MR. BLACKFORD'S REMOVAL.

GOV. HILL signalized his going out of office by removing Fish Commissioner Eugene G. Blackford; and to add to this arbitrary and ungracious act an element of grotesqueness and ridiculousness, he named for the place ex-Mayor David G. Hackney, of Fort Plain.

By tastes, training, attainments, full information, ability, long service and well-known devotion to the work of fishculture, Mr. Blackford was the best equipped man for the place in the State. Whatever fitness Mayor Hackney may have for the office is purely a matter of conjecture; he is known only as a politician.

Gov. Hill's action, it is well understood, was political. The Fish Commissioners have the appointment of fifteen fish and game protectors; and strong efforts have been made to convert the protective system into a part of the political machine. The Commissioners have ignored politics; they have been governed in their appointments solely by an earnest desire to maintain an efficient service. Their only purpose has been to protect the game and the fish, and to increase the supply. As public spirited officers, serving without pay, they have acknowledged allegiance to neither Democrat nor Republican; and they have never considered an employee's politics, nor the political bearing of his employment in their service. This independent attitude they have maintained in the face of constant importunings by those in authority to appoint, for political reasons, unworthy applicants.

One well known case where this was done was the Bradley affair, and it was presumably the one which precipitated the removal of Mr. Blackford. In 1890 Game Protector Bradley, of Gloversville, was removed by the Commissioners for what they considered abundantly sufficient reasons. They dismissed the man because the interests of the service demanded it. But Bradley, if an inefficient game protector, had a certain influence as a political henchman; he could control a few votes in his district, and strenuous efforts were made to have him put back. Comptroller Wemple was specially clamorous for this, and Gov. Hill did not hesitate to exert his influence to secure the reinstatement. At length the Commission yielded to the pressure; at a meeting of the board, three being present, two votes were cast for the reappointment of Bradley, Mr. Blackford voting against it.

Still Mr. Comptroller Wemple was not satisfied. He demanded that Mr. Blackford, as president of the board, should withdraw his official notice of Bradley's dismissal, in order that Bradley might receive pay from the State for the two months during which he had been off the force. This Mr. Blackford refused to do, as any honest man would have refused. In the light of this bit of history, it is not in the least strange that Mr. Blackford's removal should now have followed, nor that there should have been named for his place a man who is reputed to be a political co-worker with Comptroller Wemple.

This step—the summary ousting of a faithful, upright and independent public servant from a position of trust, to make the office and its incumbent a subservient factor—is an unmistakable and shameless declaration that the fishculture interests of the State of New York are to be sacrificed to political ends. We are to have not game protectors but ward heelers; the increase of the food fish supply is to be subordinated to the satisfying of partisan greed.

It is outrageous that an important economic department of the public service, such as the Fish Commission is, should not be absolutely exempt from the pestilent interference of scheming mayors, and wire-pulling comptrollers, and intriguing governors; that a public trust which demands for its most efficient conduct the untrammeled control of competent and conscientious officials, should be at the mercy of vindictive men high in office. There is no more earthly reason why President Blackford, of the New York Fish Commission, should act at the beck and call of party managers than there is that President Blackford, of the People's Trust Co., should be subject to political control. The result would be as surely disastrous in the one case as in the other. The handing over of the Fish Commission to the politicians cannot but mean its deterioration and ruin.

One consoling feature of the case is to be found in the probability that in his last official act, dictatorial and unworthy as it was, Gov. Hill over-reached himself. Mr. Blackford was appointed by Gov. Robinson, as a fifth commissioner to represent Long Island in the Board. The law provides that the commissioner must be a resident of Long Island. For this reason it appears quite clear that Mr. Hackney cannot serve. And, beyond this, it is by no means certain that Gov. Hill had the power to remove Mr. Blackford. Whether legal or not, that removal was a decided wrong to the taxpayers of the State, and good citizens should not fail to have it righted.

THE NEW "FOREST AND STREAM."

THE FOREST AND STREAM is issued to-day in its enlarged size of thirty-two pages; is printed on a better quality of paper and is of uniform color throughout. Doubtless many will miss the green cover, with the appearance of which they have so long been familiar, and which has come to be regarded as a characteristic feature, but we are confident that our readers will shortly be reconciled to the change, for they will find that though altered in dress their favorite journal is still the same in heart; that it is conducted in the same spirit as before; contends for the same principles; is marked by the same good qualities (and defects—for a newspaper is after all a human institution), and that, in short, it is pretty much the same FOREST AND STREAM as that which has won so firm a place in the regard of growing hosts of friends.

It is the ambition of those who have the conduct of this journal to make it in the future more truly than ever before representative of the field sportsman of America; its columns a record of sportsman's experience on land and water, its pages a sportsman's forum for discussion of all sides of questions of interest. To accomplish this, we gratefully acknowledge dependence upon the continued coöperation, support and sympathy of those who read the FOREST AND STREAM and contribute to its columns; for, after all is said, that is the best sportsman's paper which most adequately reflects his life and voices his opinions and sentiments.

DOE AND FAWNS.

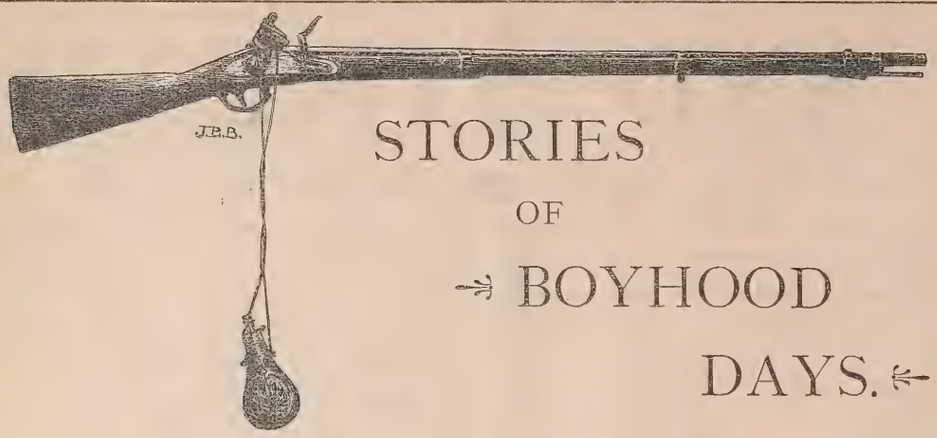
THE charming picture on another page exactly reproduces a photograph of a family of wild mule deer, taken by Mr. Fred Baker, who lives in Wyoming. Some of our readers will recognize the characteristics of the great central plateau in the sagebrush-covered hill at the back and in the ravine, one of whose sides is formed by hard baked rock, which weathers off with a cubical fracture. To this sheltered spot the old doe and her fawns have retired, and lying down in the hot sunshine, are sleepily spending the midday hours. Here, by a piece of good fortune which might not come to a man once in a lifetime, Mr. Baker discovered the deer, and creeping up to the edge of the ravine focussed his camera on them without disturbing their siesta. The result we give to our readers.

Certain of the more striking characteristics of the mule deer (*Cariacus macrotis*) are well shown in this picture, and are especially worthy the attention of those of our readers who are not familiar with the species. Perhaps the most striking of these are the extremely large ears which give to this animal its proper English name, mule deer, and its specific name *macrotis* (great-eared). These are always extremely noticeable, whether the animal is undisturbed, as in the picture, or is startled and has its ears thrown forward, or is running away. Another peculiarity is the white patch, which marks the rump of the mule deer—as it does that of several other Western ruminants, the elk, the antelope and the mountain sheep—and the curious white rat-like tail with its black tip, looking like a white paint brush which has been dipped in a pot of black paint. This is well shown in the standing fawn. This black tip has led residents of the country which the mule deer inhabits to call it "blacktail" deer, a misnomer, since that name belongs to another species found only on the Pacific slope.

The flesh of the mule deer is excellent eating, far better in the estimation of some people than that of the Virginia deer; but we think a man would have to be pretty hungry or quite without soul who would be willing to disturb the charming family group which is shown in our illustration. As we grow older we incline more and more to the opinion that a camera is sometimes a more satisfactory implement to hunt with than a gun.

OUR "BOYHOOD NUMBER."

IT is a charming collection of boyhood reminiscences which we give to-day—a series of recollections by contributors who have shown themselves to be yet young in heart. So generous was the response to our note of invitation that we have been favored with more material than we could find room for in this issue, and a portion of the contributions intended for to-day have of necessity been deferred.



The memory of one and another of those who have contributed to this charming collection of boyhood reminiscences runs back to the days of the flint-lock gun. Their reminiscences bridge over a period of marvelous developements in firearms and the various appurtenances of shooting and fishing. The advances in that time are hardly realized: but just consider that to the boy of to-day, the actual use of the flint-lock is but a tradition; in that weapon so full of possibilities in your early fancy, silver-haired reader, he sees nothing but a museum relic, as antiquated as Noah's ark. Will a like antiquarian interest attach to the hammerless breechloader of 1892, when the contributors of the FOREST AND STREAM'S Boyhood Number of 1950, shall relate their youthful experience with that arm?

Does the boy in this press-the-button age, with his light-weight, double-barreled, breech-loading, shell-ejecting product of the gunsmith's art, and with cartridge belt full of store-bought loaded cartridges, find with it all the fun, which he knew, who trudged beneath his ponderous flint-lock, and with laborious operation loaded the arm—powder poured from cow's horn into palm, the charge wadded with hornet's nest and rammed home until the ramrod bounded up again?

In those good old times, the gun once loaded was prepared for whatever game might fall within range. The same charge of powder and shot did for woodchuck or partridge or rabbit or high-holder; it was equally prepared and equally efficacious to annihilate a tom-tit or give quietus to a pig-raiding bear. Not so now; in this more enlightened and finical age we must have a separate and distinct load for every beast and bird, with carefully weighed and counted and machine-wadded loading with scientific variations for every month in the season, and a change of formula every time the naturalists change a game bird's Latin name.

Mr. W. TOWNSEND'S wildfowl illustrations have been received with much favor. Their chief merit is truthfulness; the wild ducks pictured are the wild ducks that we see from the blind. It is not an easy task to draw acceptable illustrations of hunting scenes and of wild life, the average artist evolves them as the German professor did his elephant—out of his head—and for that reason it is refreshing to look upon such intelligent and true work as that by Mr. Townsend. Others of the series will be published from time to time.

IN our news department for 1892, with the increased space at our command, and with an enlarged staff, the service will be better than in any previous years. The records of all events in the several fields will be full, prompt and intelligent.

STORIES OF BOYHOOD DAYS.

CLEANING THE OLD GUN.

WELL, the cleaning of the old gun must not be put off longer. I am ashamed when I even try to recall the length of time she has borne this charge in her vitals. Counting the months backward to the happy day when my dear friend Jack, of Michigan, went fox hunting with me, they mount up twelve, to twenty-four, yea, and seven more, an army of ghosts that arise from their calendared tombs and condemn me for this neglect of my first loved gun.

She, of all the guns my youthful eyes beheld, was the first who enchanted me; she, to my bashful touch, first responded with a roar of musical thunder and a kick that I was proud to receive, when I was permitted to fire her at a mark.

Her I first loaded with trembling hands, doubtful when the heroic feat was accomplished whether powder or shot were uppermost, or the proper wad of tow between them or underneath them.

It is humiliating, even now, that five and forty years have passed, to confess how was presently given proof of skillful loading by later unskillful handling.

The thin copper cap, bright as a new cent, and worth more to me, was set upon the nipple, the striker drawn backward, the trigger pulled to ease it down to its proper place, for hammer down was the rule of safety in those days, and the half-cock arrangement was thought to be a useless survival of flintlock times, in whose declining years this old gun was born in a London gunshop. My nervous thumb slipped, down fell the hammer, the house was shaken with the discharge, the shot was driven like a bullet through the panel of the kitchen door and spattered upon the ceiling of the hall.

Serene amid the uproar and its after hush, my grandfather turned from the window where he stood dreaming an old man's dream of the past, and I believe he would have been little moved if the shot had scattered in his silver locks.

"What is thee trying to do?" was all he asked, and I had no answer nor he any reproach. He was one of those rare old men who remember that they were once boys, and can forgive as they desired to be forgiven.

I cannot remember how many weary days or weeks or months went by before I dared to take this gun in hand again. Heaven knows they were long enough to count as years go now, when I wait and wait for what will never come.

But still the old gun waits its cleaning. No wonder that one grown accustomed to the easily and readily apparent cleaning of the breechloader, dreads attacking the cavernous depths of the muzzleloader. How shall he know when he has pumped them with cold water, scalded them with hot, and wiped them with the last rag, that those hidden recesses are not entertaining rust that doth corrupt? Only the cunning hand of the gunsmith would reveal to them now and then the condition of that dark interior. Otherwise we could only hope for the best or fear the worst.

Come down, old gun, from the hooks whereon in these idle hours thou hast hung since the days I first knew there were guns and began to covet their use and possession.

Many changes and much rough usage she has undergone since then when her igniting force slept in the cool flint of her comely lock, and its flash awakened fire and thunder that burst from her three feet and six inches of octagonal and round barrel of seventeen guage. Longer ago than I can remember her lock was clumsily changed to the incoming percussion fashion by Seaver, of Vergennes, a gunsmith who scoffed at the idea of barrels ever being twisted or made in any way but by longitudinal welding of the tube.

How distinctly I remember the old man and his low-roofed shop, him, spectacled and so bent with years that he need not stoop to his work, filing a stiff sear spring while he gossipped of his townsmen, one of whom was "jest a-dyin' of reg'lar ol' fashioned rum consumption, poor ol' creetur." The grimy walls of his den were arrayed with guns of all sorts, repaired and awaiting repairs, and bunches of new steel traps, of which he was a famous maker in those days when the Newhouse trap was unknown and nine dollars a dozen was the regular price of good hand-made muskrat traps. I doubt not he was tinkering the militia men's muskets, perhaps in this same shop, in the martial days of the last war with England, when all the Champlain valley was alert for British invasion, and McDonough's fleet was threatened with blockade or destruction where it lay at the Buttonwoods in Otter Creek.

Well, it was not making or mending guns that I set about, but the cleaning of this one, and still she waits my tardy hand. Out with the rusty charge. Mercy how she kicks, and how a gun always kicks more when fired at a target than at game, as if she resented such futile use. But the fact is, unless one's cheek and shoulder are butted unmercifully one never notices a kick in the excitement of game shooting, while in cold blooded target shooting he feels the slightest recoil, and may sometimes detect himself shutting both eyes in expectation of it as he pulls the trigger.

Now, ramrod and key are drawn, the barrel unhooked, the breech immersed in a half pailful of cold water, which with frequent changes is pumped through the barrels with a swab of tow or cloth on the cleaning rod, till water and swab show no suspicion of filth. Then boiling water is poured into the muzzle till the barrel is too hot to hold in the naked hand, then drained muzzle down a few moments, and wiped with clean swabs, changed again and again. The first comes forth wet and red with rust that even so quickly has formed, the next stained with it but only moist, and by and by, after armtiring friction, the swab reappears at the muzzle as clean and dry as when it entered, and withal quite warm. Now an internal and external touch of oil, and the work is done conformably to the instructions of Frank Forrester in his "Manual for Young Sportsmen." Happy is it for you who now inherit the title and have entered the field since the general introduction of breechloaders that his prediction concerning the practicability of such arms was not fulfilled, and that you are spared the tedious and uncertain labor of cleaning muzzleloading shotguns.

If the old gun does not look as good as new now that she is made cleanly, she is at least seemly, and I would not if I could obliterate the scratches and bruises that mark stock and barrel, for they are reminders of half-forgotten incidents, and bring up visions of happy days of unreturning youth.

Not one of us graybeards but looks backward with longing to those care-free days, but if we could recall one of them and live it again would it be wise to do so? Would not the heaviness of these present, inevitable days be increased and made less bearable by this brief lightening of the burden?

Seen through the mists of intervening years, how long and bright and full of unmixed happiness they appear to our regretful eyes, yet they were no better to us then than these are now—never quite perfect, always lacking something that was to come by and by, when we would be men and the world our oyster. Though they have drifted far away into the past, we have lived them and they are still ours to fondly love and remember. Then why should we regret them?

Ah, why? But still we do. Who can ever forget and not wish to feel again what he never can, the exalted thrill of his first successful shot at any kind of game.

How the touch of this old gun with which the feat was accomplished, brings to mind the killing of my first squirrel, brought down from the top of a tall hickory with a ball that unknown to me had been rammed atop of the powder for larger game. I remember, too, the scolding I got for shooting such a charge toward the house, a quarter of a mile away. But I was so proud of the feat that a scolding was nothing, only that it seemed to me I deserved rather a little praise for having knocked off a squirrel's head with a single ball from a smooth bore.

So comes back the memory of my first partridge, the indescribable aroma of the October woods, luminous with gorgeous tints, the dusky form skulking through the undergrowth, the instantaneous aim, the sullen roar that broke the stillness of the woods, the moment so full of hope and heart-sickening uncertainty till the fluttering bird was seen and pounced upon and gloated over. I am no more ashamed now than I was then that he was shot on the ground, and hold that no man need be more ashamed of fairly stalking a ruffed grouse than a deer. Both feats call for wariness and woodcraft, though the last requires the more, while shooting grouse from a tree to which they have been put by a yelping dog needs but a keen eye and a target-shot aim.

With us, there were no ruffed grouse then nor wing shooting—only "patridges," and sitting or running shots. No one whom we knew ever shot birds on the wing but Pierpoint, of Vergennes, who made great bags of ducks and woodcock on Great and Little Otter creeks and their borders. But that was something that only a lawyer could achieve and boys only dream of as a possibility of the future, that might bring all things.

The result of my first attempt at wing-shooting surprised me as much as the bird I fired at, a pigeon that had repeatedly flown from one to the other of the barns, whereon I was trying to get a pot shot at him. At last, as he flew across me, I let fly at him in sheer desperation, and down he slanted in a long curve from his straight arrowy flight, stone dead when he struck the earth. From that day forth I was always "pulling trigger" on flying birds, oftener wasting than giving good account of precious ammunition; but in the beginning I had acquired the knack of aiming quickly and it was sometimes a bird and not I who got the worst of it in my frequent fusilades.

This old gun gave me my first woodcock who went whistling out of the tasseled border of the cornfield seen for a flash, then whistling out of sight behind the top of a young apple tree, through which I blazed away in the direction of his flight. Impressed with a belief in his fall, I searched with a faith that was well rewarded when I found him a few rods further on belly up among the rank aftermath. Oh, long-past golden day of September, has thy like ever since shone on happier or prouder boy?

This open confession compels the admission that for all the small thunder I have let loose from this and other guns in swamp and alder thicket, a few figures would compass the score of woodcock brought to pocket between that first and the last that I shall ever shoot; but those I so possessed I was proud of and duly thankful for. They must be growing scarce here, for in the last half dozen years of my shooting, which ended four years ago, I did not flush many birds in all the good summer and fall cover that I beat. Too many guns and too little cover have almost accomplished the downfall of his goodly race.

It was the great ambition of my generation of boys to shoot ducks. How many weary days have I haunted the banks of Little Otter and the East Slang, unsuccessful but still hopeful of a shot, and how my heart sickened when, after a long crawl through the unheeded thistles of a creekside pasture, the grand opportunity lay before me, a huddled flock within short range. The deadly aim was assured, the trigger pulled and—the gun missed fire. With a torrent of epithets I reviled thee, though most innocent weapon, for the fault of some Gallic manufacturer of percussion caps.

Who that knew them does not remember with bitterness of spirit those little cups of copper foil shedding unreluctantly their thin scale of fulminating powder as lifeless as the paper box that inclosed them, and labeled with effrontery more brazen than themselves "Qualité Superieur" and the maker's initials blazoned in large capitals "G. D.," which gave to the vexed Anglo-Saxon a hint of supplement in plain, if profane, English. Did we not arise and call blessed Ely and Cox and others of our own blood who gave us honest caps, vital with a spark that the hammer's strike always awoke?

Never a duck did I get till one October afternoon Jule Dop paddled me from Sile Baily's landing to "Pint Judy Pint" in the East Slang.

As well defined as then, open before me between their pale of brown and yellow sedge and rice, the blue-black curves and reaches of quiet water, brightened here and there with the reflected glory of scarlet water maples, glints of sunshine and double of silver cloud. Were we moving, or were shores, trees and marsh filing past us? The sough of the breeze made them noisier than the progress of the boat, most apparent by the ripples that stirred rush and lilypad far astern.

Forty years and more have flown since that incomparable wielder of the paddle drifted into the mystery of the unknown. Poor vagabond, wherever he sleep in his unmarked grave, peace to him, and eternally the rest which in his brief life he ever desired.

Silently we rounded the bend below the reed bog and then, where the channel hugs the south shore of Horse Pasture Point, up sprang a great dusky duck with a prodigious flutter of wings and a raucous quack of alarm that was cut short in mid-utterance by my sudden shot. Down she came with a resounding splash that drove a shower of glittering drops above the rice tops and sent circling wavelets out to greet us. If her weight and mine had been what they seemed to me as I lifted her from the water the voyage of that old scow would have ended then and there with a surging plunge to the oozy bottom.

The horde of ducks that were wont to congregate in those marshes then had that day found business or pleasure elsewhere, for we saw but one other; as we rounded the broad marsh that westwardly borders Horse Pasture Point and drew near the mouth of the East Slang, up rose, a long gunshot off, with a needless tumult of voice and pinion, and flew straight away. The long barrel was trained on her and the trigger pulled just as Jule protested under breath, "Too far." But down she plunged headlong into the quivering sedges, and never in my life was I prouder than ween Jule's impressive lips gave me the commendation, "By gosh, you're a cuss to shoot," though in my heart I knew it was but a lucky chance that called it forth.

Further than this my shot was not rewarded, for an hour's search failed to disclose her in that unmarked expanse of sedges, weed and rushes, and my second duck was never but for a brief moment displayed as a trophy but went to the nourishment of some prowling mink or hungry hawk.

Fortune favored me that day not only in what she gave, but in withholding an opportunity of spoiling my record.

As soon as the ice was out of the East Slang the flooded marshes swarmed with muskrats, for whose sleek brown coats, worth fifteen cents apiece, we boys hungered, envying the trappers who took more in a night than we in a season. How persistently we patrolled the low shores in quest of a muskrat swimming within range, or resting on a half submerged log. Or, lying in ambush, we strove to lure the amorous voyagers to death by simulating their mating call, and happy were we if in a day our frequent shots gained us one prize.

Then, too, in those first days of open water the spawning pickerel were playing and now and then a lucky shot paralyzed one, perhaps two or three, and in the roil our eager eyes would discover the gleam of shining white bellies upturned to incite us to a splashing scramble for our prey. I confess that all this was unsportsmanlike, but it was fun, and whoever has hunted muskrats or shot pickerel cannot deny that skill cannot be lacking in the successful pursuit of the one pastime nor that excitement attends the other.

John Wadsó, late of St. Francis, but now with his dusky fathers in the happy hunting grounds, told me that a British officer whom he accompanied on a moose hunt, became so enthusiastic over the sport of shooting muskrats with his rifle that he forgot the real object of his trip, and so devoted himself to this accidental one that he scared every moose out of sight and range. Furthermore in defense of the other practice there are real sportsmen who are not above pickerel shooting when the law does not prohibit it.

How distinctly lies before me the scene of those small adventures of youth, as if not forty years, but fewer days, linked the past to this present youth to crabbed age.

The broad water rippled by the wind, flashing in the sun and beating with rapid pulse against the rustling drift of dead weeds, the crinkled reflection of tree and shore, and flash of the starling's wings, an angler casting an early worm to the unready bullheads, a pickerel shooter stalking heron-like along a distant shore, a trapper poling his cranky skiff along his marshy round, now halting to inspect a trap or gather its lifeless prey, or

resting and then pass on, haunting the shores as silently as a ghost, save when he cast a trap and tally into his boat or chopped a new notch in a log or hailed a brother trapper to learn his luck.

As the day waned and the wind died, the still water turned to gold with the reflections of the sunset sky, then in the twilight of shadows, turned to a black waste, save where the first stars were mirrored or a muskrat's wake seamed it with a streak of silver. Then as the shadow of the world crept up the eastern sky, the farmstead lights began to twinkle along the distant highway, and our own shone out to guide us homeward.

No feat performed with the old gun is more vividly remembered than the killing of my first fox.

I recall the even whiteness of the snow, shadowless under the dull December sky, the first burst of the hound's music, how it came crashing nearer, while my throbbing heart beat time to it, the glimpse of reynard's tawny fur flashing through the haze of underbrush, then disclosed for a moment after my hasty shot, writhing in the snow, then up and off, at first so slowly that I could almost lay hand on him, gaining on me, till as the dogs came up and passed me he went out of sight beyond a ridge and left me breathless and lamenting.

When my companion reached me the woods were silent but for the voices of the chickadees that curiously attended us. Had the dogs stopped, or gone out of hearing under the mountain side?

Getting first to the brink of the cliff my friend looked down, then shouted back to me, "They've got him!" and we with a triumphant cheer made the woods ring with wilder echoes than the hounds had awakened.

How small and to what little purpose were these achievements of our youthful ambitions, and yet how we still glory in their accomplishment. I wonder if men who have attained greatness do not look back to such with a completer satisfaction than to great and later triumphs, for success is most complete that brings most one's own approval, and to those was given this reward.

And now, old gun, I consign thee to thy old resting place where thou wast wont to hang in thy flint-lock days, when I was a bibbed and aproned toddler.

I have grown garrulous over thee, as I recalled the pleasures thou hast given me, pleasures that I shall never taste again but in memory.

Often have I hoped to relieve them in some measure with my boy, and share with him the triumph of his first successful shot, but this is denied me, groping in a fog that beclouds aim.

Thee nor other gun shall I ever shoot again, nor if I might, could I find such sport as was to be had in the day of thy first use? "Nessmuk" spoke truly when he said, "The game must go."

There are too many shooters, too little cover, and yearly the horde of the one increases, the acres of the other become fewer, and the game laws, game preserves and game protectors cannot long avert the day of annihilation or such poverty of its once populous haunts as to make the pursuit of game a weariness to the flesh, a vexation to the spirit.

Well, if I have not had my share I have had my opportunity, and should be satisfied. It is a wonder to me to find myself, without striving to reach this comfortable state of mind, so content to be deprived of almost all the pastimes that were once so dear to me.

How few have the years been since I was looking forward with impatient longing to this opening day of the season, whose sports I was among the first to engage in and the last to relinquish.

To-day I hear the continuous fusilade along the marshes, but am not cast down because I cannot be there, nor envious of those whom the day is all that it once was to me.

The inexorable hand of time is not altogether unkind; it wounds, but with a later touch it heals; it takes away, but in some way makes compensation.

FERRISBURGH, Vt. ROWLAND E. ROBINSON.

"US BOYS."

"BACK in the 50s" I lived in Muscatine, Ia. At that time, except in a thin belt along the Mississippi and some of the larger streams, settlements were few and far between, and, as a consequence, game of all kinds was abundant.

Prairie chickens were so thick that they were a serious nuisance to the farmers. About the first money I ever earned was the munificent (so it seemed to me then) stipend of 10 cents a day, from my father's and my friend, Mr. Kendrick, for keeping these birds away from his wheat shocks while the grain was waiting to be flailed out.

Wild pigeons were even a worse evil in their annual migrations—scratching up the new-sown seed in the spring and devastating the cornfields in the fall. I have seen them so thick in Ogilvie's Woods, adjacent to the village corporation line, that myself and chums—Hal Paine, Charlie Ogilvie and George Warfield—have more than once brought home a grain sack full of them, captured by the primitive means of stones and clubs; for we were none of us then the happy possessor of a gun.

Bob White, too, was omnipresent, and many a covey did "us boys" stone through the streets and into Hatch's lumber yard, where we often made sad havoc of the orderly board pile under which they took refuge. (If the gallant cavalry general—as he afterward came to be in the "late unpleasantness"—had half as much trouble with his "boys in blue" as he did with "us boys" who made his lumber yard our rendezvous and playground, he had his hands full.) In the fall ducks, geese and brant swarmed in the ponds on the island below town and in the sloughs of the "Illinoy bottom" across the river.

Rabbits and squirrels, gray fox and black—the latter, however, comparatively scarce—were too plentiful to be considered. Deer were as "thick as hairs on a dog's back," and many a luckless farmer smashed the third commandment all to flinders as he gazed on his growing wheat, trampled and eaten as though a drove of Florida "razorbacks" had been in it. From October to May, game of all kinds was a drug in the market, for we had no railroads then; and during the winter, when the river was frozen and the boats were laid up, venison, quail and chickens could not be given away. I remember seeing a wagonload of game, among which were three or four deer, dumped on a vacant lot next our place—we lived just outside the village limits—because the farmer who brought them in could not sell them, and did not consider them worth hauling home. Wolves were plenty ten or fifteen miles back from the river, and farmers found sheep raising impossible. Bear, I think, must have been scarce, as I remember seeing but one—in the fall of '54 I think it was—and he was brought into town, after being killed, as a curiosity.

And the fish! The waters literally swarmed with them. Off the rafts in the river we caught "jack-salmon," "white-bass," "channel-cat," and "spoonbills," (I give the names as we knew them then) in Mad Creek, "goggle-eyes," "punkies" and "yaller perch"—in the "slough" which encircled the island, "sunnies" and "gridirons"—and in the sloughs and ponds of the Illinois bottom "yaller cats" and "pike."

These pike grew to an enormous size, and I have wondered often since then if some of them might not have been maskinonge. One remembrance especially inclines me to this belief. The fall that I was twelve years old my brother, two years older, and myself caught one, *i. e.*, he caught it, while I danced around on the log and yelled, which was so large that to bring it home we had to run a stick through its gills, and thus carry it suspended between us. Even then its tail dragged on the ground, as I recall distinctly, from the fact that, owing to the shortness of the stick, and my being behind, I several times stepped on it, and once with such disastrous effect, owing to its slipperiness, as to throw me headlong in the sandy road with the big fish a-top of me, which caused my brother to call out, "Confound it, Hen, what do you want to climb *him* for? *He* ain't got no bird's nest in his head!" alluding to my propensity for "shinning" up every tree which I thought might yield an addition to my collection of birds' eggs. When, after much toil and sweat, and boyish cuss-words, such as "dog-gone it" and "darn it all," we had safely conveyed our prize home, we of course had to show it to French Joe, a red-shirted demigod from that far-off Olympus, "up the river," who came down occasionally from his celestial abode in charge of a "run of logs," and graciously condescended to accept from his boyish worshippers votive offerings of tobacco, cigars and "pop" (strange to say, he would not touch whisky), giving us in return strange tales of that enchanted country whence he hailed. When that oracle saw the fish he declared, "Dat no pike; dat a ——," as near as I can recollect, "dusky" was the term he used, which was probably my boyish rendition of "musky"—his own contraction for muskallonge.

The next year, when I was 13, I took a trip, the recital of which would be of no particular interest, except as showing what a healthy youngster of that age can do when he's had the proper training. My father was absent on missionary work somewhere in the region of Des Moines, about 150 miles to the west, and my mother being dead, I was left in charge of an uncle. My boyish dignity received some affront, I do not now remember what it was, and I made up my mind to leave him and seek the shelter of the paternal arms. My particular "pard" at that time was an Indian boy of about my own age—Hawkeye, we called him, though the literal translation of his cognomen was much less high sounding, being, I believe, "Jumping Boy," whose family led a nomadic existence in that vicinity, having in some way escaped the meshes of Uncle Sam's drag-net when their tribe, the Kioways, were gathered up and removed to the reservation. Him I easily persuaded to be my companion in the adventure, and we set out. My armament consisted of a light double-barreled muzzleloading shotgun given me by my father a short time before, and a common butcher knife "sneaked" from the kitchen. Hawkeye clung to the primitive weapon of his ancestors, the bow and arrow, in the use of which he was wonderfully expert. A loaf of bread, a roast duck and a piece of salt pork obtained in the same manner as the butcher knife made up our commissariat. I was for lugging along some blankets, but Hawkeye vetoed that luxury. "No needum blank—heap warm night (it was September); blank too much dam heavy (Hawkeye in learning our language had picked up certain "cuss words" which he used freely, regarding them, I think, rather as intensive or descriptive adjectives, than as savoring of profanity); get cold, buildum fire." I yielded to his superior wisdom, and though the organizer of the expedition, from that moment meekly yielded the leadership and assumed the position or "high private in the rear rank."

Fortunately, there were no dime novels in those days, and my head was not stuffed with trash and romance. I was merely a stout boy of 13 with a healthy body and mind, setting out on an expedition which I knew would have its fair share of discomforts, but which I did not then and do not now look upon as extra hazardous. I knew by experience that I could trust Hawkeye's wood-

A FAMILY OF MULE DEER.

craft and innate sense of direction to guide us, were it twice the distance, and I had no fear of my own power of endurance.

Sleeping out of doors was a common thing for me—in fact, in decently warm weather I slept rather more out than in. Small game was so abundant that it would have been almost a miracle had we failed to kill enough to eat. As a general thing we avoided the public roads—which, indeed, were "few and far between"—but occasionally we struck an outlying farmhouse, where we were always hospitably welcomed, given a good square meal, and our rations of bread replenished by the kind-hearted women-folks, though sometimes they looked askance at the hue of my dusky companion. Our trip, which was made in about three weeks, was devoid of any startling incident, except being caught once in a small cyclone, when we had to crawl under an immense prostrate oak (which, fortunately, lay at right angles to the storm) for shelter from the falling boughs. The Cedar and Skunk Rivers we crossed at ferries, shaping our course to strike such points, while the smaller streams presented no obstacles, as we could swim like ducks, and, with the aid of Hawkeye's tomahawk a light raft was easily constructed, on whice we ferried over our arms and clothes. On the whole, when we tramped into Des Moines, then a straggling village of two or three hundred, I did not feel that we had accomplished any very remarkable feat, and was somewhat astonished at the wonder and surprise with which the news of our journey was greeted. The lionizing which we received was not, perhaps, very great, but it was sufficiently so to disgust Hawkeye, who the second day suddenly disappeared and made his way back alone.

There was one person, though, who took a different view of our performance, and that was my father. He looked upon it merely as the perverse freak of a disobedient boy, and in a private interview, through the medium of a stout beech switch, impressed this point of view upon me so strongly that I was fain to yield to the force of his arguments and allow myself to be convinced. To cap the climax, instead of being allowed to remain and spend the winter in trapping and hunting, as I had fondly expected, I was shipped ignominiously back in charge of a farmer who was taking a load of wheat to the river, and was delivered to my uncle like a stray bale of goods, or a runaway apprentice.

I suspect the good old man was none too glad to see me back, for, with my Gipsy instincts and Indian camaraderie, I must have been a thorn in the side of one who had lived from the time of his birth till his hair was gray in the orderly bosom of New England Puritanism and Mayflower respectability.

One other reminiscence of "us boys," and I am done. But first, I must preface it by a little sketch, dating back but a few years. In the capital of one of our great central commonwealths, the State Bench and Bar Association are holding their annual banquet. In the city there happens to be at the time a certain person, "not unconnected with professional pursuits," from another State, and who, having devoted some of his time to the study of toxicology, had been called as an expert witness not long before in a case of suspected poisoning, tried in that very city. Having been recognized by some of the bar who were engaged in the trial, he has been invited to the banquet, and is present in his capacity as guest. After the regular toasts are over, this trial, which has become somewhat of a *cause célèbre*, is mentioned, and the guest is called upon to give his views upon a certain mooted point in medical jurisprudence. Having done so, and about to take his seat, a portly form (unknown to him until a kind friend at his left murmurs, "The Chief Justice") arises at the head of the table, and with a courtly bow, says: "I have listened with much delight and satisfaction to the very able and lucid exposition of the point in question as given by our learned friend and distinguished guest; but there is one point which is not yet clear to me, and on which I would tax his courtesy for a clearer light." The "distinguished guest" with an awkward attempt at returning the polished bow of the other, murmurs, "certainly, it will afford him great pleasure to answer, so far as may lie in his power, any question that his learned friend may feel inclined to ask." Whereupon the C. J. continues: "It is a question which I ask pardon, in advance, for putting, and nothing but my own eager desire for information, upon the one hand and the widespread reputation for learning and courtesy borne by our distinguished guest upon the other, could be plead in bar of the seeming intrusiveness, and, I fear you will add, morbid curiosity which I am about to exhibit. The question is this," and here, leaning over the table, amid the hushed silence of the whole room, he asks, slowly and impressively, "Hen, what do you think of the Chinese method of catching ducks by pumpkins?"

What followed is not germane to our story; it only remains to explain the reason for such a question. We had been boys together in Muscatine, and on one occasion had gone down to the island duck hunting. The ducks were there, but alas! they had all congregated in the center of a big pond, so far from shore as to be out of gun shot.

Various plans were discussed for getting them, but none seemed feasible, till Dick, who was a great reader, broached one which he had seen in some cyclopediæ or missionary report. He told how the Chinese would cut a hole in a pumpkin large enough to admit the head, scoop out the inside, cut a hole to see through, and donning the pumpkin like a helmet, made out into the pond, keeping the body under water. The unsuspecting ducks seeing no danger in so harmless a thing as a floating pumpkin, would remain quiescent till the "heathen Chinee" could gather them by the legs and yank them under water. With the divine faith of boyhood, we deemed the scheme practicable, and as there were some pumpkins in a neighboring field, proceeded to act upon our belief. As Dick could not swim, I was chosen to do the "yanking" act, for, though the pond was generally shallow, there might be unsuspected holes. Clad in nature's garb, plus the pumpkin, I waded out, but the ducks perversely refused to act their part as set down in the play. They did not fly, but warily kept such a distance that I would have needed the arm of a Brobdingnag to reach them. After a hour or so of futile effort, I waded ashore to find myself covered from head to foot with ravenous black leeches, and my back and shoulders burned raw by the sun, while Dick added insult to injury by answering that "nobody but a darned fool would believe such a story anyhow."

H. P. U.

TROUT CUNNING.

THE qualities which constitute the zest of the angler's delight and of the sportsman generally, is but little known to the boy. The latter is essentially a pot-hunter and fishes for the frying pan. Not that the exercise of his skill in taking his trophies from stream or wood affords him less intense pleasure than similar captures give his father, but his pleasure has a more direct reference to those of the table.

Propose to the urchin a quest for quadruped or bird, root, bark or fruit, and the question that instinctively arises is, "Is it good to eat?" The savage man advances no further than this, and indeed a large proportion of civilized men occupy the same status. A farmer of my acquaintance destroyed one of the most prolific little trout streams I ever knew by diverting the current for days at a time during successive years in order to get all the large fish. Hundreds of small trout were left unprotected in the shallow pools to become a feast for the kingfishers and their other enemies. A French physiologist has remarked that "hunger and love are the powers that move the world." All our motives of action, intricate and of infinite variety, as they seem, are but bifurcations and subdivisions of the two.

During boyhood and early youth the writer caught more trout with his hands, snare and spear than by means of hook and line. Through the long, narrow valley where those years were passed flows a considerable stream, which during the spring and early summer months teemed with trout through all its course. From every transverse fold in the hills flowed down a small stream. Often during the hot season beds of dry stones marked these smaller water courses in their passage through the cleared fields. Winding around in the hollow of the hills, in some cases for miles, under the dense forest shade, a small flow of water connected the pools, in some of which scores of trout subsisted. They were continually passing from one pool to another, and in doing so were often surprised by a solitary urchin who used to resort thither to capture the savory food for which his palate yearned. These places were often the scenes of contests in which the trout were more frequently winners than almost any one at first sight would suppose.

The brook trout is a creature of great intelligence. The ability with which he can navigate a water course in which there is water to speak of, is something truly wonderful to behold. If he is shy he is sly, as is shown by his behavior when surprised in course of transit over a shallow place. Silently settling beside a stone he will remain immovable for several minutes, but the instant one's eye rests upon him he darts away, almost invariably going down stream. In his shoots and plunges he rarely strands himself, and if a deep pool be near at hand it is folly to try to intercept him.

Two of the largest brook trout I ever caught were taken with a spear. In a former article I have described the rude tackle with which I was wont to tempt "a rise" in those days. It will readily be admitted that my success as an angler could not have been calculated to encourage that mode of catching fish. I had almost incredible fondness for the savory trout, the red flaky flesh of which was perhaps the most familiar reminder of my early home on the Pacific Coast. As late as the early sixties the south fork of the Sacramento, the American River, contained plenty of salmon. Sometimes a Digger Indian would appear at the kitchen window with a splendid fish, almost before it had ceased to palpitate, for which, whether it weighed eight, twelve or fifteen pounds, he demanded the uniform price of fifty cents. Very often miners captured stray salmon in their raceways, flumes and even smaller sluices. It was natural, therefore, that my favorite way of catching a brook trout was to enter his own proper element and there do battle with him.

One July morning, when I was supposed to be diligently spreading hay, the mowers being out of sight, I thought I would take a look at the trout in a deep rock-bottom hole in the large brook which flowed near at hand. Near the head of this deep pool a small stream of cold spring water entered the brook. Here, in the shade of an overhanging tree, trout delighted to pass their leisure hours. It had been a dry season; above and below the pool the flow of water was meagre. A few small trout may have been visible at the usual place but they did not interest me. I was about to return to my work when, in an opening among the roots of the large tree, through which the spring water was flowing, I perceived what I then certainly thought the largest trout I had ever seen. The head, with a portion of the back sufficient to exhibit the broad dorsal fin, was visible. The fish had partially turned, and I momentarily expected to see him dash for the deep water. However, he did not move and I retreated and began industriously to erect a barricade across the large brook just above the point where pursuit was hopeless. I took pains that there should be no accommodating chinks in the wall, which I raised nearly a foot above the water before advancing on the enemy. I think he knew what I was about, for no sooner had I stepped aside than he darted forward and shot over the wall, landing in deep water four feet beyond.

This Remus-like performance astounded as well as provoked me. I thought I had the trout, "A moment and he was gone." I returned to my work disheartened and tried to make up for lost time. Just before noon it occurred to me that if I should take down the barrier the trout would, at least during the succeeding night, return to the colder water. Judge my astonishment at finding the trout in the original position between the roots. The sound of the dinner horn led to the resolution to bring my spear before disturbing him. After hastily eating dinner I quickly returned. The trout was in the same position; cautiously advancing from behind I held the spear perpendicularly over his head. I trembled with excitement as I lunged downward, and instead of striking him fairly through the gills as I expected, one outer tine penetrated the extreme end of his snout. The tough cartilage held and I exhibited my trophy in triumph at the house before the others had risen from the table.

On the route to school was the ubiquitous dugway, the brook having forced the roadway into the base of the hill. Between the road and the brook several trees had grown, and the bank here was a mass of roots and driftwood, among which trout had a cool retreat. I never pass the place on foot without peering into the water. One morning—it may have been later in the same season—I perceived a trout lying in the most secluded spot among the roots. He was, if anything, larger than the one above described. Mazy and forbidding as the place appeared there was not a stone, cranny or roost that I had not touched and probed. I would have that trout. The water was shallow, and any attempt for him to leave the place would be to flop out of the frying-pan into the fire.

I kept secluded until the last of my school fellows had passed, and then set to work in dead earnest. No one can ever realize the gaminess of a large brook trout until he tries to catch him under such circumstances. For at least four mortal hours that trout evaded me. I bumped my shins over the stones, tore my clothes among the roots, splashed headlong on my face in the water in my efforts to get him. By noon the place wore a new aspect. I had rolled innumerable stones out of the water and cleared out half the driftwood. At first he would secret himself and remain invisible for a half hour at a time; but this at length I made impossible. At the noon hour he remained a much-badgered but still unconquered fish. I was exhausted, and solaced myself with the contents of my dinner-pail. My clothes were as wet as a mop and about as tattered. I dared go neither home nor to school, so during most of the afternoon I sat eyeing that trout with hostile interest and rueful aspect. I schemed and devised unavailingly, since I could not come at him.

As the day wore on I determined to go home and get my spear. I put in an appearance as soon after 4 o'clock as permissible, and concealing my soaked and bedraggled condition as well as I could, I explained that there was a monster trout down at the dugway which I could capture in just about a minute. I hastened back fearful lest any one else might appear on the scene. When I returned the trout was not in sight. I walked up and down in the water in tearful disappointment. At length, the sobs choking in my throat, I sat on a stone and began looking wistfully among the roots. To my exceeding joy I caught a glimpse of scarlet and gold and drove my spear into the victim's side as he lay behind a root.

SULLIVAN COUNTY, New York. B. F. HENLEY.

PENNSYLVANIA DAYS.

WHEN I was a bo—. (No! I don't mean that, for though I have seen a few rare samples of noble, manly boys in my life, about nineteen out of ten are the concentration of all manner of cunning and meanness. The people of China drown the girl babies, but I'd reverse that order of things and drown all the other kind before they had time to be boys.) I should scorn the insinuation that I ever was a boy; but when I was a young man—from 5 to 15—and ran loose around the Pennsylvania hills along the banks of the Delaware River, life was as bubbling as a bottle of bock beer, and though there has been but little of my life that I wish to repeat, I have often wished that I could be placed where I was then, with everything precisely as it was in those early days. Like Agar, "I once was young but now am old," and my memory for present things is failing, but every atom of the scenery along that lovely river is as fresh in my memory as if I'd seen it but an hour ago.

The crystal river, with its clear and pebbly shore fringed with trees from its sources to the bay, was as full of fish as Fulton Market, and as the country then was comparatively wild, great flocks of ducks were constantly flying or feeding along the shore, with but few to molest them or make them afraid.

That beautiful little black and white duck, the "butter ball," came up the river in swarms in stormy weather, but where are they now? I have not seen one for more than thirty years. Almost every kind of duck was sometimes seen, and it did not even occur to me that such a state of things would ever change. Those were heavenly days, that I did not then appreciate, but which I would now enjoy as the noble red man of the past is probably now enjoying the pleasures of his happy hunting grounds. Then were the woods alive with partridges and quail, and woodcock were scattered about in promiscuous multitudes through every piece of woodland, while every foot of soil that was damp enough for an alder bush or a willow tree was a breeding ground. I remember one day killing a fine old cock with the same sort of ammunition that David used on that big bully of Gath.

Few and lucky were the sportsmen there who thought of firing at a moving mark, and when in my rabbit rambles I flushed a woodcock he coolly whistled a defiance and dropped again a few yards off. The farms at that time were never nicely kept, nearly every fence and old stone wall being hedged with bushes and briers, that harbored myriads of quail, while partridges could be flushed by the score in every thicket. Then the farmers cared but little what or where we hunted, for game that they could not kill was of little value to them; and when I had reached the age of sweet fifteen and bagged a feathered trophy now and then, I felt as proud as a darky with a 10lb. possum. There was a famous breeding ground for woodcock a few miles from our place, and once on a time two sportsmen from a neighboring village paid a visit to the ground, and when they returned in the evening they were almost hidden with strings of woodcock thrown across their shoulders. Even after I had grown from bo—young manhood to maturer age the country swarmed with game, and once when traveling in the western part of the State I and a chance acquaintance named Stockton picked up our guns and in a little while came back with a fine lot of birds, without the assistance of a dog. On our way home, carrying our birds by a string, an old farmer stopped his team and, looking intently at our game, he asked, "What on airth are you goin' to do with all them mud ducks?" "Going to eat them," I replied; and, with disgust oozing out of his face, he drove off, evidently thinking that if there was such a thing as civilization, we were not in it.

Not only did I lose the glorious shooting of those days, but I have to regret the loss of the finest fishing that a modest man could wish for. It was sparsely settled in that region then, and the river was alive with striped bass, but scientific fishing was unknown and no one was ingenious enough to devise the ways and means of catching them.

I'd give the world, and something over, to see that old place as I still can see it in my memory. Scarcely a tree had been cut along its banks, and the shore was lined with smooth, clear pebbles—nature's beautiful arrangement undisturbed. I have been on the Juniata and other lovely streams, but I have never seen a more beautiful river than the Delaware before the march of civili-

zation with its railroads and canals took every vestige of its beauty away forever. I remember when I used to sit on our piazza on a quiet summer evening, watching the striped bass as they made the water fly in chasing chubs on a shallow bar on the opposite side of the river, and wishing I could catch them, but I did not know and nobody could tell me how it could be done. I knew they took live bait, so I would take a stone a few feet from the hook, then put on a live minnow and throw it out with one end fastened to a stone on shore. Two or three lines were sometimes out, and when they were pulled in the chub was almost always scaled from head to tail. They seldom hooked themselves, because when they strike the bait they always run a few feet before they attempt to swallow it, and the anchoring stone will jerk it from their mouths. On cloudy days they would bite so fast that it kept me busy putting on fresh bait, but few of them were brought to land. Had I known the art of trolling, even, I might have had rare sport, and it almost makes me weep to think of what I lost through ignorance. The largest one I ever caught was an eight pounder, though very large ones were often caught in the shad nets.

Well, the milk is spilled and there's no use in crying over it. Like love's young dream,

"'Tis light that ne'er shall shine again,
On life's dull stream."

Oh what a beastly change has come over our glorious land of liberty since that time!

A few years ago I made a visit to my native place. Like the author of "Lines to a Trespass Sign," I felt like wandering over my old stamping ground, merely to stir up some old-time sentiment in my sluggish blood and wake up old associations; but alas! when I wandered out with my gun I could scarcely find a trace of the old-time scenery, for the woods had been cleared away and the fields cleaned up to such an extent that I scarcely recognized the place; and when, after a diligent search, my dog came on a covey of quail the sound had scarcely got away from my first shot before I heard a loud voice saying unto me, "We don't allow no shootin' here, now you git!" I got. And has our boasted land of liberty come to this? Is our new country already worn out? Are we to submit to the kicks and cuffs of wealth and selfishness that the trampled-on masses are subjected to in aristocratic England? Go to! A few years ago the selfishness of a few wealthy men, who would buy up nearly a county so that they could monopolize all sport, excited my disgust so that I "up and at 'em." I roused their ire to such a pitch that nothing would have delighted them more than to see my carcass chop'd up into catfish bait; no one raised a finger to save me from their furious wrath, but now, after dove-eyed peace has reigned so long, I pick up a stray number of FOREST AND STREAM and find such sentiments as these: "We must have more and better legislation or soon we shall have ourselves to blame for the loss of nature's gifts in mountain, stream and field—all gone to the till of avaricious speculators or to the keeping of men whose wealth gives them advantages over the poor, which makes nature herself weep." The author of "Lines to a Trespass Sign" now adds his strong testimony to the principles that I contended for. Yet in the day of my direst need, when the weight of the wrath of mine enemies fell on me and crushed me as the fall of an eider down bed from the top of a ten-story house would crush an elephant, he smote me not, seeming not to realize the fact that

"A friend in need
Is a friend to ——."

ST. AUGUSTINE, Fla. DIDYMUS.

THE BIG TROUT I LOST.

AT ten years of age I was "bound out" to a farmer away up in the Green Mountains of Vermont, far away from large settlements, where the woods and waters were well stocked with game and fish. From my earliest recollection I had been eager for hunting and fishing; but at my new home no time was allowed for such indulgences, except it was gained on a stint. In fact, both master and mistress were constantly scolding me for my penchant, always asserting that such pursuits were a mark of a ne'er-do-well. Just the same, however, they would eat the game and fish.

On day, before I was out of my teens, I had finished a hard stint at about 2 o'clock, and was soon on a stream that ran through the farm, and while the sun was yet well above the horizon was back to my starting place with all the trout I wanted to lug; and no fingerlings, for the stream was literally swarming with well-grown fish. I rarely went that I did not get one or more of 2lbs. and upward. On this occasion I had two such on my string. Just above where I was to leave the stream was a fine hole at a big boulder which jutted out from the bank. Here I had often found a solitary big trout, so I went to try for another. Sure enough, as I peered over there was one, and the largest I had ever seen. The largest on my string were babies to it.

Putting two big worms on my hook, I let it down from the quick water above, wide of him at first, but as he did not notice it I at last let it down plump to his mouth, when he lazily took it. Then with all my strength I gave him the grand "yank," and away up and backward he went, free from the hook, the last glimpse I had of him he was still going out over a field of grain and I was tumbling backward off the rock. I remember how I chanted with exultation as I got up and started for my big trout; but for all my seeking he was not to be found; and when this was realized I cried as if my heart would break. Then I comforted myself with the thought that perhaps my master would come with me in the morning and help search, it was such a big one. But not so; he jeered me for telling a fish lie, and when I cried at his refusal he threatened me with a strapping. That night, and for many thereafter, I cried myself to sleep over my loss; and even now, after the lapse of more than half a century, I keenly regret it.

The time came in three or four weeks to cut the grain where my prize was lost; and there, where a large clump of grain stood many inches taller than the rest, still dark green and growing, lay the skeleton of my big trout almost intact. I reviewed it with mingled feeling of pride and sorrow, and burst into tears. My master gazed spellbound and speechless. His face was a study as he realized its enormous size; thus I construed it. At length I ventured, timidly to be sure, to ask if he then thought I had told him a fish lie; when he found speech and snorted out, "Huh! I should think any blank fool could have found him," HUNTER.

LONG WASH, THE FISHERMAN.

FROM April 1 to Nov. 1 is the trout season in California. When I was a boy in a country neighborhood within 30 miles of San Francisco there were large trout in the stream that crossed the farm, and any boy who had a little patience could carry them home—a dozen or so, at least, for every Saturday morning. No one ever dreamed of taking trout out of season; it was a quiet and intensely rural community, game and fish were very abundant, and, what was of more importance, the habits of the growing boys upon questions of sport were more or less formed upon excellent models.

It was our good fortune to have a large number of genuine old sportsmen among the American settlers of the valley. They and their sons did much to form public opinion. When the trout season came in, the small and well-stocked streams in the mountains and within a few hours' drive were nearly always fished over by the same groups or families of anglers. The Tysons went to Stony Brook, while the Overackers preferred the Arroyo Mucho. Some went to the Calaveras and others to La Honda. There was room for all and within easy reach.

Long Wash Hardy was one of the best fishermen of his day. He was a Missourian of varied aptitudes, as good a sharpshooter in 1861-62 as the township afforded, a natural inventor and, in point of dry humor, a Western Sam Lawson, somewhat mingled with a Fishin' Jimmie. When I was a boy of 12, following him up a Coast Range cañon, the easy grace with which his long, lean figure slipped silently over rocks and through all sorts of brush and undergrowth was my constant delight and hopeless admiration. He could fairly float his loose, ill-jointed anatomy over any conceivable obstacle and into the exact spot from which to make a cast into a pool. I have long since learned that his fishing was pure genius, even better worth emulation than I used to think. Two hours of the early morning was all he would ever use, and often he would hardly be gone from the camp for an hour before he came back with what he would gravely announce to be "all the trout that a Christian ought to gather in." On one occasion he asked me to go along, as he "only had one fish to catch, but that was a hard one," and he "wanted a witness." We slipped into the bushes and took a path over the hill to the bend of a famous trout stream. Here, as Wash told me, he had labored for two seasons with a giant of the trout family, and here I watched him try every wile of the art with all-conquering skill and patience, until the dark cold waters were cleft by the shining, leaping beauty, and he carried back the largest trout of the year in all that trout-loving country side.

In those days no one took baby trout; the dear little "fingerlings" were always left to supply the streams. One young fellow made a catch of more than a hundred mountain trout in one day's fishing.

As he came back he met a party of four of the oldest anglers in the district. They stopped to compare notes, and none of the oldsters had more than twenty-five. They had taken all they wished and had then loafed about in the shade until it was time to start for home.

"Now, see here," quoth one of them to the young man, "don't you feel sorter as if you had been pluggin' green watermelons and wastin' things generally? Three whole days outdoors up in the cañon that ye might have had out of Wild Cat Creek, all gone to smash because ye wanted to get yer name in the county newspaper!"

Long Wash Hardy knew every trout stream of the Coast Range throughout the central counties—the San Pablo, Pinole, San Lorenzo, Alameda and their tributaries in Alameda; the Guadalupe Arroyo Seco, Carnadero, Las Lagas and others in Santa Clara; Corte Medera, Lagunitas, Nicasio and San Geronimo in Marin; the San Francisquito, Ynagas, Cupertino, and Redondo in San Mateo, and the innumerable mountain waters of Santa Cruz. Wealthy men used to write to him asking that he would go with them on long camping expeditions, but he never sold his fishing lore. As the streams near his home began to fail because they were so hardly treated by the careless horde of "anyhow" fishermen Wash grew melancholy over the impending desolation. He occasionally amused himself by taking a large speckled trout out of some pool from which no trout had been caught for a decade, but when summer campers filled the Alameda cañon and quarry men spoiled Stony Brook he "pulled up stakes" and went back into the Sierras. If he is still in the land of the living he is among the glacier-fed streams in the land of the sequoias on some settler's claim twenty miles from tourists and them who slaughter the gentle "fingerlings."

But if the shrewd, kindly fisherman is in such a wilderness, it may be that he is a dangerous man for the unsportsmanlike amateur to come across. I remember that his growing wrath against such always seemed to contain certain dire possibilities, and every year when the tide of travel flows from the cities to the higher mountains I somewhat expect to hear of a catastrophe. It once happened to Wash that, while climbing up a precipice to a higher level of a stream, he slipped into the water. He was carried over a waterfall of considerable height and only escaped alive because the pool below was of unusual depth. After that experience he often alluded to the much-despised "pot-fishers" as "fellers that ort ter be dropped down a waterfall." I should hate to be guilty of unprofessional fishing behavior above the Yosemite Falls if Wash were to be a witness of the affair, for our ancient alliances on long-forgotten trout streams would only prove to be an aggravation of the original offense, and I make no doubt the saucy water-ouzels darting through the eddies of the river 2,000ft. below would presently be astonished by the flash of a descending angler.

Wash, as I remember him, was far removed from the "ne'er-do-weel" tribe. His endless contrivances kept him in sufficient funds and even gave him some capital to invest. He could bud and graft with the best professionals, he was a tamer of colts, a rare one to work with the tools of carpenter and blacksmith, and he could superintend any sort of outdoor work. The boys in the old-fashioned neighborhood used to plan out Crusoe islands, vast, undefined, overflowing with animal and vegetable life; but when it came to the culmination of the ideal, room was always made for Wash in the boat of discovery. It was felt that island life would otherwise lose all its zest, and that most of the arts of life could thus be transported in one complete and universal bundle. It was understood that every other grown person had settled habits, family bonds and various unbreakable servitudes. But Wash had never put his head under any yoke; he always seemed nearly as independent as a boy who had a dollar of pocket money every week of his life. Then, too, he could teach anything and everything to a boy—that is, if he chose to do so. Of course, as we all knew, he would never, never teach any fellow all of the ins and outs of his trout craft. That was too much to expect; if we were in his place we would not do it ourselves. Yes, give us Wash and a desert island—a large one with real savages—and we would never care to come back.

That was more years ago than one likes to say. The boys are as widely scattered over the world as if they had indeed floated off on separate ships. If they think of Wash it is as frequenting the old haunts. But I often picture him to myself as enjoying his siesta—for that was his weakness—his noontime hours under some great pine of the high Sierras. He is smoking his brierwood pipe and reading for the hundredth time his well-beloved "Universal History, in three volumes, with colored plates;' that and Byron's poems and an illustrated Shakespeare were the only books he used to own, and I cannot imagine him as reading any others. There is venison in his cabin and trout for the pan (if it is in the season); there is a garden on the hillside; the mountain children go a mile out of their way to ask him questions, and watch him fashioning some wonderful thing in the cool mornings or quiet afternoons. The wind moves in the pine tops; the squirrels shake the small cedar cones to the ground; the sweet freedom of the unfenced forest is about him as he reads, and if he looks up, the gleam of the snow range shines between the trees. He hardly remembers that he ever lived in the little valley of farms and lowland pastures beside San Francisco Bay. CHAS. H. SHINN.

SAN FRANCISCO, Cal.

WAS IT "BEWITCHED?"

THE Editor's suggestion, in regard to a collection of reminiscences of the old days and times, recalls the strange old flint-lock companion of my early days, the unaccountable perversity of which, upon occasions of the most intense interest, seemed to my young mind positively uncanny and bewildering.

Little wonder to me that there was among the old hunters of the primitive times long gone, an occasional one, uneducated save in the lore of the wilderness, who became firmly grounded in the old European belief in witchcraft; and still less is it a matter of surprise if any were occasionally "pestered" with a gun of such singular antics as at times cropped out with that same old flint-lock shotgun.

A well made gun was this old single barrel, and one which threw small shot well, and after weeks and months of sport developed but one peculiarity objectionable to the eager boy who carried it, for while in almost numberless instances it has proved its perfect readiness to "go off" at any small game which persistent hunting brought into sight, no amount of "monkeying" ever did or ever could induce the disappointing old thing to shoot at deer. It wasn't a deer gun, and it simply would not by any hocus-pocus be induced to fire while a deer was looking down its muzzle.

To be sure, I had upon several occasions when no flints were procurable at the village store, successfully hunted rabbits with it when I was obliged to aim at bunny sitting in her form and then striking a match upon the leg of my trousers, stir the powder in the pan with the burning stick until an explosion occurred; it apparently had no intention of disappointing the excited young sportsman whose beating heart shook the long barrel until an accurate aim seemed impossible, but reserved all its stubborn perversity for the supreme moment when a graceful deer stepped out into an opening and for a few almost breathless moments faced the half-crazy boy, who would gladly have given all his small possessions in exchange for one sounding report just when he wished it with all the eager desire of a heart which had for the moment forgot to beat.

Once while hunting partridges (not quail) I had seated myself by a stump in an old abandoned clearing to eat my noonday lunch, when, hearing a slight rustling near by, I glanced over the top of the stump and there, not four rods distant, above the top of another stump, rose a graceful head surmounted by a glorious pair of antlers, and nearly a dozen times did I pull trigger on those great liquid eyes, staring wonderingly into mine, and as many times did the faithless flint fail to send a spark of fire where it was needed so sadly.

Again, upon finding that deer were beginning to come out of the great tamarack swamp into the oak grove along the river; apparently in quest of acorns, I loaded the old gun with a ball just small enough to roll down the barrel, with fifteen small buckshot on top of it, (what a marvel that the average boy does not blow out his small brains on numberless occasions) and with the sun within half an hour of setting, seated myself at the foot of a small oak at the edge of the grove on the side of the tree next the swamp where I could overlook the open ground in front of me. Not five minutes had passed when a little yearling doe was seen directly in front, three hundred yards distant, walking directly toward me.

Tripping gracefully forward, straight as a line, she came on. Directly in line between us, about thirty yards distant from me, grew a small oak shrub, and through the openings in its frost-bitten leaves I watched her with gun cocked and presented. As she reached the bush and stepped out to go around it she caught sight of me and stopped instantly. With elbow resting on my knee and with aim as true as for target work I pulled the faithless trigger.

Ch-whil-lick! responded the wretched gun. Fire flew from the flint in all directions—except the right one. Reaching forward my forefinger I drew back the hammer and pan-cover, while the pretty creature in front cocked her little head to one side and stared more fixedly than before. Again and again for more than a dozen times was the interesting pantomime repeated until (it being her supper time, she couldn't wait forever), she threw her little flag into the air and galloped slowly around to my right until the evening breeze gave her the scent, and again, in plain view, and not fifty yards distant, she stopped and snuffed the tainted air.

I watched her delicate nostrils dilate with the scent

of danger, and a half dozen times more did I ply that contemptible flint. Away she went, unharmed, at last.

O, the agony of boyish disappointment!

Had I been on my feet I should have flung the faithless gun in a vain attempt to break those graceful little legs which carried her so swiftly from sight. Moodily enough and with a heart of lead I strolled homeward, set the wretched gun in the corner, and when morning came and showed the trees around the cabin alive with pinnated grouse I stepped to the door and drew up the old shotgun; she "went" at the first pull.

Will some philosopher who may, perchance, idle away a few moments in reading this perfectly true narrative, please tell me about this singular gun—Was she "bewitched?" ORIN BELKNAP.

VALLEY, Washington.

MY FIRST DEER HUNT.

SO you want to know all about the first deer I ever killed, do you, and how I came to be so passionately fond of outings and the sports connected therewith? The love of out-door life in the woods, along the streams and on the lakes was born in me. I sometimes think there must be a strain of wild blood in the family somewhere and it has cropped out in me. The first real excitement about deer that I remember was when I was 11 years old; father came in the house one evening and remarked, "I'm going deer hunting to-morrow." My, what an excitement. Father going deer hunting! It was in Steuben county, N. Y., and it appeared that for several days they had been running deer on the pine-covered hills above Campbelltown. None had been killed, but some were seen every day, and two of my uncles hearing of it had become excited and they and father had planned to go on the morrow. Father ran some bullets, filled the powder horn—we were a simple folk in those days—cleaned out the long-barreled smoothbore and was all ready for an early start in the morning. After breakfast, eaten by candlelight, we, father, mother, brother, sister and self, were off. Were we all going? alas, no. We were to be left along the way at one of my uncle's, while father went and shot the deer. Of course he would bring a deer back. I no more doubted that than I doubted my existence. How long that day was. It was really a short dark winter day and cold too for that locality. Night came on and about 8 o'clock the hunters returned. Did they have a deer? Not much, had not even seen one. The only person of the fifty or more men out that day who had seen a deer was the negro who with a cow bell did the tracking. The hunters were nearly frozen and ravenously hungry. After warming up and eating the belated supper, we loaded ourselves into the sleigh and went home. We made father rehearse again and again every detail of the hunt. The negro with the bell and the deer track he actually saw deeply interested us.

The years went by and one lovely fall morning a party of four boarded the early freight train at Battle Lake, Minn., for a ten days' outing on the Leaf and Crow Wing rivers. Jim, Jeff, George and myself were the four. We had two good boats, two mess chests, tent, bedding and other dunnage for a comfortable time. Jim was a veteran in deer hunting, having taken many trips from Chicago into northern Michigan and Wisconsin, and done some tall killing. Jeff also had shot deer in Michigan and out on the plains. George and I had not only never shot a deer, but I had never seen a wild deer in the woods.

Reaching Wadena we procured teams to carry us and our baggage to the crossing of the Leaf River, about three miles distant. There was a full moon, and as its silver sheen fell over river and meadow and wooded bluff crowned by sombre pines, it was almost too beautiful to be of earth.

Early the next morning we were off. The same glorious weather, the same beautiful river and scenery, clearings being less and less frequent, the pine trees growing thicker and nearer the river. The only stop we made was for dinner, although we halted once or twice at places where Jim or Jeff thought they saw "signs" on the shore. During the afternoon Jeff shot four ducks which he started up from the river ahead of the boat. "We'll have them baked for our Sunday dinner," said Jim. Both Jim and Jeff began to grumble about the weather. "If it keeps dry and warm like this we'll get no deer." In fact, the newly fallen leaves made stillness impossible in the woods. As night drew on we looked for a good place in the pines for our Sunday camp, but could find none. At length we found a nice place among the hardwood and pitched our tent. We had taken the precaution as we came by some hay stacks in the afternoon to secure enough for our beds. After fixing our camp we crossed the river into some pine "slashings" hoping to start a deer, but none were to be found.

Sunday seemed more like a midsummer day than a late fall one in northern Minnesota, and Monday was a repetition of the same, only we had the excitement of following a wounded deer for awhile. Jeff had been absent from camp quite a while. Suddenly we heard his heavy Marlin ring out, once, twice, three times, then all was still for a long time. At length Jeff appeared, all excitement, "Boys, I've shot and wounded the largest buck I ever saw!" he exclaimed. Seeing how incredulous we looked, he continued, "Look there, see that." That, was a tuft of grass wet with blood. "Come help me track him." So we went. We readily found the place where Jeff was when he shot. "I was lying here under these trees half asleep and wondering if the weather would change, when I looked up and saw the deer right yonder; as I threw up my rifle he saw me and wheeled off. I shot and he stumbled, but he recovered himself and went on, while I sent two more bullets after him." Traces of blood were found here and there, but we finally lost the trail in a great marsh, and returned to camp without the deer.

We now decided to move on down into "better country," as Jim phrased it. We went on a few miles to where the Leaf joins the Crow Wing, and here we established our camp again. The next morning we started out, separating and beating the low ground that formed the peninsula between the two rivers. Jim and George went along near the Leaf, I was near the Crow Wing, and Jeff somewhere between. I sauntered along, stopping now and then, wondered where the others were, and if there were any deer in the woods. I came to a rise in the ground and went up the slope into the grand pine woods. Just as I did so I heard a rifle ring out again and again. I looked quickly to my left and saw George shooting at a deer running along through the open pine woods. I then saw my first deer in the woods. How it did run as George was emptying the magazine of his rifle at it. Just then I heard a crashing behind me, and turned just as two deer broke from the low ground and came dashing up the slope. They saw me as I turned and at once separated, one going to the right and one to the left. I threw up my gun and fired at the one on the right, and great was my astonishment to see the deer jump high in the air, turn a complete summersault, and then lie still on the ground. I had killed my first deer. There was no mistake about it. I ran to where he lay, and if ever I felt mean in my life, it was then as I stood by that beautiful animal stretched out there with its legs slightly quivering and its wide-open eyes looking so reproachfully at me. Just then I heard a shot on the other side of the slope, followed quickly by a second, and knew that Jim had sighted a deer. George had now joined me and, leaving my deer lying there, we went over the ridge and found Jim standing by a deer he had just shot. Jeff now came up, and there was general congratulation and a triumphal march back to camp.

Jeff had started the deer from a willow thicket on the low ground. "But," he said, "I'm going home if I've only come out here to be beaten by a fellow who was never on a hunt before and never saw a live deer in his life." He did not carry out his threat, however. We put in two more days there, but the weather grew continually warmer and the woods drier. Finer weather for camping could not be desired, but it spoiled the deer hunting entirely. We concluded to break camp and move on down the Crow Wing. This is quite a large stream and very picturesque. In some places there are rapids over which it required considerable skill to run our heavily loaded boats. We ran them all in safety, only Jim and I were hung up once in midstream on a boulder. Fortunately we ran square on, so did not capsize. The day was very warm. While we were resting at noon, Jeff and I proceeded to investigate the river for specimens of agates and shells. In our enthusiasm we partially undressed, and I shall ever remember the look on Jeff's face as, having waded out to a large boulder, he stood upon it calling to me to come, and as I started his feet slipped and down he sat in the water up to his chin.

There being no promise of change of weather, we decided to go on down the river until we came to where there was a railroad station, when we would start for home. The dusk of the following evening found us hauling our boats from the river, and at midnight we boarded the westbound express and were home in time for breakfast. And I had killed my first deer.

Jim is now the popular landlord of the far-famed Prospect House, Battle Lake, Minnesota; George is proprietor of the boat houses and fleet of boats on the same lake. He has not killed a deer yet, although he has gone after one every fall since. Jeff and I are here in Detroit City; he is the county attorney now and I am pastor of one of the churches. The world is not so very big after all. A year ago last fall, while Stephens and I were at Cushing, a siding on the Little Falls cut off of the N. P. R. R., for a week after deer, the evening we broke camp to come home it was bitter cold and the snow coming down thick and fast. We not wishing to remain out in the storm until the train came along, took refuge in a logging camp, and here we found George, who with two other gentlemen, had been out for ten days. Last fall Stephens and I went on the same cut off at Curtis's siding for a week, and while in camp learned of a large party camped about three miles from us.

One forenoon we walked over where we judged the camp to be. After a rough walk we found it, and who should be there but Jim with six of his friends. They had been there nearly two weeks, but had poor success, only one deer having been killed. We took dinner with them, and Jim rehearsed "The killing of my first deer" for their benefit. I believe Jeff and Jim are planning to get off together this fall, going up in the Red Lake country somewhere, while I shall probably go some place where the deer abound with my outing chum and all-around friend Stephens. And by the way, before I had ever met Stephens he had met Jeff, and Jeff had told him of our trip down the Leaf and Crow Wing, and how "I killed my first deer," so when Stephens and I became acquainted one of the first things he said was, "I've heard of you before, and how you killed the first deer you ever saw at the first shot." MYRON COOLEY.

DETROIT CITY, Minnesota.

REMINISCENCES OF A SNAP-SHOT.

SMALL boy of 12. Small sawed-off muzzleloader of unknown caliber, weight 'steen lbs. Dime's worth of powder, pound of shot, an old newspaper for wads, and Saturday when school kept not, and pocket full of caps, at 5 cents a box. Two hard-boiled eggs—salt and pepper forgotten, of course—two slices of bread (hard as bricks at lunch time), a black-handled jack-knife, a piece of string—also left at home with the salt and pepper—and a determination to bring back a bear or two with No. 8 shot. A dozen instructions from mother to be careful, a howl from younger brother at not being taken along, a hole in toe of one shoe, ditto in trousers, three matches in pocket (wet with sweat when called to be used), a 5-cent fish line—also forgotten and left behind— a pair of cloth suspenders sewed on, and a determination to take a swim before coming home.

A creek, with a little slough filled with cat-tails and lots of things a boy don't know the name nor use of, but also contained a few woodducks; a little path to it, and the boy crawling snakewise along it; a shot ahead of him, and an antiquated German returning up the path with a couple of ducks and a muzzleloader 10ft. long. Disgusted child and happy German.

A pond a mile above, frequented by one solitary crane; another sneak, mindless of clothing; Mr. Crane surprised in act of impaling a frog or some such creature; a shot point blank; Craney gives a yell, or something sounding like it, and quietly sails away; boy can't sail, so he goes to the meadows, shoots at a few small fry, without success, looks for his fish line with ditto, goes down the creek to his old swimming hole, gets some of the mud off his skin, dips his scanty clothing and hangs it to dry, while he sits in the sun and gets burned from head to foot, puts it on and goes home the back way, with nothing to show but an empty gun and a wet jacket.

Finale: A spanked kid. A SENIOR SNAPPER.

KANSAS.

THE VELVET TRAIN of the Monon Route between Chicago and Cincinnati offers the best and most luxurious service obtainable between those points.—*Adv.*

MY FIRST REPEATER.

IT was in the old Nutmeg State, and back in the forties, say forty-six. My father and mother were making a journey in the "far West," supposed at that time to be located in the neighborhood of Ashtabula, or somewhere on the "Connecticut Reserve." We children had been left in the care of Patience, one of the best of old New England housekeepers, a class of whom the present day sees only now and then a type. My father had a double-barreled shotgun and numerous samples of smaller arms, and I had early developed a passionate fondness for such tools; that was before the days of revolvers, even of the "pepper-box" style.

Rummaging about the cabin of the old ship Meteor I had found in an arm-chest a rusty boarding pistol, originally flint-locked, but at this time minus lock and pan; and as it had been deemed harmless and a safe plaything for a seven-year-old boy I had been permitted to use it for my own pleasure.

The morning of the glorious Fourth awoke the old hillsides and the sound shore with the echoes of booming signal cannon, guns and small arms, accompanied by a boy chorus of crackers, and aroused the sprouting patriotism in my breast.

Before the sun I had risen and, escaping from the vigilance of Patience, was early out among the boys in all the glory of my empty pistol, and yet I was not happy after the first few minutes: crackers were tame and quiet and I longed to fill a larger place and have a larger share in the din of the dawn of Independence Day. Taking a hint from some observations of the process of blasting rocks, and getting surreptitious possession of a horn of powder, I put a load in my pistol, and lighting it off with the main fuse of a pack of firecrackers and holding it above my head, "just like the big boys," off it went with as much noise as if it had lock and all things complete. I experimented with two loads, one above the other, separated by a good oakum wad and with my cracker fuse leading to the lower charge, and got two successive reports, "for all the world like a regular double-barrel". Elated with my success, I tried four charges, and with military promptness and regularity they went one, two, three, but No. 4 seemed to hang fire for a long time (two or three seconds are a long waiting time to a seven-year-old), and I was just bringing the pistol into position for examination, perhaps I blew in it or at it, when, well, if I remember rightly, that harmless plaything went off the wharf and into the river and I ran bellowing home. It was still early; a small boy can get into a good deal of mischief in a very short time. Breakfast was just ready, the morning's milk had just been brought in and the big bright tin pail stood warm and foaming on the kitchen table. Patience, good soul, foregoing her usual privilege of scolding, took me in hand, washed my burnt cheek and closed eye with new milk and with a cambric needle carefully removed the last speck from my face and sent me off to my grandfather, who was a physician. There I spent three weeks of that glorious summer weather in a darkened room, miserably trying to console myself with imaginary cruises along the shores and over the fields until I was released from duress; and if the old doctor could speak out from his long rest we would doubtless hear the oft-repeated warning, "That a gun is dangerous without even a lock, stock or barrel." NUTMEG.

ST. LOUIS.

A BOY'S TROUBLES.

TO BE born of "poor but respectable parents" is nothing of which one should boast. Most writers of autobiography have had that experience. The being poor is at times very inconvenient and hard to bear, but to be poor and without fishing tackle is more than a boy of spirit can endure patiently. The question to be solved is a weighty one and the writer has his manner of solving it indelibly imprinted upon his memory.

Nearly seventy years ago, a descendant of "poor but respectable parents," I found myself old enough to go a fishing, but without tackle. One cent would buy a hook and a small piece of licorice at the country store; that matter was easily arranged, now for a line. We had a good crop of flax and small as I was I had assisted to bleach and prepare the lint and sister Fannie would, in consideration of my services in passing the warp ends so she could take them through the reed, spin for me a double and twisted line. All ready now except the bait. You may think I am going to dig worms; not a worm; the white grub from the decaying wood was the only bait we knew: and being fully equipped with alder pole this youthful "Izaak" went forth to capture his first trout.

It was not necessary to go out of my mother's sight, for in front of our house a bridge crossed the East Oswego creek, ten miles from its entrance into the Susquehanna river, and that was the place where I was to cast the "line."

Between the planks of the bridge I could survey the stream underneath and to my great delight I saw among the number of fish, enjoying the shade of the bridge, one really noble trout. Then dropping my hook over the upper railing and watching it through the crack I soon drifted it near the place where it should be, and to my great delight the trout seized it, when, sans ceremony, he came to the surface, but not to stop, for never since the days of Tenbrook has there been such speed made as with pole over shoulder, I covered the space between the bridge and house, to find a happy mother.

More than sixty-five years ago I left the scene of my youthful pleasures. Sometimes I visit friends and relatives that remain there, but never do I see the old bridge without thinking of my first trout. G. L.

It is sometimes difficult to select an acceptable present, something that will give real pleasure. For the sportsman there is nothing more pleasing than a book which deals with his favorite topic. He enjoys its perusal, and the satisfaction it gives him is a lasting one. FOREST AND STREAM'S *free illustrated catalogue gives the intending purchaser a wide range of selection and offers many suggestions which at this season of the year are very timely.*

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

SOME EPISODES IN THE LIFE OF A VERY BAD BOY.

THE quiet little village of —— of this State was honored by my appearance on the morning of Sept. 13, eighteen hundred and never mind.

The honor I fear was never fully appreciated by the denizens of the hamlet.

My first recollection of myself was upon the occasion of my putting the kitten into the tea kettle just prepared to be hung upon the hook of an old-fashioned crane in the large open fire-place of the kitchen.

The peculiar flavor of the tea led to an investigation and detection of my part of the business. It is needless to say that the warning I received on that occasion was so impressed on my mind and body that it took root—served as a data of introduction to a succession of similar attentions to my early education which failed to eradicate the brightest ambition of my juvenile mind to destroy infant cats; and regardless of the many similar applications of slippers and small birchen rods I continued to discourage the efforts of our old white Tabby to raise a family of mousers. The well and the rain water barrel afforded excellent facilities for disposing of them. I always felt sorry for the kittens, and invariably shed tears over them when consigning them to their watery graves, but the mania for destruction prevailed, in spite of my sympathies, and they had to go. The catastrophe being followed by the usual application and practical illustration of the proverb that to spare the rod is to spoil the child. It is but justice to my honored father to say that if I was spoiled it was from no neglect on his part. He did his duty honestly, and with a vigor worthy of a better cause.

On looking back through the long vista of years and bringing to my mind the recollection of my early days, I cannot but believe I must have been a trial to my respected parents, and I think it must have been very near the truth when it was asserted that I was the worst boy in the village, and especially was it so stated with great emphasis when one Sunday morning it was discovered that there was not a whole pane of glass remaining in the school-house windows. A trial of skill on the afternoon previous between another young gentleman and myself as to who could hit the greatest number of panes with the fewest number of apples from the adjoining orchard, resulting in my favor, as well as a subsequent reward of merit. As the young gentleman aforesaid, with a view to shirking his share of the responsibility, had hied him homeward, and "blabbed" on me, as the culprit, disclaiming any participation on his part. The consequences were of a serious character, involving a heavy bill for my governor to pay for damages. The result to myself I pass over. Imagination can supply description, but there was a little personal matter to be settled between that young gentleman and myself for his having "peached." For a whole week I had to nurse my wrath, as he kept very shy of me, but on the following Sunday morning as he was coming out of Sunday-school, conveyed by a spinster aunt, and dressed in an immaculate white linen suit, I seized him on the very portals of the sanctuary. It had rained the night previous and left a charming mud puddle just in front of the church, and despite the rush of the spinster aunt to the rescue, her darling was treated to a bath, remorselessly rolled over and soused until there was little left of his magnificence; and when hauled ashore by the aunt and the beadle, he was a sight to behold. I will pass over the excitement this little episode caused. The minister preached a sermon on the growing tendency of the young to iniquity and the duty of parents. A convention of the old village gossips was held, and it was universally resolved that my future life would be a series of desperate crimes winding up with an ignominious end, the scaffold or the prison, with expressions of sympathy for my poor parents. I found myself tabooed and outcast, shunned by all the boys, who were forbidden to associate with me, whereupon I thrashed them in succession, as I caught them, by way of keeping up my character for ferocity. I was the terror of the village, everything thereafter being laid at my door, and I think I rather enjoyed it. My mother was sorely grieved and shed many bitter tears over my great demoralization, but the governor, much to my surprise, sided with me, as I afterward learned, for the manner of my punishment, of the treachery of the embyro midshipman, whose father was a superannuated old commodore of the navy. Years after I met this same young gentleman, then in command of a gunboat, and reminded him over our after-dinner cigars, of our boyish days and his Sunday morning bath.

About this time, when my social standing in the village was at very low ebb, I conceived the idea of paying off an old village doctor for sundry old scores. He was a portly, heavy man, but could run like a deer. He had an office in a two-story building with a piazza in front on the second story; and he never seemed to go to bed, but would sit in front of the fire smoking a long pipe into the small hours, and his boys could never slip out late in the evening to have a little lark, such as changing gates, and tying long strings to knockers to ring them furiously at midnight, but what that old doctor would be on the alert, and give chase.

One evening in passing quite late I saw him through the window smoking as usual. I had noticed that day that there was a long ladder in the rear reaching to the roof; it had been left by the carpenters who were making some repairs. The idea occurred to me that my chance had come; so slipping home and up to my room, I took a package containing about half a pound of powder I had traded eggs for, a few days before at the village store, and going behind the building crawled up the ladder on to the roof and to the chimney, dropped my package down, and made a lively retreat for the ladder. Just as I reached it I heard the explosion. Sliding down as rapidly as possible, I struck out, knowing he would soon be after me, but I thought I could get across the street into my house and to my room before he could get on my track. But I failed in my calculations, for before I had got half way I saw him after me. There was just moonlight enough to enable him to keep me in sight. There was a cornfield at hand, extending to the bank of the river. I broke for it, and over the fence I went, and none too soon, for he was uncomfortably close to my heels. As I ran the rustling of the corn gave him the direction. I thought that if I could make the river bank I could either hide in the willows, or, failing in that run down the bank to the bridge and cross or in the darkness flatten myself against the side and let him pass. But as I emerged from the corn he appeared a little distance down the bank. He had divined my plan and cut me off. There was but one thing to do; take water, and in I plunged, thinking as it was rather a cool night he would not follow. Vain hope. I heard his heavy splash behind me, and his porpoise-like puffing. But I could beat him swimming, and landed on the opposite bank considerably ahead; took the road and "streaked it;" and he after me. Coming to a dense thicket that darkened the road I dodged into it, and had the satisfaction to see him pass. There was another bridge half a mile further on, and knowing he could reach the village and my house as quickly or sooner than I could by ambling back to the other one, I made for the river bank again and plunged in, swam over and made a bee-line for home; crawled in at the kitchen window, shed my clothes, wet to the skin, hid them behind the door, tip-toed up to my room, hurriedly put on a dry shirt and hung another suit of clothes over a chair, and set a pair of dry shoes by it, and jumped into bed. I had not been there five minutes before there was a thundering knock at the door; and the hubbub was repeated until my mother being awakened put her head out of the window and asked who was there. (The governor was absent.) The Doctor answered, and said, "I want to come in." Wondering what could have caused such a request on his part, at such an hour she went down and let him in. The first inquiry was if I was at home. My mother answered, "Certainly." The Doctor was incredulous and wanted to see, explaining that he had been blown up, and he believed I was the culprit. My mother indignantly led the way to my room, where I was sleeping the sleep of innocence and was with difficulty aroused, and much astonished at the spectacle of the old doctor in his dripping habiliments, and my mother in a wrapper. The Doctor eyed me sharply and then proceeded to examine my clothes. Saw they were dry, picked up my shoes and looked at them, then at me and shook his head doubtingly as my mother said, "Now, Doctor, I hope you are satisfied." He departed gloomily, went back to his office, cleaned up the wreck, and went to bed.

It was lucky for me that he had to stop long enough to grab a broom and hastily sweep the coals and ashes back into the fire place, or the building would have been burned. At the moment of the explosion he was sitting in his favorite position with his feet on the mantel, and was thrown over backward amid the coal and ashes, but fortunately the bottom of the chair protected that portion of his body from damage, but his eyebrows and long whiskers were singed, and his stock of medicine bottles and drugs a wreck.

Twelve years later I chanced to revisit my native town. I found the old Doctor sitting in front of the fire at the old hotel, tavern as it was called, with his back as usual, at an elevation, smoking his pipe. The evening before I left, after a long chat about old times, the Doctor after a pause said, "I want to ask you one question." I replied, "Go ahead." "Was it you that threw that powder down my chimney?" I had to laugh and confess my crime. The Doctor drew a long sigh, apparently of relief, saying, "Now, I can die happy. For twelve years I have had it on my mind. I knew well it was you all the time, for I knew you were the only boy in town that could outrun me, but didn't you play it fine though?"

* * * * * *

The sexton of our church was as disagreeable an old curmudgeon as could be found in the whole county and it was our delight to annoy him. He was toll collector of the bridge, and at nine o'clock the gate was always lowered as a precaution against free crossing after he had retired. Selecting the coldest night, we would hammer on his door and rout him out to raise the gate, but before he came out grumbling and shivering, we were at a safe distance and then, although a deacon in the church as well as sexton, how he would swear.

On one cold winter night, the evening previous to Christmas, we planned and executed the very laborious feat of turning the church bell bottom up, propping it in the reversed position by sundry sticks of wood; and climbed the ladder to the belfry with buckets of water, knowing that it would freeze solid before morning, and that when the old sexton came to ring it, as customary, it would give forth no responsive sound. We had lugged up nearly a dozen buckets, and were on our way down the ladder for one more round to complete the job, when the supports gave way, and down came the whole contents on our heads, giving us a shock and an icy shower bath that we had not calculated on. Fortunately we had wrapped the clapper with a grain sack as our first idea of silencing it; but fearing that that would be removed and the job fail, on second thoughts we had adopted the water treatment. We scrambled down and stood shivering, holding a consultation. The other two boys were for giving it up. Their ardor was effectually cooled, and despite my indignant protest they were for sneaking off home. I determined that the enterprise should not fail; and after obtaining their help to prop up the bell again, this time securely, by the aid of the bright moonlight shining in the belfry. Then they went home half frozen, while I, resuming my bucket, began the laborious work of going to the creek back of the church, and lugged nearly a dozen buckets of water up to the bell and pretty nearly filled it. I did not feel the cold, the exertion kept up circulation. Having finished my job I scuddled home, only a few doors distant, and cautiously crawling up to my room got on a dry shirt, jumped into bed, and was soon sound asleep.

The next evening, Christmas Eve, the church was brilliantly lighted and at seven o'clock the old sexton seized the rope to ring out the Christmas peal. The first pull on the rope of course disturbed the props and over went the bell weighted with a hundred pounds of ice, with a suddenness that jerked the old sexton nearly to the ceiling. Great was the wonder that the bell did not ring out its Christmas carol and summons to evening services. People began to arrive straggligly, curious to know what the trouble was; was the parson sick? What was the matter? Some of the young members secured a lantern and climbed the ladder which was now ice (the capsized water having frozen), making it rather a ticklish business. The reason why that bell would not ring was then discovered, and dire was the punishment promised to the culprits guilty of such a scandalous trick. Suspicion would have at once pointed to me, on general principles, as being the author of all the deviltry going on, but it was universally decided to be the work of full-grown men, as no boys could have turned that heavy bell bottom up and held it there long enough to get props under its rim. It never occurred to them that we three boys had solved that problem, by hauling down on the rope, and by the leverage reversed it, and then taken a turn on the cleat where the rope was always hung to get it out of the way. Thus secured it was comparatively an easy job to prop it up; our first failure had resulted from our carelessness in not securely fastening the rope to the cleat.

When it was decided to be the work of men, it was laid to some of the members of the Presbyterian Church at the lower end of the village, between which and our church great rivalry prevailed, and a bitter feud existed characteristic of the different creeds while all the time preaching peace and good will toward all men—good Christians, but just ready to tear each other's eyes out. It was a great comfort to my good mother to be able to say: "Well, for once they can't lay this mischief to my son."

The aforesaid son held his own counsel and did a large amount of inward chuckling, knowing it was all safe as the other boys were too scared and afraid of consequences ever to "blab," and to this day that innocent Presbyterian Church down the street rests under the odium of such a contemptible manifestation of jealousy of the real and only respectable church, the Episcopal.

Of course, it will be said by all good people that boys showing such traits and want of reverence must necessarily come to a bad end, theory requiring it—and for once there is pretty fair grounds for its correctness, for, of the three, one brought up in the penitentiary for crookedness as cashier of a bank; another went to Congress, and the third, your humble servant, has, as you see, taken to writing for newspapers. Take your choice as to which has fallen lowest.

Apples and melons, it is my firm conviction, were the (not weak) inventions of the enemy, *i. e.*, his majesty, the devil. Much juvenile demoralization can be traced to the enterprising pursuits of these contributions, or rather temptations, in the path of youth—it being a singular coincidence that the path of youth with much proneness leads through a prolific orchard or melon patch, presumably as a short cut to a given point.

Early apples and enterprising and ambitious melons ripening prematurely were in our boyhood days closely associated with mean and irascible old grangers, and very stub-tailed bulldogs—the governor ever ambitious to tan our jackets, and the latter to do violent damage to the seats of our trousers. In cases of an absence of bull dog, resource was often had to nice little doses of calomel and jalap, cleverly introduced into a watermelon left temptingly exposed to the longing eyes of the small boy. Such cases were often very fetching (it might be spelled with an r), and the village school was not honored with the presence next day of little Johnny and his big brother. A very scrawly note from the mother, more accustomed to domestic duties than correspondence, generally read:

Schoolmarm: You will please to scoose Johnny and Willie to-day as they is took bad and can't come.—MRS. DOOZENBURY.

The undersigned was caught but once, and in that instance fell heir to a dose probably intended for impartial distribution among a joint concern with several partners in the watermelon line—but in the case in point I was doing business solely on my own hook—realizing all profits personally and shouldering all disasters. The one shouldered in this instance weighed about four pounds, but in effect might have weighed a ton. After partaking of that vegetable, or most of it, behind the wood shed, I experienced internal premonitions of an earthquake, with a vesuvious termination, which premonition was successful to a degree that would have filled the soul of Wiggins with envy. It filled mine with alarm. The balance of my construction was not filled again for several days. As they say in stage plays, "an interval is supposed to have elapsed." One did in my case, during which my absence from school was noted, and when the rumor reached the owner of that watermelon he grinned sardonically.

It was scarcely a week later that my special chum, innocently straying through this man's orchard, with eyes thoughtfully bent upon the ground under an apple tree, was suddenly set upon by the stub-tailed bulldog previously mentioned. Scorning any personal argument with the dog, the boy scaled up into the apple tree, where he was comparatively safe. The owner who had instigated the attack from the other side of the fence, gave the dog the injunction to "Watch him, Tige," a pleasure Tige seemed greatly to enjoy. Happening along myself, possibly influenced by a fancy for watching the progress of Pomona's efforts to bring the June apple to a toothsome condition, I was hailed by my chum. When I looked over the fence the condition of things was explained. I pondered how a rescue could be made. The tree was not over ten feet from the fence, not much ground to cover in the absence of that bleareyed quadruped, but a feat attended with certain risks as the case stood. An idea struck me, and bidding Jim be of good cheer, I broke for home and raided the kitchen yard for about twenty feet of clothes-line. Making a slip noose at one end and taking my fishing pole from its rack, I returned to the orchard. A reconnoissance showed that old Brown had gone to his dinner, and the coast was all clear. I made fast my line to the rod and passed it to Jim. "Now," I said, "Jim, you watch your chance, drop that noose over that dog's head and pull." Evidently that miserable dog had his suspicions, and eyed our preparations very curiously; and several times successfully dodged the rope, but at last I attracted his attention and the noose went over his head, followed by a tightening jerk. Jim held on, ending the dog up on his hindlegs, and passing the rope over a limb threw the end down to me. The dog was safe; he was too busy snorting and trying to breathe to pay any attention to me; moreover, he couldn't if he wanted to. Seizing the rope and pulling on it, up went the dog, and down came Jim, a released and free man or boy. We secured the rope to a limb, scaled the fence, and were off. There was a changed condition of things, and by no means a happy one for the dog. He never troubled us boys after that; and that farmer later was inquiring who had a dog to give away.

There were now two grievances to be settled; and Jim and I entered into a treaty offensive and defensive. I procured several ounces of rhubarb and jalap, and bided my time. We knew that about once a week of a Saturday old Brown came into town from his farm a mile away, and as regularly got drunk, previously to which he laid in a gallon jug of whisky for his week's supply.

It was the usual custom along late in the evening, if Brown was too drunk to get into his wagon, as was generally the case, for some one to end him in, and start the old horses for home, as they were a steady old pair, and sure to take him home safely, where his farm-hand received him and left him in the wagon to recover at his leisure. One Saturday, soon after our little dog episode, Jim reported Brown in town and very drunk. Watching until he was started home, we followed cautiously, and when well out of town, we stopped the team, took the old tar bucket, which in those days hung under every farm wagon, and with an old paint brush, which Jim had provided, we proceeded to lather his face and beard and hair and every reachable part of his body. Meanwhile, as Jim was putting on the artistic touches, I was charging the whisky with my little dose. When all was finished we started the team homeward.

Brown did not do much farming the subsequent two weeks. He did not feel well Sunday morning; scraping tar made him sick, and whisky being his universal panacea for all ills, while his man and wife scraped away on tar, he pulled away at the jug. Contrary to his theory, the more he drank the sicker he got, until there was hardly enough left of him to be worth saving. As he persisted in turning to the jug between each spasm, Brown and the jug were both exhausted about the same time. If there had been one more pint the jug would probably have won. As it was, Brown was laid up two weeks for repairs, but the best of it was (which Brown declared was the meanest) that from that time out he could not bear even the smell of whisky. We had unwittingly reformed Brown.

One day, a few months later, as I was going past Brown's house, he was leaning on the gate thoughtfully chewing a straw. We passed the salutations, Brown's good morning being unusually cordial. As I had nearly passed he hailed me again, saying, "Hold on, I want to ask your opinion on a question." "Well, what is it?" "Do you think watermelons are going to be healthy this season?" I said I could not say about watermelons, but I thought it would be a poor season for bulldogs, and the quality of whisky was said to be very bad this year. As I passed on Brown shook his hand after me and remarked, "Ta-ta, you consarned little cur."

I think Brown could have forgiven the jalap and the bulldog, but never his involuntary reformation. Such is the ingratitude of this world; we do good by stealth, and our good intentions are never properly appreciated, but there is a moral in the system that is worth the attention of the prohibitionists, and no charge for the recipe.

At the lower end of our village there lived in an old tumble down house a mysterious personage, generally known as the Bashaw—the name arising from the fact of his seldom being seen except when dressed in a long bag-like garment of foreign cut, supposed to be such as Orientals wear, and also from a legend that he had had seven wives, all of whom had disappeared mysteriously; and we boys believed they were buried in the cellar. No one ever visited him, and he never left the premises, and save a foreign looking serving man no one was ever seen about the place.

There was a fine orchard back of the house, but as the old fellow sat the entire day on his back piazza overlooking the orchard, no boy dared to sample this forbidden fruit. But one day in passing I peered through the fence and saw the dark-visaged servant digging a deep pit and at once surmised that another wife had fallen a victim to old Bluebeard and that this was a grave intended for her reception. Hiding myself in the hedge I awaited developments. The pit being finally finished the man brought a bundle of straw and lined it carefully and departed. I was firmly convinced that he had gone for the body, but instead he returned with a bushel basket of fine large apples and dumped them in. Again he left and returned with more apples and finally covering the whole with straw proceeded to fill up and carefully cover the "cache," and departed. I carefully marked the spot and slipped away unnoticed, making a mental note of some future occasion when apples became scarce. A few months later, one snowy winter evening when half a dozen of us boys were surreptitiously gathered in the counting house of the village store, near at hand to the old Bashaw's house, with a pitcher of cider and nuts and raisins, a general lament went forth that we had no apples. I at once bethought me of the old chap's "cache," and imparted my knowledge of a supply close at hand; and called for pick and shovels and volunteers. This was responded to enthusiastically; all went with baskets and mining tools, and we were soon silently at work and speedily reached the apples, filled the baskets and carefully filling up the hole departed, having first acted on the proposition of one of the boys to bury a large dog that had been accidentally run over and killed and lay in the street. The dog was duly consigned to the hole to help fill the space left vacant and carefully eradicating all signs of our work we returned to our den and made merry well into the small hours. Fortunately it snowed and covered our tracks entirely. After stuffing ourselves to bursting, we hid our surplus in barrels in the cellar and every Saturday night with shutters carefully closed we reveled in cider and apples.

One day, in early spring, one of the boys came to me hurriedly and reported a something going on in the old Bashaw's orchard. We reconnoitred and saw the old chap out there in his long Turkish robe superintending the opening of the cache. We hid ourselves and waited for developments. The man dug away until finally reaching the straw, which carefully removing he uttered an exclamation and started back. The old man said something angrily, and stooping down bent over to look in. The ground being soft gave way, and into the hole he went, head foremost, heels in the air, kicking and yelling, the man struggling to pull him out; when he finally did, the old fellow grabbed a pick ax and made for the man, who ran, and after him, with the pick raised, bareheaded and the long robe streaming after him, the old man pursued. Around and around the orchard they went until the old chap caught his foot and fell sprawling, while the man escaped. A passing farmer climbed over the fence and assisted the Bashaw into the house and the doctor was sent for. We never saw the old chap out again and a couple of months after he was found dead in his chair. Every one of us, firmly believing in his own mind that we were the cause of his death, and felt properly conscience-stricken and never dared whisper a word of our midnight raid on the apples. Fortunately they had all been eaten or the attempt to eat one would have choked us. We mutually vowed to reform and steal no more apples (it being early summer when there were none), and we kept our good resolutions faithfully until the fall crop came in. PODGERS.

ANGLING ANNALS.

FROM THE NOTE BOOKS OF AN OLD FISHERMAN.

1812.—Aged 6, in Newton, Mass., began to fish for minnows, sunfish and shiners.

1814.—Catch perch, pickerel and pout or catfish in Charles River and various ponds, thus far with worm bait. Took my first trout in Smelt Brook, Newton. Eels and catfish at night in ponds.

1818.—In Boston. Flounders, tomcod and eels from the bridges in summer; also an occasional small codfish; these with clam bait. In the fall we took smelts from the wharves with minnow bait; sometimes three or four dozen in a tide. At that time there were no fishing tackle shops, the hardware stores sold hooks and lines for hand line fishing, but no rods, reels, flies or the hundred kinds of tackle which now tempt the angler. When I aspired to the use of a rod it was a cane pole, and my reel was of wood, made by myself. Anglers who wanted fine tackle had to import it from England.

1819.—Leave school and go to work in a store, so had no time for fishing for years.

1825.—Took my vacation in a fishing trip to Barnstable, Cape Cod. Found plenty of trout in streams and ponds—got twenty to thirty pounds in a day, with worms, average size half a pound. This year my last catch of trout in Newton, the stream being nearly fished out; I got a handsome brace of trout weighing two pounds. After this no fishing for many years, spent in business at home and abroad.

1839.—Remove to Chicago, then a small town on the verge of the wilderness, but with abundance of game and fish. In the Chicago River, now an open sewer, we found pike, pickerel, black bass, catfish and dogfish; from the lake pier we took lake trout, two to five pounds, pickerel, pike-perch, perch and catfish, these last sometimes up to twenty pounds in weight.

In the Calumet River, muscalonge, pike-perch, pickerel, black bass, large-mouth, and catfish. All these taken with minnows, for the spoon was not then in use; the first that I saw were in use in the lake schooners about 1845, and were used in trolling for lake trout.

In 1840 there were but two houses on the Calumet River from its mouth to the bridge, about four miles up; these were log taverns. Fish were very abundant, 100lbs. to a rod of pickeral and bass were often taken in a day, pickerel from two to five pounds, bass from one to six pounds, a few muscalonge; one I saw at the mouth of the river, which was taken in a seine in the lake, was six feet long and estimated to weigh eighty ponnds, and, I think, correctly.

About this time the effects of an English immigrant were sold at auction in Chicago, among them a box of fishing tackle, which I bought for a trifling sum, and found in it hooks, lines, gut, trout flies, reels, and an English trout rod; a clumsy affair, compared with the American fly-rod of to-day, built of hickory and ash, and weighing at least a pound, but it proved a useful weapon for the heavy fish of that region.

1841.—Made a trip to the Sault St. Mary, outlet of Lake Superior. Fished in the rapids in bark canoe with Indians, also in the adjacent streams, and got many trout up to 2lbs. in weight, with fly, usually 20 to 30lbs. a day.

1842.—I investigate the lakes in Waukesha county, Wis.—Pewaukee, Pine Lake, Okauchee and Oconomowoc—find black and rock bass, pike and pike-perch in abundance; some pike weighing 18lbs. I have seen taken there. In Back River I take my first black bass with a fly.

1843.—I place a boat in Crystal Lake, in McKenny county, Ill., where no boat had been. In our first day's fishing two rods killed 100 fish, one-half black bass from 2 to 4lbs., the balance rock bass and pickerel. In one day at the Calumet River two rods take, trolling from the mouth of the river to the bridge, 250lbs. of pike and bass.

1845.—Fish the Fox River from Geneva to Batavia, with minnows and fly. Twenty-five to thirty bass, 2 to 3lbs. weight; this in July.

1846, May.—At Ottawa, at mouth of Fox River, fished three days with Delano, of the Fox River House. Got in that time 400lbs. of black bass.

1866, June and July.—At Newport, R. I. Going out with a fisherman in his boat I take tautog, sea bass, weakfish, flounders and striped bass, 40 or 50lbs. in a day. We fish from Fort Dumpling to Point Judith, and round the island to West River.

1868.—To the Adirondacks in July. Camp out for three weeks. Brook trout from ¼lb. to 2lbs.; about 50lbs. while out.

1870, August.—St. Lawrence River, at Alexandria Bay, in five days' fishing got 105 pike, 22 bass, 2 pike-perch, 2 chub, 6 perch, 1 eel—about 300lbs. of fish.

1871, July.—To the Restigouche for salmon. Fished five days, got four salmon—24, 22, 12, 3—and about fifty trout, average 6oz. in weight. In that river trout were found as abundant as chubs or shiners in New England waters, but were treated with equal contempt by the salmon fishers. From the Restigouche to the Nouvelle, another tributary of the Bay of Chaleurs, where sea trout are abundant and large. With two Indians in a canoe camped out two days and brought home fifteen trout weighing 37½lbs., besides those that we ate, all taken with the fly. Coming directly from a salmon river, I noticed the similarity of habits and action of these trout to the salmon, differing in these respects much from the brook trout, which are found in the same waters.

1871, February.—To East Florida, three months at New Smyrna and the Indian River. Found sheepshead, red bass, salt-water trout, whiting, blackfish, groupers, snappers, etc., in abundance, so that with hand line or rod one could get 50lbs. of fish in about an hour.

1872, July.—To Prince Edward's Island, one day's fishing with mine host at Charlottetown. Took about 25lbs. of trout, ¼ to 2lbs. Thence to the Tabusintac in the Province of New Brunswick. Fished this river one day with a guide, using flies. We filled a champagne basket with sea trout from 4oz. to 2lbs. in weight, returning to the water all under 4oz: and it was a poor day for trout, the guide said, being very hot and calm, with a great thunderstorm in the air, which came the next day.

1872, September.—To Plymouth, Mass. Fished two ponds for black bass with mine host, Mr. Perry, but without much success, getting about half a dozen small fish.

1872, February.—To south Florida for three months, took rods and reels and good tackle with me, and killed some hundred weight of sheepshead, red bass, etc., largest bass 25lbs., largest sheepshead 6lbs., also sharks and sting rays up to 50lbs. weight.

1873. July.—To Moosehead Lake and upper Penobscot: camped out two weeks. Plenty of trout 4oz. to 2lbs. to feed party of six men. Insects so bad that we shortened our stay in the woods.

1873, February.—To south Florida, three months at New Smyrna. Fishing good, largest red bass 37lbs., largest sheepshead 6lbs. Had a day on Spruce Creek with black bass—large-mouth; got forty, from 2 to 4lbs. in weight, trolling with spoons.

1874, July.—To Pine Lake and Jordan River in Michigan. Pike and black bass (small-mouth) in lake; 2 to 4lbs. for bass and up to 6lbs. for pike. In Jordan River many small trout and few grayling were caught.

February.—To Mosquito Inlet, East Florida, where the fishing was as good as ever. Red or channel bass of 30lbs. and sheepshead of 5lbs. were taken.

1875, July.—To lakes in Waukesha county, Wis., and to Green Lake, Wis. Small-mouth black bass, pike-perch and pike, latter up to 10lbs.

March.—To Mosquito Lake, East Florida, for two months. Many anglers there, but fish enough for all.

1876, August.—To Cohasset Narrows, Mass., for bluefish; got a few by trolling up to 5lbs. weight.

March.—To Mosquito Inlet, East Florida, for two months. Find the fishing the same as usual: on most days 30 or 40lbs. of bass or sheepshead can be got in a few hours.

Return from the Inlet to Boston in a schooner loaded with live oak timber.

1877, August.—To the Magalloway River in New Hampshire; fish the river and Sturtevant's Lake one day with flies; trout do not rise well, largest taken 1½lbs.

1878, February.—To Mosquito Lake, East Florida, for three months. Fishing good; largest bass, 25lbs.; sheepshead abundant; largest, 7lbs.

1880.—Remove to Marietta, Ga. A hill country, with few lakes or rivers. To Florida in March.

1885, July.—To Lake Gogebic, Wis., for a week. Many anglers there: bass do not bite well. I got about a dozen each day that I went out, from 2 to 3lbs. each, with grasshopper bait. The bass would not take spoon or minnow bait. S. C. C.

MY FIRST SHOOTING LESSON.

I INHERITED a love for shooting, and at ten years of age began to pester for a gun that should be my "very own." The gun, an old singlebarrel, had come into the family long before I appeared, and sad to relate, I had for some little time been in the habit of hooking said gun on Saturday mornings and snaking it off to the barn, where I tucked it away in the hay loft until after my father's departure for town, when out she would come and off we would go together for the woods. One morning I saw father examining the old piece, and fearing that some disagreeable questions might be asked, I made myself scarce. After thinking the matter over I decided that the best thing to do would be to ask for the gun for my own, for I well knew that should my secret be discovered it would be "good-bye gun."

After much persuasion on my part, it was ordered that my "big brother" should take me out and show me how to shoot (imagine my delight). So one morning we wended our way to the shore after "teeter snipe." Putting in a light load (my usual charge was from three to four fingers) my big brother took me to an old dock, and after resting the gun barrel on the string piece, carefully cocked the piece and placed the butt on my shoulder. Pointing out a bit of seaweed about twenty yards away among the drift, he instructed me to wait until the snipe should come as near as that seaweed, then take careful aim and blaze away. I shall never forget my feelings. My brother was acting in good faith, while I was playing the miserable hypocrite. I waited until he reached the bank, where he seated himself to watch the proceedings. Then letting the hammer down, I jumped from the dock and stole along the beach in spite of loud commands in big brother style. As I approached the snipe the little fellows ran together as is the habit of "teters," and after the usual preliminary "wig waggnig" took wing. I pulled on the flock as they sailed away, and three came out dead. Picking them up, and putting on a "big brace," I walked back to big brother. Not a word as I approached. I stood before him. "You're a young devil," said he.

Well, I guess he was right; at all events I did not contradict him. W. TOWNSEND.

BAY RIDGE, L. I.

To Old Railroad Men.

Editor Forest and Stream:

I wish to obtain the names and present addresses of one or more men who, between the years 1869 and 1873, were conductors, engineers or firemen serving on the western divisions of the Kansas Pacific R. R. in Kansas or Colorado. From such persons I desire to obtain certain information with regard to events which took place in Kansas and eastern Colorado in the early days of railroad travel in those States. It is requested that such addresses be sent me, care FOREST AND STREAM.

BUFFALO.

The Best.

I FILE FOREST AND STREAM for reference. It is the best publication of the kind in the country, and grows better each year.—P. T. B. (Conowingo, Md.).

The Right Thing in the Right Place.

YOU don't know what joy it has been to be in the Maine woods again—with some stormy days on hand and 15 or 20 unread back numbers of FOREST AND STREAM!—BOSTON.

Natural History.

WILDFOWL AT COHASSET.

Editor Forest and Stream:

For a number of years I have kept careful record of the different species of *Anatidæ* taken at Cohasset, Mass., and have been surprised at the number of varieties shot, many of which are doubtless of merely casual occurrence. I have fully identified no less than twenty-four species, of which the following is a list. Red-breasted merganser, hooded merganser, mallard, black duck, blue-winged teal, green-winged teal, baldpate, shoveller, pintail, woodduck, redhead, canvasback, American scaup duck, lesser scaup duck, golden-eye, harlequin duck, buffle-head, American eider, American surf and white-winged scoters, ruddy duck, Canada goose, brant.

E. H. CLARK.

BOSTON, Mass., Jan. 1.

A CONNECTICUT BUFFALO.—The Lake Kenosia serpent incident calls to mind the time when this section was considerably stirred up over the presence of a buffalo. That was about fifteen years ago. Where the animal came from is not known, but it was said to have escaped from a passing circus. The buffalo was very large, and was seen many times between this place and Georgetown and Newtown. Sometimes he would frighten the wits out of women and children by appearing before them in the road. Many a valiant hunter has been so startled by the buffalo that he fled in terror, leaving his gun in the woods. Sometimes the buffalo would make himself at home among a drove of cows and would create a sensation about milking time. Stories of the strange beast spread broadcast, and the sensationalists of the day enjoyed themselves immensely relating Munchausenish tales of alleged personal experiences with him. It will be remembered that until the animal was killed it was not at all certain that it was a buffalo. One day four hunters ran across the buffalo in the woods between Bridgewater and Brookfield, and after a desperate battle, the most of which was fought from trees in which the hunters had taken refuge, the enemy was vanquished. The carcass of the dead menagerie attraction was brought to Danbury, where it was viewed by hundreds of curious people, many of whom came miles to see it. The hunters were Eugene Shepard, Samuel Ward, a Mr. Hedden and another whose name we do not recall. The skin of the buffalo was removed and placed on exhibition, where it was an object of interest for many weeks.—*Danbury (Conn.) News.*

A NEW ORNITHOLOGICAL ASSOCIATION.—A number of gentlemen interested in ornithology met in Allegheny City, Pa., Dec. 30, 1891, and laid the foundation for the Western Pennsylvania Ornithological Association, an organization whose work will be somewhat similar to that of the Delaware Valley Ornithological Club, of eastern Pennsylvania. An interesting paper on the migration of birds, written by Mr. Harry Gordon White, of Massachusetts, was read by Mr. W. E. Clyde Todd, of U. S. Dept. of Agriculture, Washington, D. C. Mr. Todd showed how the best results are obtained from studying the flight of migrants, and also gave some very useful information concerning the avifauna of western Pennsylvania. Twenty-five persons, exclusive of those present at the meeting, were elected as associate members. Officers were elected for the ensuing year: President, Dr. A. D. Johnston, Allegheny; Vice-President, Thos. Harper; Allegheny; Secretary and Treasurer, H. H. Wickham, Beaver. All communications relating to the Association should be addressed to the secretary.

A NEW JERSEY GRAY FOX.—New York, Dec. 16.—On Dec. 14 I shot, between Monmouth Junction and Rocky Hill, N. J., a genuine gray fox, weight 9½lbs., and measures 3ft. and 6in. from nose to end of tail. I did not know that she was a genuine gray until I consulted Mr. Wallace, of William street, New York, who has the fox to mount for me; he says it is a fine specimen and in fine fur. My dogs were four hours running the fox before I got a shot, and we little expected a fox, as we were out for rabbits. Every year for the last six years while shooting in this locality we have struck what we thought was a fox trail, but now we are certain that the dogs knew their business when they got on this trail and brought her in. The boys in Jersey, also the farmers, are very glad the fox is out of the way, for we know how destructive they are on game and chickens.—H. C. W.

A BLACK RAT.—*Editor Forest and Stream:* Mr. H. W. Raymond has a black rat on exhibition at his store 33 Main street, Gloucester, Mass. The animal was caught in Boston and was presented to Mr. Raymond by a friend. I suppose this rat is the *Mus rattus* of the books, but I did not know they could be found in this country. This animal is smaller than the brown rat. It is covered with long black hair that glistens in the sun, but under this covering is short thick lead-colored fur. Its ears are large and light colored on the inside. In shape it resembles the brown rat. It attracts much attention.—HERMIT. [This is no doubt an example of the black rat (*M. rattus*). It is rare in this country, being everywhere driven out by its larger and fiercer congener, yet we have seen it in California and in the South.]

IN THE YELLOWSTONE PARK.—Winter is here and the snow is getting deep in the Park, 30, 40 and 60in. on a level. We have had another cold snap, the thermometer standing at —23°, —38° and —16° on different days at the Hot Springs. It has been down to —41° at Soda Butte and to —45° at Norris Geyser Basin.—H. (Dec. 28, 1891).

Books make good holiday gifts, and give more pleasure in proportion to the money expended than anything else. If you want a good book on shooting, fishing, natural history, or any other subject connected with outdoor life, consult the list of the Sportsman's Library in this paper, or better still, send for FOREST AND STREAM'S *free illustrated catalogue of works on outdoor sports.*

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

CHICAGO, Ill., Jan. 2.—Mr. Dick Merrill, of Milwaukee, much esteemed in this country as a sportsman of the quiet and gentlemanly sort, is the owner of the setter Paul Bo, which won at the lower field trials and so bore out his owner's confidence in him, which was not shaken by the defeat at Bicknell. It seems that some one else has a notion to Paul Bo, and last week the dog turned up missing. All day long, in the rain and mud, Dick searched the city over for his dog, feeling as only a man can who has had his favorite dog stolen. At night Dick went home, and a little later Paul Bo appeared also, a broken string around his neck testifying as to the cause of his forcible detention. Meantime the walk in the wet had given Dick a cold, and last Saturday this had grown into a sickness which prevented him from shooting the match with Rolla Heikes for which he was scheduled. The dog thief recks not of consequences.

Mr. Ed. Bingham, a well-known shooter of Kansas City, spent a day or so in Chicago this week. It would be pleasant to have Mr. Bingham come here to settle down. We need a few more Kansas City men like Andy Thomas.

It might possibly be borne in mind by somebody that a couple of years ago I described a little fishing party that went down to the Tippecanoe River in Indiana in a special car. One of this party was Mr. C. E. Chapin, at that time editor of the Chicago *Herald*. Mr. Chapin was sick, but plucky. I shall not soon forget the picture he made us; clad in nothing but a suit of white underwear, he cast the fly for bass on that warm summer day. Mr. Chapin did not fish enough, and lately his health broke down entirely, and he left the city editor's chair of the *Herald* this time, to go to Cape Cod for a rest. He drifted to New York one day last fall. To-day, with so slight a knowledge of that city as a month or so of life there might mean, he is city editor of the New York *World*. I can't help wondering what sort of waders he will wear next summer.

The fun which the city game warden was intending to have with the cases against B. Aaron & Son, mentioned earlier, came to an untimely end. Justice White fined the defendants $5 apiece for the five birds on which suit had been brought. The defense pleaded statute of limitations, very justly, for the three months had elapsed.

Mr. A. H. Harryman is back from a shooting trip below Indianapolis, which was productive of abundant rabbits and squirrels. The squirrel law of Indiana is out on Dec. 20. The clause reads peculiarly, the fine being "$2 for each squirrel so killed and $1 for each squirrel so pursued." For pure comedy go to the game statutes.

Last week I was out in Iowa for Christmas, and I spent one day in the woods with a certain elderly gentleman of whom I think a good deal. We found the rabbits very scarce in that neighborhood, near Newton, although once they were so numerous as not be noticed as game. Yet, in that denuded country, where little or no shooting is to be had now, there happened to us a most singular and unexpected thing. J. B. H. was looking into a thicket after a rabbit which he had seen go in, and called to me to come up on the other side to intercept the rabbit. This brought me upon the top of a little ridge, above the thicket, which lay in a gully. Looking down I saw stealing out of the thick brush a long gray figure which at once I knew was a wolf. It did not seem possible that a wild wolf could be there in that old country, within a mile and a half of town, and I thought it was a pet belonging to some farmer. "Here's a wolf," I called out, "I think it's a pet one. Shall I shoot him?"

"Yes, give it to him," called J. B. H., not understanding what I said. So I let the wolf have it, through the heavy hazel brush, with No. 6 shot and at a distance of not over 30yds. The charge, what little of it got to him, struck him in the hip and flank and staggered him, but he sprang on, and I fired again directly at him with the left, though the dense growth almost hid him. In the open either shot would have killed him, but here he got off over the hill. Had the snow been heavy enough we should have found him before noon, for he was hard hit after all. J. B. H. told me there were a good many wolves that still hung around the Cherry Creek bottom, but said that in the forty years he had hunted in that country he had never had a shot at one, or seen any one else who had. We found a carcass near by, at which the wolf had eaten the night before. The accident of our coming up on opposite sides of the thicket was what led to the chance at the wolf. We regretted much that fate was against us. The animal was what is usually called in this section a gray timber wolf, but in reality it was a coyote, very large, and of a lighter color than the animals of the plains.

A family in the same town of Newton has a fine setter dog, and also a thoroughbred fox-terrier, for neither of which is there much actual use, game being scarce. This being the case, the dogs go poaching for rabbits outrageously, and work well together, the fox-terrier putting them up and the setter catching them. The latter is trained to retrieve, and faithfully brings to the house all the rabbits he catches. It so happens that these two dogs cannot distinguish between a rabbit and a cat, and the fox-terrier being naturally much disposed to hunt cats, the result is that the neighborhood is nearly cleaned up of cats. Each defunct pussy cat is dutifully carried home as soon as killed, and it puzzles the dogs a great deal, apparently, to know why a long-tailed rabbit is not prized as much as a short-tailed one. The day before I was out there these two degenerate scions brought in a beautiful Maltese kitten, dead as Julius Cæsar, and they appeared to think they had shown themselves peculiarly gifted. There is a huge Thomas cat near by which has thus far defied assault, but I am inclined to think the fox-terrier will get him yet.

The other day, out in this same town, J. B. H. saw an encounter between a mink and a rat, the latter a very large one. The animals came out from under a grain elevator, and were so busy fighting they paid no attention to the human spectators. They reared up and struggled like dogs, fighting for quite a time. The mink, though much the smaller, had the best of it. At length the rat broke away, and ran directly up to the men who stood by, as if to claim their protection. It went under a building, and its throat was bleeding badly with the usual murderous mink wound, so that doubtless it died.

The Acme Gun Club has changed its name to the Douglas Gun Club. The Garfield, Douglas and West End gun clubs all have grounds close together.

Cumberland Gun Club at its annual meeting elected the following officers: Pres., Mr. Al. Hofmann; Vice-Pres., Mr. Geo. T. Farmer; Sec'y, Mr. W. L. Shepard; Treas., Mr. John Hieland; Board of Managers, Messrs. H. W. Loveday, H. D. Nichols and J. B. Sanborn.

"Good mawnin', Captain, may the Lawd bless an' prospah you, sah," said he, as he drifted into the office and addressed the man in plain clothes.

"Well?" said the man in plain clothes.

"Ken you give a mossel fo' the upbildin' of a temple in Zion, the new Afercam Mefodis 'Piscerpal chu'ch, sah?"

"That's the man you want to see," said the man in plain clothes, pointing to the editor, who wore rather better clothes.

"Good mawnin', Colonel, may the Lawd bless an' prospah you, sah. Does you feel like insertin' a few bricks er two in the temple of the Lawd, the new Afercan Mefodis 'Piscerpal chu'ch, sah? I'se a deacon in dat chu'ch, sah, an' we'se a needin' of de sinners of wah to fight de evil of dese yer times, sah."

The editor was just fixing to go fishing. He couldn't get the paper out unless he had a certain bundle of proofs, and these must come within half an hour, or he couldn't catch his train. They had not come. The editor pointed to the clerk, who was better dressed than anybody. "That's the man you want to see," said he.

"Good mawnin', Ginneral, may the Lawd bless an' prospah you, sah. Does you feel it in yo' haht to jine us to de extent of a quahtah in de upbuildin' of de cause of the Lawd, sah? I'se a deacon in de new Afercan Mefodis 'Piscerpal chu'ch, an' we all is pow'ful anxyus to finish owah temple in Zion, sah. We has the foundashun putty well stahted, but we needs mo' 'n a foundashun befo' we ken hole sarvices in de tabernickle. Ken I count on you fer a quahtah, sah?"

Just then the printer's boy came in with the roll of proofs. The clerk saw him and pointed to him. "That's the man you want to see," said he.

He turned to the boy, who in garb and color approached himself.

"Good mawnin', son," said he, "may the good Lawd prospah you. Ef you is of the colah, as I thinks you is, I hopes yo' mammy'll take you to de noo Afercan Mefodis 'Piscerpal chu'ch, w'en we gits it finished. W'at bizness is yo' fadah, chile?"

"Aw, wot yer givin' us!" said the printer's boy. "Dat's de feller youse lookin' fer, over dere," pointing to the editor. "You better not take me fer no nigger, er I'll give it to yer in de neck, see?"

The editor was glad to see the proofs. Now he could go fishing. His heart changed.

"Old man, here's a quarter for your church," said he, tossing the coin into the ragged hat. "It'll bring me good luck!" he muttered to himself. "Sometimes fish won't bite." Then he added, turning to the clerk, "Julius, I think you may as well not come back after lunch. We shall not need you this afternoon."

Julius was glad. Now he could go to the races. "Here's a quarter for you, uncle," said he, and the hat came his way. "It'll change the luck," thought Julius to himself. "I ought to pick a winner to-day."

The man in plain clothes looked up. "Thank heaven! the office will be clear this afternoon," thought he, "and I can work out that scheme in quiet. Here, old man," he said, "is a quarter for you, and see you only use water in mixing up your mortar for the church. It'll bring me luck," he thought, and so he whistled to himself softly.

"Good mawnin', gennelmen, all of ye," said the old man as he shuffled out, pausing at the door, "May the Lawd bless an' prospah you, one an' all. Hit shoh'ly do seem laik de Angel of Grace done tetch yo' hahts mighty suddent, right yer in disher room." E. HOUGH.

ABOUT COONS.

Editor Forest and Stream:

The coon stories in the FOREST AND STREAM have recalled to the memory of old sportsmen the exciting hunting scenes of our youth. That animal was my "big game" in my boyhood days in western New York. Many a night after a hard day's labor have I and my companions hied away to the woods, and perhaps after a long tramp, drowsy and fatigued, seated ourselves upon a log, waiting for the dogs to arouse the game, in the meantime passing frem drowsiness into sleep. But soon those faithful and truthful animals would give tongue and then sleep would depart and fatigue vanish.

Since those youthful days the writer has hunted much for large game, sometimes with dangerous surroundings, but never with half the enjoyment and excitement of those youthful times.

There appears to be two opinions as to whether the raccoon hibernates in winter. My observation is that it does not. Usually the coon hunting I could do in winter would be on Saturdays, when there would be no school. Then myself and mates would watch the winter thaws and then go to the woods to trail the coons on the soft snow to his home. In a few instances I have hunted them in the winter at night with dogs and caught them. Twenty years ago, or thereabouts, when camping out for deer during a January thaw, we took a tramp of five or six miles in a circle, and when within about a mile and a half of camp came to a wet weather water course, filled from melting snow and about hip deep. To get to camp we had to take back tracks or ford the water course. We adopted the latter method. The water, of course, was cold, but the bank where we landed was covered with scrub oaks, and a plenty of down dry timber. Soon with the aid of our hunting axes we had a rousing fire to dry

out by. While thus engaged one of our party pointed to the top of a large oak, and there upon a limb were three raccoons basking in the sun.

Whether or not that animal will kill the rabbit I do not know, but I have reason to believe if they have an opportunity they will kill domestic fowls. A few years since some animal several nights in succession entered the hen house of an acquaintance and killed some of his choice domestic fowls. Hearing a disturbance in the evening among his fowls, he rushed out and saw an animal fleeing which in the darkness he took to be a lynx. He set a trap for the animal, and the next night caught a very large raccoon. He was not troubled after that. H. L.

CHENANGO AND OTSEGO GAME LAWS.—Norwich, N. Y., Dec. 31.—The Chenango County Board of Supervisors has amended the game law as follows: "Sec. 1. The lawful season for killing partridge (ruffed grouse), squirrels and woodcock within the county of Chenango shall be only from sunrise on the first day of October until sunset on the 31st of December in each year hereafter. Whoever shall kill or hunt any partridge (ruffed grouse), or squirrels, or woodcock at any other time than during the specified lawful season aforesaid shall forfeit a penalty of $25 for each partridge, squirrel, or woodcock killed, and whoever shall have in his possession of any such game out of season shall forfeit $25 for each bird or squirrel." The board of supervisors of the adjoining county of Otsego had passed an act at the session for 1890 prohibiting the taking of brook trout from any of the waters of the county, except during the months of May, June, July and August in each year. At the recent session of the board the law of 1890 was so far amended as to permit the taking of trout during the month of April in the waters of the towns of Unadilla, Oneonta, Maryland and Worcester. Another act prohibits the taking of any trout, perch, pickerel, or bass from the waters of Wharton Creek, in the town of Pittsfield, between Jan. 1 and April 1. Another law specially applicable to the town of Unadilla prohibits the killing in that town for a period of three years of any partridge (ruffed grouse), or pheasant or woodcock, or for the carrying of any such birds out of the town, under the maximum penalty for each offense of two months' imprisonment in the county jail, or a fine of $100, or both.

MICHIGAN SHOOTING.—Saginaw, Mich., Dec. 29.—Our shooting season is over; it ended the 15th. Game Warden Ostrander has been around after the game dealers with a sharp stick, and made them dispose of (or get out of sight, at any rate) all game after the eighth day limit expired. Quail has been very plentiful around Saginaw this year. In any direction you might go you were sure to run across them. We have so much underbrush here, and so many dense thickets, that it makes it very difficult shooting, for the little roosters pitch for the thickest cover when they are first flushed. It seems now as if we were going to have another open winter; and if so, this country will be literally alive with them another year. Ruffed grouse, however, are very scarce.—W. B. MERSHON.

VIRGINIA COAST SHOOTING.—Norfolk, Va.—*Editor Forest and Stream:* Any of your many readers desiring to obtain for the present and future for themselves the best duck, goose, swan and bay bird shooting to be had anywhere in the South, will do well to write me at once. They can come and inspect the grounds for themselves; they will not be asked to take any steps in the dark.—J. B. WHITE.

Hints and Helps.

1. Sleeping Bags.—SPRINGFIELD, Mass., Nov. 28.—*Editor Forest and Stream:* I was glad to see the few words about sleeping bags, by Mr. Stark, in your issue of Nov. 19, as I have given the subject some thought, with the intention of making one for my own use. I wish others would give their experience with them. I am in doubt as to the best material for the bag, whether to use sheep or lamb skin, quilted eiderdown or wool blanketing, and for the covering waterproof canvas or enameled cloth. No doubt the skin of the reindeer is the warmest material in proportion to its weight, but it can hardly be obtained here. I should also be glad of some hints on making a knapsack or packing straps. I do not find such things in the sporting catalogues.—W. G.

2. To Tell the Time with the Sun and a Compass.—WASHINGTON, D. C.—*Editor Forest and Stream:* From the article "How to Tell the Point of Compass with a Knife and Watch," previously appearing in your columns, I derived the following formula, which I send for the benefit of some of your readers who are not accustomed to carry watches on their hunting tours. Hold the compass in such a position that the needle points to N. The next thing is to find the sun (if the day is cloudy, a thin splinter placed on, and perpendicular to the thumb nail, will cast a shadow on the nail, from which the direction of the sun can be easily found). Imagine a line drawn from the center of the compass to the sun. This line will represent the hour hand of a watch. If the time is between 6 A. M. and 6 P. M., a point on the rim of the compass, placed at a distance from S., equal to the distance between S. and the point H., where the imaginary hour hand cuts the rim, but on the opposite side of S., will be the position of the figure 12. By dividing the rim into twelve equal parts, beginning at the right of 12 and numbering each part 1, 2, 3, etc., the time will be shown by the hour hand, which will point to the number (or between two numbers) corresponding to the true time. If the time is between 6 P. M. and 6 A. M., then N. instead of S. must be equi-distant from H. and 12. By a little practice one can become so adept in the application of this formula, that he can calculate to within five minutes of the true time.—A. F. HODES.

If your shooting friend does not read FOREST AND STREAM *why not give him a charming present and do a little missionary work at the same time by subscribing to the paper for him. It will give him pleasure fifty-two times a year. Do you realize that this year* $4 *will buy you* 1664 *of these big pages, and all of them devoted to wholesome, manly sport.*

Sea and River Fishing.

Angling Talks. By George Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price $2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price $1.50. American Angler's Book. By Thad. Norris. Price $5.50.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

TROUTING IN THE CASCADES.—IV.

THE MOLALLA COUNTRY.

WE were up bright and early and had breakfast, and I was off to the stream, Billy preferring to potter around camp until the afternoon. I concluded to fish up stream toward the mouth of Canyon Creek.

Up and down creek fishing both have their adherents. Some anglers will not fish up stream, while others will not fish down. All fly-fishermen are cranks. Much may be said in favor of either method. For the up-creeks it is truthfully claimed that the fish lying head up stream (as they do when at rest) cannot see the fisherman so readily and therefore less caution is necessary; the fly coming with the current it appears more natural to the fish and, further, the strike brings the fly toward the fish instead of taking it from him.

For the down-creeks it is truthfully asserted that the swift-running water always keeps your line taut, you can retrieve better and the fish will often hook himself instead of ejecting the fly, as he frequently does when the line is slack. Neither plan has much advantage over the other so far as I am able to discover. As for myself I fish either up or down, as the circumstances make most convenient.

This morning I fished up. Starting opposite camp I fished for nearly a mile, then, turning, fished back over the same water. Coming back the fish seemed to be about as numerous as when I went up.

I was whipping a beautiful pool with nothing to relieve the loneliness except Mike, who was wrestling around in the brush, showing up now and then simply to keep track of me, when out of the brush at my side stepped a nondescript sort of an individual with long hair and the conventional wide-brimmed faded hat. His advent was so sudden and unexpected that it startled me a little, but, perceiving that he was a human being, I exchanged salutations with him and went on fishing.

He too was fishing, but with primitive tackle and worms for bait. He paused, intently watched the artificial flies playing on the water and finally propounded the usual inquiry, "What is them things you got thar?" While I was explaining a fine fellow seized the royal and after a good fight fell in my basket. My new acquaintance had watched the rush of the trout, the strike and the performance clear through with open mouth and now approached modestly to have a better look at the "tarnal things."

I always like to meet such good fellows and always try to be friendly and entertaining, so I sat down on a rock and proceeded to enter into details for his edification. He examined each fly on the leader carefully and listened patiently to my explanations, finally expressing himself simply and honestly with, "Well, I declar." Of course this did not admit or deny anything I had said, but it manifested his appreciation of my efforts. It is pleasant to meet such people, especially in such lonely out of the way places, and I always carry a lot of second-rate flies and fair leaders for their special benefit, on the same principle that Stanley takes colored beads and old muskets to Africa with him.

Then I asked the young fellow about himself; where he lived, how long he had lived there and about his knowledge of the country. I had found a prize. He and his brother had a cabin up Canyon Creek, had lived there "quite a spell," had hunted b'ar, cougar, elk, deer and wildcats and he didn't mind tryin' a few of them red and white bugs of mine. I prepared a leader with its three flies and tied it upon the end of his line, explaining that he must keep the flies moving on the water as if they were struggling, half drowned, to reach the shore.

He experimented then and there and showed a natural aptitude for the business (fly-fishermen, like poets, are born) and I had the pleasure of seeing him hook and land a beauty within a minute. That settled it, and away he went, lost to sight in a twinkling as he had appeared, like an apparition. But I observed that the worm box was left ignominiously sitting on a rock. I dumped the worms into the creek and proceeded on down toward camp carelessly and noisily, as I had been taught that the expert fly caster had little advantage over the tyro on this creek. The trout were so reckless that several times I saw them pass between my legs while I was standing in the water. My friend had undoubtedly gone back up the creek, for presently I heard Mike barking a hundred yards or so above me in a way that would indicate that he had struck either the apparition or a bear. I returned to camp satisfied with my forenoon's work. Fortunately we had brought a keg with us, and as we had more trout than ourselves, Halls and Moodys combined could use we proceeded to salt them down. The Indian plan of smoke curing them is the better way, however. Their method in this country is to drive four stakes into the ground as corner posts for a wicker of small hazels laid horizontally some three feet from the ground upon which the cleaned and salted trout are spread and occasionally turned while a slow fire of hard wood burns underneath.

Early in the afternoon Billy and I started out, intending to try some of the deep holes we had passed coming up, below any part of the creek yet fished by us. Coming to a deep, still pool nestling back in the side of a bluff, down whose moss-covered side tiny streams of water trickled from a dozen miniature springs, and just below a mad rapid that angrily buried itself in the hidden depths, we thought we had found the home of the big fellows, and proceeded to try conclusions with them. Our efforts were in vain. Not a trout responded. Billy suggested that there must be something wrong with the bottom. On the contrary, I thought the bottom was all right but that the big trout were hiding from the sun's rays, away down. The fact that not even a little fellow acknowledged our efforts only convinced me that the big fellows had either eaten the little ones or driven them from the pool. But our arguments were cut short by Mike, who undertook to cross the rapid above. Bang, he went down into the pool as a matter of course, and on we went down the creek. We found fewer riffles and more deep holes than we expected, but had good sport with the medium-sized trout.

Billy wanted to get back to camp early in order to make a table and some stools. He always finds some excuse for hanging around camp. Truly, I sometimes get very angry with him, but, as little good comes of my kicking, I have learned to let him do about as he pleases and I do the same. Now here we were starting home just as the sun was sinking behind the mountains, and I was mad. The trout were just beginning to yawn after their midday dreams and were brushing up for their suppers.

As we sauntered along the trail the music of the rapid by the bluff struck my ear, and I at once declared my intention to give that pool another trial. Billy reminded me that a fool never learns from experience and went on to camp. Down through the vine maples and ferns I went all the same, and reaching the pool sat down to reason about it. The sun's rays no longer glanced upon its placid surface, and the shadows of the bluff gave it an air of mellow mystery. Hearing a suggestive smacking sound I glanced over to the side next the bluff and at once became aware that the trout were utilizing the tiny springs, and that the insects incidentally washed into the stream by them were snatched up by the trout as they fell. Here was the solution of the mystery, and right here permit me to admonish my brother anglers never to pass by a spring, it matters not how small, that trickles from a bluff into the stream, without dropping your flies close in next the bluff where the spring empties in. No matter how small the spring; even if it should be but a discernible thread of liquid silver, give it at least one trial. In a trout country it is a safe two to one bet that the biggest trout in that bend of the creek has his home right where he can see every ant, bug or worm that wiggles vainly down that little current.

I immediately replaced my light leader with a heavier one, attached to which were a No. 4 royal-coach for stretcher and No 6 red-spinner and professor for dropper. I cast so that my flies struck the bluff and rolled carelessly down into the pool.

Fish are just as excitable as we are. Anything differing from the ordinary affects them even more than we are affected by unusual happenings, and they act on the impulse. My flies had scarcely touched the water when a great big fellow went clear out of water and down again with a loud splash that startled me. In his anxiety to swallow the whole business at one gulp he had sprung clear over the leader; but gathering himself he turned quickly and seized the spinner. My reel buzzed like a rattlesnake; a quick turn of my wrist firmly fastened him and the fun commenced. Whew! how he did fight. Out of the water he went shaking that fly as a terrier would shake a rat.

One would think his conduct would scare every other fish out of the pool, but imagine my surprise when I observed another trout of about the same size hot in pursuit of my victim. But it turned out that he was not so much after my trout as he was after the royal-coachman that dangled merrily after him—and he got it. But his ideas of beautiful flies were at once modified, and he strove in vain to eject the beauty with a stinger he had so greedily snatched. It was too late. He was there to stay, and here I had another balky team. I regretted having hooked the second fish, for one 2-pounder was enough for any light tackle. But I couldn't unhitch either of them, and so let them fight it out.

My landing net was in camp, as I had not anticipated any particular need of it. The best way to find big fish is to leave your landing net at home, on the same principle that a deer will stand in the trail and stare at you when your Winchester is twenty miles away, I suppose.

Tug, yank, pull, you pretty leopards of the pool, your hours are numbered! For you there are no more trickling springs or mossy rocks; no more pretty flies, no more proud rises or graceful curves. Like all other life, yours must end in death. The bright sun, the myriad rainbows of your deep home, the crystal jewels above and below you are no more for your eyes.

To land both safely was a long, tedious task. They were beauties, but too long for my creel. I could not even bend them in; so I was forced to string them, as, when a boy, I used to string suckers. And I strung eleven more from the same pool; some larger, some smaller; none weighing less than a pound and a half, none weighing more than 3lbs. They were all fighters to the backbone, and and one peculiarity of theirs seemed to be to rush and spring clear out of water, seizing a fly in their descent.

I have fished with the fly for many years, but in all my life I was never kept more busy for an hour with my rod and reel than in capturing that baker's dozen of big fellows. S. H. GREENE.

PORTLAND, Oregon.

CHRISTMAS PIKE-PERCH.—Fish Commissioner W. L. Powell, of Harrisburg, Pa., surprised us greatly the other day with information of the capture of several pike-perch in the Juniata River about Christmas. Mr. Jacob Haehnlen was the happy fisherman and he took the fish by trolling with lampreys. The bait, we assume, was the blind larva of the lamprey, which passes the early period of its existence buried in the mud, usually at or near the mouths of small creeks. The pike-perch is active in winter and in some localities, notably Saginaw Bay, Mich., it is speared through the ice, a decoy fish being used to lure the prey within reach. The name of the pike-perch in that bay is pickerel.

SHAD.—The first shad of the season appear from year to year in the Washington, D. C., market on January 1st. On Saturday, the 2d, quite a number were on sale and brought from 50 cents to one dollar apiece. The best shad seen were shipped from New Berlin, Fla., near the mouth of the St. John's River, but the majority of the fish came from Savannah, Ga.

THE FIRST FORT MYERS TARPON.—Fort Myers, Fla., Jan. 2.—[*Special to Forest and Stream*]: First tarpon was caught here to-day by Besante Gravielle. Others were hooked and lost. The river is full of them and they bite well.—LOUIS A. HENDRY.

CHANNEL BASS WITH SPOTS.

CAPT. CHARLES BENDIRE, of the U. S. National Museum at Washington, has kindly sent us the following letter from Lieut. J. M. T. Partello upon the occurrence of numerous black spots on the Florida bass:

"MOSQUITO INLET, Fla., Dec. 21, 1891.—My dear Captain: You never saw such fishing. In one hour and twenty minutes I landed a 26lbs. bass. Four ducks at one shot. I found a peculiarity of bass that I believe is not known. In casting in the surf to-day I saw a large bass first pass the bait (cut mullet) swiftly by, and after he passed it he returned and struck it with his tail. As soon as the bait floated from the shock the bass came back, struck it and started off. I landed him O.K. He was prettily marked with five spots. As a rule bass have only one spot on or near the tail, but this one had five. [A sketch is here given of two on the tail, one above the tail, one above the other, and three immediately in front of the upper caudal spot, arranged in a single row.] No birds down here worth speaking of, except the Florida bluejay, which is a regular butcher bird and kills young chickens."

We have upon several occasions observed specimens of the channel bass or red drum with more than the usual number of spots (one or two, confined to the base of the tail). In November, 1890, a specimen was secured in the Washington, D. C., market, which had, besides the two marks on the tail, three on either side of the body. Recently another specimen was seen in the same market which had ten spots on one side of the body. These, as well as the three spots, were scattered along on the middle of the body. What causes the multiplication of these coal-black spots is a question not yet solved. In certain books upon ichthyology the presence of the spots is noted, but nothing is given as a clue to their variation in number.

A NUMBER OF SMALL SALMON have come to Fulton Market this winter, having been caught in mackerel nets by fishermen of North Truro and Provincetown, Mass. They run 9 to 10 pounds, the largest, reported by Mr. Blackford, 21 pounds. More of these fish go to the Boston market than come to New York. It will be remembered that the winter capture of salmon in Massachusetts waters was reported last season.

Fisheulture.

NEW YORK'S FOOD FISH PLANTING.

Editor Forest and Stream:

The New York State Fish Commission have planted the following food fish during the past four years:

	1888.	1889.	1890.	1891.
Lake trout	1,703 200	5,329,000	8 935 000	9,678,600
Smelts	1 000.000	4,601 000	4,650,000	7,400,000
Tom cods	200 000	4,100,000	3,062,000	3 200.000
Whitefish	800 000	1,900.000	5 998.000	9,000 000
Shad	4.274 000	6,055,200	2 025,000	2,421,000
Frostfish	4.453,000	3,780 000	3,260,000	7,400,000
Carp		5 400	5,790	5,470
Pike			4,560,000	4,030 000
Ciscoes			2,460 000	3,000,000
Pickerel			90,000	2,000,000
Muscallonge			75.000	1 750,000
	12,430,200	25,762,400	33,635,790	49,853,070

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

FIXTURES.

DOG SHOWS.

Jan. 5 to 8.—The New York and New England Poultry and Kennel Club's Dog Show, at Albany, N. Y. W. C. House, Fort Plain, N. Y., Sec'y.

Jan. 5 to 9.—Annual Dog Show of the South Carolina Poultry and Pet Stock Association, at Charleston, S. C. Benj. McInness, Sec'y.

Jan. 13 to 16.—Second Annual Dog Show of the South Carolina Kennel Association, at Columbia, S. C. F. F. Capers, Secretary Greenville, S. C.

Jan. 21 to 25.—Second Annual Dog Show of the Elmira Poultry and Pet Stock Association, at Elmira, N. Y. C. A. Bowman, Sec.

Feb. 9 to 12.—Fourth Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Sec'y.

Feb. 16 to 19.—Second Annual Show of the Central City Kennel, Jackson, Mich. Chas. H. Ruhl, Sec'y.

Feb. 23 to 26.—Sixteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Supt.

March 1 to 4.—Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. E. S. Brown, Sec'y.

March 8 to 11.—Washington City Kennel Club, Washington, D. C. Fred. S. Webster, Sec'y, 738 Broadway, New York.

March 15 to 18.—Second Annual Dog Show of the Duquesne Kennel Club, at Pittsburgh, Pa. W. E. Littell, Sec'y.

April 7 to 10.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Sec'y.

April 20 to 23.—Fourth Annual Dog Show of the Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.

May 4 to 7.—Annual Dog Show of the California Kennel Club, at San Francisco, Cal. H. L. Miller, Sec'y.

FIELD TRIALS.

Jan. 11-12.—Second Annual Trials of the Bexar Field Trial Club, at San Antonio, Texas. G. A. Chabot, Sec'y. Open to all.

Jan. 18.—Trials of the Pacific Field Trial Club, at Bakersfield, Cal. J. M. Kilgarif, Sec'y.

——.—Fourth Annual Field Trials of the Southern Field Trials Club at New Albany, Miss. T. M. Brumby, Sec'y.

THE GLOVERSVILLE SHOW.

[*By a Special Reporter.*]

THE Gloversville dog show was held on Dec. 29, 30, 31 and Jan. 1 under A. K. C. rules, and had 113 entries, only three of which failed to put in an appearance. Mr. C. H. Mason judged and gave satisfaction. The great feature of the show was the quality of the exhibits; in fact quality was better represented than at most of the shows of the recent Canadian circuit, thanks to the entries of Messrs. Frank Dole, Geo. Jarvis, W. H. Hyland, F. B. Zimmer, T. J. Farley and the Seminole, Woodhaven, Beverwyck, Rosecroft, Rockland and Ancient and Modern Spaniel Kennels. The judging did not commence till 2 P. M. Wednesday, instead of 10 A. M. on Tuesday as announced. Mr. Mason did not arrive until Wednesday morning, and even then the management were not ready for him to start. This put several to great inconvenience, the judging not being finished till 1 P. M. on Thursday. However, once things were started under the management of "Uncle Dick," everything went on smoothly and the dogs had the best of attention, the benching and food being excellent and they were well exercised and the building was kept scrupulously clean and free from all smells. The building used was two large adjoining stores, which answered the purpose admirably, giving plenty of room, and most conveniently situated, being a few minutes' walk from the depot and the same distance from the principal hotel, the Windsor, where host Moore and his genial assistant did all in their power to make "the boys'" lives happy. Mr. Clute made an excellent ring steward and Secretary Zimmer was here, there and everywhere seeing that things were right and that nobody wanted for "anything," either for their dogs or themselves.

In mastiffs three put in an appearance in the open class for dogs. The winner was far and away the best, beating the others in head, substance and character. He is a far better dog than one usually sees at small shows. The other two were both very moderate. One poor puppy was shown and had a walkover.

The best St. Bernard in the class, barring his color, was Tartar, but being black and white, the judge very properly discarded him. He is said to be by Alton. Crystal, the winner, is bad in expression, poor in coat and small, but has good bone. Saratoga, second, is a weed. Kathleen, the only entry in the rough-coated bitch class, is a wretched curly-coated specimen, all the same she got first.

One poor great Dane, Flora L., carried off the "blue" without opposition. Prince Hal, a good black Newfoundland of more than average merit, was alone in the next class.

Spinaway, a moderate greyhound bitch, was also the only entry in the challenge class; she was shown far too fat and is very straight behind.

Four moderate American foxhounds comprised the next two classes and call for no comment. A fair English dog was shown in the puppy class.

The well-known Ossining, in very poor condition, was alone in the challenge class for pointers, as was Lady Graphic in the class for bitches. Lad of Kent won easily in the open class. He is a dog with a deal of quality, and in body a hard one to beat in any company; but he could be improved in skull and might be darker in eye. Spot, second, is very light of bone and not sprung enough in ribs; otherwise fair. In bitches, Vesta C., the winner, is a good bitch; a bit light of bone, open in feet and decidedly throaty. Lass of Kent, second, beats her in bone, substance and spring of ribs, but loses in head, shoulders and chest.

In English setters, Sir Frederick won from Glendon, who was quite out of condition. Sir Frederick is a good-boned, powerfully made dog, but decidedly inclined to be coarse, heavy in shoulders and a bit common in head. Glendon shows far more quality, but in the condition he was in was rightly beaten. Rockland, third, was common all over. Spectre was alone in bitches. She is a beautiful bitch, decidedly on the small side; but after you have said that, not much fault can be found with her, and she pressed Sir Frederick closely for the special.

In Irish setter dogs Nicho, the winner, is far the better in color, body and substance. King Elcho has the better head, but was in poor condition. Nellie Husted, an eight-months puppy, better in color and head, but Bessie Glencho II. won rightly enough. In puppies General Husted, a poor one, nevertheless won easily from Budweiser, who evidently believes that his sole mission in life is to live and keep growing.

Of black and tan setters Heather York, the winner, is a good upstanding dog of grand color, he has a capital head, legs and feet, but is very light in body and wants letting down a great deal. The well-known Heather Bee was alone in the class for bitches.

In the challenge class for cockers Cherry Boy easily defeated his solitary opponent; he is far the better in head, bone and body. In the open class for dogs Adam won from Gothamite; we thought there was little to choose between them, Adam being in the better condition. Eve won in bitches from Lady Oto; she is better in bone and body, but is wrong in skull. Two wretched leggy animals showed up in puppies and got vhc. and hc., respectively, more than they deserved

In the collie challenge class for dogs the well-known Roslyn Dandy was alone in his glory, but was rightly beaten by Roslyn Conway for the special for best in the show. Metchley Surprise, all out of coat and condition, was alone in the challenge class for bitches. Roslyn Conway had only Scotilla IV. to beat in the open dog class, which he did easily. Scotilla IV. is likely to go off, as he is already thick in head, has a poor expression and heavy ears. Dot had no difficulty in winning from her opponent, Ban's Jessie. Dot was all out of coat, is none too good in head, and decidedly small. In puppies Matchless Scot is weak in head and soft and open in coat.

The well-known Racer, Jr., and Twinkle were alone in the respective challenge classes for beagles. Roy K. won rightly enough in the open dog class. He is a typical hound but is not let down enough in body and might have more bone. The Rambler, second, loses in head, hound character, neck and shoulders. Lady Vic, a good bitch, won easily from her kennel companion, Fanny Racer, who is a bad one. Two fair daughters of Twinkle were alone in the puppy class.

In the fox-terrier challenge class for dogs Starden's Jack had a walkover, as did Ebor Nettle in the class for bitches; neither are improving; in fact both seem to be getting worse. In the open dog class Beverwyck Rebel easily disposed of Warren Tripper; neither are good ones, but the winner has the better terrier character and expression and length of head. Woodale Regina, the winner in the bitch class, is a smart little bitch with a good deal of character about her, but she is short and weak in head. She beat Starden's Jack for the special, as he was shown very fat, stood very badly in front and his head and ears, never good, seem to get worse. Beverwyck Crescent, second, is a poor one, as were the rest in the class. In puppies Joe Hooker, the winner, is a fair-headed dog, heavy in ears, too long in body and likely to be too large.

Nellie Bly was alone in challenge class for pugs. All the pugs were very poor, being very faulty in color and none too good in head properties. Mr. Russell's Bedlingtons made a nice display. They are all pretty good ones. We think Christmas Carol the best. They came near beating the Seminole collies for the team prize, and not much fault could have been found if they had. The well-known Harper, in grand condition, was the great attraction of the show. Carney, Frank Dole's new bull-terrier, is a clinker indeed; his eyes look a bit full, but this on examination proves to be due to his eyelids being black; the eye itself is a beautiful, well-set small one. We are told he is likely to give Streatham Monarch a tussel. Not having seen the latter we cannot express an opinion. At all events, it will take an extraordinary good one to beat him.

A beautiful couple of dachshunde were shown, we should say the best yet seen over here. The bitch Janet being particularly good and full of quality.

King of the Heather, a real good Dandie, is a little common, but for all that will be a hard one to beat. Heather Madge was alone in the class for bitches, she is a nice one, but is not nearly as good as the dog. Hilbar, a smart Scotch terrier, about the best we have seen, was the only representative of these quaint, game little dogs.

In the miscellaneous class Pat Murphy, a fair Irish terrier, uncropped, was easily first. Two moderate Dalmatians followed, and a poor Mexican hairless, vhc., completed the list.

PRIZE LIST.

MASTIFFS.—1st, J. W. Miller's King Caution; 2d, G. Levor's Levor's Max; 3d, Myron T. Scudder's Ilford Rex. *Puppies:* 1st, G. Levor's Wonder.

ST. BERNARDS.—ROUGH-COATED.—*Dogs:* 1st, H. S. Brooks' Crystal; 2d, H. R. T. Coslin's Saratoga. *Bitches:* 1st, Ira Worster's Kathleen.—SMOOTH COATED.—1st, Chas. S. Baker's Lady Leeds.

GREAT DANES.—1st, G. Levor's Flora L.

NEWFOUNDLANDS.—1st, John Marshall's Prince Hal.

GREYHOUNDS.—CHALLENGE—1st, Woodhaven Kennels' Spinaway.—OPEN—2d, Abram Whitbeck's Don Pedro.

AMERICAN FOXHOUNDS.—1st, E. W. Judson's Gill; 2d, Jas. W. Taylor's Freckled Nell. *Puppies:* 1st, H. R. McDougall's Milo; 2d, Willard Wilson Jr.'s Bessie.

ENGLISH FOXHOUNDS.—*Puppies:* 1st, L. Hillabrant's Chopper.

POINTERS.—CHALLENGE—*Dogs:* 1st, Wm. H. Hyland's Ossining. *Bitches:* Wm. H. Hyland's Lady Graphic.—OPEN—*Dogs:* 1st, Geo. Jarvis' Ladd of Kent; 2d, S. S. Van Patten's Spot. *Bitches:* 1st, B. Moyer's Vesta; 2d, G. Jarvis' Lass of Kent.

ENGLISH SETTERS.—*Dogs:* 1st, Seminole Kennels' Sir Frederick; 2d, Rosecroft Kennels' Glendon; 3d, D. S. Ellsworth's Rockford. *Bitches:* 1st, Wm. Bryce, Jr.'s Spectre.

IRISH SETTERS.—*Dogs:* 1st, John Mack's Nicho; 2d, Seminole Kennels' King Elcho. *Bitches:* 1st, T. J. Farley's Nellie Husted; 2d, Seminole Kennels' Bessie Gleuch II. *Puppies:* 1st, T. J. Farley's General Husted; 2d, J. H. Hillabrant's Budweiser.

BLACK AND TAN OR GORDON SETTERS.—*Dogs:* 1st, Jas. B. Blossom's Heather York. *Bitches:* 1st, Jas. B. Blossom's Heather Bee.

COCKER SPANIELS.—CHALLENGE—*Dogs:* 1st, C. G. Browning's Cherry Boy; 2d, Ancient and Modern Spaniel Kennels' King of Oto's.

FIELD SPANIELS.—*Dogs:* 1st, C. T. Sackett's Adam; 2d, Ancient and Modern Spaniel Kennels' Gothamite. *Bitches:* 1st, C. T. Sackett's Eve; 2d, Ancient and Modern Spaniel Kennels' Lady Oto; 3d, Chas. H. Scoville's Fan. *Puppies:* Very high com., W. Streeter's Fido. High com., Mrs. G. H. Hall's Sport.

COLLIES.—CHALLENGE—*Dogs:* 1st, Seminole Kennels' champion Roslyn Dandy. *Bitches:* 1st, Seminole Kennels' champion Matchless Surprise.—OPEN—*Dogs:* 1st and 2d, Seminole Kennels' Scotilla IV. and Roslyn Conway. *Bitches:* 1st, Seminole Kennels' Dot; 2d, E. Rosa's Ban's Jessie. *Puppies:* 1st, Seminole Kennels' Matchless Scot.

BULLDOGS.—CHALLENGE—1st, F. F. Dole's champion Harper.—OPEN—*Bitches:* 1st, F. F. Dole's Countess of Norfolk.

BULL-TERRIERS.—*Dogs over 30lbs.:* 1st, F. F. Dole's Carney. *Bitches:* 1st, Dr. Sneeden's Winning Wagtail. *Under 30lbs.:* 1st, G. A. Rosa's Old Dorp.

BEAGLES.—CHALLENGE—*Dogs:* 1st, Rockland Kennels' Racer, Jr. *Bitches:* 1st, F. B. Zimmer's Twinkle.—OPEN—*Dogs:* 1st and 2d, Rockland Kennels' Roy K. and The Rambler; 3d, Ray Hillabrandt's Joe. *Bitches:* 1st and 2d, Rockland Kennels' Lady Vic and Fanny Racer.

FOX-TERRIERS.—CHALLENGE—*Dogs:* 1st, Woodale Kennels' Starden's Jack. *Bitches:* 1st, Woodale Kennels' Ebor Nettle.—OPEN—*Dogs:* 1st, Clarence Rathbone's Beverwyck Rebel; 2d, Wilton Kennels' Warren Tripper. *Bitches:* 1st and very high com., Woodale Kennels' Woodale Regina and Woodale Radiant; 2d, Clarence Rathbone's Beverwyck Crescent; 3d, Hallock Alvord's Hillside Treasure. Com., Larchmont Kennels' Larchmont Rose. *Puppies:* 1st, R. Morrison's Joe Hooker; 2d, H. C. Alvord's Mark Twain; 3d, Woodale Kennels' Woodale Radiant.

BLACK AND TAN TERRIERS.—1st, Irene Wilmarth's Harry.

DEATH OF MR. N. B. THOMAS.

Editor Forest and Stream:

It is with feelings of the greatest regret that I write to you to-day announcing the death of the veteran handler. Mr. Nathaniel B. Thomas, of this city. Mr. Thomas was taken ill with the grip while attending the field trials of the Philadelphia Kennel Club. Your reporter has told us that although suffering severely he handled Katie Noble II. in her first heat in the Derby. He insisted upon following the trials and Mr. Winslow, of our club, seeing that he was very ill, insisted upon his taking his horse to ride. It was not long before Mr. Winslow missed him, and upon search being made found him lying on his face in the woods in a fainting condition. He was taken back to the house and cared for by Dr. Glass. Soon after reaching his home in this city pneumonia set in, and, growing steadily weaker, he died on Monday last, the 28th inst. We can appreciate how keen was Mr. Thomas's disappointment in not being able to handle little Kate. You see he had handled her dam, Katie Noble, for a number of years, and won first prize with her in the All Age stake last year. The strongest attachment existed between Mr. Thomas and the "old lady," as he called Katie Noble. He was never content unless the bitch was with him. I have seen tears in his eyes when I have taken Katie away from him to go on a shooting trip, and it was his fondest wish to run her daughter, Little Kate, to the front; he reared her from a puppy, trained her perfectly, and I firmly believe that had he been in good health he would have won the Derby with her.

Mr. Thomas's death will be keenly felt among our local dog men. For many years he had devoted his attention to the development and training of bird dogs. He has trained many dogs for Philadelphia sportsmen, and had acquired a reputation for being one of the most faithful and reliable men in the profession; he invariably gave satisfaction to his employers. He was one of those conscientious men who would never hesitate to tell an owner if a young dog intrusted to his care would not come up to expectations. He would never take more dogs in his string than he could do justice by, and whenever he gave an opinion on a dog's merits you could tie to it. He reared and trained the noted pointer, Inspiration, and handled Bob H., Rod Gem, and a number of Irish and Gordon setters for gentlemen in this city. He trained and handled the Derby winner of 1890. Mr. Thomas was born at South Weymouth, Mass., Dec. 6, 1831, and therefore had passed his sixtieth birthday. He leaves a wife and three children and a host of friends to mourn him.

CHESTNUT HILL KENNELS.—Philadelphia, Pa.—*Editor Forest and Stream:* I have to advise you that on and after this date my connection with the Chestnut Hill Kennels will cease. I have sold out the dogs owned by these kennels to Mr. Henry Jarrett, who has been managing them for some time, and has practically been their owner as far as the conduct of the kennels, the correspondence and all business has been concerned. From this on he will be the owner of the dogs and directly responsible for all business and bills contracted in his name or in the name of the kennels. I wish him a most prosperous career, and a steady continuance of the success of the kennels.—MITCHELL HARRISON (former proprietor Chestnut Hill Kennels).

The entries for the Albany show number, we are told, 190, and as a dispatch says, fifty of them represent $100,000! Mr. Mortimer, the judge, should have some good dogs before him. The poultry entries number over 1,000.

SPANIELS USED FOR FIELD SPORTS.

[Concluded from Page 316.]

THE introduction of field spaniels into America seems to have been done very promiscuously until Mr. E. M. Oldham got some from Mr. Jacobs' kennel, and was stimulated to greater enterprise by the writer bringing over his kennel of Sussex and blacks in 1888, which included Bridford Negress, Negro, Bridford Ruby, Bridford Gladys, Beau President and Lady, which made up the strongest kennel of field spaniels ever brought to this country, and as nearly all of these have since become American champions of record, it is easy to estimate the value of such an importation to the breed in America. When Blackie II., imported by Mr. Cummings, Beatrice, imported by Mr. Watson, and similar specimens, were the kind of spaniels Americans had been brought to consider the only correct type, the many singular criticisms and more singular awards by the recognized judges in connection with this breed may be overlooked. Following this the writer introduced Mr. Geo. W. Folsom's Baron to the American spaniel world, and having been preceded by the dogs referred to and others which Mr. E. M. Oldham sent for, his merit was not subject to such tardy recognition, and after an unbeaten record for 1889, in which were two wins of the Spaniel Club's challenge cups, he had to take second place in the cup competition to a dog of the Beverley strain named Negus, imported by Mr. Rowland P. Keasbey, and also to Lady, which was once in the writer's team.

The effect of such singular awards by two of the recognized judges was somewhat minimized by both of these dogs being defeated by Baron on several occasions, by unrecognized as well as recognized judges, at some of the leading shows. Having imported Lady and introduced Baron, and both being now out of his hands, the writer feels that the credit of three wins of the cup out of four is to some degree his due, and that he can now refer to these dogs without a suspicion of prejudice. Baron is undoubtedly one of the finest black field spaniels that has been exhibited in recent years in America. He is not inordinately long and low, but he is sufficiently so to meet the standard, and the expectations of any one whose ideas of spaniels are not so utterly modern that the fact of field spaniels being intended for field sports is forgotten, and a desire to pander to the craze for monstrosities is too much for his common sense. Baron is, moreover, very active, a good size, and of true field type in conformation. He lacks that fixedness of type which is sometimes more clearly seen in dogs descended from those of the Newton Abbott strain; but his head and expression cannot detract much, because of his general excellence, and as he comes from stock of the most approved order, his blood should be of great value to breeders who have the stock referred to, which came to this country in recent years.

Lady is one of these, and having a somewhat more definite type, although less strong in character and size, she is worthy of a good position in the best company, and being a Sussex, will not detract from her usefulness, for it will be remembered that both the Newton Abbott and Bridford kennels relied greatly on this for perfecting their strains, and it is entirely safe for American breeders to tread in the footprints of the two foremost breeders in England.

Beverley Negus is the other winner of the cup; and in referring to this dog it is in the writer's mind that our aim should be to benefit and improve, and he unhesitatingly affirms that neither the importation of this dog nor the awarding of the Spaniel Club's cup to him can serve either purpose. Judges are not infallible, and are sometimes carried away by a general uniformity, which may be wrong when the standard or an ideal is in mind. Viewed in the light of facts stated in this paper, the Beverley prefix should awaken suspicion and make an intelligent breeder hesitate. If Spurgin, Jacobs or Woolland had no use for the mixture of cocker and field spaniel this dog embodies, then why should good representatives of these strains be overlooked in favor of a moderately good one of a strain which cannot hold its ground in England. The breeders of America cannot do better than start where those over the water left off, if they do not they will always be liable to a "knock out" by the importation of English cracks; and if the awarding of the challenge cup is such an uncertain guide, some outside light is desirable.

COCKERS.

Having already incidentally referred to cocker spaniels, it will only be necessary to say that at one time the Old English cocker was almost as rare as the Sussex of Rosehill strains, and from nearly the same cause. Dr. W. W. Boulton once had some very good ones of this breed, his Poll, in particular, being of the true type, but she was used in making the Beverley strain of field spaniels. Keno (E. 16,471) was another dog with much of the right character, being by Farrow's Obo (E. 10,452), who was by Fred out of Betty, both being pretty true to type. Dr. Boulton found it necessary to use Keno also for the benefit of the field spaniel, and later on his successor, Mr. W. R. Bryden, was producing both field and cocker spaniels from this sire, which were exhibited at the same show; so, as we were compelled to dismiss this strain in speaking of the field spaniels, so must we pass over this kennel in our search for cockers of the true type. But, in passing, we should note that in spanieldom across the water, at a Kennel Club show so recently as 1887, two dogs by Keno got second and vhc. in field classes, and another by this same dog took vhc. in cockers. In referring to the importations and the breeding of this variety in America, this must be kept in mind, and should be of considerable interest to those who are truly devoted to the maintenance of the correct type and of the characteristics which were at one time so much valued.

Mr. A. I. Boulton, Mr. F. S. Carew-Gibson and many others kept dogs of the old type, but to Mr. James Farrow is due much of the honor of maintaining the breed in the face of strong and persistant attempts to substitute a small kind of spaniel, bred from a union of the true type with field or Sussex spaniels. It has been asserted that the cocker spaniel was known in America twenty years ago and we hear that at one time Mr. Bestor, and afterward Mr. McKoon, kept a variety of liver and white which were relegated to the background on the Hoe brothers importing Romeo and Juliet, and strengthened their kennel by the further importation of Witch, Fly and Puss. These in turn had to give place to later importations, but surely a mistake was made when the Beverley blood was introduced through Beau and Blackie, which were imported by Mr. Pitcher, and it is difficult to see how Mr. Cummings expected to help matters by getting Brush II. over, for though he had a slight dash of Poll's blood, it could scarcely make him a cocker, and as Black Bess, imported by Dr. J. S. Niven, was of the same stock, viz., one branch of the Beverley strain before its union with Mr. Farrow's Obo, it seems clear that there was a great deal of groping in the dark, and that it was not until Mr. A. W. Langdale was induced to send over Chloe, after a visit to Farrow's Obo (E. 10,452), that a fair start was made. Unfortunately, the produce of this union was not kept clear of the previously imported stock, and though the importation of Obo Jr. or rearing of Obo II. and his excellent qualities in conjunction with Miss Obo II. might have secured a strain of cockers which could not be surpassed, even in England, a great opportunity has been missed, or used without due discrimination. Hence come the varied types to be found in the cocker classes at American shows, and the uncertainty felt by breeders regarding the proper type to select.

American spaniel breeders being men of intelligence as well as independence, it may be inferred that there has not been an attempt to manufacture a different kind of cocker with a view to varying the standard to meet the generally prevailing type, and by adding American to the cocker, claim it as an American production, after the fashion of those interested in other kinds of dogs. Nor yet can it be supposed that the judges have been compelled to bow to outside influence; therefore it is clear that information or sufficient material to meet the demand for these charming little dogs has been lacking.

One of the chief reasons for the resuscitation of the English Club was the desire to save the old English cocker from extinction; and when this is considered in conjuction with the knowledge of those who were then the patrons of the breed it should make any alteration of the standard a very serious matter, requiring the sanction of the club members

MR. FARROW'S FRED.

or a majority of those interested, and such a duty should not be left to a few, who may or may not have the necessary knowledge and interest in each of the varieties they are expected to deal with.

Among those who have done the best they could to breed stock resembling the old English cocker, Mr. J. Otis Fellows (familiarly known as Uncle Dick) is entitled to priority, because he as far back as 1861 had a true red Welsh cocker, a breed that is almost extinct. This probably accounts for there being many very cocker-like specimens of this color even to-day, which seems to be a mystery to those who are supposed to be well posted.

Mr. J. P. Willey is perhaps the chief breeder who has followed somewhat on the same lines with the Obo strain.

MR. FARROW'S LILY OBO.

Blacks seem to be his fashion, but as no great degree of consistency is insured at the different shows, his persistent efforts are liable to be as little valued as were those of Mr. Fellows, and it is nearly time that "What is a cocker?" should be decided, or the experienced will ask an equally important question of those with whom the destiny of this breed seems to rest, and it will be, "What of the future?"

Are we to accept from England such dogs as Newton Abbot Lady as true cockers, she is said to have been represented as such, and warranted to never weigh over 25lbs., yet, did she not weigh 35lbs. on arrival, and more ere she became acclimatized, and if the remark is true, "she never knew but just enough to eat, and I believe all the Jacobs strain is the same way," apart from other considerations, will such dogs do any breed a service, and when the pedigree is analyzed what do we find?

It will be as well to remark that any indication of the mixture of the King Charles, or other pet spaniels, is very objectionable, although they were undoubtedly evolved from this variety, and are sometimes equal to the cockers of our day in hunting instinct.

GREAT DANES.

Editor Forest and Stream:

The articles that have appeared of late in regard to the great Dane have prompted me to ask for information about this comparatively unknown breed of dogs. I have seen but few of them, but they were to me the most attractive in appearance of any of the large dogs. Now, is this German mastiff, Ulmer, or whatever his right name is, a wolf that must be kept chained and muzzled to prevent his eating up babies and children and from attacking his master, or is he like most dogs, a good companion and friend when well treated and properly trained? What is his mission in life? Is he simply a watch dog like the English mastiff, or has he any of the tracking qualities of the hounds?

I would like to have Dr. Nicolai or some one of your correspondents or advertisers tell in the columns of FOREST AND STREAM what the peculiarities of the breed are; whether they are even tempered or treacherous; in what way, if any, their dispositions differ from those of the English mastiff, St. Bernard and Newfoundland, and whether they make good watchdogs and are intelligent. I think many besides myself would be glad to learn about these splendid looking animals. STEWART.

TROY, N. Y., Dec. 26.

OLD CHAMPION MAC IS DEAD.—Eau Claire, Wis.—*Editor Forest and Stream:* Perhaps it may be of interest to some of the readers of FOREST AND STREAM to know that my deerhound champion Mac—that grand old veteran that so many have known in former years as Dr. Van Hummell's crack dog—is dead. He died Dec. 19, beloved by all the children in the neighborhood and hated by no one, unless perhaps by the sneaking fellow who compounded his last dose of poison. If there is a "happy hunting ground" for dogs, he surely has gone there.—WM. J. STARR.

THE ANTONIO—MAID OF KENT HEAT.

Editor Forest and Stream:

I was much interested in Mr. Tracy's account of this heat, in your last issue, but as a fact is mentioned which (he states) has a direct bearing on the result of the race, and that fact not being a reality at all, it becomes my duty to correct it, (being the handler of Maid of Kent). There is undoubtedly no question as to the competence of Mr. Penry; but I will venture to say he never gave any report to the judges, in which he stated that I shot, and Maid retrieved no less than twelve birds in the bye heat. As a matter of fact, only three birds were killed in the four hours, out of eight coveys pointed: two by myself which Maid retrieved and one by Mr. Penry, which he retrieved personally. To prove this I will leave it to any one who may be interested, to call on this same Mr. Penry and the assistant steward, who also accompanied us.

That evening I said, in joke, to Mr. Tracy that we had done a good afternoon's work and killed twelve birds, knowing any remarks I (the handler) might make should have no bearing whatever on the race. The result of this mistaken fact turned out to be very unfavorable and unjust for Maid, and does not at all offset the advantages Antonio had already obtained over her, and what is more the gap is still widened when we consider that Antonio had four days to run his three heats in and Maid only three. Again, I fail to perceive how a dog can rest himself if he retrieves in a quick and prompt manner. In the summing up of the bird work I notice Mr. Tracy makes no mention of the fact that Antonio had no retrieve to his credit, whereas Maid had several; and what is more, the rules require a dog to retrieve, in spite of which this accomplishment turned out to be to her disadvantage all through this heat. Antonio is credited with only one more single, which score would undoubtedly have been considerably reversed if Maid had not devoted time to retrieving. Her backing qualities were severely tested on more than one occasion by Antonio's frequent hesitancy on game and the character of her work all through proved that she did not flush purposely or go to her birds heedlessly, and no man knows positively whether the currents of air are blowing favorable or not for a dog to scent his game. If Antonio finished strong and ranging well, Mr. Tracy must admit Maid finished much stronger and was ranging outside of the dog up to the time she was lost on the rabbit. She kept "going it" in view of the judges the whole time, whereas Antonio might have been "resting" on point, the half hour he was absent, he always being found on game. Mr. Tracy speaks of Antonio as having one plainly apparent fault and that one with the fact of his noticing larks are very bad for an aged dog, but against this he can find no one individual fault with Maid, except that "she points rabbits." I would like to ask any man who follows a dog, if this is any demerit, provided he does not chase when flushed. In my opinion a dog with only that fault is as near perfection as they ever get. The object of this letter is simply to give Maid her dues and not at all intended to throw any discredit on Antonio, as I consider him one of the best dogs I ever saw, and certainly the hardest I ever tried to beat. C. E. BUCKLE.

CHARLOTTESVILLE, Va.

Editor Forest and Stream:

I notice that in your last issue Mr. J. M. Tracy, among other things, mentions the attack made by your reporter upon Mr. Avent as one of the many incidents of the Antonio—Maid of Kent heat. And as I personally know all the circumstances incidental to this, I give them as they occurred. Mr. Tracy, in this, as in many other matters concerning the heat, got his information second-hand, except as to the closing part of it. I am led to this explanation from the fact that your reporter passes the matter by in a manner that fails to do himself justice.

The facts are these: Mr. Avent had gotten behind in his attempt to get Antonio in hand just as he was leaving a corn-field, the judges and reporters having gone into the strip of pines and grass, beyond which was another corn patch. Maid of Kent and her handler were ahead, the judges next, followed by the reporters who were all in their proper places behind the judges. Major Taylor was the first reporter that Mr. Avent passed, and Mr. Avent remarked to him, "I wish you would let the handlers get ahead." Major Taylor answered, "Your proper course is to apply to the judges and ask them to let you catch up." Mr. Lacy was a short distance ahead, and perhaps, riding in a path, if there was one; at any rate this made no difference, as to one's getting by, the ground was open enough to permit three or four to ride abreast. Mr. Avent had pulled up a cornstalk with a lot of dirt in the roots, and without saying anything, with a swing struck Mr. Lacy between shoulder and neck, the dirt going down his neck and covering his camera, which occasioned him a good deal of trouble. This was the first intimation that Mr. Lacy had of Avent's presence behind him, and necessarily he was much incensed by the attack. Mr. Avent's manner was not such as to indicate that he intended to hurt him, and I think was sorry to think that he had. Mr. Lacy, as before stated, was in his proper place, behind the judges, and so far that Mr. Tracy did not know of the incident until told of it afterward. As I have said, only a hundred yards or so away was another corn-field. Mr. Lacy, having stated he would get even with Mr. Avent, took advantage of his stop in the corn-field to get some burrs out of Antonio, and succeeded in getting a similar cornstalk with dirt attached and struck Avent as stated by Mr. Tracy, as he was finishing his work. Mr Avent took the matter in good part, which was much to his credit, and laughingly said, "I guess we are even now." The whole time, from the time Mr. Lacy struck Avent until the start afterward, did not exceed one minute. And the attributing of the bevy point of Maid of Kent to this incident is all bosh, as Maid was covering the ground when she made the point before Avent had finished taking off the burrs. Mr. Tracy seemed much incensed for the moment until the matter was explained to him.

I think he gives undue significance to the incident as affecting the heat in any manner, but I suppose all these matters are mentioned in order to explain how Antonio won the heat. J.

THE WESTMINSTER JUDGES.

NEW YORK, Jan. 4.—*Editor Forest and Stream:* Inclosed please find list of judges for the coming Westminster Kennel Club show:

St. Bernards and Newfoundlands—Miss A. H. Whitney, Lancaster, Mass.

Mastiffs, great Danes, bloodhounds, Russian wolfhounds, deerhounds, greyhounds, English foxhounds, poodles, bulldogs, all terriers, dachshunde, toy spaniels, Italian greyhounds and pugs—Geo. Raper, England.

Pointers, English setters, American foxhounds and Chesapeake Bay dogs—J. M. Tracy, New York.

Irish setters—Wm. Tallman, New York.

Gordon setters—H. Clay Glover, New York.

Field, cocker, Clumber and Irish water spaniels—A. C. Wilmerding, New York.

Collies—A. D. Lewis, Hempstead, L. I.

Beagles and bassett hounds, R. F. Mayhew, New York.

Miscellaneous—Messrs. Raper and Mayhew.

H. Clay Glover, Veterinarian. JAS. MORTIMER, Supt.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

POINTER CLUB SPECIAL AWARD PROTESTED.

Editor Forest and Stream:

Will you kindly publish the inclosed notice of award and protest. The matter will be laid before the executive board of the Pointer Club of America at the next regular meeting and decision publicly announced when made.

GEO. W. LA RUE, Sec'y-Treas.,
Pointer Club of America.

JAN. 1, 1892.

[COPY.]

HEMPSTEAD, Dec. 28, 1891.—*Mr. Geo. W. La Rue, Sec'y Pointer Club of America:* DEAR SIR—I have the honor to inform you that the special prize of one hundred dollars offered by the Pointer Club to the best pointer owned by a member of the Club, which should be entered and run at the Central Field Trials this year, was duly awarded to the Hempstead Farm Kennels' Duke of Hessen. The judges desire to express their satisfaction in having been able to make this important special prize, the reward of very remarkably meritorious work, the performance of the winner having been quite above what is usually seen in field trials. Will you kindly transmit the amount of the prize to Col. C. H. Odell, Sec'y Central Field Trial Club for payment to the Hempstead Farm Co. Or if you so prefer, send it direct to them and advise Col. Odell when the payment is made. Respectfully yours. (Signed.) J. M. TRACY,
Vice-Pres. and Manager, Central Field Trials.

[COPY.]

CLEVELAND, Ohio, Dec. 26, 1891.—*Geo. W. La Rue, Sec'y Pointer Club of America, New York:* DEAR SIR—I hereby protest the award of the Pointer Club special of $100 as made by the judges at the Central Field Trials Club, December, 1891, for the following reasons: The award was not made in accordance with the resolution as passed by the Pointer Club, viz.: "Resolved, that $100 be and is hereby appropriated to be paid to the member of the Club whose pointer shall make the best record in any of the stakes run for in the season of 1891-2, at any recognized public field trial." As Promotion won first in the Pointer Derby and was absolute winner of the Derby at said trials, his work throughout the trials being of the highest order compared by the records, I do not hesitate to claim that Promotion excelled Duke of Hessen at said trials in winnings and work, and the judges erred in making the award in Duke of Hessen's favor. I respectfully request your board to consider this protest and award the prize where it rightfully belongs. Yours very truly, (Signed) JOHN R. DANIELS.

LORD CLOVER'S PEDIGREE.

Editor Forest and Stream:

As it is the wish of "Onlooker" for more information about the pedigree of Lord Clover, I offer the following. I am as little inclined to prolong "the agony" of the present owner of Lord Clover with respect to the correct pedigree of that dog, as he must be to have the pedigree circulated by former owners and himself questioned.

In a former letter this gentleman in criticising the little volume "The Prize Pug of America and England" says: "He (Dr. Cryer) denies that Lord Clover is a grandson of champion Little Dorritt and then places me in the awkward position of one who attempts to forge a pedigree." The book does nothing of the kind; the accusation is simply in the gentleman's own mind, but I have said in a letter to your journal that Lord Clover is not the grandson of champion Little Dorrit, and he who so advertises the dog places himself in an "awkward position." All the evidence Mr. Ballantine has given in your issue of Dec. 31 goes to prove that Lord Clover is not a grandson of a champion Little Dorrit, and he cannot furnish you, Mr. Editor, a letter from the persons he names that will sustain the pedigrees as sent out to the public by the former owners, or by Mr. Ballantine, the present owner of this dog. I inclose you a letter from Mr. Hugh Dalziel (where have we better authority?) written to the *Fanciers' Journal*. It will oblige me very much if you will publish it in full; I think it will satisfy "Onlooker." I here wish to make a correction.

I was misled into giving a wrong name for the dog's breeder in my book. Lord Clover's importer, his owners, the entries at the shows, the catalogues of shows and the American Kennel Club Stud Book had all previously named Mr. C. M. Chatterton as the dog's breeder, and unfortunately by accepting such authorities I fell into an error, but was more fortunate in regard to the pedigree.

To give an idea of the kind of information I received about this dog from his owners, I quote the following from a printed card sent to me: "Lord Clover, bred by C. M. Chatterton, England. Sire, champion Louis, he by champion Diamond out of champion Queen Rose, she by Tum, Tum out of Dowager, Diamond by champion Lovat out of champion Jenny. Dam, Gould's Nellie, she by champion Stingo Sniffles out of champion Little Dorrit, he by Max out of Midge, Stingo Sniffles by Stingo out of champion Set Set."

In speaking of Lord Clover's dam, this card further says: "His dam is that peer of good bitches, Gould's Nellie. * * Her dam, champion Little Dorrit, is as well known in pug circles as Old Gladstone is in the setters." M. H. CRYER.

PHILADELPHIA, Jan. 1.

[COPY.]

Editor Fanciers' Journal:

As I have just been engaged in the compilation of a "Pug Dog Stud Book," I willingly place before your readers, and as at present specially interesting, to Dr. Cryer and Mr. Ballantine, such information as I have gained on the question, premising that my researches in pug pedigrees are not concluded.

I know Dr. Cryer's book, and I venture to say that I have a much more accurate appreciation of the immense labor that little work represents than Mr. Thomas L. Ballantine can have, because I have had great experience in compiling pedigrees and know the difficulties in the way of getting true and full information. I dare say Mr. Ballantine will be astonished when I say that in compiling the first volume of my fox-terrier stud book considerably over 300 letters of inquiry sent out by me were unanswered, although I had enclosed with each a stamped addressed envelope for reply.

Now, where was the public record of Lord Clover's pedigree to be found, and to which Dr. Cryer in compiling his most useful little book would naturally turn for information? The English Kennel Club Stud Book, of course, and there in Vol. XV., Lord Clover, 23,514, is given as by Loris, 17,567, out of Nellie, and of Nellie no pedigree, nor any means of tracing one is given, nor, although the Kennel Club has since issued three volumes of the Stud Book, has there been any amendment of the faulty registration. If Mr. Ballantine is under the impression that the English Pug Dog Club keeps and issues a stud book he is mistaken.

Dr. Cryer has, however, fallen into two errors of commission which he might easily have avoided. Lord Clover was formerly named "Sing Pooh," not "Sig Pooh," and in Stud Book and all catalogues where exhibited his breeder is clearly given as Mr. Goulding, and not Mrs. F. M. Chatterton, who owned and exhibited the dog. As it is the pedigree of Nellie, dam of Lord Clover, that is in question, I will confine my remarks to that. In my Pug Dog Stud Book the registration of Lord Clover is as follows: Whelped Aug. 30, 1886; owner, Mrs. F. M. Chatterton; breeder, Mr. Goulding; sire Loris (Loris's pedigree not being in dispute I go on to maternal pedigree); dam, Nellie (dam of Rosalind, Lindon of Holcombe, etc., etc.); sire, Stingo Sniffles, by Jingo (also sire of Say So, See So, etc.); Jingo's sire, Cupid; dam, Psycho. Up to the present I have been unable to identify Cupid and Psyche; both names are of frequent occurrence. Dam of Stingo Sniffles, Set Set, pedigree unknown.

Now we come to Dr. Cryer's sin of omission, and surely it was not a great sin not to state that which he did not know and which the public records, which should have been clear on the point, gave him no means of knowing. Instead of debiting Dr. Cryer with the omission as a sin, I should credit it to him as a virtue, and when Mr. Ballantine, from this, charges Dr. Cryer with mutilating a pedigree, Mr. Ballantine writes arrant nonsense. If dog owners would confine themselves to statements they know and can prove to be true, they would save compilers of pedigrees a tremendous amount of trouble, and they would less frequently deck their dogs with honors that have no existence. By what right and on what authority does Mr. Ballantine call Little Dorrit a champion? There is not and there never has been in England a champion pug of the name.

Little Dorrit was the dam of Goulding's Nellie, and, therefore, grand dam of Lord Clover; but far from being a champion, she has not even a place in the Kennel Club Stud Book, because my plan of registering pedigrees is to trace back pedigrees of all noted dogs step by step to their most remote known ancestors.

It is in the pedigree of Mrs. Proctor's Rosalind (K.C.S.B. 25,830) that Dr. Cryer will find pedigree of Goulding's Nellie. It is there stated that she is out of Little Dorrit, and that Little Dorrit was by Max out of Madge, but what Max or what Madge the K. C. S. B., with its usual indefiniteness, leaves us to guess. I am now endeavoring to trace these and other pug pedigrees, and if I can identify the parents of Little Dorrit I shall send the information to the *Fanciers' Journal*, but if Mr. Ballantine can and will clear up the matter by giving Little Dorrit's full pedigree in your columns, I for one will be greatly obliged to him. Yours truly.

HUGH DALZIEL.

DOG CHAT.

OWING to the dissatisfaction over hotel accommodations and the inclination shown by some to take advantage of visitors at the field trials to get as much as they can out of them in a pecuniary way, the subject of having a club house supported by both the principal field trial clubs was spoken of. Situated in a good game country—somewhere round Lexington or Thompsonville, N. C., would be an excellent location—we think it would be an inducement for visitors to come to the trials. Men of refinement object to coming a long journey to find that they must "bunk in" with three or four other people, probably total strangers to each other, in one room. It would not cost much to run up a suitable house with small single rooms with cots, a sitting room, dining room, etc. Suitable kennel accommodations could also be erected at small expense. We heard of one man at the Philadelphia trials willing to put up $1,000 in such a club house, and no doubt there are many others who feel similarly inclined.

At the Dumfrees, Scotland, show Mrs. Foster, the well-known Yorkshire breeder, had a small fancy glass lamp suspended in the center of the pens in which her dogs were confined. This after dark had a pleasing effect, enabling the sightseers to examine critically these pretty little animals to greater advantage. This is a good suggestion if the lamps can be so made and hung as to avoid all danger of fire.

The English Kennel Club field trials will be held March 19 and following days.

The *Stock-Keeper* (Eng.) says that Lord Bute is still growing in French fancy. The *Figaro* states he is the biggest dog in the world, and stands 43⅜in. at the shoulder and weighs 247lbs. And as for price, our Gallic contemporary even outdoes the English romancers by gravely informing its readers that an American buyer paid $19,000 for him. This is almost enough to make Monsieur Kloskey have a relapse of his recent sickness, of which we are pleased to hear he is quite convalescent.

It seems now, according to last week's *Stock-Keeper*, that there is no cause for alarm as to the future of the Hospice St. Bernard. It has been suggested that the money so generously donated both in America and England be applied to the building of a new wing the Monks contemplate erecting. But, as the above journal rightly remarks, this was not the purpose for which the fund was started, so before making any further move in the matter they intend to find out officially through the English consul if the Monks have any pressing need for the money.

A Mr. C. Westfield paid $550 for the pug Fairy King at the late Birmingham show.

We quite agree with "Podgers" in his letter suggesting a "That reminds me" column to swap dog stories in. We have often thought of the same thing ourselves and had endeavored to sandwich in a "tail" whenever we could with any degree of confidence in its truth. The average dog man has such an abiding horror of seeming to set forth that which is not strictly correct that he holds back many surprising little happenings that would often make interesting reading. We find numbers of dog stories in our exchanges, but as a rule so Munchausenish that the sceptical dog man would turn away in disgust before it was half read. If "Podgers" will set the ball rolling we will do our best to find a corner in the Kennel where the tails can wag and the story-teller be at rest.

From what we see in the papers, we fear Col. North's greyhound "stable" will hardly do so well the coming spring. Simonian is off and ran poorly the other day. Young Fullerton did very badly at the Studley Royal Meeting. "Gossamer," in *Stock-Keeper*, thinks nearly all the Short Flatt dogs have suffered from illness, though the great Fullerton has escaped, and if he goes to the slips is sure to give a good account of himself.

The English *Stock-Keeper* publishes this week a portrait of the wonderful large Thibet sheep or wolf dog that we spoke of some time since. From the drawing, it looks something like a "bob-tail" sheep dog with Dundrearies and a long tail. It stands 36in. at the shoulders, and is 74in. long. It is good-tempered, very playful, and is of a lion color, with legs as straight as gun barrels.

From Mr. E. B. Bishop we learn that the Gleumore Kennels are now settled on what is said to be the best game country in the United States. With plenty of chickens, quail, snipe, etc., the dogs can all be worked throughout the entire year. The town of Coffeyville is one of the gateways to the Indian Territory, and this in itself is proof that this kennel will have exceptional facilities to train their dogs.

We are always sorry to see the old timers drop out of the show ring, and we least expected such an enthusiast on the cocker spaniel as Mr. Andrew Laidlaw would be guilty of such a desertion from the ranks. Our business columns will show that Mr. Laidlaw is disposing of his dogs for the reason, as he writes us, that business precludes his devoting much time to his dogs. While we are pleased to hear that Mr. Laidlaw's material prosperity is responsible for his decision we are sorry, and so will his fellow breeders be, to hear that one who has done so much for spaniels will henceforth be a spectator only. It is a hard matter, however, for an old fancier to sever his connection with the fraternity entirely, and we still expect to see Mr. Laidlaw's name occasionally in the show catalogues. This gentleman's success on the bench with dogs, many of his own breeding, is a guarantee that his stock will be well worth purchasing.

The New Year's Card sent out by the Duquesne Kennel Club is very neat. They are quite original in the way they draw attention to the fact that their show takes place March 15 to 18.

We note among the new advertisements this week the following offers for sale: Cockers, Andrew Laidlaw; setters, E. B. Bishop, Henry Sturtevant, C. T. Brownell; foxhounds, L. N. Edwards, C. F. Kent; great Dane pups, Merry Mount Kennels; pointers, W. K. Purinton, Wm. M. Stanbrough; Skyes, C. H. Smith; greyhounds, C. W. Sarvis. J. S. wants a beagle.

The Nashville dog show will make the third one being held this week in America. There are no regular money prizes given but several important breeds have substantial prizes in cash for the best dog and bitch, besides these a gold medal is given for the best of each class, and diplomas for second and third, and added to these the numerous specials, and no doubt there will be good pickings. Mr. Harry L. Goodman judges all classes. The club is very much disappointed that their application for membership in the A. K. C. arrived too late to be acted upon at the last meeting and this, to some extent, may affect the show. The Nashville Kennels have labored hard to make the show a success in a new country and we trust their enterprise will be rewarded.

Our suggestion that the Psovoi might be used with benefit in the hunting of wolves which infest some parts of Mexico, has, we learn from a dispatch from Pittsburg, received practical indorsement. Mr. Hacke has received a letter from some planters in a remote section of New Mexico asking him to send five of his Psovoi to the Territory. The letter states that during 1891 150,000 calves and other cattle were killed by wolves, which entailed a loss of $1,000,000. Every remedy which the planters have thus far tried has failed in the extermination of the pest, and the planters request Mr. Hacke to send a pack of his hounds to them in the hope that through them the loss of cattle and money will be lessened.

The judges at the Toronto Kennel Club's members' show, to be held Jan. 7, will be Messrs. C. A. Stone and R. P. Foreshaw, and Pres. R. W. Boyle will act as referee.

Mr. John Hawkes, of Cincinnati, called upon us the other day. We are sorry that owing to the crowded state of our columns Mr. Hawkes's letter containing his challenge could not appear at the proper time, and the next week, as it had already appeared in other papers, it was too late. The Rockford people have brought charges against him before the A. K. C. on account of his expressing himself more forcibly than politic on the decision that placed his collie Sir Walter Scott second to Rowdy. Mr. Hawkes took his dogs out of the show, but not until he had paid the $5 forfeit on each of his dogs, and for this he holds the receipt of the Rockford Club. Mr. Goodman, the judge, is one of the signers of the protest, or charge, but Mr. Hawkes says that he had no communication whatever with Mr. Goodman personally on the matter, and if Mr. Hawkes expressed his sentiments, however forcibly, outside of the show, that has nothing to do with the club or the judge. That Mr. Hawkes was ill-advised in rushing into print with a challenge to the judge is apparent to all show goers, but in extenuation it may be urged Mr. Hawkes has hardly had the experience in dog shows that enables him to submit without kicking to decisions that may appear to him erroneous. The future will, however, remedy this, and should the wrath of the A. K. C. be visited upon him we are afraid an exhibitor who seems disposed to invest largely in the best collie stock will be lost to the fancy. Mr. Hawkes has just purchased from Mr. Jarrett, of the Chestnut Hill Kennels, the noted collie bitch Roslyn Clara.

The New England Field Trial Club, after the successful trials held last November, are taking time by the forelock by making arrangements for leasing grounds, procuring game and seeing that it is protected in time for the next trials. To this end they have appointed a committee of four at their last meeting, held Dec. 29, with full power to act in the matter. Those appointed to this duty are Messrs. D. A. Goodwin, Jr., Geo. W. Lovell, A. M. Tucker and Dr. J. W. Hayward. At the same meeting Mr. Geo. W. Lovell was elected vice-president and Messrs. Harry Dalton and Fred Clarke were placed on the Board of Governors. President W. A. Power was elected delegate to the American Kennel Club. Charter membership has been extended to July 1, 1892. Before leaving this subject it might be well to say that if the New England Field Trial Club expects to become more than a local organization it behooves them to have their meetings and doings officially chronicled in other kennel papers, so that the field trial men of the country may be enlightened as to their doings. There is no reason why, should suitable conditions exist, this club's trials should not become more than a local affair, and providing the members of the club show an inclination to have their meetings recorded outside of Boston, the FOREST AND STREAM will do whatever is possible to bring their trials into more extended notice.

At the coming New York show the American Spaniel Club offers the following specials: The Field Spaniel Cup (solid silver, value $100) for the best field spaniel. The Cocker Spaniel Cup (solid silver, value $100) for the best cocker spaniel, American bred. Mr. George H. Whitehead offers, through the Spaniel Club, the Stud Dog Trophy (value $25) for the best cocker stud dog shown with two of his get. These cups to be won four times before becoming the property of any one exhibitor. The American Field offers through the Spaniel Club a cup for spaniels. To be allotted later on. Mr. J. L. Little offers through the Spaniel Club $10 cash for the best kennel of five or more Clumber spaniels; also $5 for the best Clumber bitch. Messrs. Luckwell & Douglass, J. P. Willey, Wm. West, E. H. Oldham, R. P. Keasbey, A. C. Wilmerding and Dr. F. W. Kitchel have all donated handsome specials, which will be allotted later on in the spaniel classes. All of the above prizes are open for competition to members of the American Spaniel Club only.

"THIS WILL SUIT PROF. ROMANES."—Hulton, Pa., *Editor Forest and Stream;* Either you have hidden a deep irony in the heading you give Mr. A. G. Adams's letter in yours of Dec. 31, or you miss what Prof. Romanes is in search of. What that distigushed investigator wants is instances where a bitch shows in her thoroughbred offspring the influence of a previous sire of another breed. This does not seem to be an element in the case Mr. Adams presents. It may be said in passing that Maltese is by no means a rare color in terriers, as mongrels are frequently seen of it. Crossing a red on a black sometimes produces mouse color, which is what I suppose Mr. Adams means by "Maltese." Brown and gray very often produce the same, and the "blue" of a blue mirl is nothing but a mouse color. It is very much to be regretted that some of your readers have not responded to your invitation to contribute cases of either "influence of a previous sire" or of mesalliances that were not followed by any traces of this "influence." Really this supineness is discreditable to breeders. Their pockets are directly interested in this question, for the owner of a bitch who has had a mongrel litter, very seldom dares to avow it, fearing injury to the reputation of his stock. I am convinced that ninety-nine out of a hundred breeders who have had "accidents" in their kennels have failed to see any after influences of them, yet with a most amazing indifference to their own interests they pay no attention to the opportunity afforded them by the most distinguished investigator of canine physiology now living asking for their experiences. Gracious! if I were to write that Bose, Old Dog Tray or Snooks was one quarter inch too long in the armpits, what a howl Smith, Brown and Robinson would raise over the slander on their pets. Faugh!—W. WADE.

DOG STORIES.

Editor Forest and Stream:

I have an idea (please omit the usual pleasantries on such an announcement).

The old saying that "Every dog has his day," is being pretty well verified, *vide* the dog shows, when he has his several days, and he is of sufficient importance to occupy several pages of valuable space in the FOREST AND STREAM each week. There is a good deal of the dryer statistical—pedigreeical and similar matter of interest to dog breeders; but as complete as all that is, the dog does not really get justice done him, and we readers who love dogs want to hear more of them in other ways or otherwise. You tell us all about their merits as field dogs and their aristocratic lineage, but nothing of their social qualities. Now, why can't we have a little discussion from the usual dog lore and give them a social show? We all know that the dog is more in the line of man's chum than strictly confined in use to a few days' shooting in the year. The FOREST AND STREAM has given all other animals and subjects a pretty good show. Bears, coons and woodchucks have had a good showing, and now young cubs have their innings (*vide* "Boyhood stories"). So I don't see why you should not have a "That reminds me" column for short dog stories or short tales of dogs. Can't spare the space? Nonsense. Have you not given columns to dog sights or fights of owners over their dogs? What I propose would be much more interesting.

How many of your readers really care, do you suppose, whether a great Dane or Ulmer has twelve joints in his tail or thirteen, over which or equally interesting points dog men wrangle. We have heard all about his ears, his tail, now let us hear something about his head, or what is inside of it—his intelligence. I know you will be deluged with dog stories that will make your hair curl and out-Herod any fish story on record. Never mind that; you are not responsible. It is not your conscience that is being damaged.

I am a friend of the dog in general, and do not confine myself exclusively to dogs of high degree either, although my inclinations point that way; but I can see merit and a soul in many a miserable little "ornery cuss" of a dog, with no more pedigree than half our millionaires that ride in carriages.

I have owned lots of dogs, some good, some indifferent, but few bad: and my experience is, that there are more good dogs than good men—that is, a larger percentage of goodness than in mankind. That was a sensible remark of the man or woman (a woman, I reckon) who said the more he knew of dogs the less he thought of men, or the more he knew of men the more he thought of dogs, whichever way it was—you have the idea either way.

I could fill a column of the FOREST AND STREAM every week with "tales of the dogs I have owned," but I promise not to be so hard on you, and will give others a show. I could begin now with one in point, not a pointer, but a little rascal of a fox-terrier with scarce any tail at all, that is at this moment at my feet working away vigorously on an old slipper, which he is reducing to shreds. He is the pest as well as the pet of the house. One moment down in the kitchen worrying the cat, the next at the top of the house lugging off everything in reach, and by the same token gave the household a chance to run an embarrassing joke on a lady boarder and myself by the fact of the discovery of my slippers in the lady's bedroom the other morning. Fortunately my "previous good character" and an alibi was a saving clause; but all this, as Rudyard Kipling says, has nothing to do with the story. What I am getting at is the suggestion that, inasmuch as you are enlarging the FOREST AND STREAM, and have given the other animals such a showing and now the cubs (*i. e.*, the boyhood yarns), let us have the dog "that reminds me." Fish stories will have to take a back seat. The change will be refreshing. PODGERS.

NOTES AND NOTIONS.

IT is almost axiomatic that early legislation is crude, that fundamental principles are overlooked and surface sores are the only ones treated. This is natural, as only experience develops what the underlying principles are. Now dog show legislation is necessarily new, dog shows not having existed long enough to result in the gathering of the experiences that determine primary principles. Thus a majority of dog show enactments are not founded on the essentials from which shows derive their support, but on the needs most at hand, of the exhibitors themselves, disregarding too much the visiting public, who, after all, are the mainstays of shows, for it goes without saying that if visitors do not attend shows there will be no revenue and therefore no shows. Now large as the dog loving public is, they alone will not support shows, we must draw in those having little or no love for dogs, who are moved to attendance by curiosity, and I can conceive of nothing more potent toward keeping such visitors away from shows than the incident, far too common, of a visitor being bitten by a dog. It is true that a majority of such sufferers have none but themselves to blame, their imprudence in handling and petting dogs bringing the biting on them, but nevertheless it is unquestionable that show committees knowingly permit dangerous dogs to be exhibited without taking precautions to prevent the public handling them. Any old babitue of shows can recall the names of many dogs that would bite on the least provocation, and who went the circuit of our shows with no kindly grating to protect the unwary public.

* * *

I am glad to see English papers speaking right out on this subject, the London *Stock-Keeper* calling attention to the growing ill temper of St. Bernards, and the *Bazaar* narrating the unprovoked attack of a mastiff in the ring on its kennel companion, the *Bazaar* doing the more effectual service in boldly naming the offending dog. I have no doubt that the owner of this quarrelsome animal will take offense at the frank publication of the dog's misdeed, but which is the more important, that the feelings of owners of savage, dangerous or quarrelsome dogs be unruffled, or that the public be protected?

* * *

The ordinary prescription for any trouble is, "bring it to the attention of the American Kennel Club and have it enact a rule," but, with all respect for that organization, it is too much of a clinic (I think that is the medical word) for trying patent nostrums, to deal with so important a matter, and the best course is for every show to provide itself with ample gratings for dogs showing any disposition to biting, and at the first indication of anything of the sort put up the grating. Our invaluable friend, the dog-show reporter, will certainly note this incident, or if he is too much afraid of cutting down his paper's list of stud-dog advertisements, such an act cannot be kept hidden and the owner of a dangerous dog will take the initiative himself in this matter.

* * *

The late amendments to the dog show rules of the American Kennel Club indicate a tendency in the direction of over-legislating that will certainly produce trouble and confusion in time. A recent contributor to your paper pointed out the propensity there is for multiplication of legal enactments, aiming to cure every evil under the sun by a special act directed against each particular grievance. This tendency is so well known to students of legislation that State constitutions now generally provide against the mischief thus wrought, by prohibition of any special legislation, requiring all to be general in purpose. So well settled is this in the public mind that a recent attempt to call a convention for constructing a new constitution for the State of Pennsylvania was overwhelmingly defeated at the polls, largely from the apprehension of another dose of "too much law." The American Kennel Club promises to become over-lawed very rapidly.

* * *

The English Kennel Club has under consideration a question of vast importance, nothing less than a proposal to exclude from exhibition at shows under Kennel Club rules, all dogs shown at shows not under these rules. While "The Onlooker" does not deem it discreet to discuss the merits of the question submitted, it is very proper to call attention to the tone and manner in which it was discussed, the ordinary arguments pro and con that Americans have become so familiarized with being presented, and it is impossible to withhold admiration for the final question put by Mr. Shirley, the chairman of the club, whether the exhibiting public should such a rule made? and indicating that the decision of the matter should hinge on this. We free Americans may take a lesson from despot-ridden Britain in this remark of Mr. Shirley's.

* * *

As a fact, however, the American, doggy or non-doggy, rebels at no tyranny at home. He is always ready to fight anybody foreign to him, but submits to a galling yoke of slavery from his fellow American such as Britons fought down some centuries since. THE ONLOOKER.

CHARLESTON SHOW.

[*Special to Forest and Stream.*]

CHARLESTON, S. C, Jan. 6.—This show opened yesterday with about sixty-five dogs and a thousand poultry. Some noted dogs are here. Laura B., Spot, Sting, Rosa, May Treasure, Cassino and others. Pointer, setter and terrier classes are good. Entries nearly all local. H.W. L.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.

W. H. P.—The best dressing for killing fleas is one part of kerosene to two of cotton-seed oil. Or you may add two ounces of kerosene to a pail of water, in which wash the dog.

A READER.—I have a foxhound puppy, ten mouths old, that has every point of making a good dog, but his mouth and throat are covered with warts (they look just like those a person would have on the hands). Ans. Remove the warts with a pair of scissors, cut off a few every day or every other day till they are removed.

CONSTANT READER.—I have a fox-terrier bitch a year old, now in heat. When six months old she was in heat and was lined, without effect, by a dog at the kennels of a friend. Is there any danger of there being no result should I have her lined again, and what could be done to aid matters, provided she is not barren? I have heard that a dose of salts is good for a bitch before having her lined. Is that so? Ans. There is no reason why she should not breed this time. Give two services. You can do nothing to aid her.

C. W. F., Cleveland, O.—Once more I am obliged to call on you for a lift. My beagle bitch Stella, in whelp and due about Jan. 18, 1892, has worms, the short, flat variety. Would I dare to give her anything to drive them off before she whelps, and what? Or would it be policy to wait until after? She is now 9 years old, in good condition otherwise, and I should very much like to raise her puppies in order to retain some of her blood. Ans. Give, after twelve hours' fasting, one scruple of powder areca nut; two hours after give a teaspoonful of castor oil. It should not hurt the coming litter.

READER.—My five-year-old Irish setter had a bad case of distemper last spring. He seems to have recovered, with the exception that his nose is dry and hot and he has lost courage. He eats well and hunts well, but is not half the dog he was. What can I do for him? Ans. The nose will always remain more or less dry. Apply a little boracic ointment twice a day; this will improve it. Also give the dog the following mixture for three or four weeks; it will improve his system and in this way his "courage:" Tr. nucis vom., ½drs.; liquor arsenicalis, 1dr.; dialyzed iron, 2drs.; water, 6oz. Give one tablespoonful twice a day.

G. P., Regina, Canada.—I have a pointer bitch, 4 years old, which is affected with what I believe is eczema. It causes her to scratch until the skin bleeds. The parts chiefly affected are the back and base of ears, throat and stomach, and slightly so on feet and legs. Have been giving compound rhubarb pills, two each morning, for twelve days, and bathing parts affected twice daily with an alkali wash, but there is no improvement. I feed only once a day. Ans. Apply following dressing all over the dog every other day for a fortnight, then wash off and repeat if necessary: Kerosene one pint, oil of tar two ounces, sulphur sublimed eight ounces, cotton seed oil three ounces. Give five drops of Fowler's solution of arsenic twice a day. Also treat for worms.

Rifle Range and Gallery.

"FOREST AND STREAM" TOURNAMENT

FOR NEW JERSEY RIFLE CLUBS.

THE opening matches in the trophy tournament were shot on Monday night, the Our Owns meeting the Puritans, the Millers shooting against the Excelsiors and the Hudsons trying their skill against the Palisades. The scores were below the average in each of the matches, but as soon as the novelty wears off the clubs will settle down to their proper shooting form and good scores will rule. The tournament is exciting a great deal of interest all over the country and the work of the various teams will be closely noted. The effect on gallery shooting is bound to be beneficial.

Below will be found the scores received of the matches shot on the opening night, Jan. 4:

Miller Rifle Club vs. Excelsior Rifle Club, shot on Miller Rifle Club range:

Miller R. C.										
D Miller	21	23	23	23	24	25	24	24	22	24—233
L Vogel	25	19	24	19	25	23	21	22	22	21—221
A Schlicht	22	22	25	22	24	22	24	25	23	24—233
E Fischer	23	23	23	21	22	17	25	25	23	24—226
C Judson*	24	23	23	25	25	23	25	24	25	24—241—1145

*This score was made in three minutes.

Captain, Richard W. Dawy. Judge, Fritz Brandt.

Excelsior R. C.										
L P Hansen	24	24	23	21	20	24	25	24	25	25—235
W Hallowell	22	22	25	23	22	25	24	24	22	22—231
W J Channing	21	22	23	24	23	22	24	23	21	25—227
W J Hennessy	25	24	21	24	25	21	25	22	24	23—235
C L Pinney	22	23	22	25	16	24	22	24	22	24—224—1152

Captain, L. P. Hanson. Judge, Frank Kittridge.

Our Own Club vs. Puritan Rifle Club, shot on Our Own range:

Our Own R. C.										
J Bander	21	22	24	24	25	22	24	24	21	22—239
W Watts	23	21	19	25	21	24	25	23	25	23—229
C H Townsend	20	22	25	23	23	24	25	22	25	25—234
F A Freiensehner	22	25	24	25	22	23	24	22	22	23—232
Gus Widman	24	25	24	24	23	21	21	24	25	25—236—1160

Captain, F. A. Freiensehner. Scorer, A. Cherry.

Puritan R. C.										
F Danger	23	24	24	22	24	25	20	24	22	—233
C Carpenter	20	24	24	23	24	24	24	23	21	23—229
E Helb	21	23	24	22	18	22	23	23	21	24 - 221
C Kopf	25	24	25	24	23	25	20	20	24	23—233
W Hansman	25	23	24	25	22	24	23	23	22	24—235—1151

Captain, A. Sauer. Scorer, M. Clark.

Hudson R. C. vs. Palisade R. C., shot on Hudson range:

Hudson R. C.										
H Hansen	25	24	24	22	22	23	25	23	25	24—[illegible]
J Rebhan	25	25	25	23	24	24	24	25	24	21—240
H Boddey	19	24	25	24	23	18	23	23	22	18—219
A Malz	22	24	22	25	20	24	23	22	21	21—225
A Braun, Sr	25	22	23	24	23	25	20	23	20	21—226—1147

Palisade R. C.										
J Reinhardt	19	19	21	25	24	23	24	20	22	22—219
G Finger	21	20	21	22	21	23	22	23	23	22—218
G W Graf	23	18	25	25	25	25	24	24	23	24—237
G H Heerschaft	24	22	20	17	18	19	21	14	19	16—190
Geo L Graf	20	18	21	20	19	22	22	23	22	21—208—1072

Signed by A. H. Nicolls, Judge. G. A. Finger, Secretary Palisade; C. E. Bird, Secretary Hudson.

Notice to competing teams: Please preserve your tournament targets, as the FOREST AND STREAM will from time to time publish *fac similes* of those which show meritorious work.

W Burt	25	24	24	24	23	23	23	20	20	20—227

NOTES.

The Miller Rifle Club headquarters, 80 Hudson street, Hoboken, are being thoroughly renovated and refurnished, and will no doubt prove a comfortable place for the visiting marksmen in the FOREST AND STREAM Tournament.

The Standard Rifle Club, corner First and Jackson streets, Hoboken, has only one range, and it will take about twice as long to shoot off the matches as it will anywhere else. The range is 98ft. long, the shooter fires through a slit, it being a half slit, half box channel. It is, perhaps, needless to say that the averages will drop when the different clubs come there.

In the 10-men team match between the Miller Rifle Club vs. Manhattan Shooting Club, the Millers will be represented by David Miller, Louis Flack, Frederick Brandt, August Meyers, George Schlicht, Louis Vogel, Ernest Fischer, L. Sohl, Frederick Liell, and either Charles Judson or J. H. Kruse. The first match takes place at Zettler's Gallery, 219 Bowery, New York, Thursday, Jan. 7.

August Steuber, of the Jefsen Rifle Club, Jersey City Heights, is now shooting in fine form. Fred Kloepping, Charley Prien and Billy Dilger are also putting up some fine scores. Their range has been attended to for several days by a few carpenters, and the place now looks cosier than ever.

The shoot for the weekly class medals in the Miller Rifle Club is weekly becoming more interesting. In the first class it has been won by Dave Miller, Sohl, Vogel, Schlicht, Judson and Fitzsimmons. In the second Kruse has won it eight times, Carragher three and Varick one; in the third Seltenreich has won it five times, Stadler six and Katenkamp one. The medals are up for twenty-six weeks.

The Millers cleared $65 clear of all expenses at its two-days' gallery shoot which closed ten days ago.

The Friday Night Club, Hoboken, has purchased a 28-inch Ballard rifle from Henry Ranges. The price paid was $22.

If Miss May Clinton, of the Cooke & Clinton Lady Rifle Shots, is anxious to arrange a match in all-round shooting with Charles Judson, of the Miller Rifle Club, a few lines addressed to the headquarters, Hoboken, will reach him.

It would be interesting to see a match made between the gentleman named above and Prof. John Loris. Mr. Judson claims to be quite handy at all-round shooting, which includes revolver, gun, pistol and rifle. His friends claim he is unbeatable, and therefore, yearn to see him give the Grecian gentleman a "holt."

William or "Buff" Rosenbaum, of the Empire Rifle Club, New York, recently appeared at a Hoboken variety theatre and gave a splendid exhibition of fancy and difficult shooting. Prof. John Loris, mentioned above, was filling a week's engagement at the house that week. His challenge to meet any rifle shot in the vicinity for from $50 upward was accepted by "Buff." Loris however, was not able to appear, but "Buff" filled out the week for him. To say that he made a success would be putting it mild.

Fred Ross created considerable merriment at the Miller's late shoot by frequently inquiring of "Buff" Rosenbaum, "How is it Buff, another case worth?"

The Miller Rifle Club will hold no ball this winter as the members think it too much bother, but intend to save their energy for

the spring shoot at the Union Hill Schutzen Park on Decoration Day.

Tom Fitzsimmons is now Sergeant stationed at the Guttenberg Race Track. Every visitor that Tom sees is scrutinized from head to foot, and his looks rival that of a Pinkerton detective officer.

Capt. J. Reinhardt, of the Palisade Rifle Club, as also Adolphus Rossy, J. Johnson, and in fact the whole club, are weekly interested readers of this paper. Capt. John says he can't get along without it. Adophus seconds this.

That old Texas war horse, police officer "Cap." Aldonetta of the Hoboken Police Department has as yet received no answer to his challenge inviting any 55 year old policeman to a match with the revolver. Thirty years ago he was one of the foremost shots the Lone Star State possessed.

Third Brigade Rifle Association.

ALBANY, N. Y., Jan. 1.—The following scores were made by the Third Brigade Rifle Association:

Major Chas. Gaus	7	7	5	6	5	8	7	7	9	9—71	
	6	9	10	8	7	10	6	10	7	8—81	
	10	10	5	6	4	10	5	10	7	7—74

	9	7	6	7	8	6	7	10	9	10—79	—233

WM. C. GOMPH.

Walnut Hill.

BOSTON, Jan. 2.—The regular Saturday shoot of the Massachusetts Rifle Association was held to-day at its range, with a good attendance of riflemen, but a dark, stormy day. All the new matches were opened for 1892. F. Daniels, John French and S. O. Merville won the association medals.

Following are the scores made to-day, all being re-entry matches, standard American targets:

Pistol Medal Match—50yds.

H Severance	91	O Moore	84
L H Greene	84	A D Stevers	82
W P Thompson	113	O Moore	104
I B Thomas	105	W Peters	104

All-Comers' Off-Hand Match.

H Cushing	82	M T Day	77
S O Merville	82	O Moore	73
W M Foster	80	J B Hobbs	72

Revolver Match—50yds.

L R Avoy	80	M R Barter	65
J F Browne	74		

M T Day... 81
A D Stevers... 72
D N Winn... 72
All-Comers' Rest Match.
J F Browne... 88
D Martin... 70
I B Thomas... 69
D N Winn... 68
N O Good... 63

The Wurfleins.

PHILADELPHIA, Jan. 2.—Regular weekly scores, at 25 ds., American ring target, possible 250, off-hand, .22cal. Wurfflein rifles, were made by the several members of the Wurfflein Rifle and Pistol Association at their private range, 227 North Eighth street, for the week ending Jan. 1 as follows:

A J Yerger	25	23	24	22	25	24	23	23	24	25	—238
E Travis	24	24	25	24	24	21	25	24	24	21	—236
J J Mountjoy	24	21	25	22	24	24	21	23	24	24	—232
H J Mebard	24	23	23	24	22	25	23	23	22	22	—231
W Wurfflein	23	23	22	22	24	22	23	24	21	25	—228
Dr Gardiner	22	24	24	22	23	23	24	19	23	23	—227
R L Dubbs	23	23	24	25	19	20	24	22	22	24	—226
Leslie Woods	21	22	23	24	23	24	24	21	21	15	—218
J N Benner	23	21	22	23	22	17	21	19	22	21	—211
S DeGrasse	23	22	19	19	23	22	18	19	24	19	—208
J C Wurfflein	16	22	18	23	23	23	18	19	19	23	—204

Empire Rifle Club.

NEW YORK.—The following scores were made by members of the Empire Rifle Club at their regular shoot Tuesday, Dec. 29, at the club's 100ft. range at the 25-ring target, possible 250 points:

W Rosenbaum	251	W Maisenholder	224
W Miller	229	A Stahl, Jr	224
J Grimm	227	G Tallman, Jr	220
C Zettler, Jr	225	H Zettler	220
		G Hillmeyer	219
		A Nowak	218
		G Bernhardt	203

W. MILLER, Cor. Sec'y.

Brooklyn.

BROOKLYN.—*Editor Forest and Stream:* There will be a rifle match at the Thirty-second Regiment Armory N. G. S. N. Y. Jan. 11 at the 200 and 500yds. range, ten shots at each range, R. Gen. Guide R. M. Abbeser and Chief Bugler J. J. Gorman against Ordnance Sgt. Otto Langsdorf and Sgt. Saml. Holdsworth, Co. D. —C. C. MINOR.

Chicago Rifle Club.

CHICAGO, Jan. 4.—At the regular meeting of the Chicago Rifle Club, at Colehour, Saturday afternoon, Jan. 2, with a high wind, the following scores were made on the standard American target, 200yds., off-hand:

J Macauley	62	67	61	W H Holden	60	62 69
				W H Gleason	63	72 66

W. H. HOLDEN, Sec'y.

Trap Shooting.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Jan. 12.—North Side Gun Club, monthly shoot, Maspeth, Long Island.

Jan. 14.—Newark Gun Club, monthly club and open shoot, at live birds, on John Erb's Old Stone House grounds, Bloomfield avenue, Newark, N. J.

Jan. 21.—Essex Gun Club, monthly shoot, at live birds, for club members only, at Marion, N. J.

Jan. 26.—Hamilton Gun Club, grand live pigeon and artificial bird tournament; $1,100 guaranteed. A. Smith, Sec'y-Treas., Hamilton, Ontario, Canada.

Jan. 28.—Atlantic Rod and Gun Club, team of two match, 50 birds per man for $100 a team, West End, Coney Island.

Feb. 9-11.—Reading Shooting Association's tournament, Reading, Pa.

April ——Ridgewood Gun Club tournament, at Ridgewood, N. J.

May 17-20.—Annual tournament of Kansas City State Sportsmen's Association, at Council Grove. G. W. Cleck, Sec'y.

June 6-11.—Eighteenth annual tournament of Illinois State Sportsmen's Association, at Chicago. W. L. Shepherd, Sec'y.

June 13-18.—New York State Association's Thirty-fourth Annual Convention, at Syracuse, N. Y. Chas. H. Mowry, Sec'y.

Manufacturers' and Dealers' Association tournaments:

Baltimore, Md.—Second week in March.
Staunton, Va.—Second week in April.
Savannah, Ga.—First week in May.
Pittsburgh, Pa.—Second week in May.
Brooklyn, N. Y.—Second week in June.
Watertown, N. Y.—Fourth week in June.

Geneseo Tournament.

GENESEO, Ill., Dec. 30.—The fourth annual tournament of the Geneseo Gun Club, held at Geneseo, Ill., Dec. 28, 29 and 30, was fairly attended, the entries numbering as high as 25. The weather was fine, a high wind prevailing during the three days, making targets very unsteady and the live birds hard to stop in a 50-yard boundary. The birds were a good lot, some slow to start, but when on the wing they were hustlers. The target traps were set facing the south and the sun shone directly in the shooter's face, and much complaint was made about the bad and uncertain light, but owing to being disappointed in getting the fair grounds the club did the best they could under the circumstances.

Among the visitors were R. O. Heikes, Chicago; S. A. Tucker, of Parker gun fame; Wm. Duer, of Jacksonville; Rexroat, of Virginia, Ill.; Hon. Tom Marshall and Mr. Pugh, of Keitbsburg, Ill.; Chris Reese, of Moline; J. W. Howard, Harry Young and Mr. Kray, of the Forester Gun Club, of Davenport; also Ole Oleson, the lightweight of the West Ends; John Schick, of Mt. Pulaski, Ill., and a number of others whose names I do not remember.

The second day Nate Dixey, an intimate friend of Miles Johnson, of Robbinsville, N. J., and an old-timer, was on hand to have a go at the live birds and entertain us by telling how Miles, Bogardus and himself put in three weeks attending tournaments in Jersey. Owing to targets running out some events on programme were not shot. C. W. B.

First Day, Dec. 28.

No. 1, 15 targets, entrance $2:

Averages on targets: Rexroat first, Budd and Heikes second, White third, Sands fourth, Harbaugh fifth.

Averages on live birds: Rexroat first, Budd second, Heikes and Reese third, Marshall fourth, Harbaugh fifth.

Iowa Traps.

DES MOINES, Ia., Jan. 1.—The Highland Gun Club held an all day shoot at targets and live birds. The first shoot was to have been a team shoot, six men on a side, for a purse of $60, but owing to three of the contestants not showing up it was declared off and the day was spent in sweepstake shooting. The weather was cold and raw with a high wind, and many birds fell dead outside of the fifty-yard boundary. Ties divided. The club intend to put in a set of fine bluerock traps with North's electric pull. When this is done they will have a shooting ground second to none. The Iowa State Sportsmen's Association will hold their annual tournament on these grounds, the dates of which I will send you as soon as the board of directors meet. C. W. B.

Councilmen at the Trap.

The match between teams of three men each captained by Councilmen Heage and Merritt, of the Union Hill Gun Club, took place Saturday afternoon Jan. 2, for $50 a side and a supper for twenty-five, ten birds a man. None of the participants are experts. The score:

Merritt's Team.		Heage's Team.	
J Merritt	2210000010—4	A Heage	1000200000— 2
J Washington	1102101011—7	H Lange	0102020102—5
J Wein	1200210010—5	O Haas	0002001000— 2
			—9

A general good time interspersed the supper afterwards, Councilman Merritt explaining the cause of his team winning.

JAY H. KAY.

FULFORD CAPTURES HARRISBURG.

GENTLE reader if you care to become embittered, soured, out of sorts with yourself as well as the rest of the world in general, to say nothing of the railroad company in particular, just board one of the evening trains on the Central Railroad of New Jersey, ride as far as Allentown, where you have (according to the time table) about ten minutes "lunching spell" before taking a train on the Reading line for Harrisburg. You rush into the restaurant—where, I must confess, the service is very prompt—have your order filled, and just as you are about ready to eat there comes to your ears, "All aboard for Reading, Pottsville and Harrisburg!" Then, of course, you swallow the scalding cup of coffee, "see the captain," run for the train and—wait from five to fifteen minutes for it to start. Beside all these pleasurable experiences you must not forget to note the smooth (save the mark) motion of the car, which prompts one to think he is riding on a lumber wagon over a country roadway. But it's all in a lifetime, and once you reach Harrisburg you'll forget all the pains of the trip. Of the town proper I can say but little, having reached it at 12:10 on New Year's morning, spent the whole of the next day on the shooting ground, and started for home again at 1:15 the same night. And after all I don't think that the seekers after trap news and gossip are at all interested in "gush," personal experience, contents of private letters and the like, with which some shooting columns abound, to the exclusion of better matter. Nor is there such a great honor attached to the fact of "getting loaded" as to make it necessary to advertise each particular instance. Let 'er go!

There is one thing anent Harrisburg that will interest the public, and that is the number of hotels, which appear on nearly every block. Some of the hotels are first-class in every respect, but the majority are medium grade, both in price and quality of service. When it comes to "tacking on" for extras they are well posted to a degree, and in this I am inclined to think there is but little difference in hotel methods the world over.

The object which brought the writer to Harrisburg was, of course, the winter tournament of the Harrisburg Shooting Association, with the special attraction of a hundred-bird match between those two kings of the smooth-bore, Elijah D. Fulford and John L. Brewer, to take place on the first day of the new year. Everybody in the city knew Fulford; everybody knew of the match and was going to see it; everybody and his or her friend was willing to wager that the Harrisburg favorite would win. Brewer, of course, was well known in the place by virtue of his great reputation as a shooter, although he had never shot there. People were willing to acknowledge that the Hammonton man was a great killer and that the man who defeated him would have to put up a great score, but nevertheless the whole town was willing to wager that Fulford would kill enough to win. I have said that Brewer had never shot in the place, and I may add that Fulford had done no shooting there except in sweepstakes and an occasional little "go" with some local expert at ten or fifteen

FULFORD AT THE SCORE.

From an instantaneous photograph.

birds each. Although the company by whom he is engaged has its general headquarters in Harrisburg, his business keeps him away from there the major part of the time. For a number of years he has been a valued member of the Harrisburg Shooting Association, which engineered the arrangements for this match in order that his admirers might have an opportunity to witness a display of his skill as well as that of the world-renowned Captain Brewer. The grounds on which the match took place are what are known as Island Park, being situated on the northeastern end of Hogarst Island, one of the many beauty spots with which the picturesque Susquehanna River abounds. The grounds are those of the Harrisburg Athletic Association and are used principally for base ball games. A large grand stand, capable of seating a thousand people, and two "bleaching boards," each of the same capacity, are on the ground. The ground is soft and soggy, and rubbers are in demand there as a rule. From the toll bridge, which it is necessary to cross in order to reach the island from Harrisburg, the view up the river on a clear day is a beautiful one, the river being dotted with small islands, covered even at this season with green, and in the distance the mountain peaks standing out in bold relief against the blue background of sky.

Although I reached the shooting ground shortly after 9 A. M. I found a good number of people there, the majority being shooters. Among the first ones to say "good morning" were Mr. and Mrs. Lindsley, of Hoboken, of American wood powder fame; and Neaf Apgar, of Henry C. Squires, of New York. After an introduction to President Chas. E. N. Brelsford, Secretary Worden and Treasurer Etter, all of the Harrisburg Shooting Association, I had the joints of my arm almost loosened by the warm hand-shaking of Champion Fulford, who, along with Captain Brewer, whom I met a moment later, was overjoyed to think that FOREST AND STREAM would not be obliged to depend upon Associated Press reporters for details of their match. The shooting in the regular and extra events was under American Shooting Association rules. The birds used in the sweeps were a mixed lot, some of them being very fast and tricky while others needed considerable coaxing before they would fly. The weather at this time was rather threatening, the air being moist and raw, the wind coming from the northwest and a heavy mist hanging over the river. Later in the day, however, the mist cleared away and for a couple of hours the sun peeped down on the scene. The conditions of the first sweep, a sort of a warming event, preparatory to the regular programme, were 5 live birds per man, $2.50 entry; there were seven entries in this event and consequently only two moneys. The scores were as follows:

J S Dustin	11111—5	F Bower	10111—4
J Dinger	11111—5	R Fuller	10101—3
F Brown	11110—4	A Hoffman	11001—3
J O'H Denny	01111—4		

The moneys were both div.

By the time the above event was shot to a finish the number of shooters had been considerably increased, among the new comers being N. A. Hughes, of Williamsport, vice-president of the Pennsylvania Sportsmen's Association; H. A. Bach, of Harrisburg; P. Buss, R. S. Parker and President Brelsford. In the next sweep the two experts, Fulford and Brewer, entered, as did Lindsley and Apgar and Mrs. Lindsley, who shoots under the romantic name of "Wanda." The next event was No. 1 on the regular programme, the conditions being 5 live birds each, $4 entry, 4 moneys. The whole entry list was in prime shooting form, as is shown by the appended detailed scores, which account for only 13 lost birds out of 75 shot at, there being 15 entries. The shoot:

Dustin	11111—5	Bower	10111—4
Lindsley	11111—5	Dinger	11110—4
Brelsford	11111—5	Apgar	11110—4

J. S. DUSTIN.

Bach	11111—5	"Wanda"	11110—4
Fulford	11111—5	Parker	01101—3
Brewer	11111—5	Russ	10011—3
Hughes	11101—5	Brown	10100—2
Denny	11110—4		

Ties for first, second and third moneys were divided; Brown took fourth alone.

Below will be found a tabulated score of the Brewer-Fulford match, showing the trap from which each bird was sprung as well as the direction of flight:

No. Bird.	E. D. FULFORD. No. Trap.	Bar-rel.	Direction of flight.	No. Bird.	J. L. BREWER. No. Trap.	Bar-rel.	Direction of flight.

Key—R, right; L, left; I, incomer; D, driver; C, circler; Tw, twister; Tow, towerer; Hov, hoverer; Q, quarterer.

Fulford used 1 is second barrel 39 times, Brewer 47 times to kill. Time of match, 2h. 1m.

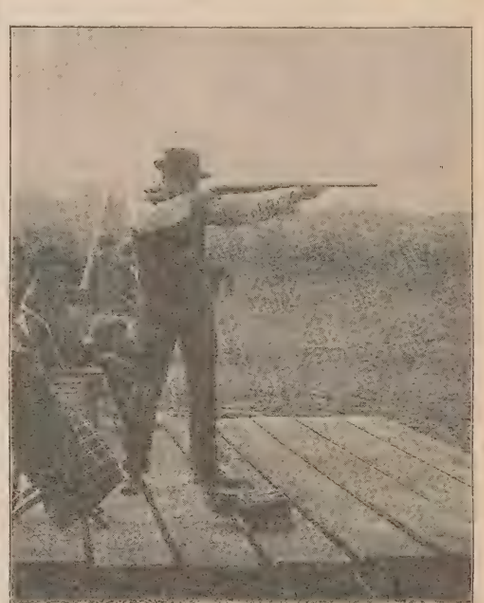
Regular event No. 2, at 7 live birds, $6 entry, was next in order, there being 15 entries and 4 moneys. The scores:

Dustin	1111111—7	Stewart	0111111—6
Brewer	1111111—7	Fulford	0111111—6
Brown	1111111—7	"Wanda"	0011111—5
Lindsley	1111111—7	Denny	1010110—4
Bowen	1111111—7	Kinzer	0101011—4
Hughes	1111111—7	Brelsford	1010201—4
Dinger	1011111—6	Andrews	0011001—3
Bach	1111110—6		

First and second moneys were divided; third went to "Wanda" alone; ties on 4 were divided. An exhibition not down in the programme was given when Bach lost his last bird. The bird flew back over one of the "bleaching boards," and just as it had cleared the fence it was brought to grass by a bullet from a revolver in the hand of Officer Chas. Yowler, of the Harrisburg police force. The bird was killed at fully 30yds.

No. 3 on the regular programme was at 10 live birds each, $10 entry, 4 moneys. Brewer and Fulford remained out of this event. Out of 130 birds shot at only 13 were lost. The scores in detail are given below:

Brelsford	1122211111—10	"Wanda"	2202121121—9
Bach	2122112111—10	Bower	2222211220—9
Brown	2121112221—10	Denny	2221122100—8
Dustin	1111111122—10	Rolfbach	2012121202—8
Lindsley	2222222222—10	Stewart	2021220220—7
Spicer	2112112112—10	Dinger	0101201111—7
Hughes	1211111201— 9		



All ties were divided.

Event No. 4 was at eight live birds each, $5 entry, there being fifteen entries and four moneys. When the fifth round had been shot half way down the event was stopped until after the match between Brewer and Fulford, the time for starting which had now arrived. At 4:25 P. M., when the event was again taken up, it was fast growing dark and before it had been brought to a finish it was almost impossible to see a bird twenty yards away. Previous to the postponement only eight birds had been lost out of sixty-eight, but of the last fifty-two seventeen were lost. The scores of the shoot in the order of names follows in detail:

Hatfield	1011111—7	H Thurman	2210220—6
Lindsley	2020210 2—5	Worden	2011120—6
Denny	2122101—7	Dinger	1122112 0—7
Brown	1 20120 0—5	J Thurman	0112121 0—6
Kinzer	2222122 2—8	"Wanda"	0 2 2 2 0 2 2—5
Mercer	1112101 0—6	Spicer	1112101 0—6
Dustin	1112101 0—6	Coder	0 2 2 1 2 0 2—5
Brelsford	1 0 0 2 1 0 2—5		

Kinzer won first alone, second, third and fourth were divided.

It was some minutes after 2 P. M., when the announcement was made that the big event of the day would start, and while the principals were shooting at a few practice birds, the officials started the by no means easy task of getting the field cleared. At this time a big crowd was on the grand stand, on the "bleaching

BREWER AT THE SCORE.

From an instantaneous photograph.

boards" and standing about the field, the number being variously estimated at from 2,200 to 3,000. However this may be, over thirteen hundred people paid their admission, while of ladies, to whom admission was free, there were fully 500. Beside these were from 500 to 600 free admissions, so that 2,200 would be under rather than over the actual number present.

Among the spectators there were a large number of prominent people from all over the country, among whom may be mentioned Mayor Fritchie, of Harrisburg; Sheriff Keller, of Dauphin county, Mayor Robert Clark, of Lancaster; Horace B. Johnson, D. H. W. Leister, Lewis Leister, Harry Ruppert, Joseph Strauss, W. W. Carmen, C. M. Gauge, Russell Gracey and Col. Jas. Gwin, of Huntington; R. E. Sheerer, of Carlisle; C. C. Beebe, of Williamsport; James Sweeney, of Hazleton; Charles Fettinger, of Altoona; Simon B. Cameron, of Lochaber; Joseph Thurman, Harry Thurman, Charles Tappen, R. M. Peterson, J. A. Lutz, Elmer Lutz and Edward Burger, of Germantown; T. Sholvin, Pres., R. F. Stott, Sec'y, S. A. Peck, McLellan Hummell, James Witmer, J. A. Elliott, Daniel Snyder and G. E. Rohrbach, of the Northumberland Shooting Association; Dr. Schwartz, F. H. Reimel, W. McGowan, Geo. Bock, Field Bock and Add. Hoffman, of Lebanon; N. A. Hughes, Sec'y, Frank Hertig, A. Neilson, Garry Freisman, Will Anderson, F. P. Abercrombie and J. S. Hopkinson, of the William Penn Shooting Association; L. T. Hatfield, H. H. Hatfield, E. Hipersteel, H. Disney, W. Harbacher, Frank Harbacher, E. Jamison, Jas. Jamison and R. C. Bamford, of West Fairview; W. F. Jordan, editor of the *Daily News* and *Sunday Telegram*, of Harrisburg; E. J. Stackpole, of the *Evening Telegraph*, of Harrisburg; W. G. Jones, sporting editor of the Harrisburg *Call* and *Telegram*; Jacob Peniz, of the *Sporting Times*, New York. The Harrisburg Shooting Association was represented by President C. E. N. Brelsford, Secretary J. H. Worden, Treasurer C. F. Etter, H. A. Bach, H. M. F. Worden, H. A. Dill, H. P. Shoop, E. Greenburg, J. S. Dustin, J. D. Kinzer, W. H. Brensinger, Geo. F. erster, J. Dinger and H. A. Roat.

It was precisely 3:30 P.M. when the match began, the conditions of which were 100 live birds each, 12-bore gune, 30yds. rise, Hurlingham rules to govern, for a purse of $500 contributed by the Harrisburg Shooting Association. Referee, James H. Worden, Harrisburg Shooting Association; official scorers, C. H. Townsend of FOREST AND STREAM, and Jacob Pentz, *Sporting Times*; trap-puller, N af Apgar, New York; handler, Harry Hellman, Harrisburg, Pa.

THE FIRST ROUND.

Amid a dead silence the giant from Hammonton stepped to the score, threw his Westley-Richards beauty to his shoulder, lowered it, called "Pull," in the same off-hand style as of old, and an instant later was gazing blankly at a dun-colored pigeon which made a zig-zag flight as the number 4 trap went over, and escaped from both barrels with the loss of a few feathers. Then up stepped Fulford, his face showing the same determined look that it had at Woodlawn when he said "I will shoot to win!" Twice his Greener was lined on the traps, then in a drawling monotone came "Pull!" and as a blue-checker from No. 3 trap started straight to the left it caught both barrels and ended its career. Brewer grassed four birds straight and slipped up with his sixth, a bird which started straight to the front from No. 5 trap, and is probably nesting somewhere about Fairview. Fulford's second bird was a circler, which came out of No. 3 trap and carried two

loads back over the heads of those on the "bleaching boards," only to fall dead out of bounds. His ninth bird was a "clinker" of a driver from No. 3 trap, that flew like the wind, but was stopped by a beautiful second at 60yds. Brewer's twelfth, a lightning left-quartering driver from No. 3 trap was a splendid first barrel kill. Fulford's thirteenth bird was a dun-colored circler from No. 3 trap that failed to stop on the first fire, but was brought down by a fine exhibition of judgment with a long second. Brewer's fifteenth was also a circler, from No. 5 trap, and the style in which it was grassed with the second brought out a round of applause. His eighteenth was another ugly zigzagger that started from No. 1 trap, as though in doubt as to its course—these birds of indecision by the way being a terror to a shooter—and finally climbed away out of both barrels. His twenty-third, a "rasping" driver from No. 3, was killed in elegant style, getting both barrels full; his twenty-fourth took the same course and was brought down with a regular grandstand second. Fulford's twenty-third was a fast right-quarterer which looked as though it wanted its freedom, but dropped when his deadly first sent an ounce and a quarter of No. 7 shot after it; his twenty-fourth was a very fast and vicious-looking left-quartering driver from No. 3, which was grassed at fully 70yds. by a well-timed second. At the end of the first round the score stood: Fulford 24, Brewer 22, and Harrisburg was happy, for its favorite looked like a sure winner.

THE SECOND ROUND

opened by Jack grassing an ordinary bird that hovered over No. 3 trap, Fulford following with a kill of a not-over-fast right-quarterer, also from No. 3. On his twenty-ninth bird Jack caught another zig-zagger, that started from No. 1 trap and tried to see how many turns he could make in a yard. Just how many he made no one is willing to testify, but it is certain that he made just enough to get out of both barrels, although the second ruffled his feathers. Brewer's thirty-third was a terror, starting from No. 4 trap with a lightning flight, it described a number of gyrations that would puzzle the eye to follow, but Jack, after wasting his first load, waited for it to straighten and grassed it with a long second; this was one of the finest shots of the day. Fulford's thirty-fourth bird was a hot one from No. 1 trap, that was killed with a fine first less than 6yds. from the trap. His thirty-eighth was a very fast left-quartering driver from No. 4, that called for another fine shot; his forty-ninth was a vicious looking twister that squirmed out his first but went down on his second at long range; his fortieth was a circler and killed neatly with a good first. Brewer's forty-third went with a circling flight from No. 1 trap, and seemed bound to escape, but had to stop when Jack put in his second, although it was quick and pretty work. Fulford's fiftieth bird was a warm left-quartering driver from No. 3 trap, that called for another pretty first. The score at this stage stood, Fulford 49, Brewer 46.

THE THIRD ROUND

Opened with a fine kill by Brewer of a fast right-quartering driver. Fulford following by grassing a right driver with a long second. Jack caught a tartar on his fifty-seventh, a very fast right-quartering driver that was killed with a very fine second. Fulford's fifty-eighth was a star bird, starting like a streak straightaway from No. 3 trap, but with one of the finest firsts on record he brought it to grass. Brewer's fifty-ninth was another star flyer, going to the right-front from No. 4 trap with a terrific burst of speed. Jack got in one of his old-time doubles and "called down the house" as the bird dropped. Fulford's sixty-first was a fast right-quarterer, and was killed by a very fine first; his sixty-fourth was a very fast right-incomer killed with a neat first. Brewer's sixty-ninth was a lightning left-driver from No. 1, and the manner in which it was grassed with the first showed that the Hammonton man had lost none of his old skill. Fulford got another extra fast flyer, a twister, on his seventieth round, which was dropped near the boundary line with his second. Jack's seventy-first called for a clever double-barrel shot; his seventy-third, a terribly fast and low-flying driver, was one of the best birds of the day, and was killed with a beautiful first. On the end of the third round Fulford had killed 74 to Brewer's 71, and everybody conceded the race to Fulford.

During this round an exhibition, outside of the regular programme, was given, that showed the marvelous skill of these two grand shots as well as did their work at the trap. Several flocks of pigeons, comprising from half a dozen to twenty each, had been circling about the grounds for several hours, although keeping well out of range. After Fulford had fired at his sixtieth bird one of these flocks came within range, and quick as a flash both the men poured in double shots, each of them dropping one bird, Brewer's falling near the score and Fulford's going over on the grand stand. A few moments later the performance was repeated, and three pigeons fell. Still later came a beautiful exhibition, each of the men firing both barrels and each man dropping 2 birds. Before the applause had died away Brewer killed another pair and Fulford a single. These shots were all splendid ones, the birds being high in the air and circling. It was fully ten minutes before the crowd grew weary of applauding.

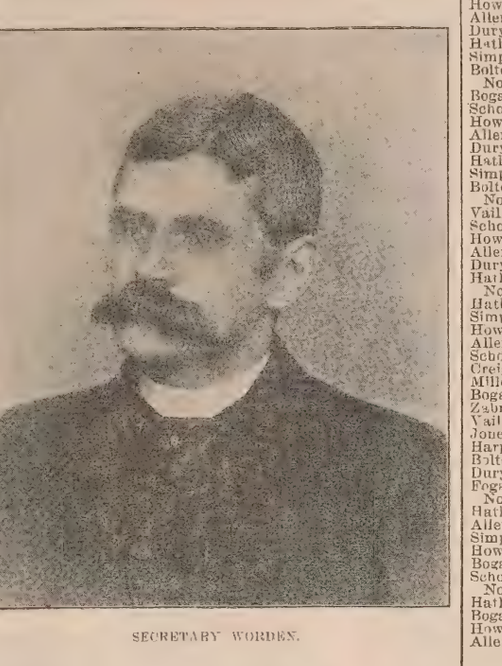
ON THE FOURTH ROUND

Brewer started in by making a beautiful first-barrel kill of a fast left-quartering driver, Fulford following with an equally fine first on a circling left-quarterer; his eighty-first was another pretty first on a left-quartering driver; Brewer's eighty-second, a tricky incomer from No. 2 trap, was killed and plucked by a neat double. Fulford's eighty-fourth was a terror from No. 1 trap, starting first as a right-driver, then twisting out of the first, it began to circle, twist and squirm at a great rate. The telephone man put in a hot second, and the bird turned over, but recovering itself it made a dying effort, crossed the boundary and fell like a stone outside, this being his first lost bird after a straight run of 81 kills. At this point another pretty piece of by-play was enacted on another flock of tramp pigeons, each of the men again making double kills, then following it up with a single kill each, and Fulford following up the good work by dropping another pair, while Jack grassed a single. This gave the crowd another chance to yell itself hoarse. His next bird was another scorcher, going with a puzzling zig-zag flight from No. 2 trap, gathering speed and ugly motion with every yard; it managed to get over the Susquehanna with loss of feathers only. Jack's eighty-fourth was a "clinker" of a left-driver from No. 3 that lost no time in trying to get away from danger, but concluded to stop when it caught his deadly second at full 70yds. This was a magnificent shot and was not unnoticed by the audience. His eighty-sixth, an awfully fast climbing driver, got away from both barrels and sailed "over the hills and far away." His eighty-seventh was lost solely through trying to make a grand stand shot. The bird was a blue-checker, that started as a right-driver, then began to circle, and finally assumed a zig-zag flight. Jack hit it very hard with his first, but it failed to stop, and tried for the back boundary. He waited until it was within 5yds. and gave it the full benefit of his second, which sent it down like a stone—just over the fence. Fulford's ninety-fourth bird, a mean circler from No. 1 trap, was terribly fast. It caught the first barrel full, but failed to stop; when his second load caught it, however, fully 70yds. away, it folded up like a jack-knife and gave up the ghost. His ninety-seventh bird was a fast left-quarterer that carried two loads over the river. Both men killed straight from this out and the shoot ended with a score of

96 kills for Fulford; **94** kills for Brewer,

the Harrisburg man having succeeded for the fourth time in defeating the champion of the world, and that by a score that would win 99 per cent. of the matches shot anywhere or against anyone, and yet there are men who affirm that Brewer can beat any man in the world, and that he is 3 per cent. better than Fulford. In this match Brewer was in form, and some of his kills were as fine as any he has ever made. Fulford in the earlier part of the match was a trifle off and made several slobbering kills both with his first and second barrels; after 20 rounds, however, he settled down and his work was of the best. As to the birds, they were what I would call a good lot of match pigeons, but by any means to be compared with the lot used at Woodlawn—as that kind are seen but once in a lifetime—but as good a lot as is run across in a long travel. The birds were mixed and were hard for this very reason. Some few that refused flight when the trap was sprung proved to be veritable "clinkers" once they caught their wings, but the major part were off in good shape almost before the trap settled. Brewer had 6 and Fulford 3 "no birds" (shot on the ground), but these were killed, not because they were easy but rather because they might prove to be ugly it given an opportunity to fly. The two principals agreed in calling the birds "a good lot." The luck of the birds throughout the entire race was in favor of Brewer, Fulford certainly getting the hardest ones, although Jack's were hard enough to keep him guessing.

The treatment the two men received from the big crowd was first class, although early in the race the party seemed to think that Fulford was the only man entitled to applause. It was not long, however, before they began to realize that Brewer was doing work that was worthy of notice, and thereafter a good shot by either man received its full share of applause.



It was at this time that the five-bird sweep, mentioned before, was again started, and by the time it was finished everybody was ready to go home and discuss New Year turkey and plum duff. The majority of the shooters went to their hotels and after supper discussed a play at the local theatre or gathered in knots at the various hotels and fought over their battles. At 7:20 Brewer and the Philadelphia and Germantown contingent started for home, Jack taking along with him the good wishes of the Harrisburgers. At 1:10 the writer was obliged to board a sleeper for home, urgent business preventing him from remaining to witness the artificial target contests to be shot on Saturday on the club grounds at Fairview.

THE SECOND DAY'S SHOOT.

Saturday was decidedly a moist day, the rain coming down in torrents all the morning and at intervals during the afternoon. The second day's programme called for several regular events at artificial targets on the club grounds at Fairview, about one and a half miles below Harrisburg. The bad weather curtailed the attendance. It was after 11 o'clock when the first shot was fired, but after that the shooting was kept up until dark. All the events were shot under the Inter-State Association rules, expert handicap. The electric pulls were used and gave general satisfaction. The scores of the regular events are appended:

No. 1, 10 singles, $1 entry: N. Apgar 9, Corcoran 8, H. A. Dill 8, Brelsford 7, Lindsley 7, J. Thurman 7, H. Thurman 7, W. B. Smith 6, J. H. Worden 6, E. D. F. 3.

No. 2, 15 singles, $1 entry: Brelsford 14, W. B. Smith 5, Lindsley

SECRETARY WORDEN.

12, Corcoran 11, J. Thurman 8, H. Thurman 10, N. Apgar 13, Ford 9, H. A. Dill 11, J. W. Worden 11.

No. 3, 10 singles $1 entry: Brelsford 7, W. B. Smith 6, Lindsley 9, Corcoran 6, J. Thurman 6, H. Thurman 7, N. Apgar 9, J. H. Worden 9, H. A. Dill 8.

No. 4 15 singles, $1 50 entry: Brelsford 14, Smith 9, Lindsley 12, Corcoran 7, J. Thurman 11, H. Thurman 13, Apgar 13, Worden 15, Dill 12, Ford 13.

No. 5, 10 singles, entrance $1: Brelsford 10, Smith 7, Lindsley 7, Corcoran 8, J. Thurman 8, H. Thurman 9, Apgar 8, Worden 8, Dill 7, Ford 9.

No 6, 20 singles, entrance $2: Brelsford 13, Lindsley 11, H. Thurman 14, Apgar 18, Worden 18, Ford 18.

No. 6, 10 singles, entrance $1: Brelsford 7, Smith 9, Lindsley 4, Corcoran 9, J. Thurman 9, H. Thurman 7, Apgar 9, Worden 9, Dill 7, Ford 9, Coleman 8.

No. 8, 10 singles, entrance $1: Brelsford 8, Smith 8, Lindsley 8, Corcoran 7, J. Thurman 7, H. Thurman 7, Apgar 8, Worden 8, Dill 8, Ford 9, Coleman 6, Nutt 5.

No. 9, 20 singles, entrance $1.50: Brelsford 17, Smith 9, Lindsley 15, Corcoran 14, Apgar 20, Worden 15, Kinzer 14, Ford 15, Sullivan 17, Nutt 10, Coleman 12, Dustin 17. C. H. T.

The Glenmore's Diamond Badge.

THE final shoot for 1891 of the Glenmore Rod and Gun Club took place at Dexter Park, on Dec. 30, there being 21 members on hand to try for the possession of the diamond badge. The birds were of an excellent quality and a stiffish breeze caused many of them to be veritable "screamers." The grounds were in fine order. First in order came the club shoot for the diamond badge, the conditions being 7 live birds per man, handicap rises, modified Hurlingham rules to govern. The scores:

J Bennett (29)	1111211—7	W C Levens (27)	1110100—4
L Eppig (25)	2120121—6	R Woods (27)	1002102—4
C Engelbrecht (25)	1120122—6	T T Edgerton (29)	1001110—4
J A Eppig (27)	2120221—6	M E Hayden (25)	0020022—3
J Young (29)	1002212—5	W Hartge (27)	1101100—4
J A Still (28)	0120111—5	G Pfohlman (29)	0022200—3
R Lambert (25)	0011222—5	M Livingston (25)	1002020—3
L Schortemeier (30)	0121220—5	L Sutten (27)	2000020—3
E Helgans (27)	2220022—5	W Thompson (27)	2020000—2
R A Vroom (29)	1110110—5	F Maier (25)	0020000—1
J Simpson (20)	1111000—3		

Epoig wins ties on 6. A turkey was offered as a special prize in the above event, and this became the property of L. Eppig.

As Host Louis Miller had plenty of birds and the day was still very young, the time was spent in sweepstake shooting, this continuing until dark. The first event was at 3 birds each, $2 entry, three moneys. The result:

Woods	111—3	J Young	111—3
Hayden	111—3	Still	111—3
A Eppig	111—3	Levens	101—2
L Eppig	111—3	Hartge	101—2
Engelbrecht	111—3	Pfohlman	011—2

The ties divided, third money going along with first.

Five birds, $5 entry, one money:

J Young	11111—5	Still	10111—4
Hayden	10111—4		

Three birds, $3 entry, three moneys:

Helgans	211—3	Bennett	100—1
Engelbrecht	211—3	Young	100—1
Woods	221—3	A Eppig	020—1
Simpson	201—2	L Eppig	010—1
Edgerton	011—2		

Ties divided.

Five birds, $5 entry, one money:

Woods	02712—4	Helgans	20020—2
Edgerton	11200—3		

The Amateur Gun Club.

NEWARK, Jan. 1.—The following were the winning scores at the sweepstake shooting of the Amateur Gun Club to-day. The conditions in each event were 5 bluerocks per man, A. S. A. rules to govern:

No. 1: Goehring 5, Ecker 5, McCune 3.
No. 2: McCune 4, Bauden 3.
No. 3: McCune 3, Koker 4, Goff 2.
No. 4: Goff 4, Gaiser 3, Huff 2.
No. 5: Goehring 4, Ecker 3, Limbert 2.
No. 6: Lunburger 4, Goehring 3, Vetter 2.
No. 7: Robinson 4, Lunburger 3, Goehring 2.
No. 8: Goehring 5, Ecker 4, Murphy 3.
No. 9: Ecker 5, Goehring 4, Huff 3.
No. 10: Huff 5, Ecker 4, Goehring 3.
No. 11: Goehring 5, Huff 4, Ecker 3.
No. 12: Ecker 5, Goehring 3, Murphy 2.

Spring Hill Gun Club.

BEAUVELTVILLE, N. Y., Jan. 1.—The following are the scores made at the tournament of the Spring Hill Gun Club to-day.

No. 1, 6 live birds, $3 entry, 3 moneys, ties div.:

Hathaway	101001—3	Schortemeier	122111—6
Howard	000221—3	Bolton	011001—3
Allen	200020—2	Baker	222012—5
Simpson	121210—5		

No. 2, same:

P Daly, Jr	1222211210111111211101111—22

Ed. M. Cooper first, John Cooper second.

No. 1, miss and out, $1 entrance: James Cooper won on the third bird, shooting out Beale, Ivins, White and John Cooper.

No. 2, miss and out, $1 entrance: James and John Cooper divided, shooting out White, Ed. Cooper and Beale.

No. 3, miss and out, $1 entrance: John Cooper and Daly divided.

No. 5, 9 singles, 50 cents entry, two moneys: Ivins 5, Daly 9, J. Cooper, Jr 6, E. M. Cooper 9, John Cooper 7, Hesse 7, Supp 5, Dye 2, Carner 6.

No. 6, 15 singles, $1.50 entry: E. Cooper 13, Jas. Cooper 12, John Cooper 14, Daly 13, Supp 6, Davis 9, Ivins 9, Worthley 11, Coley 12, Kearney 10, Day 4, Throckmorton 14. John Cooper and Throckmorton first, Ed. Cooper and Daly second.

YESTERDAY'S EVENTS.

No. 1, 10 bluerocks, $1 entry: Hesse 5, Supp 5, E. Cooper 6, Coley 5, Jas. Cooper, Jr. 6, J. Worthly 4, Hurley 4, John Cooper 7, S. Worthley 5, Borden 1 Davis 6, Jake Worthley 6, Throckmorton 7, Ivins 5, Day 3, Wagner 6. John Cooper and Throckmorton first, E. Cooper and Jas. Cooper, Jr. second.

No. 2, same: E. M. Cooper 8, John Cooper 8, Ivins 5, Throckmorton 7, Hesse 8. Jas. Cooper, Jr. 8, Wagner 5 Coley 7, Worthley 4, Davis 4, Hurley 3, Supp 4, Dye 6, Jake Worthley 2, John Worthley 4.

No. 3, same: E. M. Cooper 7, John Cooper 5, Ivins 6, Throckmorton 9, Hesse 6, Jas. Cooper, Jr. 7, Warden 6, Davis 2, Supp 7, Cooley 3, Whaymer 2, Dey 5, Scott 5, Hurley 2.

No. 4, same; E. M. Cooper 10, John Cooper 8, Ivins 7 Throckmorton 6, Hesse 5, J. Cooper 5, Supp 3, Cooley 7, Waymer 4, Hurley 3, Dye 5, Davis 6.

No. 5, same: E. M. Cooper 9, John Cooper 8, Ivins 6, Throckmorton 8, Hesse 10, S. Cooper, Jr. 6, Davis 3, Cooley 4, Worden 4, Supp 3, Dye 2.

No. 6, 15 singles, $1 entry: Hesse 6, Jas. Cooper, Jr. 10, Jones 13, Throckmorton 11, Coley 9, Warden 4.

Match for $5, at 15 targets:

J Cooper, Jr.	111111110011100—11	A Ivins	101000105001011— 6

Massachusetts Rifle Association.

BOSTON, Dec. 30.—Rain, snow, driving wind and biting cold failed to take the edge off to-day's sport at this range, and the shotgun experts who gathered here to wind up the season's shooting kept pluckily at their work as long as the daylight lasted. It was the last competition in the series of matches which the Massachusetts Rifle Association has kept running since July, and at its close the prizes were awarded.

Mr. Bowker won first place, and with it a costly silver tea service. He also was awarded the championship medal of the Association for the highest aggregate in the entire 14 competitions of the series.

The other prize winners were: Second, E. Bennett, $20 in gold; third, D. Black, $15 in gold; fourth, C. Hosmer, $10 in gold; fifth, J. S. Snow, silver shaving set; sixth, J. Nichols, one dozen ivory-handled table knives, seventh, D. Parham, hammerless revolver; eighth, C. O. Barrett, carving set; ninth, A. W. Gore, carving set; tenth, H. Boynton, bamboo fly-rod and fly-book; eleventh, W. Choate, opera glasses; twelfth, J. Curtis, $5 in gold; thirteenth, W. Bennett, $2.50 in gold; fourteenth, H. C. Warren, order for silk hat; fifteenth, W. Gale, field glass; sixteenth, H. G. Wheeler, pair razors; seventeenth, T. Stanton, ink-stand; eighteenth, A. F. Adams, $1. Messrs. Dann, Hooper, Stone and Woodward were awarded minor prizes.

After the prizes had been awarded the employees of the range were called forward and presented each with a New Year's gift.

Gold coin and merchandise match.—Fourteenth and closing competition, 20 Keystone targets, 5 traps, squad system of firing: Barrett 18, Bennett 15, Gore 15, Black 14, Bowker 14, Curtis 14, Hosmer 14, Rocky 14, Gale 13: Rule 12, Snow 11, Nichols 7.

CHICAGO TRAPS.

CHICAGO, Ill., Jan. 1.—The past week has been a busy one for the trap shooters, though quiet in all other lines of sport. Match shooting is quite the rage here now, as the scores from Burnside will show. The man who has not a half doz n matches on, to be shot next month, or next week, or right away before dinner, is a lowly light in the galaxy of shooting stars at this writing. The Milwaukee gentlemen found ready takers for their propositions last Saturday, and previous accounts of the negotiations with the magnates of Kansas City, St. Louis, Omaha and Des Moines, would go to support the belief that all Chicago is carrying a large-sized chip on her shoulder and laying for some one to knock it off. It is a common word here now that nobody can, or not anybody can, or not nobody can't, come here now and get away without shooting a match. Last Tuesday Husky George Holden beat Col. J. W. Sheahan, J. A. Ruble beat B. Rock, and that substantial youth B. Dicks once more defeated J. L. Wilcox, as see scores. Three or four races a day isn't bad, and you are liable to find that almost any day these days. This is one of the cycles when spots appear on the sun and the moon is overcast with an ensanguined hue. Such times come every once in a while, times when every one is brave and wants to wade in trouble.

There is trouble of good size brewing for the future, unless all plans go wrong. The talk of a Chicago challenge to Fulford and Brewer has now progressed to such point that it is practically a certainty that the challenge will be issued, and issued soon. Chicago has not at present two men to place against a Fulford and Brewer team, but proposes to back George Kleinman against those two men separately. The challenge will be for $500 for each match. If the Eastern men can win both of these races they will have enough for an oyster supper, anyhow, and the way they figure, they ought to win them both easily. I understand Brewer does not think much of George as a pigeon shooter. Yesterday I heard of one Chicago man who offered his check for $1,000 to back George in these two races. This will not be needed to secure the challenge money, but I do not doubt that this and other money, to a good figure, will be up on a silver plate to the Eastern autocrats as a side inducement. Chicago is nothing if not sensible and practical. To Chicago a ladder has holes in it. It is also particular use for Messrs. Fulford and Brewer to spring the old, old, hoary fake about shooting for "championships" and $10,000 a side. A new fake is needed to catch this settlement, and the $10,000 racket is not new. We've even had it out here. But if either Fulford or Brewer, or both of them, want to shoot a race for more actual cash than either or both of them had up in their last race, or either of their other races, they can get that sort of a race out here now, and Chicago won't be backing a "champion" either. George Kleinman isn't any champion. He is just a tall, slim, sicksort of a fellow, with consumption and Bright's disease and an $18 gun. He isn't a champion, but he has moved among the champion class of society a good deal, and is Chicago's hope and belief that he will be among Fulford and Brewer toward the close of the shooting match. It's a pretty tough place out here. All our trap shooters wear red shirts and six-shooters, and if either man from the East got a lead of a bird or so he would need to be careful that some one didn't hamstring him or deprive him of an eye. Still, there will be a detail of police, and a sort of bluff will be made at decent conduct, so the Eastern men may count themselves reasonably safe in coming out to garner in the savings of some of these Chicago folks. If they come out of the races alive, there will be a sort of attempt made to treat them right.

The only question in the minds of the Chicago men who are trying to arrange these matches with the Eastern shooters is one of the relative quality of the Eastern and Western birds. No shooters on earth can score 98 or 99 birds in the 100 on hard birds. In the last Fulford—Brewer race the birds were hard, but the scores, in proportion, lost all phase of being phenomenal. Mr. C. E. Willard, of this city, who is familiar with our birds here, witnessed the last Fulford—Brewer match. He says the birds were very hard, as good as he ever saw. The top score of that race is not out of the reach of George Kleinman's gait on our birds here. The comparison of the birds is what should be considered in framing odds or opinions in regard to the match now sought to be arranged. We all sincerely hope to see the match shot. Should Messrs. Fulford and Brewer decline it it will be a mistake militating against the popularity of either, or both of them, for public opinion is only too ready to find flaws in the conduct and the motives of prominent men.

It is the more especially to be hoped that these two celebrated shooters will come West in view of the importance which the time of their stay here would assume. It would be made the greatest week in the history of Chicago traps. It is now certain that all the prominent shooters of the West so far as the Missouri River would be here, and there would be a season of heavy sweeps and probably matches, such as was never seen here and perhaps not elsewhere. It can not be denied that Chicago is practically the West. If the Eastern magnates wish to shoot for Western money the time for such arrangements will be just this shooting week above suggested, for all of the match shooters of the West will be here—Parmalee, Budd, Elliott, Winston and plenty more. Fulford and Brewer wish to shoot for heavy stakes. I do not think they can get a $5,000 stake here, but during the week they probably would be able to shoot for $2,500, without including side bets. This ought to tempt them a little. We all hope they will come.

Mr. R. B. Organ, just back from Omaha, says that he met Frank Parmalee there and that that amiable genius expresses a keen desire to be in Chicago about Jan. 15, hoping then to meet sundry and divers shooters who are of the opinion that they can beat a left-handed, stammering man.

I suppose everybody has heard of Frank Parmalee's historic wooden bluerock race. I shall not need to mention names, for there is a lawsuit about it, and some of the parties are touchy. Years ago, this happened, and it happened this way: Frank had a race, $500 a side, 100 bluerock targets, and to make a complete cinch of it he got a lot of wooden bluerocks made, turned and painted in exact imitation of the genuine article. These he fed to his opponents' traps, and the result may be imagined. Unfortunately Frank was too nervous and put in too many of the artificial artificials. The gatherers in the field found some of the wooden birds. Again the result may be imagined. The opponent enjoined the stakeholder not to pay over the stakes, and the thing went into the courts and has been going ever since, though Frank has a childlike confidence that his innocent joke will not be taken amiss by the law.

By the way, while I am on this, I might add another appendent story to the above. Not long ago the same stakeholder (who declares he has spent all that money long ago and never will pay it to anybody) was in at Frank's gun store. The latter sought to sell him a gun, a $125 Greener.

"I haven't got any use for a gun," said the stakeholder man, "for I've got plenty now, and besides, I couldn't afford to buy it, but I would put up $125 against it and shake the dice with you for it."

"I g-g-got you!" said Frank, as quick as he could.

They shook, and Frank lost. The stakeholder man took up his new gun and walked whistling out of the door. On the walk he met a policeman.

"Here's a gun for you, officer," said he.

"Pfwhat!" said the officer.

"A gun. Take it. I don't want it. I want to give it to you." After hard work he managed to coax the officer into accepting the gun as a gift.

"Now, you need some shells," continued he. "You just step inside. You'll find a man crying behind the counter, and you tell him you want to shake the dice with him for the price of twenty-five shells."

Frank wouldn't shake any more, but had the mournful satisfaction of selling a box of shells for the $125 gun he didn't sell. The vicissitudes of the gun trade are peculiar.

Garfield Club Shoot.

THE weather to-day has been peculiarly abominable and unsuited for New Year's Day festivities, rain, mud and slop being everywhere upon the face of nature. This doubtless prevented many pleasant shooting events which would otherwise have come off. At Watson's Park, Burnside, sweeps were announced for all day. Outside of this doubtless the most considerable meet for the day was that of the Garfield Gun Club, on the West Side, where sweepstakes shooting began at 11 o'clock and lasted until dark, a very good attendance of club members and guests being on hand.

Ordinarily Garfield grounds are very pleasant, being situated in the middle of a breezy prairie, which the advancing of the building lines has left untouched. To-day, however, the rain had turned this prairie into a bottomless sea of mud, unspanned by any sidewalk, and approach to the grounds from the car line had to be made at the expense of a regular wade of over 300yds. Through the muck all who progressed on this dangerous journey he was in further danger of being shot by some of the innumerable guerrilas who formed an irregular body close up to the boundary line, there being no fence upon the grounds. At the instance of the club members, a local policeman finally succeeded in clearing away these gentry. The skies, however, could not be cleared, and the space immediately about the cosy shooting box remained very muddy and grew worse indeed as the day went on. This did not prevent the jovial crowd from having a pleasant time, and nobody found fault with the inevitable. I understand it is the plan of this able and prosperous club to fill in its house grounds with cinders and lay walks. This would make the place very convenient and pleasant.

To-day there was a strong wind blowing from right to left across the traps, and although the birds started badly, the stronger ones grew very hard the instant they caught this wind and swept by like a flash. As almost any shooter was liable to fall heir to one or two of these fast twisters, the scores ranged very low, only one straight in three 10-bird sweeps being made, that by Rolla Heikes, who shot very finely throughout. Toward night the rain troubled the birds and they flew poorly. In the anxiety to finish the last sweep the shooting was continued until it was impossible to see any but a white bird go from the trap, and this being guesswork the sweep was concluded in the 9 frame.

The boundary used was the 80yds. Illinois State, but most of the shooters seemed to think the rules were the Association rules, for the gun was held against the shoulder all the time. This received no caution under the happy frame of mind befitting the day, and everthing proceeded as each saw fit. Indeed, toward night this proceeded further than should be allowed on any grounds under any circumstances, if the gentlemen will pardon the well-meant criticism. Shooting at stray pigeons was constant at and about the score and clubhouse. One shooter came within the nearest of killing one of the boy trappers by a shot too close to the line of the score. In the dusk as many as three loaded guns were seen at the same time at the score waiting for a shot at a pigeon which had been freed by mistake. After the rain commenced it was common to see a shooter turn from the score and run back into the house with a loaded shell still in his closed gun. This was done more especially by two or three of the more careless. These things are finable under the rules and should not be tolerated for an instant, as they make possible an accident for which all the regret of the club could not atone. There should be swift reform in this, and also in the custom of leaving wounded birds ungathered. This latter gives an appearance of inhumanity to the sport which was never intended under the rules. I do not think that many days, however, could be so trying as to-day to the management, for the weather threw everything into confusion. Certainly I should say the above only as a suggestion to those by whom the facts may not have been noticed in the general crush and hurrah. The following are the scores of the day:

Sweep No. 1, 10 live birds, Illinois boundary, American position, $2 to club members to enter for stakes, $1 to enter for birds, 3 moneys, 50, 30 and 20 per cent.:

Lauterbach	0121220022—7	Bowers	1102220000—5
Hicks	1112101121—9	S Palmer	1120110212—8

The Coming Year.

From the grounds of belief obtainable it would appear that the year of 1892 is to be one of importance in trap shooting in this city, doubtless the busiest and most important ever yet known. There comes on apace also the year 1893, that of the World's Fair, and for this some forethought should be had. The greatness of that year in every feature of activity is not easily measured, but it ought to be forecast so much as possible. The world does not yet fully know how great the plans and the accomplishments are in the essential preparations for that event. Even Chicago hears little from the city of record and of enterprise which is silently but swiftly springing into being upon her southern confines. The years of 1892 and 1893 will be colossal for America and for Chicago. Are the sportsmen to be behind in the work of preparation for that time? There has been talk, duly recorded in these columns, of a great international tournament to be held in Chicago in 1893. International tournaments do not hold themselves. Between every large idea and its large consummation there are many steps of detail. It is nearly time some of these steps should be taken for the World's Fair tournament. Talk will not bring it. Talk will aid in formulating plans for it, and so there should be talk in the sporting press about this and for this. The country should not think the World's Fair a Chicago enterprise, for Chicago is only the theatre for the American enterprise. From New York and from all sister cities Chicago needs help and advice for the conduct of such an undertaking for the benefit of sport at the trap as this international tournament must be. Something of the sort, at least, should be prepared to make the year memorable here in sport as in everything else. 1892 should prepare for 1893.

I shall take the privilege, for the many friends of FOREST AND STREAM in Chicago, of wishing every shooter in the world a very happy new year. But no shooter without the improved FOREST AND STREAM can be happy now. E. HOUGH.

Wyandotte Gun Club.

SOUTH BETHLEHEM, Pa., Jan. 1.—The following scores were made here to-day in a match between the Wyandotte Gun Club of this place, and the Weiler Club, of Allentown. The conditions being 10 men per team, 10 live birds per man, 30yds. rise, Hurlingham rules to govern:

Weiler Club.		Wyandotte Club.

An American in Germany.

BERLIN, Dec. 16.—*Editor Forest and Stream:* At the shooting tournament arranged by the Milan Gun Club and which took place at Milan Italy, Dec. 13, Capt. J. H. Fowler was an invited guest. He won the gold medal and 360 francs by killing 20 pigeons in succession at 26 meters rise, using the new Walsrode smokeless powder in both barrels and an ejector 12-bore Greener gun.—ARMIN TENNER.

Words of Appreciation.

Editor Forest and Stream:

I did not receive a copy of your paper containing report of the Fulford-Brewer match until this week. I will now say that your report is the best, not only of this shoot, but it is the best I ever saw of any shoot. The cuts of the shooters are simply perfect.

NEWARK, N. J., Dec. 30. C. M. HEDDEN.

DRIVERS AND TWISTERS.

FROM all quarters are received letters commendatory of the active interest taken by FOREST AND STREAM in matters pertaining to trap shooting. All of this tickles the palate of the editor and prompts him to put forth an extra effort each week to try and improve the column, if improvement can be made in what is now the most complete record of the sport published. Yes, we are on top and there we intend to stay, blow high or blow low. Our contemporaries, in everyday slang, "are not in it." Our reports are the most complete of any published, and our pictures are perfect; so what more need be said? During the coming season FOREST AND STREAM will have a special correspondent at all the tournaments, and has arranged to receive detailed scores of all club shoots, wherever held; so that in the future, as in the past, its readers can say, "If it is not recorded in FOREST AND STREAM, 'it never happened!'"

* * *

The FOREST AND STREAM of Dec. 18, 1891, devoted 358 square inches of space to the Brewer—Fulford match.

* * *

The Maplewood (N. J.) Gun Club anticipates a very prosperous season. Its newly-elected officers are "hustlers" and will keep the shooters close to their work.

* * *

Robert E. Cox and Fred Lumbreyer are making for themselves an enviable reputation as purveyors of live pigeons for matches. They recently imported a sample lot of trained English bluerocks, which have attracted considerable attention.

* * *

At the New Year's Day shoot of the Sheepshead Bay Gun Club, each member tried his skill at 10 live pigeons. J. McKane won first honors with 8 kills, J. Dooley grassed 6, A. Boyl, A. Jamison and Illshorne 5 each, W. Boyle 6, and W. Von Fecker 3. C. E. Morris was referee.

* * *

Since the fire which cleaned out Laflin & Rand the firm has been "camping" at Von Lengerke & Detmold's Murray street store, the latter firm having generously extended the privileges of their place to their stricken brethren.

Cleveland Gun Club.

CLEVELAND, O., Jan. 1.—The county badge has been shot for a number of years. Now and then one of the crack shots of Cleveland has won it twice in succession, but the third effort has proved too much for the nerves of the successful ones when it came to a final attempt. Mr. Sheldon has won it twice in succession and so has Mr. North; but, woe be to them, they will never have that chance again, for it has gone where it will be a fit centerpiece for other trophies that have gone with it in the home of D. A. Upson. It was a poor day, but Mr. Upson was in good shooting trim, and with the final round the crowd broke into cheers. It was not necessary to announce the score. Everybody present who was interested in the shoot had kept an accurate little account of his own. The scorer stepped down from the club house and judge requested him to announce the result. "Mr. Upson has shot 46 targets out of 50," said he, "and that leads all the contestants. The nearest man to him is Mr. North, who has shot 43." Then the judge, taking the badge, presented it to Mr. Upson, stating that by the rules and agreement under which it was competed for he had won it fairly, and it was now his personal property. He was entitled to its possession as the champion shot of Cuyahoga county. He had been led a great race by some of the best shots, not only in northern Ohio, but in the entire State. During all the shoots for the county badge in which he has participated he has had the best average of any one who has been in the contest.

The contests for the county badge in the past twelve years have been interesting and exciting, and a great deal of sport has been gained from them by the local trap shooters. Now nothing is left to contest for but the Sipe & Sigler cup, and doubtless the interest in shooting for that will increase under the favorable conditions which have been announced for the coming year. It is a magnificent trophy, and whoever earns it may well feel proud. If it should be some other gentleman than Mr. Upson, a contest between the two would be an exceedingly entertaining event for the future. The final score of the shoot is as follows:

Upson	1101111111111111011111111111111011111101111110111—46
Johns	0101000111011000010100000011010 —15
Rudolph	1111110111010011111111111111000111111101111111—41
June	1000011100110101000011101111011100111101101100—29
Forrester	0011010000100111101010 —11
Hoit	1111110101011110011111111111111010011011010111—39
North	1111111111110100111011111111110111011111011111—43
Calhoun	1100011101111011111011111101101101101010001—33

Williams	0011111001000111010001110010001110010100001010—24

When the shoot for the county badge was disposed of the members of the Cleveland Gun Club took off their pickers at the traps and commenced the regular bi-weekly shoot, which was to decide who was entitled to the honor of owning the badges for the past year. The conditions were no more favorable than in the county badge shoot. If anything they were a little worse, for the clouds had banked up heavily in the south and the light was dim and bad for the sharp-eyed marksmen who were endeavoring to pick out the fast-flying targets. The scores made were only fair in consequence, but they settled the outcome of the badges, and the results of the year show that D. A. Upson is entitled to the cup for the best average and to the first badge for winning the greatest number of shoots. Mr. Worthington gets the second badge, W. H. Tamblyn the third badge and F. H. Wallace the fourth badge. The following are the scores made yesterday:

Rudolph	1111111111111111111111111111—24
Cosell	1001010001011111111111011010—15

Walter Huff	1011111111111111011011111—22

Under Long Island Rules.

The little village of Verona, N. J., just above Montclair, has quite an active organization known as the Verona Sporting Club, the members of which follow up trap and field shooting, fishing or whatever other sport their fancy dictates. On New Years Day they decided that a little practice at live birds would relieve the monotony, and nine of the members went to the club ground about noon to carry out the fun. The contest was an interesting one from the fact that the shoot was governed by old Long Island rules, single barrel, gun below the elbow until bird is on the wing. Each man shot at twenty birds, all of which were good flyers. The scores follow. Boxall 24yds., rest at 21:

Haring	1101111111111111011111—18
Boxall	1011111101010111111—16
GJacobus	1111011110110101101—15

Sanders	1001010010101101011011—17

Maplewood's Annual Meeting.

THE annual meeting of the Maplewood Gun Club was held at Post's Hotel, South Orange, N. J., on New Year's Eve, the attendance being light owing to several of the members being sick with la grippe. Before the meeting was held the party discussed a substantial dinner as the outcome of the team match shot on Christmas Day. Mine Host Post did himself proud in serving the meal and gave the party his personal attention.

Next in order came the business meeting, at which the officers' reports were read, these showing that the club was in a healthy condition with a snug sum on hand and no indebtedness. It was decided to increase the initiation fee from $1 to $5. The following officers were then elected for the ensuing year: President, C. W. Brown; Treasurer, J. B. Smith; Secretary, W. G. Laidlaw. Governing Committee, S. B. Tillou, J. Warren Smith, William Drake, O. L. Yeomans, D. W. Van Iderstine, Wickliffe Smith, W. G. Laidlaw, A. G. Parry, John Siggins and C. W. Brown; Field Captain, A. G. Parry.

On Jan. 2 occurred the first regular shoot of 1892 for the champion silver cup and the first merchandise shoot. The cup contest is open to all members, the winner being subject to challenge at any time. The cup will become the property of the member winning it six times. The scores follow:

Merchandise shoot, 25 bluerock targets:

Parry	1111111111101111111111101—23
C Dean	1101111111111111101011111—22
Sickley	1111110101111101111111110—21
Siggins	0111011111111101111010111—20
Drake	1110101011111001111011111—18
Van Iderstine	1110111011110101010001101—17
Wick Smith	1110110011001011111101101—17
Yeamans	1010101111010001001110111—16
Geldner	1001111100110101011101001—15

L. Dean 9, Laidlaw 7, Tillou 6.

Silver cup shoot, 50 bluerock targets:

C Dean	1111111111111111101111011111111011111111110—46
Yeamans	1110111111111111111111111111111111111111101011111—45

Wolfe 35, Van Iderstine 26.

The South Side's Annual.

THE New Year's day tournament of the South Side Gun Club, held at Newark, N. J., was a grand success in every particular, the attendance being very large. Among the visitors were Eddy Collins, of Hoboken; A. P. Hunt, of New York; "Uncle Billy" Sigler, of Montclair; E. D. Miller, of Springfield; J. Warren Smith, of Orange; C. Dean, L. Dean and R. Yeomans, of Maplewood. During the day 3,500 targets were thrown. The scores of the shoot will be found below:

Dec. 31.—Score made here to-day by the Lake County Club, for gold medal to first, silver medal to second and a handsome bull-hide medal for lowest score, 10 live pigeons each, Illinois State rules:

W J Edbrook	1222110221—9	A L Smith	0222201200—6
N Lewis	0111021221—8	C Bockelmann	2011001220—6
N Ford	1111112202—9	J F Hastings	2112100010—6
A Wies	1100021212—7	H Koehler	1101210211—8
L W Shernfleir	0000020101—3	C Cave	1012102211—7
A Marquardt	2221110221—9	A Henrotin	1002201012—6
J W Donnell	2302101100—6		

Ties shot off at 3 birds, Edbrook gold medal, Ford silver medal, Shernfleir wins bullhide badge.

Same day, sweepstakes, 5 live pigeons, same rules, entrance $2, 60 and 40 per cent.:

Ford	22211—5	Edbrook	01222—4
Smith	12222—5	Wies	01200—2
Henrotin	21111—5	Marquard	20211—4
Cave	01211—4	Koehler	12010—3
Lewis	11000—2		

Henrotin wins first money on ties, miss and out. The 4s div. second.

Jan. 1.—The following named gentlemen shot at 25 live pigeons each, A. A. rules. Wind blowing a gale, several of the birds shot dead in the air fell outside the line:

J C Wells	1112221102102022021112220—20		
B Jones	2101021020003021020201111—12		
C Smith	0121201102111101100061001—15		

Same day, same rules, five pigeons also:

R R Donnelly	2022120000—3	G Eaton	0210001010—4
C De Wolf	2210001000—4	Com Thorne	1101010300—5
Ben Donnelly	10011—3		

Same day, same rules, sweep, 5 live pigeons, $2, 1 money:

Ben Donnelly	20000—1	H A Foss	02022—3
Billy Kent	01211—4	Dr Norris	0000w

Jan. 2.—Sweepstakes at live pigeons, A. A. rules, 5 birds, entrance $2, two moneys:

H A Foss	11101—4	A J Atwater	12110—4
W Kent	02110—3	B Donnelly	21001—3
Joe Card	00001—1	C E Willard	21111—5

Second decided by score in next sweep.

Another of the same:

H A Foss	02112—4	A J Atwater	22121—5
W Kent	10100—2	B Donnelly	01111—4
Joe Card	20000—1	C E Willard	22102—4

Atwater wins first in this and second in last sweep, second decided next sweep.

Another of the same, 50, 30 and 20 per cent.:

Foss	11021—4	E l Steck	22211—5
Kent	12002—3	Card	10221—4
Donnelly	02000—1	Geo Kleinman	22112—5
Willard	12112—5	J M Hutchinson	12211—5
Atwater	12221—4	F C Donald	10220—2
C H Smith	11212—5	J Scott, Jr	02211—4

First and second decided next sweep, Kent wins third.

Same as above, but 3 moneys:

Card	21020—3	Foss	21100—3
Steck	12211—5	Kent	02221—4
Smith	22220—4	Hutchinson	22002—3
Kleinman	11221—5	Donald	01010—2
Willard	12110—4	Scott, Jr	12111—5
Atwater	21101—4		

First div., Scott, Jr., wins second in last sweep. Second decided in next sweep. The 3s div. third.

Sweep, 10 live birds, entrance $5, 60 and 40 per cent, same rules:

Kleinman	1212110212—9	Steck	2112221300—8
Scott, Jr	1212110011—8	Smith	0221012101—7
Hutchinson	2101102021—7	Willard	1102111111—9
Card	1012122212—9	Atwater	1112021112—9

First and second div. Atwater wins second in last sweep.

RAVELRIGG.

The East Side—Mutual.

NEWARK, Jan. 2.—The New Year's Day shoot of the East Side Mutual Gun Club, held on the club grounds in Weidenmayer's Park, were not attended by a very large party, but those who were on hand were full of enthusiasm and kept the ball rolling from 9 A. M. until darkness settled down over the scene. First in order came the live bird events, the birds being of good quality. A good stiff breeze helped many of them over the boundary. The shooting was governed by Burlingham rules. Appended are the scores:

No. 1, 6 live birds, $3 entry, 2 moneys:

R Baar	111210—5	R Newhouse	201012—4
J Perry	111131—6	W Hassinger	000112—3
F Perment	220021—4		

No. 2, same, excepting 3 moneys:

Baar	111211—6	Hassinger	000121—3
Perment	021111—5	Newhouse	022001—3
Perry	020211—4	R Schrafft	001101—3
F Hilfers	002211—4		

No. 3, 5 live birds, $3 entry, 2 moneys:

Hilfers	21112—5	Baar	11100—4
Schrafft	10212—4	Perment	20110—3
Hassinger	21110—4		

No. 4, 6 birds, $3 entry, 3 moneys:

Perment	120121—5	Hassinger	111100—4
Perry	011121—5	Baar	012100—3
Hilfers	210211—5	Francis	121000—3

No. 5, 10 bluerocks, $1 entry, 3 moneys, American Shooting Association rules to govern:

Koegel	1111101101—8	Hassinger	1100110001—5
Perment	1111010101—7	Richard	0001011101—5
Baar	0111010110—6	Newhouse	1001000101—4
Schrafft	0110100110—5	Hilfers	1010000110—4

No. 6, same:

Baar	1111111110—9	Schrafft	0001010111—5
Koegel	1101111111—9	Hassinger	0001010111—5
Perment	1010111111—8	Newhouse	0100101001—4
Hilfers	1111101100—7	Kraemer	1111000000—4
Richards	1110101100—6		

No. 7, same: Schrafft 7, Perment 7, Koegel 7, Baar 6, Keller 6.

No. 8, same: Hassinger 7, Hilfers 6, Kraemer 4, Newhouse 4, Henning 1.

No. 9, same, excepting 2 moneys: Baar 9, Koegel 7, Perment 7, Schrafft 6, Hassinger 5, Kraemer 3.

No. 10, same: Baar 10, Koegel 8, Hassinger 5, Perment 5, Schrafft 4.

No. 11, same, excepting 3 moneys: Hilfers 8, Baar 8, Hassinger 7, Kraemer 6, Perment 6, Koegel 5, Schrafft 4, Richards 4, Keller 3, Newhouse 2.

No. 12 same: Koegel 8, Perment 8, Baar 8, Hassinger 7, Schrafft 6, Kraemer 5, Koeller 5.

No 13, same: Koegel 8, Perment 8, Baar 7, Hassinger 7, Kraemer 6, Schrafft 3.

No. 14, 5 pairs, $1 entry: Koegel 7, Baar 6, Schrafft 6, Hassinger 3.

No. 15, same: Baar 7, Schrafft 6, Hassinger 6, Koegel 3, Perment 2.

Auburn Gun Club.

AUBURN, N. Y., Jan. 4.—On Thursday, Dec. 31, occurred the first of a series of three matches between the Auburn Gun Club and the Onondaga County Sportsmen's Club, of Syracuse. This match was shot on the Auburn grounds. Teams of 20 men each, 20 single kingbirds, 5 traps, unknown angles. Wm. A. White, president of the Auburn Club, was chosen referee, and B. J. Hoyt, of Weedsport, acted as scorer. The birds were a pretty hard lot to hit, being low and swift and the angles sharp. The race was stubbornly contestested throughout, each man being determined to hold his opponent down if possible. How successful they were is shown by the appended score, which wins the race for Auburn by three birds. The second match will be shot in Syracuse, Thursday, Jan. 14:

Auburn Club.		Syracuse Club.

Yachting.

Small Yachts. By C. P. Kunhardt. Price $10. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

Yachtsmen who do not see what they want under this heading will please lookunder the hatches of the *Canoe*, peep into the *Kennel*, squint down the barrel of the *Rifle*, open the *Fish Car* and *Game Bag*, inquire of the *Sportsman Tourist*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising Departments*.

INSTRUCTION IN NAVAL ARCHITECTURE.—Through the liberality of Mr. A. J. Drexel, a magnificent "Institution of Art, Science and Industry" has been built and endowed in Philadelphia, and was formally opened last month. The courses of instruction, for girls and young women, for boys and young men, are most elaborate and complete, the long list including modelling, sculpture, free hand and model drawing, oil and watercolor painting, designing, chemistry, physics, practical woodwork, ironwork, machine construction, mathematics, mechanical drawings, elementary economics, wood carving, photography, electric engineering, house decoration and designing, cooking, book keeping, millinery and dress-making, house planning and ventilation; in short, all branches of artistic, scientific and technical education—save one. In the entire list of subjects there is not the remotest hint of naval architecture or even elementary instruction in ship drafting.

While this omission might excite no remark if it were Denver or Omaha in place of Philadelphia; in the metropolis of the "American Clyde," the great center of American ship building it is a most striking commentary on the neglect which naval architecture has experienced in this country. That even elementary instruction would not be entirely superfluous along the Delaware, is fully demonstrated by some, though by no means all, of the vessels built there in recent years. We have heard on reliable authority of one of the largest and most recent of the fleet of American river palaces, a vessel whose engines, cabin decoration and electrical installation are of the finest; but which is carrying 100 tons of pig iron stowed in one end to keep her near the proper waterline. Day after day throughout the whole year this worse than useless load is carried back and forth over a distance of several hundred miles, no one caring or daring to count the cost of such a serious blunder. Out of the millions spent in the cause of education in this great country each year, it is safe to say that not five thousand dollars goes toward instruction in naval architecture or ship designing.

NEW YACHTS.—Rumors are afloat of one and possibly two more 46-footers from the Herreshoff shops, also several of the new fin keel racers of 25 and 35ft. As long as it is the fashionable fad to preserve as much useless nonsense and mystery as possible about the ownership of new yachts—both designer and builder being sworn to secrecy before an order is placed—the verification or contradiction of such rumors entails an amount of skilled and patient detective work which is as unpleasant as it is unprofitable, the majority of the midwinter crop of new yachts never getting much further than the pencil stage on the drawing board. It is probable now that one or two new boats besides the Rogers craft will be added to the 46ft. class, and that other yachtsmen will join Mr. Morgan in the 35ft. class before spring; while several boats will be added to the 25ft. o.i. class about New York. If those owners who have really decided to build are out for sport in a well-filled class, and are not merely lying back in the hopes of having the only new boat, and scooping the prizes from an outbuilt class, they will benefit both their own and the general interests by announcing their intentions in such season that others may be induced to build for the class.

G. L. HAIGHT.—Mr. Gilbert L. Haight, who died on Jan. 1 at his home, at Mamaroneck, at the age of 78, was an old member of the New York Y. C., having joined it in 1858. For some years past he has owned the sloop Domino.

The Seawanhaka Corinthian Yacht Club House at Oyster Bay, Long Island. R. W. Gibson, Architect. N.Y. 1891

SEAWANHAKA HARBOR.

IN common with all other metropolitan yacht clubs, the history of the Seawanhaka Corinthian Y. C. shows a continual struggle for a foothold on the waterside, the odds against the club increasing every year with the growing importance of New York as a great railroad terminal. The "Seawanhaka Yacht Club of Oyster Bay," as the club was first christened, was formed in 1871 by a party of ardent and enthusiastic boat sailors who resided about the waters from which the club took a part of its name, and raced constantly on Oyster Bay, Cold Spring Harbor and the adjoining part of the Sound. The organization of the club was the direct result of the Corinthian racing already existing, and the immediate object was the encouragement and promotion of the sport in the Oyster Bay fleet; but within three years the list of membership included the names of the leading New York yachtsmen, and in the fleet of fifty yachts were enrolled a number of the largest. So popular and well known had the club become by 1874 that the general had outgrown the local interests and its first move was made, from Oyster Bay to New York Bay, a temporary station being secured below Tompkinsville, Staten Island.

Holding a high position among the metropolitan yacht clubs, largely through the high standard of membership and the successful management of its races, the club continued to grow and prosper, though from the first much hampered by the lack of a suitable anchorage and shore station. In spite of this drawback its fleet included the leading yachts of New York and the East, and its many races were marked by good entry lists and close competition. The encouragement of handling and racing by owners rather than paid sailor men, which had naturally been an important point of the club's policy in its early days, was still adhered to as larger yachts were added to the fleet, and in 1880 it took a permanent and definite form in the change of the name to the Seawanhaka Corinthian Yacht Club.

The club was the first in this country to adopt a strong and vigorous policy for the advancement of Corinthian sailing, the first club race under Corinthian rules being sailed in 1873, followed by a second club race, and an open regatta for schooners off Newport in 1874. Its work in this direction, in which it was the pioneer, and its successful efforts for the improvement of measurement and sailing rules, are now a part of yachting history, and an evidence of the success which has attended both attempts is found in the rules of a great number of American clubs, which are based directly on those of the Seawanhaka Corinthian Y. C.

While successful on the water, the club was never able to secure a suitable home on shore; the basin leased at Staten Island, with the neat little house provided by the Anchorage Company, composed of members of the club, was entirely inadequate, owing to the shoal water; and the basin was finally held by a new owner at a rental so far beyond its value that the club abandoned it. Another site was found near by, and the house moved to it; but in addition to its limited conveniences, a serious difference arose within the club over the lease of the property, resulting in the loss of it to the club. At this time—1886—the question of a permanent station and anchorage, owned by the club, had been for a long time under discussion, and the entire water front of New York harbor had been examined and searched, but without success. With the loss of the existing basin, some new move was necessary, and a very able committee early in 1887 went over the ground already so well explored, from Sandy Hook through the Upper and Lower Bays, and along both shores of the Sound as far as Greenwich and Oyster Bay.

In the long and exhaustive report which resulted, the committee recognized the impossibility of securing a site below New York, and at the same time showed that a successful station on Long Island Sound, and at some distance from the city, would be possible only when carried out on a much more extensive scale than then seemed desirable. The committee was also disinclined to abandon the harbor, the racing ground of the other large clubs, and return to the Sound. The course recommended by them, and finally carried out, was the establishment of a town house in New York city and a further expansion of that part of the policy of the club which looked to the instruction of its members. This new plan was at once put into operation, and after a trial of five years the result has been a complete indorsement of the wisdom of the committee. At the same time many changes have taken place in yachting, and two facts have been plainly evident to the club: First, that the Sound, and not the harbor, would be the future racing waters of New York: and second, that, save in one or two special cases, a home beside the water is absolutely indispensable to the continued and healthy growth of a yacht club.

For the past two years the question of a club station has been under discussion in the club, with the result that a committee was appointed early last spring to look for a location on the Sound, the original idea being merely to build or lease a small house in the vicinity of a harbor suitable for the small craft of the fleet. Again both shores of the Sound were thoroughly explored in the yachts of the committee, and after a long search a site was selected at the birthplace and old home of the club, on Oyster Bay. The natural beauty of this locality, and its many advantages as a harbor and sailing ground, had in no way diminished since the time that the club had left there; but the two great objections, the inaccessibility of the place by land and the distance from the center of yacht racing, had in the meanwhile disappeared. In 1889 the railroad was extended to the water side at Oyster Bay, doing away with the six-mile stage ride of old, and even before this the whole tide of racing had begun to turn from below to above Hell Gate.

The result of the committee's labors was the securing of a plot of 85 acres on Center Island, located as shown by the shaded portion of the chart, the land lying just inside of Plum Point, and fronting on both portions of the harbor. This land has been laid out in building plots, several of which have already been purchased by members of the club; and a portion has been reserved the lot marked 1 in the plan, on which a handsome club house is nearly completed; and the new station will be ready for use some time before the opening of the season of 1892.

The first consideration in an undertaking of this kind is that of money; and it was treated as follows in the report of the committee on out-of-town site:

"The money necessary to establish the station, and to pay for the land, the club house and furniture, outhouses, pier, float, launch, flag-staff, well, pump, windmill, water tank and improvements to the grounds, has been carefully estimated and found to aggregate $42,750, which, with the present bonds of the club of $7,250, makes a total of $50,000.

"We suggest that a mortgage be placed by the club on the land to be acquired, the house and furniture and all the property and income of the club, to secure an issue of 5 per cent. first mortgage bonds to the aggregate amount of $60,000, of which $50,000 shall be issued at this time to pay for the proposed undertaking and the remaining $10,000 in bonds shall be reserved to be issued in the future to pay for additional improvements if and when, in the judgement of the club, a necessity arises therefor. The $50,000 in bonds to be issued at this time will make a total annual interest charge upon the club of $2,500. That a sinking fund to redeem the bonds be established by covenant in the mortgage, to consist of the money received from initiation fees and from life memberships. The bonds to be of the denominations of $100, $500, and $1,000. The present issue of $50,000 of bonds to be offered to members of the club for subscription. Bonds to the amount of $7,250 should be reserved to retire the present club bonds for that amount by exchange, bond for bond, in the option of the present holders. It has been suggested by some of the holders of the present bonds that they would be willing to make the club a present of their bonds, but the committee advises against the acceptance of these offers. We believe the club should meet its obligations in a straightforward business way, and thereby maintain its credit with its members. The security for the new bonds will be ample and the mortgage can be so drawn as to make the bonds a perfectly safe investment; and the committee confidently believe that enough members will be found who have sufficient pride in the club and confidence in its future to secure subscriptions for the bonds."

On the decision of the club to proceed with the undertaking according to the recommendations of the committee, the above scheme was at once put into operation, and bonds to the amount of $50,000 were readily placed.

The property has a frontage of about 2,400 feet on Oyster Bay Harbor proper, facing a large and well protected anchorage with ample depth of water and good holding ground, the distance to the open waters of Long Island Sound being but two miles. The courses for the larger yachts will be laid out on the Sound, where an unlimited extent of deep and open water is available, while for the smaller craft good courses will be located inside, in full view of the club house. The land rises quickly from the main shore, offering fine cottage sites, and the club house, though near the beach, is on high ground, commanding a view of the Sound and the surrounding country from the windows of the second story, with a still more extensive sweep from the deck on the roof.

The house was designed by Mr. R. W. Gibson, a member of the club, and covers, with the piazzas, about 119×53ft. The lower floor contains a large main hall, with dining hall, kitchen, billiard hall and other apartments. On the second floor there are fourteen sleeping rooms, and on the third are extra dormitories for use when the house is full. The building is handsome and imposing in appearance, and well located about a hundred feet from the low bluff, from which runs out the club landing, with a float stage. To the west of the club house the main roadway runs down to the water, and at its foot is the main pier, 300ft. long, 13ft. wide, and with an L 20×30ft. At low water there is 8 to 9ft. and at high water 15 to 16ft. at the end of the pier. The average rise of tide at Oyster Bay is 7ft. 3in., thus giving a chance to the smaller craft to beach and scrub bottom with little difficulty. The frontage on West Harbor is 600ft., this slope of the property commanding a fine view of the Sound across the neck. A large tract of land adjoining the club property has been purchased by two members of the club, and one handsome residence has already been built.

While New York and Eastern yachtsmen do not need to be told of the beauty and advantages of Oyster Bay, it may interest others to know that it is one of the numerous indentations of the north shore of Long Island, whose hills and headlands are divided by green and beautiful valleys, each of which opens on a deep, narrow bay, as at Manhansett, Hempstead and Huntington. Oyster Bay has long been noted among all the harbors of the Sound for its natural beauty, its deep water and excellent shelter; and in these requisites it fully comes up to the ideal of a yachting station, its only rival on the coast being Marblehead. Its location is specially favorable, being within an hour of New York by rail, and yet far enough away from the head of the Sound to secure broad and open water, and to give a wide range for cruises in all directions. The distance from the Battery, New York, to the club pier is about 30 miles, and the distances from the mouth of the harbor to the different yachting ports are shown on the chart; City Island, with its shipyard and railways, being 12 miles; New Rochelle, 11 miles; Larchmont, 9 miles; Greenwich and Indian Harbor, 5 miles; Black Rock, 19 miles. The natural advantages, both as a harbor and point of rendezvous, are all that could be required, and the work now in hand will make Oyster Bay the most complete, if not the only real, yachting station between New York and Boston.

The club will put in a steam pump and watertank, from which a pipe to the end of the main pier will supply fresh water to yachts, the supply being free to all vessels of the club. An icehouse will be built near the beach, with a boat house and storage house for yacht gear. Coal for steam yachts can be obtained at the village of Oyster Bay, and a storekeeper there will supply the best of groceries and provisions, avoiding the necessity of sending to New York for such supplies. The marine railways at Cold Spring offer facilities for the smaller yachts and general repairs, while for larger yachts the distance to City Island is but twelve miles.

The great drawback to Oyster Bay in the past was the lack of transportation facilities, but in place of being six miles from a railroad station, it is now the Sound terminus of the new route between Brooklyn and Boston, the express trains being ferried across between Oyster Bay and Wilson's Point, Conn. The roadbed and the local service are being improved, and the road has promised to reduce the running time between New York and Oyster Bay to forty minutes next summer. The club pier is about 1½ miles from the wharf at Oyster Bay, and a 45ft. cabin launch will be used by the club to carry its members and visitors across from each train.

It has been an unfortunate thing for yachting that the many beautiful harbors along the Sound on each shore have always been practically inaccessible to business men, being reached only by a drive of three to six miles from some small station of a branch road to the water side, as at Milton Point, Oyster Bay, Northport, Huntington and Glen Cove. With its present facilities, however, Oyster Bay compares favorably in time from the City Hall with any, and the probabilities are that as this part of Long Island becomes better known the service will be much improved. There is also a steamer from New York three times per week by which freight and supplies may be shipped.

With such a home and harbor at its command, the Seawanhaka C. Y. C. will be in a position to do far more for its members, and for yachting interests in general, than has ever been possible in the past. The vicinity of the club house on Center Island promises to become the summer home of a colony of yachtsmen; while on the opposite shore is already a large contingent of yachtsmen, formerly constituting the Oyster Bay Y. C., which has just been consolidated with the S. C. Y. C., adding 75 new members. The club will supply a good restaurant, tennis courts, bathing houses

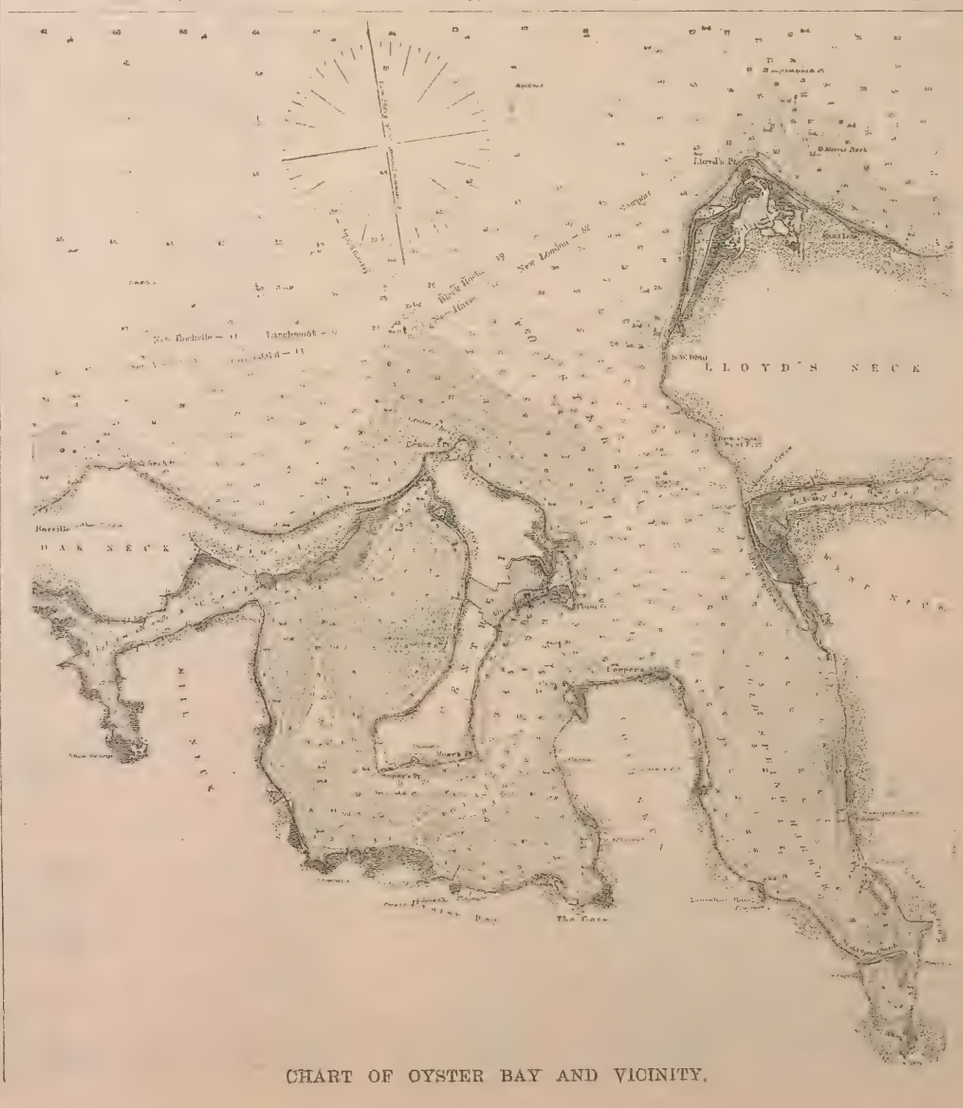

CHART OF OYSTER BAY AND VICINITY.

PLAN OF PROPERTY OF SEAWANHAKA CORINTHIAN Y. C. CENTER ISLAND, OYSTER BAY HARBOR.

and boat house, with facilities for the care of small craft keeping no paid crew.

While the facilities for carrying on races in the larger classes will be vastly better than in the past, what is of still more importance to the prosperity and *personnel* of the club is that the racing of small craft, for which sport the club was founded, and which contributed so much to its success at one time on New York Bay, will be revived on a far larger scale than of old. A move in this direction has already been made by the ordering of four catboats, designed by Mr. A. Cary Smith and now building by Wallen & Gorman, all of the same model, for the use of members. There is already a fine fleet of small racing craft at Oyster Bay, in part a remnant of the first fleet of the club, and this is likely to be largely increased as other owners of such yachts realize the facilities for keeping and racing them which the club now offers.

Since the publication of the notice of the first race under Corinthian rules in 1873, many great and important changes have taken place in yachting, and the different conditions existing today are likely to lead to a modification of the strict Corinthian rule in the larger classes of racing boats, but the truth of the principles of Corinthian sailing first laid down in this country by the Seawanhaka Y. C. has been so generally recognized that they have become a part of the policy of the majority of the clubs. With these principles still for its guide, and installed at last in a fitting home, the Seawanhaka Corinthian Yacht Club, once more of Oyster Bay, begins its third decade with unequalled possibilities before it of benefit to itself and to American yachting.

RACING IN STANDARD CRAFT.—The Seawanhaka Corinthian Y. C. is about to inaugurate at its new home a variety of racing which is, with one exception, a novelty to this country though the scheme has worked successfully in several English and Irish clubs. The club has commissioned Mr. A. Cary Smith to prepare the lines, sail plan and specifications for a standard club catboat, and a contract has been made for four boats, to be owned by the club; while it is expected that others will be built by members. Of course all the boats will be identical in model and rig, making the winning purely a question of individual skill. Regular weekly races will be held through the season, any member of the club being at liberty to enter one of the boats; while members may sail special races at any time. A record of all races and winners will be kept, prizes being given at the end of the season for the best records. Besides its novelty, the scheme has several valuable features to commend it—while from the equality of all the yachts, and the resulting personal rivalry between the crews, the interest in the racing is likely to be keen and sustained; at the same time all considerations of expense, together with the discouragement which follows out-building, are entirely removed. The new class is likely to prove a most popular one with non-yacht owners especially; while even those who are happy in the possession of large craft need not hesitate over taking the tiller of one of the club cats against a field of rivals. This system of racing in small craft all of the same model is specially adapted to a large number of yacht clubs where racing is at a low ebb through continued out-building and the increasing work and expense of racing. Of course under it there can be no improvement in the boats, but there can be plenty of good racing, with all the resulting benefits which racing brings to a yacht club.

AN AMATEUR DESIGNER.—Mr. Henry Bryant, of the Eastern Y. C., the designer of Thetis and Alert, whose lines have appeared in the FOREST AND STREAM, is now in Glasgow, attending the regular course of study in the College of Naval Architecture, and also working in one of the Clyde shipyards. Mr. Bryant is fortunately the possessor of ample means, and consequently able to command such advantages abroad as cannot be had in this country.

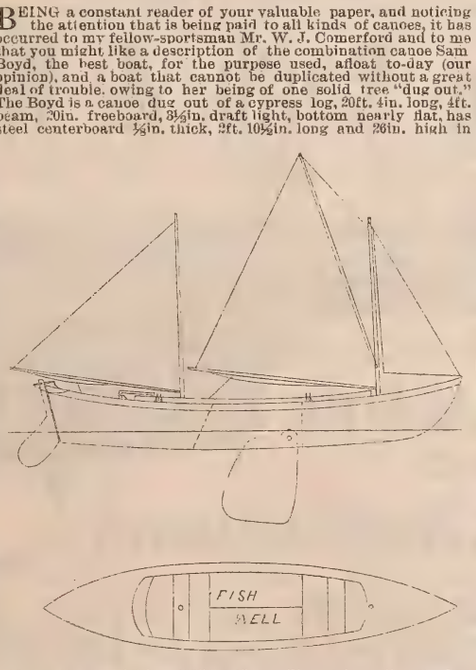
A GENEROUS YACHTSMAN.—Moved by the serious disasters caused by the recent severe gales on the French coast, Baron Arthur de Rothschild, vice-president of the Union of French Yachts, and owner of the steam yacht Eros, has presented the sum of 20,000 francs to an institution which cares for the orphans of French sailors, of the navy and merchant marine. In addition he has promised the sum of 10,000 francs annually for five years.

KEEPING UP WITH THE PROCESSION.—The Hull Y. C. is one of the active and pushing clubs which has been content to do a good deal of racing under poor rules; but it has awakened to the needs of the times, and at its next meeting, on Saturday, some important changes will be acted on, the following amendments in all probability being adopted: "In all races of the fifth and sixth classes the wheel or tiller shall be held only by an amateur. An amateur for the purposes of this rule shall be defined as one whose business is not in or about boats, and who has never received money or equivalent compensation for sailing or assisting to sail a boat since this club was organized." Adding to Article 5 the words, "before the owner of a winning yacht shall receive the prize, he, or, in his absence, the club member representing him on the yacht, shall sign a declaration that all the racing rules were complied with on such yacht during the race." The committee on "standard of measurement" will present its report recommending a combined waterline length and sail area rule.

D. J. LAWLOR.—Mr. Lawlor, a sketch of whose life we recently published, died at Boston, Jan. 1, the 68th anniversary of his birth.

JLDERIM, the Vanderbilt 46-footer, a new yacht last year, but never fitted out, will have a new sail plan, designed by Stewart & Binney.

ISIS, cutter, has been sold by C. A. Stevens to C. G. Miller.



Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $2.00. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all tems relating to the sport.

A FISHERMAN'S CANOE YAWL.

BEING a constant reader of your valuable paper, and noticing the attention that is being paid to all kinds of canoes, it has occurred to my fellow-sportsman Mr. W. J. Comerford and to me that you might like a description of the combination canoe Sam Boyd, the best boat, for the purpose used, afloat to-day (our opinion), and a boat that cannot be duplicated without a great deal of trouble owing to her being of one solid tree "dug out." The Boyd is a canoe dug out of a cypress log, 20ft. 4in. long, 4ft. beam, 20in. freeboard, 3½in. draft light, bottom nearly flat, has steel centerboard ⅛in. thick, 2ft. 10½in. long and 26in. high in

widest place, weighing 105lbs. You will see from "cut" what splendid ballast and great resistance the board offers when working to windward. Has housetop well each side of centerboard case, water-tight, with brass valves through bottom for keeping fish alive, also bait, such as minnows, shrimp and crawfish; well and centerboard placed so as to allow for rowing two pairs of sculls when wind fails, and room at each end for comfortable fishing, for which purpose we use the boat altogether. The Boyd is a most remarkable boat in any and all kinds of weather, being very fast under sail and pulling very easy, with two pairs of 8ft. spruce oars Mr. Comerford and myself can row about five miles per hour in slack water. She carries no ballast but water in the wells, and the crew hardly ever require to sit on windward rail unless blowing very hard. The masts, booms, sprit, etc., all of lightest spruce, and very easily handled, the masts are just the length of cockpit, and when unshipped all fit on each side of housetop well, entirely out of the way when rowing. The centerboard is of ⅛in. steel, and works in the case through a piece of gas pipe the width of the case, and is held in position by an iron bolt running through the gas pipe and screwed up inside well on each side of the case, thereby giving board plenty of play and all the wear coming on gas pipe and bolt and making the centercase perfectly water tight. The board is raised and lowered by a line running to an iron band riveted loose on the board, thereby keeping the rope perpendicular in every position of the board in its passage up and down the case. The tiller works with double yoke, one on the rudderhead and one under the deck. The sail plan is just the thing for us, as we use the sprit for staking the boat when fishing, and we reef the foresail when blowing too hard. By stowing the jib, which sets flying, and removing the sprit we have two leg-of-mutton sails, which we can carry in half a gale in nearly any kind of sea. I hope that my very poor description of a very good boat will be of some interest to you.

NEW ORLEANS, Dec. 24. TALLY HO.

CLUB CONSTITUTIONS.

Editor Forest and Stream:

A reprint of the N. Y. C. C. constitution which appears (with some slight errors) in your number of Dec. 31 gives the writer too much credit for this compilation, which is really due to a committee of the club and to Mr. Delavan, the chairman. As matter of fact, the committee to revise the former constitution accepted written suggestions from several members, and its final report was adopted at the annual meeting of the club, 1890. With this and other club constitutions for material, the writer subsequently drafted one intended to be brief, yet comprehensive. The draft endeavors to give full powers to a small, responsible governing committee to be elected annually by the active members of the club to hold office (each member thereof) for a term of one year, and have power to elect its own officers, who shall also be the officers of the club. This draft for a constitution was duly printed and published in the August number of *Sail and Paddle*. Its merits or defects must be determined by careful comparison and by actual service; at all events, new material is added for the compilation of dry and unattractive reading to be found in club books.

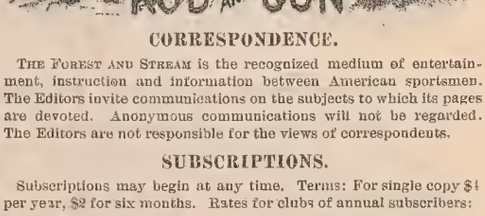
The present tendency to incorporate voluntary associations under the laws of the several States, in reality does away with the necessity for any constitution other than the articles of incorporation; the better view seems to regard the charter itself as the constitution proper, under which all necessary by-laws are made and subject to the laws regulating such incorporated associations.

A. H. SEXTON.

NEW YORK, Jan. 3.

[The typographical errors alluded to are the substitution of the word "the" for "and" in the second line of the 5th section of Article V.; the substitution of "expire" for "occur" in the twenty-fourth line of the same section, and the omission of the words "due notice" after "club" in Art. VI., Section 2, line 5.]

PURITAN C. C.—The annual meeting of the Puritan C. C. was held on Jan. 2, the following being elected officers for 1892: Com., Edw. S. Gilmore; Vice-Com., J. S. Dean; Rear Com., Jos. E. Hill; Sec'y, Jas. W. Cartwright, Jr.; Treas., Lothrop Hedge. Board of Directors: The above officers and F. J. Baxter and Geo. R. Underwood. Measurer, J. R. Robertson. Membership Com.: Messrs. Hill, Underwood and Dean. House Com.: Messrs. Gilmore, Hedge and Jepson. The year 1891 has been a very successful one for the Puritan C. C., there being noted a gain in all directions. Total membership 36, total fleet 45 boats, financial condition sound, average daily attendance at club house 7 men. The club fleet has been increased by the purchase of the 20ft. paddling canoe Goo-goo-zenia, which accommodates ten men.—JAMES W CARTWRIGHT, JR., Sec'y.



Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

W. H. M., Scotch Lake, N. B.—1. Can you tell me what kind of bird this is, of which I send a rude drawing and description, and what would be the value of a mounted specimen? 2. What species of woodpecker is entirely black excepting white marks on wings? It has four toes on each foot. 3. Would the habits of birds of this locality be of interest to the readers of FOREST AND STREAM? I have dates of the arrival of quite a number of birds for two or three seasons, and of the departure of some which are very late. Ans. 1. The bird is the American sparrowhawk (*Falco sparverius*). It is quite common, and perhaps a mounted specimen may be worth $1.50 to $2, if any one wanted it. 2. Cannot identify bird from this description. 3. Should be glad to hear from you, but cannot answer definitely without seeing manuscript.

Some prospectors, while digging for gold in an old spring at the head of Trout Creek, last week, unearthed a fairly well-preserved buffalo head. It was some four or five feet underground, and one horn was still on the skull intact. This find is of some interest, as it has been pretty generally believed that there were never any buffalo on this side of the Rocky Mountains. An old Piute Indian, who was over at Crow Camp last summer, who was doubtless over one hundred years of age, has told of seeing herds of buffalo roaming over this valley in his early boyhood days, and his story, which was considered then a common every-day Indian lie, is confirmed by the finding of this unmistakable proof of the animal's having been here.—*Harney (Ore.) News.*

It is said that there are yet a few beavers along the Umatilla River to remind old-timers of the days when these little animals frequented Oregon streams in large numbers. An immense beaver dam was discovered several miles below Pendleton the other day by a couple of hunters, who saw a number of the animals and succeeded in shooting one.—*San Francisco Call.*

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The Editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The Editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Subscriptions may begin at any time. Terms: For single copy $4 per year, $2 for six months. Rates for clubs of annual subscribers:

Three Copies, $10. Five Copies, $16.

Remit by express money-order, registered letter, money order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain.

Foreign Subscription and Sales Agents—London: Davies & Co.; Brentano's; Sampson Low & Co. Paris: Brentano's. Foreign terms: $5 per year, $2.50 for six months.

ADVERTISEMENTS.

Inside pages, 30 cents per nonpareil line. Special rates for three, six and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money, or they will not be inserted. Reading notices $1.00 per line. Only advertisements of an approved character inserted.

New Edition of Small Yachts.

Now Ready: Small Yachts, Their Design and Construction. By C. P. Kunhardt. A new edition, enlarged and extended to 470 pages of text and illustrations, and 87 full-page plates. Size of page, 14½ x 12½ in. Price, $10.00.

As comely as it is practically serviceable to yachtsmen of large as well as small craft.—*Evening Post.*
The new edition should be purchased and carefully studied by any amateur yachtsman who wants to buy or build a boat and is not yet certain as to what he wants.—*N. Y. Herald.*

New Edition of Steam Yachts.

Steam Yachts and Launches; Their Machinery and Management. By C. P. Kunhardt. A new edition, with extended text and many added illustrations. Cloth. Price, $3 00.

With Fly-Rod and Camera.

A magnificently illustrated volume descriptive of fly-fishing for trout and salmon. By Edward A. Samuels. Cloth. Price, $5.00.

FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.

THE ART OF SHOOTING.

An Illustrated Treatise on the Art of Shooting. With extracts from the best authorities.

By CHARLES LANCASTER.

LONDON, 1891. PRICE $3 00.

AUTHOR'S PREFACE.

At the special request of many gentlemen who have placed themselves in my hands for instruction in the Art of Shooting, I have written this treatise. I have endeavored to meet the special requirements of those who are anxious to become proficient in the art, and who have hitherto been unable to obtain, in a precise form, the information necessary for studying the first principles of shooting at moving objects.

I have had the honor of coaching many gentlemen, and have carefully studied the points especially requiring attention that have cropped up from time to time while giving instruction. I hope that those who favor me by studying this treatise may quickly gain the knowledge so essential for the making of an average if not brilliant shot.

I have purposely refrained from touching on the several merits of any class of gun—being a gun-maker myself; and, indeed, so many good works on the subject have been written, that it is really unnecessary.

I trust that authors from whose writings I have made extracts will pardon me when they recollect that I have at heart one object, viz., the advancement of a manly sport which gives pleasure, health and occupation to many, and to the patronage of whose followers I am indebted for many pleasant days.

Forest and Stream Publishing Co., 318 Broadway, N.Y.

Senator Geo. F. Edmunds

Was one of a party of Washington men who used to gather in evening session, when the FOREST AND STREAM reached that city, to hear read from its columns the weekly chapters of "Uncle Lisha's Shop" and "Sam Lovel's Camps," by Rowland E. Robinson.

Of the "Shop," the Boston *Advertiser* says: "A more graphic, kindlier, funnier and more touching picture of old back-country life it would be hard to find."

The Rutland *Herald* says: "There is not a Vermonter in middle life, especially if he now lives at a distance from the old home nest, who will not continually laugh and cry over this picture of the past."

"Sam Lovel's Camps," by Rowland E. Robinson, is a sequel to "Uncle Lisha's Shop," of the shrewd Yankee humor and varied pictures of old-time country life of which we spoke in praise some time since. The present collections of sketches has the same entertaining qualities, and carries most of the old characters of its predecessor into interesting fishing and camping excursions on river and lake. There is a decidedly wholesome, outdoor air, and a kindly, hearty fun about the tales which makes them eminently entertaining reading.—*Christian Union.*

CANOE HANDLING.

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible Everything is made intelligible for beginners and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building. Price, postpaid, $1.00.

FROST-FISH.

THE interesting article on this small whitefish by "A. N. C.," which we publish this week, contains a record of the first observations known to us upon the movements and spawning habits of a widely-distributed but little studied fish. In our brief references to the species we have purposely avoided the use of the name frostfish, because of its intimate association with a small marine fish of the cod family and, also, on account of the many older common names which have been applied to this *Coregonus*. In FOREST AND STREAM of March 7, 1889, will be found, in "Answers to Correspondents," page 145, a short survey of its names and distribution. The statement as to its occurrence at Kadiak was based on a misunderstanding of the collector's notes; the fish was found on the peninsula of Alaska, and not on the island. The specimen mentioned by our correspondent was caught "with bait in Roach River, a tributary of Moosehead Lake, about seven miles from the lake." Among the names applied to *Coregonus quadrilateralis* are the following: Round whitefish, Menomonee whitefish, shadwaiter, pilot-fish, chivey, billfish (Connecticut Lakes, N. H.), mackerel. (Newfound Lake, N. H.), cucumber fish (Megantic Lake), clearfish (New Hampshire). According to Col. Hodge, Chesterfield Lake appears to be its southern limit in New Hampshire. In addition to its value as food for man the round whitefish (or frost-fish) furnishes abundant and wholesome food for the lake trout.

By reference to the figure of Hoy's whitefish in "Fishery Industries," plate 197B, it will be observed that the round whitefish belongs to a very different group of whitefishes, namely, the one typified by the lake herring (*Coregonus artedi*). One of the most striking characteristics of the *quadrilateralis* is the small number of its gill-rakers; there are only seventeen on the first gill arch. If "A. N. C." noticed parr marks on the fry of this species it would be interesting to record the observation; we have seen them in the young of a closely related whitefish and in the grayling.

SNAP SHOTS.

THERE is this peculiarity of a dead-letter law that, though it lie long forgotten, it nevertheless is a potentiality, and is tolerably certain on occasions to be raked up and called into play as a means of gratifying somebody's personal spite. There is in New York a law forbidding fishing on Sunday. But as a matter of fact, taking the State, probably 10,000 fishermen do fish on every Sunday throughout the fishing season; and no official ever dreams of enforcing the law. Last season, however, the netters of Jamaica Bay, Long Island, caused the arrest and fining of several Sunday fishermen, to "get square" with them for having interfered with illegal net fishing. Now the Sunday fishermen are preparing a huge petition to be sent to Albany praying for a repeal of the Sunday fishing prohibition.

Private advices from Montana tell us of a terrible butchery of elk just north of the line of the Yellowstone Park. It is said that the slaughter is carried on in pure wantonness, not having even the miserable excuse that hides or meat are to be sold. It is stated that men have been seen to shoot elk down and not even take the trouble to go near the carcass, which they could not use as they already had all the meat they could carry. It is an extraordinary thing that no notice is taken of these bold violations of the law in Montana and Wyoming, the two best game sections left in the West. Both States have laws which are good, if enforced, and both have gun clubs and game protective clubs, whose purpose as announced by themselves is the enforcement of these laws. Wyoming has done more in this respect than Montana, and yet the latter State has always before her eyes an impressive object lesson in the shocking destruction of big game which every now and then takes place on the borders of the National Park. Montana enjoys the bad eminence of having exterminated the last of the buffalo. Does she want to repeat that process with the elk?

At a monthly meeting of the New York Fish Commission, at Albany, last Tuesday, Mr. Huntington was made President to fill the place made vacant by Gov. Hill's ousting of Mr. Blackford. Mr. Hackney, the new commissioner, is disposed to recognize the grotesqueness of his appointment; declares that he did not seek the office, and good-naturedly admits that he does not know the difference between an eel and a clam, has no interest in fish, and cannot imagine why he was given the office. If Mr. Hackney does not know what he is put into the Commission for, he may learn from an interview with Gov. Hill, printed in the Brooklyn *Eagle*, that he is expected to blow a political fish horn for the Democratic candidates in campaign times. The Governor told the reporter that he believed Mr. Blackford to be a good man for the place; but Mr. Blackford had voted for Mr. Fassett, the Republican candidate; and this was a Democratic State; and he did not propose to keep Mugwumps in office. We recall no recent instance of a more shameless declaration of pernicious political principles than this.

The Prince of Wales and eight companions put in less than five hours of pheasant shooting on a recent occasion and secured a bag of 2,236. So much for the incubator system of hatching game birds and the battue system of securing them for market. But one well-educated shot-proof American partridge has more game wrapped up in his feathers than a barnyard full of such English pheasants; and when a man has chased around through the brush for hours after the old bird and finally laid hands on it, he trudges home with a vastly richer store of satisfaction than an average of 49,933 pheasants per hour can ever give the participant in a battue.

A Capt. DeHaas just back from a gold-hunting trip in Alaska suggests that somebody might make a fortune by starting a cannery for wild geese and ducks at the mouth of the Yukon River, where the fowl congregate in immense numbers in the spring of the year. We print this for the edification of the esteemed correspondent who wrote from Paris the other day that he would be glad to see sport with the gun put an end to in America. A few of Capt. De Haas's springtime duck canneries, judiciously established at the right points in the far North, would solve once and forever the spring shooting question.

The most enthusiastic gun man we have heard recently in praise of his "trusty" was the possessor of a 10-bore, originally of 32 inch barrels, but gradually cut off until with 24 inches it was found to be a perfect wonder for duck shooting. We would like to have for publication in our gun column some notes of practical experience with short-barreled guns.

One need not go far from New York city for wildfowl when the flight is on. At Bellport, Long Island, sixty-three miles from New York, three shooters from the city, in ten days last fall, killed 509 ducks. One day's score reached 140.

We take pleasure in presenting this week a foretaste of the good things in store for those interested in American birds. The delightful article on Gambel's quail published in our Natural History columns is from advance sheets of the first volume of Captain Bendire's "Life Histories of North American Birds," referred to in these columns some time since. This is the typical game bird of Arizona, where it is extremely abundant. Captain Bendire writes from a very full personal knowledge of the habits of this species, derived from his long service in the Territory, and his story of the life of the beautiful bird is charmingly told. On more than one occasion we have seen birds of this species in captivity here in the East, the examples having been sent on by our friend, Mr. Herbert Brown. The birds did well in a wire-screened pen ten or twelve feet square, and were beautiful and interesting objects.

Kennel interests are advancing so rapidly that their adequate presentation calls for a more generous provision to-day than ever before. In our Kennel department we propose to give all the news, and to give it promptly on the dot while it is news. To further this end we have added to our staff Mr. B. Waters of Chicago, whose long experience with field dogs and familiarity with field trials have given him peculiar qualifications. The acquisition of Mr. Waters will be recognized as an accession of strength. Mr. Waters will remain in Chicago, where he will cooperate with Mr. Hough, and will represent not only the West, but the South and Southwest. While as a matter of fact the FOREST AND STREAM is the most popular sportsman's journal in the West to-day, we do not claim it to be a "Western" paper nor an "Eastern" paper; we are quite content to have it recognized as an unsectional, national, American FOREST AND STREAM.

Immediately following the last shooting tournament of the New York Association for the Protection of Fish and Game, Gen. D. H. Bruce of Syracuse suggested through our columns a convention of the Association to discuss measures for securing desired legislation. The proposal was seconded by Mr. Horace White, President of the Association; and it is a pleasure to record, as we do on another page, that the project has taken practical shape. A meeting will be held next month, and the names of those who have the matter in charge warrant confidence in the result.

"Well, the fellow that made that knew what he was about," was the comment which an experienced cow-puncher made as he passed along Broadway and noticed the Winans trophy in the window of Hartley & Graham, opposite the FOREST AND STREAM office. "It's a real cowboy on a real pony; and he's got all the fixings right, too. He sits on his broncho as he should and not with his knees drawn up like an English jockey. His gun seems a trifle long, but he's got the drop on his man sure enough."

An Austrian chemist has devised an instrument of defense and offense for wild-beast tamers. The invention consists of a syringe charged with caustic ammonia; one strong squirt of this into the nostrils of any wild beast would, he says, half asphyxiate the animal and render it powerless for sufficient time to enable the tamer to escape from the cage. Supplied with a powerful syringe of this sort, some of our grizzly bear hunters would no longer find it necessary to trap and clog their bears before venturing within range.

Dr. James A. Henshall has gone to Florida for a six weeks' collecting tour to gather specimens of fishes and other objects for the World's Fair exhibit of the U. S. Fish Commission.

It all depends upon where you see it. The heading "Woodcock's Puzzling Curves," would mean one thing in a sportman's journal, but in the daily paper it refers to a baseball pitcher. "Great Slaughter" in our gun columns would imply big shooting, in the daily it means that dry goods are going "below cost."

Sports Afield has taken on a magazine form, and now adds convenience of handling to its other attractions. Our bright Denver contemporary is a true child of the West; it brings with it the breezy spirit of Colorado and the Rockies, and is in every way a credit to sportsman's journalism.

The annual dinner of the Megantic Fish and Game Club will be held in Boston, Hotel Brunswick, Jan. 28.

The Sportsman Tourist.

WINTER SPORTS IN NORTH CAROLINA.

LETTER IV.

On Roanoke Island.

IN all my life I never saw such a congregation of geese, ducks and swans as gathered on the edges of mid-channel in Roanoke Sound during the mild warm days of Christmas week. Sometimes the fowl were down at the south end of the island, off Spence Daniells's place, and anon along the "Reef," near the north end. But wherever they were there was a hubbub, and for several consecutive days they picked and plumed themselves until their discarded down and feathers appeared in little windrows of flotsam all along the landwash on the shore. A stiff northeast wind which had prevailed for several previous days had blown the water all off the shoals, so that, barring the channel aforesaid, a man could wade nearly the whole two miles across to Nag's Head, on the outer beach; and he would have to wade that far to get to the ducks. Nag's Head is a noted summer watering place, lying nearly opposite the town of Manteo; and Manteo is the capital of Dare county, located on the east side of Roanake Island, named for an Indian chief who once controlled the little realm; a bit of history in a nutshell.

Southerly winds, it seems, invariably drive the water into the sounds, and as the wildfowl have to go to the bottom, in order to feed off the favorite tapeweed and celery, they naturally "use" nearer the shore when the so-called tides are high. This habit, or necessity, of course gives the sportsmen his opportuity. He can either sail for them over a twelve-mile course, in from 3 to 5ft. of water, tacking off shore and on in quest of stray bunches, and looking into the creeks and channels which divide the sedge grass islands, or he can shoot from points and blinds. The latter have to be located with good judgment at various distances from the shore, so as to be within reach of the fowl at the varying stages of water. Daniells has his brush piles a full mile out from the land, so that the gunners sit on their little isolated hummocks, or board platforms, surrounded by a veritable waste of waters, though by no means off soundings. Caught in a driving storm, I fancy they would feel much like wayfarers lost on a Dakota prairie.

A noted gunner by the name of Midgett had three or four blinds abreast of the Reef, ten miles further up stream, north, and on one particular Sunday during the Christmastide I started to speak of, the ducks and geese were paddling all around the outermost one and trying to climb into it. Residents of Roanoke Island are a devout and church-going people and Midgett never shoots on the Sabbath. Hence their temerity. The chances are that on any other day in the week there would have been none there.

Verily, it was a sight to behold. The water was peppered black and white with the motly throng. Full fed and elated, they seemed to enjoy the perfect immunity of the hour. They would quack and honk and cackle and call to each other, and whoop like Sioux Indians at a sun dance. They would mock and make mouths toward Midgett, and swim about, heads up, with the most consummate bravado. Such consequential poses and attitudes were never attempted by the most fantastic barnyard fowls. These were mostly surf ducks and geese. Further out there were thousands of swans whose plumage flashed with dazzling whiteness in the sun, looking like floating fields of ice, or surf upon the yellow beach. Sometimes large masses would rise and float away in mid-air like fleecy clouds and then settle down in a distant place. With a field glass every movement could be distinctly discerned. Perched upon the apex of a sand dune which had been formed in the margin of the pine forest which skirted the shore, I found an excellent point of vantage. The day was perfectly calm, and the lense brought the large birds right up to my eye. It seemed as if I could reach out my hand and take one, but alas, the power which could lessen the distance could not lengthen my arm, and so I had to content myself with merely estimating the price which the entire lot would bring in the Fulton Market if I had them at my disposal.

I had tested the wariness of this aquatic assemblage on the day before, when friend Evans, of the Tranquil House (good name), at Manteo, had contrived to work his sailing skiff over to the channel, across the flats, where we blazed away at the "whiteness" with Winchester rifles at 500yds. range. At the successive reports of the discharge you should have beheld the entire mass of swans, acres upon acres of them, rise majestically and noiselessly, like unnumbered seraphim, and float away into space with the sun of glory glowing from their pure white radiant wings. The sight was grand. It was a revelation which St. John himself might have envied. We might have got nearer, perhaps, had not the skiff grounded in 7in. of water. Whereupon we incontinently lightened ship by getting out and wading, taking good care lest the nimble craft should slip away from us, and leave us in the midst of that broad but shallow sound, wrecked and afoot, a mile away from land, with all the life-saving stations out of sight on the weatherly side of the beach.

On that hapless cruise we fished up one solitary surfduck or scoter, which we stopped on its hasty flight. We also crippled a waterwitch or diedapper, which got away from us by persistent diving, in spite of several ounces of No. 4 shot which we threw into the water all around him. We fired about twenty-four shots and, as Asa said, got a duck with every shot, though we apparently missed the bird.

Everything got up wild and flew a mile, for the wind was blowing stiff; and if we had only been at Spence Daniell's on that day we would have loaded the skiff with brant and ducks, for your Mr. William Dormon, the sporting house keeper at Broad Channel, Jamaica Bay, was down there and brought in 57 head, chiefly brant, though he had a pair of fine geese and a few redheads. He is a patient, painstaking and persevering sportsman, and by biding his time took in his little divvy of birds, though he had to wait ten days, I believe. One cannot come down here to these banks and get his checks cashed at sight. Geese and ducks are uncertain fowl, and decline to make appointments with gunners, and the liveliest of live geese stools will fail to bring them to terms, unless they are in the humor and the wind and tide serve.

A party of four gentlemen from Bordentown, New Jersey, whom I met at Mr. Daniell's place on Dec. 22, were more fortunate. They were Messrs. George W. Scott, B. W. Jobes, J. L. Van Zandt and Sam H. Turner. They were on the ground four days, and put in only one day's fair shooting, gathering 22 black brant, and a miscellaneous lot of shore birds and upland specimens, including 8 brace of Wilson snipe, some doves and meadow larks, a yellowhammer, a marshhen, a bluepeter, a double rail, and a gray squirrel, showing that they were not only persevering and industrious, but able to live off the country. When not afloat after sea fowl they took turn about on shore.

I did not get a veritable canvasback and but few redheads during my week's visit to Roanoke Island. Geese, swans, scoters and black brant were the conspicuous types present. At times canvasbacks are plenty. There is no doubt about there being an abundance of geese at all times, for I have not only the testimony of Mr. Daniells's written rocord, but ocular demonstration in the shape of numerous feather beds with which his house is furnished. Two winters ago he killed 1,600 geese and 40 swans, besides ducks and brant. In a single season he sold $80 worth of goose feathers at 50 cents per pound, four geese to the pound of feathers. Black brant at this season are even more numerous than Canada geese, and much easier to kill. They are about half the size of geese, having black legs, bill neck and head, with cheeks splashed with white; breasts white, with white lines across the larger wing plumes. Female head much the smallest. There are also the bald or white brant, identical with the snow goose.

And I may also give you right here a complete enumerration of all the waterfowl which are common to this section, so far as persistent inquiry has discovered, and will mention in passing that I find Trumbull's "Names and Portraits of Birds" of great service in comparative identification, for it is altogether inclusive and quite infallible. Of ducks there are the shuffler or broadbill (*Aythya affinis*), the coot or scoter, mallard, black duck, spritgail, baldface or widgeon (*Anas americana*), blue and green-winged teals, water-witch or Scotch dipper (*Charitonetta albeola*), which is identical with the buffle-head; the paddy or ruddy duck (*Erismatura rubida*), bearer of sixty-eight local synonymes according to Trumbull, and known also in this section as lightwood knot; spoonbill (*Spatula clypeata*), redhead, canvasback, bull-neck or scaup (*Aythya marila nearctica*); hairyhead or hooded merganser, south-southerly or old squaw (*Clangula hyemalis*), woodduck or summer duck, shelldrake; whiffler or golden eye (*Glaucionetta clangula americana*), and booby (*Oidemia americana*). Besides these there are the king rail, clapper rail, and sora, which are known as single rail, double rail and coot respectively, the bluepeter or crow duck (*Fulica americana*), marsh hen (*Gallinula galatea*), loon, cormorant or nigger goose, greybacks or dowitchers, English snipe, willet, curlew, yellow shank, plover, beach robin or knot (*Tringa canutus*), oyster birds, bitterns, blue herons and scroggin or white heron, blue herons, all of which are found along the marshes and beaches which border the sounds.

Manifestly there are water fowl here in unusual variety, all of which, excepting the Anatidæ and Anserinæ, are available to the general sportsman by the usual methods. But there is a law of the State which bears oppressively upon non-residents, as respects ducks and geese, for it forbids their shooting from their own blinds. An alien must own or control eighty acres of land within the State to entitle him to shoot for market or to put up blinds or to carry game out of the State. It is a well-meant law, but it hits hardest where it is not deserved. Under its provisions there is absolutely no place on Roanoke Island, excepting at Daniells's, where non-residents have anything but a meagre show. It is true that there are islands and points of marsh abreast of Manteo where a gunner can sometimes put out stools or live geese decoys with some success, and the house of Evans has at least one fine goose to its score, shot by "We, Us & Co.," during my visit there. I am not sure but that I might have obtained permission to shoot from Mr. Midgett's blinds, but I didn't ask it, and he seems to have a monopoly of the "Reef." It is a pity that circumstances are so adverse at Manteo, for it is a lovely place, all new since 1871, and ornate with green, red and white paint, and many local attractions which do not appear at any other part of the island. Evans keeps an excellent hostelry, with boats and teams on livery, and is always ready to oblige. But he is handicapped by the law, and there is no resource for the sportsman who wants to be sure of game except to go to Daniells's place. Daniells is hospitable but rough. His table is good, his beds soft, and he has every appliance for shooting in the shape of boats, blinds and decoys both dead and alive. He also keeps a store and post-office (called Wanchese Post-Office), and runs a terrapin farm. Mr. Herbert A. Weeks, of 74 Murray street, New York, has a very fine house a few rods distant, which is perhaps the best on the island. It is said to have recently passed into the hands of a club. If so, some one is going to have rare accommodation and fine sport.

This southernmost point of Roanoke Island lies right abreast of Oregon Inlet and Bodie's Island Light, and is accessible to the best fishing on the coast. Quantities of fish are shipped to market from this place the full year round, but the two best seasons occur in the fall and spring. The ichthyc fauna of this section is as various as its avifauna, for many Northern and Southern species meet and lap at the Hatteras line, and counter currents from the arctics and the tropics beset the cape.

Fishermen of this section claim that their sailing skiffs, shad boats and kunners are the most weatherly craft in the world. Certainly I have never seen better behaved boats in a seaway nor craft that will stand right up to business, with or without ballast. These little vessels and the dead-rise skiffs are all built and rigged on the same general pattern; that is, they are keel boats, with sharp stem and square stern, mast stepped two-fifths of length abaft the forefoot, and rigged with a spritsail and jib without bowsprit, a centerboard, rudder, transom, thwarts and small deck forward. Most of them carry an immense topsail in fair weather. The island mails, all but one, are carried in kunners (vulgate for canoe) navigated by negroes. Manteo is a distributing post office. A small schooner first brings the mail from Elizabeth City, making two trips a week, distance 50 miles, fare 75 cents—cheap enough. Sometimes the trip will take twenty-four hours, and once it was made in four hours and a half. The average time, Capt. Daniels says, is six hours. Routes and distances hence are as follows: Canoe to East Lake, 25 miles; canoe to Kinnikeet, via Chicamacomico, 55 miles; canoe to Powell's Point, via Kitty Hawk, 25 miles; canoe to Stumpy Point, via Man's Harbor, 25 miles; wagon to Wanchese, 8 miles. Kitty Hawk and Kinnikeet are on the beach, the two others are on the mainland.

The prevalent impression in respect to the "bankers" and the pointers is that they are unkempt, unlettered and forlorn, but I find them to be up to the average New Englander in intelligence, and much resembling them in many characteristics. They have churches and schools, neat houses and the latest fashions, procured from visitors or by excursions to the towns. The keepers and crews of the numerous life-saving stations along the beach all wear uniforms, and look as officially correct as car conductors and letter carriers in the cities, and their houses are supplied with books and papers twice a week. I do not find idiosyncracies enough among these several classes of people to make a sensational letter of. Each station's outfit comprises a keeper and seven men and the stations are six miles apart. Pea Island Station, Capt. Richard Etheridge, is manned exclusively by negroes, who have proved their efficiency on several occasions. Horses and mules are employed to haul apparatus to the locality of wrecks, and the supply schooner was engaged in making her periodical rounds with hay and feed while I was there.

It does not take a visitor many days to do Roanoke Island thoroughly. It is 12 miles long by 2½ wide, on the average about the size of Manhattan Island, and a very excellent turnpike bisects it the whole distance. Lateral roads run off at frequent intervals to farms and plantations. The population is said to be 1,200, of whom about one-half are colored. Most of the negroes occupy a single settlement on the west side, opposite Manteo, which is called California. It supports three churches and a schoolhouse, all neatly painted and in good repair. The whites have also three churches, a Methodist, Baptist and Disciples, one located at Manteo and the others at either end of the island. There are four district schools. At Manteo is a court house and several large stores and ship chandleries. The local curiosities are old Fort Raleigh, the Federal headquarters, the sand hills, the old windmill, the Confederate fort and battery and the old scuppernong grapevine, which covers a half acre of ground and makes five barrels of wine. I found some Hoboken people and an old gentleman from Baltimore passing the winter at Manteo. A citizen of Syracuse was visiting near by.

The sandhills are the most interesting features of Roanoke Island. They have already buried a hundred acres of pine forest sixty feet deep and are gradually encroaching upon the public highway and the farms. The tops of many scores of trees are seen protruding above the surface. The wind blows the sand about at its caprice like drifting snow, and the formations are very similar to snowdrifts. In some places the superficial lighter materials have been blown from the head of the beach, leaving the stiffer and more compact clays standing in fantastic shapes like the buttes seen in the semi-arid plains of the Southwest. The effect is very weird and impressive. Standing upon the summit of the loftiest dune, with a tangle of briers and vines enveloping my outlook, and gullies opening on either side, I look across the broad expanse of the Sound to the sandy counterpart on the beach beyond, where the yellow dunes rise fully 150 feet in places, and stretch away off to the far distant horizon where the tall shaft of Bodie's Island Light looms up faintly.

The most conspicuous object opposite is the Nag's Head Hotel, surrounded by its summer cottages, all now empty. There is very little vegetation over there now, though it was a beautiful place before the war. The sand has shifted much since then. The old buildings were burned; the forests have been covered; and the hotel, which used to stand on a hillside, with lawn and flowers around it, is now set on piles, at the margin of the beach, so as to escape the remorseless sweep of the ever moving sand. Many buildings, it is said, lie beneath the dunes. It is a pleasant sail over to Nag's Head in summer time, and there are always excursion parties from Nag's Head to the buried forests of Roanoke. But at present all is solitude. While I stand and gaze I see no human being in sight. The flats are bare for a mile out. A solitary fishing stage, perched on high piles, stands a few rods from shore. Some old fishing boats, sink-boxes and battered decoys are hauled upon the sand, with here and there chance bits of anchor rope, old nets and broken oars. Three or four rickety cows are picking over the flotsam on the beach, and a dozen restless sandpipers are running along the margin.

My next move will be a break for the main road, through the forest of the old Chief Weapomiock. There are no red men thereabouts at present, but I am told that in summer any one might know by the moccasin tracks in the swamp that this was once an Indian country.

CHARLES HALLOCK.

THE AUDUBON MONUMENT.—Audubon Monument Committee, Columbia College, New York City, Jan. 6.—*Editor Forest and Stream:* After five years of work the committee still need $3,000 to complete the amount necessary for the erection of the proposed monument. Many of the largest subscriptions have been made conditional on the amount of $10,000 being raised, and these we shall lose if the whole amount is not subscribed. As the amount is so nearly raised we beg to ask through your columns further subscriptions. The influence of your journal toward that end would be valuable and highly appreciated.—THOS. EGLESTON, Chairman.

THE CALIFORNIA ACADEMY OF SCIENCES has elected the following officers for 1892: President, H. W. Harkness; First Vice-President, H. H. Behr; Second Vice-President, J. G. Cooper; Corresponding Secretary, Frederick Gutzkow; Recording Secretary, J. R. Scupham; Treasurer, L. H. Foote, Librarian, Carlos Troyer; Director of Museum, J. Z. Davis. Trustees: W. C. Burnett, Chas. F. Crocker, D. E Hayes, E. J. Molera, Geo. C. Perkins, Adolph Sutro, John Taylor.

Natural History.

GAMBEL'S PARTRIDGE.

From advance sheets of "Life Histories of North American Birds with Especial Reference to their Breeding, Habits and Eggs."

BY CAPT. CHAS. E. BENDIRE.

Callipepla gambeli "Nuttall."
Lophortyx gambeli "Nuttall" Gambel, Proceedings Academy Natural Sciences, Phila., 1843, 260.
Callipepla gambeli Gould, Monograph Odontophorinæ, 1850, Pl. XVII. (B 475, C 392, R 483, C 576, U 295.)

Geographical Range—Northern Mexico and contiguous portions of United States from western Texas to southern California, north to southern Nevada and southern Utah.

The home of this graceful and interesting species includes that portion of southern California commonly known as the "Great American Desert." Here Gambel's partridge reaches the most western point of its range, near San Gorgonio Pass, in San Bernardino county, California, where it overlaps that of the Valley partridge and hybrids are found[1]; thence it ranges eastward through Arizona and the greater part of New Mexico into western Texas. To the north it is found in southwestern Utah and the Death Valley region of southern Nevada, as well as in parts of northern New Mexico, where Dr. C. J. Newberry, Jr., met with it a few miles south of Santa Fe. South it extends into western Mexico. It is a resident, and breeds wherever found.[2]

In southern Arizona, along the valley of the Gila River, it used to be exceedingly abundant before the day of railroads, and is yet, I presume. In those days Gambel's partridge was one of the most pleasing sights to the weary traveler over Arizona's hot and dusty plains, where springs and even stagnant water holes were few and far between, and stretches of 50 miles without water were not unusual. The presence of these handsome little game birds always indicated that this much-needed fluid, poor as it often might be, was not far off, and this cheered you, for which reason alone, if for no other, their appearance was doubly welcome. Numerous wells along the principal highways and railroads have changed all this now, and a journey through Arizona to day has lost about all its terrors, and can be made in comparative comfort and even luxury.

For one of the most exquisite pieces of word painting of Arizona, as it appeared thirty years ago, and at the same time giving an exceedingly interesting and accurate account of the life-history of Gambel's partridge, I refer the reader to an article in the Ibis of January, 1866, entitled "Field Notes on *Lophortyx gambeli*, by Elliott Coues, M.D.," which will not fail to prove attractive to the most critical observer. Concerning the relative abundance of Gambel's partridge in Arizona at present, Mr. Herbert Brown, of Tucson, writes me as follows: "There is no diminution in their numbers; if anything they have multiplied in proportion to the extent of increased cultivation. I have been told that some farmers on the Salt and Gila rivers, about Florence and Phœnix, poisoned them as a nuisance, and in a "game bill" introduced in the Arizona Legislature in 1885, partridges had to be stricken out from protection before the bill could pass."

Wherever water is found Gambel's partridge is common throughout southern Arizona up to an altitude of 5,000 ft., and in New Mexico, Mr. W. H. Cobb, of Albuquerque, informs me of meeting with young fledglings in the pine forests at an altitude of 8,000 to 9,000 ft. In 1872 I found this species very abundant near my camp on Rillitto Creek, the present site of Fort Lowell, 7 miles northeast of Tucson. During the winter and early spring coveys of these birds might be seen almost daily, feeding and dusting themselves in the immediate vicinity of my camp and especially on the wagon roads leading to it. They frequented these mostly in the mornings and occasionally in the evenings, the birds scratching about in the sand and dusting themselves like domestic fowls. They appeared very sociable, and were constantly calling to each other as the scattered covey moved from place to place. This note resembled the grunting of a sucking pig more than anything else, and it is rather difficult to reproduce the exact sound in print. Any of the following syllables come near it, "quoit," "oit," "woét," uttered rapidly but in a low tone. During the mating and breeding season, the former commencing usually in the latter part of February, the latter about the first week in April and occasionally later, according to the season, the male frequently utters a call like "yuk-käe-ja, yuk-käeja," each syllable distinctly articulated and the two last somewhat drawn out. A trim, handsome, and proud-looking cock, whose more sombre-colored mate had a nest close by, used an old mesquite stump, about 4 feet high, and not more than 20 feet from my tent, as his favorite perch, and I had many excellent opportunities to watch him closely. Standing perfectly erect, with his beak straight up in the air, his tail slightly spread and wings somewhat drooping, he uttered this call in a clear strong voice every few minutes for half an hour or so, or until disturbed by something, and this he repeated several times a day. I consider it a call of challenge or exultation, and it was taken up usually by any other male in the vicinity at the time. During the mating season the males fight each other persistently, and the victor defends his chosen home against intrusion with much valor. It is a pleasing and interesting sight to watch the male courting his mate, uttering at the time some low cooing notes, and strutting around the coy female in the most stately manner possible, bowing his head and making his obeisance to her. While a handsome bird at all times, he certainly looks his best during this love making period. The alarm note is a sharp discordant "crăĕr, crăĕr," several times rapidly repeated, and is usually uttered by the entire covey almost simultaneously. Although they nested abundantly in close proximity to my camp, I saw but a single brood of birds that were probably not more than a day or two old. Small as these were, they neverless managed to run and hide so quickly in the under-growth in which I found them that I failed to catch one for closer examination. The hen tried to draw me away by the usual devices, and showed considerable anxiety. Half-grown birds were much more frequently met with by me, and not until they are well able to fly do they make excursions in the more open country, away from the tangled undergrowth and vine-covered chaparral of the creek bottoms. Their food, like that of the other species of this genus, consists of insects of various kinds, especially grasshoppers and ants, small seeds, grain when obtainable, the tender leaves and buds of leguminous plants, and berries. In the early fall and winter they pack, and from two to five hundred may, at times, be met with on favorite feeding grounds.

During the intense heat of the Arizona summers Gambel's quail, like most other birds, prefers to remain in the shady and cool spots in the creek bottoms, frequently perching in the trees, and I believe the majority of these birds spend the night in them as well. They take to trees very readily at all times. The nesting season of 1872, compared with subsequent ones, was an unusually late one, and though I searched carefully for the nests of this species during both April and May, I failed to find a single one before May 29. This contained ten fresh eggs. During June I found a number, however, also two in July, and one as late as August 17. I believe two broods are regularly raised in a season. Incubation, as near as I was able to learn, lasts from twenty-one to twenty-four days, and does not begin until all the eggs are laid, and these are deposited daily.

The nest of Gambel's partridge is simply a slight oval hollow, scratched out in the sandy soil of the bottom lands, usually alongside of a bunch of "sacaton," a species of tall rye grass the dry stems and blades of last

CALIFORNIA QUAIL.

year's growth hanging down on all sides of the new growth and hiding the nest well from view. Others are placed under, or in a pile of, brush or drift brought down from the mountains by freshets and lodged against some old stump, the roots of trees, or other obstructions on some of the numerous islands in the now dry creek beds, refreshing green spots amid a dreary waste of sand. (It is perhaps as well to mention that many of the so-called creeks in Arizona are dry for about ten months of the year, the water sinking below the sand for a foot or two, but running below this through the coarser gravel, digging being necessary to reach it.) These so-called islands are always covered with a luxurious vegetation, and it is in this that most of the partridges nest. According to my observations only a comparatively small number resort to the cactus and yucca covered foothills and mesas some distance back, where the nests are usually placed under the spreading leaves of one of the latter named plants. If grain fields are near by they nest sometimes amit the growing grain in these, and should the latter be surrounded by brush fences, these also furnish favorite nesting sites.

Among the nests observed by me two were placed in situations above ground. One of these was found June 2 on top of a good sized rotten willow stump, about 2½ feet from the ground, in a slight decayed depression in its center, which had, perhaps, been enlarged by the bird. The eggs were laid on a few dry cottonwood leaves, and were partly covered by these. Another pair appropriated an old road-runner's nest (*Geococcyx californianus*) in a mesquite tree, about 5 feet from the ground, to which apparently a little additional lining had been added by the bird. The nest contained ten fresh eggs when found on June 27, 1872.

Mr. Herbert Brown found a pair of these birds occupying a newly-made nest of Palmer's thrasher (*Harporhynchus curvirostris palmeri*) in which seven eggs had been deposited. This nest was placed in and near the top of a cholla cactus about 4 feet from the ground. He says: "My first impression was that an Indian had probably placed them there, but I was soon convinced to the contrary, as I found it impossible to get my hand near the nest without first breaking down a part of the cholla with the barrel of my gun. The eggs were fresh and finely marked."[3]

Birds resorting to nesting sites in trees or cacti have undoubtedly lost their eggs or small young on former occasion's and learned from experience that such a situation is in many respects a safer one.

During the nesting season of 1872, I found, upon a second visit, that several incomplete sets of eggs belonging to this species had been destroyed or removed. The numerous large snakes of various kinds, especially the rattlesnake, must be counted among the worst of their enemies.

On one occasion I found a Gambel's partridge's nest in the side of a sand bank. A portion of this had been washed away by a former freshet and a sod of grass, having been undermined thereby, fell over it, being still firmly held in place by its roots. The bird had scratched out a hole in the sand bank behind this sod and deposited her eggs therein, and it appeared to me to be an extremely well-selected nesting site. It proved otherwise, however, for a few days later, when passing by the spot again, I put my hand in the cavity, the contents of which were not visible without raising the sod, I came in contact with something cold which I at first supposed to be a snake; and being curious to see what it really was and not able to dislodge it, I raised the sod with a stick and found a land terrapin taking its ease in the nest. Not the sign of an egg remained, neither were any shells visible. Whether the reptile had eaten the eggs or not I was unable to decide, as I found no remains of them in the stomach. That reptiles of various kinds are not adverse to an egg diet is shown by the following instance kindly furnished by Mr. Herbert Brown. A Gila monster (*Heloderma suspectum*) had been caught alive near Tucson, Arizona, on April 14, 1890, and was placed in a packing box for safe keeping over night. Next morning five eggs were found in the box with the occupant. Two of these were forwarded to me for identification by Mr. Brown, who wished to know if they were the eggs of this reptile or Gambel's partridge, he surmised the latter. There was no difficulty in solving this problem, for the shells of the eggs, although considerably injured, plainly showed the peculiar markings of the egg of Gambel's partridge, and even the shape, leaving no possible doubt that they were the product of one of these birds and not of the Gila monster, which had probably swallowed them whole on the day it was caught and thrown them up during the night.

The nests of Gambel's partridge are lined usually, but very slightly, with bits of dry grasses or leaves, and often contain no lining whatever, the eggs lying on the dry, sandy soil. These usually number from ten to twelve in a set, but occasionally double these numbers are found, which are unquestionably the product of more than one hen. I have several times found ordinary-sized sets placed in two layers, one egg on top of the other, the cavity being in such cases deep and narrow and not rounded.

A set found by me June 20, 1872, contained nineteen fresh eggs, evidently laid by two different birds, as the eggs showed two radically different and distinct types of markings. These were likewise placed in two layers. In the hot Gila River Valley in southern Arizona nidification commences in some seasons by the middle of March.

Mr. John Swinburne informs me of finding a full set of eggs on March 19, near Phœnix, in Maricopa county. In the vicinity of Tucson they lay somewhat later. The earliest date at which eggs of this species have been found there, according to the observations of Mr. Brown, is April 4, usually about the latter part of this month and the beginning of May, the nesting season continuing into August and sometimes even to September.

The eggs of Gambel's partridge are short ovate in form, and the ground color varies from a dull white to a creamy white and pale buff color. The eggs are spotted, clouded, and blotched, sometimes very heavily, with irregular markings or blotches, and again with well-defined and rounded spots of dark seal-brown and écru drab. Diffused over these botches is found a peculiar purplish or pinkish bloom, difficult to describe, resembling somewhat the rich bloom found on blue grapes and various kinds of plums when first picked. These markings, when touched by water or moisture of any kind, change radically, becoming seal brown, or chestnut brown of different shades, according to the variable amount of pigment on the shell of the egg. Carefully blown specimens will retain this peculiar bloom for years, and some eggs collected by me and now deposited in the U. S. National Museum, one of which is figured, show this as plainly today as when they were first taken, fully eighteen years ago. Eggs of *Callipepla gambeli* are, as a rule, more heavily spotted than those of the two California partridges, and the color of the markings in the majority of specimens is decidedly different. The peculiar golden russet shade so often present in the eggs of the latter is almost entirely wanting here, and is replaced by darker and more bluish brown tints.

The average measurement of ninety-seven specimens in the U. S. National Museum collection is 31.5 by 24 millimetres, the largest egg of the series measuring 34 by 26, the smallest 28 5 by 24 millimetres. The type specimens, No. 16480 (Pl. 1, Fig. 11), selected from a set of ten eggs, taken June 14, 1872, and No. 21116, two eggs selected from a set of nineteen (Pl. 1, Figs. 13 and 14), one showing the peculiar bloom before mentioned, and the other a decided difference in the style of markings, taken June 20, 1872, near Rillitto Creek, Arizona, (Bendire collection), were found by the writer. No. 23938 (Pl. 1, Fig. 12), from a set of ten eggs, was taken by Mr. Herbert Brown at the Laguna, near Tucson, Arizona, May 19, 1889.

[The illustration which accompanies this paper is a portrait of the California quail (*Lophortyx californica*), from "North American Birds, by Baird, Brewer and Ridgway," Little, Brown & Co., Boston, through whose courtesy we use it. The figure is, as stated, the California quail. In form and markings the two species are almost exactly alike, but their colors are not the same. Still in a figure showing only black and white, a drawing of one species represents both.]

ORNITHOLOGISTS' ASSOCIATION. — At the December monthly meeting of the Association the following persons were elected corresponding members of the Association: Edmund Heller, Riverside, Cal., and W. S. Strode, M.D., Bernadotte, Ill. President Langille made some remarks on the nomenclature and differentiation of *Ortyx virginiana*, *Lagopus albus* and *Bonasa umbellus*. Mr. S. R. Ingersoll, of Ballston Spa, N. Y., gave a list of the birds which he had observed in the county of Saratoga. The list includes 127 species and is scarcely annotated.

CARRIER PIGEON ASTRAY.—New Haven, Conn., Jan. 5. —*Editor Forest and Stream:* Early in the evening of Dec. 21 a pigeon alighted at the house of Wm. Splaman, Mt. Carmel, Conn. It has a ring on one leg and is very tame, and has refused to go away. They think it is a carrier pigeon. I have made some inquiries in this city, but do not find any one who knows anything about it. I write to you thinking that perhaps that will be the shortest and quickest way of finding the owner.—G. T. HEWLETT.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

---

[1] *Auk*, Vol. II., 1885, p. 247.
[2] Lieut. Robert G. Van Vliet, U. S. Army, tells me that he tried to introduce this species in the vicinity of Fort Union, New Mexico, liberating fifty of these birds in February, 1884. They all disappeared within a year. The birds met with by Dr. Newberry, near Santa Fé, may have been stragglers or descendants of this lot.
[3] FOREST AND STREAM, June 4, 1885.

ABOUT BUFFALO GRASS.

DENVER, Col., Jan. 4.—*Editor Forest and Stream:* In your issue of Dec. 31, you editorially quoted Prof. A. R. Wallace as announcing that since the extermination of the buffalo the buffalo grass is disappearing—giving place to coarser plants—because "the uniform hardening of the surface by the tread of bison, together with the equally regular manuring, favored the growth of this particular form of grasses." I desire to say, not from any theoretical conclusions or brief superficial observations, but from forty years' experience in the buffalo country, that the buffalo grass is not running out from any such causes as are stated by the learned professor. The buffalo grass is a plain, practical plant. It can endure adversity; hence it grew on the plains when few other plants could live. But it can also stand prosperity, and it flourishes the more proportionately. Buffalo grass is now an element in our native upland hay, which many of us feed in preference to timothy or clover. This shows that it grows in the more or less irrigated meadows to a height sufficient to be caught by the sickle. On the dry plains it did not, but in early days of travel and traffic on the plains it was always observed that the rankest growth of that grass was along the sides of the roads where the wind blew the dust from the road upon and around it and thereby gave it a measure of cultivation, and in the swales or depressions where the water followed after rains.

As for the "treading" of the ground and the "manuring" by the bison, assumed by the professor to be the two essentials necessary to perpetuate the buffalo grass, it is a fact that the entire buffalo region is now trampled more and manured more, by domestic cattle (including sheep, horses and other animals) than it ever was by the buffalo. The country is now pastured as nearly as is safely practicable to its full capacity, whereas in the days of the buffalo it was not pastured to one-half what it was capable of. Why didn't the professor attribute its disappearance to sentiment—the buffalo gone, why should the grass remain? I assure you that wherever it has given place to coarser plants there is some other obvious and commonsense reason why it has so happened. I can point out plenty of places where, to my own knowledge, a buffalo has not been for more than thirty years where buffalo grass still grows luxuriantly every year—much more luxuriantly than it grew thirty years ago.

The common, every-day public is often shamefully humbugged by the learned logic of professed professors, who ought to confine their erratic speculations to descriptions of the flora of the moon. WM. N. BYERS.

CANNIBAL SNAKES.

MR. HENRY HORAN, Superintendent of the U. S. National Museum, who has had considerable experience in the care of living reptiles while confined at the Smithsonian Institution, cites a case illustrative of the cannibalistic tendencies of certain snakes. At one time he had in a cage two king snakes, the largest of which was about 2ft. long, and the smaller 18in. The kind and affectionate nature of these snakes soon won for them the best attention from Mr. Horan, who fed them upon "all the delicacies of the season." The snakes were particularly fond of the eggs of other snakes, and through their weakness for these tid-bits Mr. H. discovered his king snakeship's inclination to a trait characteristic of the Fiji islanders. Upon this occasion a goodly number of blacksnake eggs were being fed the pets, and for the last round but one egg was left for the two snakes. It was given to the smaller one, which took it from the hand from which all the rest of the eggs had been taken, and the larger snake, seeing no other egg, tried to take the last one from the mouth of the small snake. But the smaller reptile had a firm hold and kept the egg, whereupon the larger snake commenced to swallow the egg and its possessor. When the snake had disappeared, leaving only a few inches of its tail protruding from the mouth of the larger snake, Mr. Horan took hold of the member and rescued its owner from the living tomb. He was much surprised to find that the small snake still held the egg in its mouth and says it lost no time in swallowing the morsel.

Another case illustrative of how we are not overrun by snakes was seen in the National Museum in 1881, when a large watersnake gave birth to 104 young, and the male snake hearing of it went over and swallowed the whole batch. He was playing "for keeps," too. BON.

WASHINTON, D. C.

BIOLOGICAL SOCIETY OF WASHINGTON.—At the meeting of the Biological Society at the Cosmos Club last night the following officers were elected for the ensuing year: President, Dr. C. Hart Merriam; Vice-Presidents, Prof. C. V. Riley, C. D. Walcott, Richard Rathbun and Dr. Frank Baker; Corresponding Secretary, F. A. Lucas; Recording Secretary, F. V. Coville; Treasurer, F. H. Knowlton, and a Council comprising Dr. T. H. Bean, L. O. Howard, T. I. Palmer, F. W. True and Dr. Theobald Smith.

Words of Appreciation.

I most heartily congratulate you on the changed appearance and greatly increased value of FOREST AND STREAM. It was a superior paper of its kind before—clean, comprehensive, reliable. May its prosperity increase in proportion to the spirit of enterprise it shows in abundantly filling the field it occupies. Dear FOREST AND STREAM. I have read every number of it from its beginning. D. H. BRUCE.

SYRACUSE, N. Y.

The new FOREST AND STREAM, I can truly say, is "immense." The paper has been growing in interest and value for the year past, and is now quite up to the highest demands of sportsmen.

NEW HARTFORD, N. Y. R. U. SHERMAN.

Congratulations are in order, therefore allow me to offer mine to FOREST AND STREAM on the occasion of its new issue as a long time correspondent and reader of FOREST AND STREAM. I have enjoyed the evenness of its gait and consequently I am not surprised to find that with comparatively little effort its claim to lead the entire field has been so indisputably asserted. Its record is without blot, and it has not, and I am sure will not, belie its character. White it has been and white it should be. May you continue to show the lead, in expounding to the public, in the old manly way, all that is best in nature as we know her.

LONG ISLAND. W. TOWNSEND.

Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price $2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

A GUN CAMERA.

BERLIN, Germany.—*Editor Forest and Stream:* Baron Victor Kalchberg (Austria) has successfully solved the problem of obtaining photographic views in such a short period as is represented by the difference of time between pulling the trigger of a gun and exploding the cartridge, and by this means securing an absolutely reliable control of a correct aiming at moving game.

The apparatus is made to fit any hunting gun or military rifle, and is so constructed that the pulling of the trigger will open and close it before the effect of the explosion takes place.

The small attachment is made out of aluminum and is fastened to the lower side of the barrels in such a manner that its optical axis stands in a straight line with the

aiming point. It therefore follows that when a shot is fired at a distance below sixty yards the center of the picture thus obtained will show a distinct spot, representing the true point of aiming at the moment of the pulling of the trigger.

Thirty such views, each in size a trifle smaller than a silver dollar, can be taken in succession. Even at a distance of eighty yards the view will be plain enough to show that part of a deer very distinctly at which the gun has been aimed in the moment of firing. The same picture will display the surroundings of the main object within a circle of thirty yards.

At longer distances, however, the aid of a magnifying glass is necessary in order to locate the aiming point on the picture.

The attachment can be readily fastened to and removed from the gun, thus enabling the gunner to use his gun with or without the attachment. ARMIN TENNER.

A VENERABLE BEAR HUNTER.

HAVING for some time been a constant reader of the FOREST AND STREAM, the oldest, ablest and most reliable sportsman's paper in the world, I naturally take an interest in its varied contents, and if it would not be too much of an intrusion I should like to say a few words concerning my old and valued friend, Elijah Simonds, the venerable hunter and trapper of the Adirondacks, who, by the way, is probably personally acquainted with more of the old readers of the FOREST AND STREAM than any other man living in northern New York. This truly remarkable man, now on the further side of seventy, is passing the happy evening of a hunter's life under the shadow of Mt. Raven, whose towering summit looks down with stately and steady gaze upon the lovely Bouquet Valley, in the bosom of which nestles the romantic little village of Elizabethtown. He is the last surviving member of a large family of brothers, all of whom were passionately fond of hunting. Notwithstanding the fact that Mr. Simonds is living on "borrowed time," he is still able to roam the deepest recesses of the forests unattended save by that trusty fowling piece, a Lewis double-barrel muzzleloading weapon, one barrel for bullet and the other for shot. He has caught the usual number of foxes, mink, skunk, etc., this fall, and has also taken three black bears, capturing the last one just west of Elizabethtown village on Tuesday, Dec. 8. All these bears were caught within a few miles of the Essex county court house, which fact, besides proving the prowess of Mr. Simonds, goes to show that bears are still fairly plenty in and around Elizabethtown. I venture to assert (Mr. Simonds would never voluntarily speak of his own exploits, as he is a very modest man) that no other hunter living within the entire limits of the Empire State, who bears the weight of three score and ten years, can point to a similar record made during the past three months.

G. L. BROWN.

AGAIN THE JACK RABBITS.

I HAVE just lauded here and shall stay till April or May. As I have before had occasion to say, this region is afflicted with jack rabbits. I have brought along both a .32 and a .22 Winchester, with 1,000 cartridges for each, and hope to thin out the long-eared pests some. I wish some of your readers who like to shoot and who are jolly good fellows would come out and help me. I will guarantee them a shot every ten minutes as long as they care to hunt. And for a change I will agree to show them 200 to 400 quail a day for any number of days in succession. I can show them 20 to 50 antelope a day within 20 miles of town, 5 to 15 deer a day by going 30 miles out, and plenty of peccaries, or wild hogs, within the same distance. The open season lasts until March on deer, antelope, quail, etc., and all the year round on the other varmints.

I am not in hotel or livery business and have no axe to grind.

Two brothers of the name of Witt recently went into the foothills of the Guadaloupe Mountains, 40 miles west of here, hunted two days, saw over 40 deer and brought in seven.

A few weeks ago I was driving down the valley with my wife. Two antelope, a buck and a doe, stood near the road. When within 200yds. of them I handed the lines to Mrs. S., took the rifle, hopped out of the buggy, and took a hasty shot at the buck. I failed to score, and the pair sailed away over the prairie. They ran to the top of the ridge and stopped. The distance was great, but accidents are always liable to happen in this glorious climate of New Mexico. I estimated the distance at 350yds., turned the Lyman sight up until it showed the proper number of points, knelt down, took a careful aim at the buck—holding well up to allow for any possible underrating of distance—and when the smoke cleared away the buck was down and kicking.

"Oh, George," screamed my wife, "you've killed the poor thing." And then she wept just as any other tender-hearted, sympathetic woman would have done, and as I felt inclined to do myself.

I stepped the distance to the buck and it was a good honest 379yds. The bullet severed his spine.

I would never have told of the shot had I not had a witness to it, and one whose word no one who knows her would ever doubt.

By the way, why don't some of you sportsmen come here and take up homesteads and go to farming and growing fruit? There are thousands of acres of Government land here, under the irrigating canals, that in two years will be worth $50 an acre. Meantime you can live on quail, wild turkey and venison. Write me any of you who are interested. G. O. SHIELDS.

EDDY, New Mexico.

TWO REMARKABLE CAPTURES.

LAST fall, while on a quail shoot at Kellogg, W. Va., I lodged with my friend Robert Arms, with whom I have been acquainted for many years, and who, I will say, has not a constitutional proclivity for telling wonderful things for wonder's gratification. Before the lurid glare of the great fire-place in the old log cabin he ventured upon my credulity at least for once, and, in all honor to his veracity, I will say I doubt not his story. Said he: "Now, it may seem a thing impossible to you, but what I'm going to tell you is a fact. I was standing on the side of a hill, when some one started a pheasant (ruffed grouse) which came directly toward me. I stood near a tree, and the bird apparently aimed to pass between me and it, and as it did so I made a grab for it and caught it." Now, when we consider the strange vagaries of the grouse, the account does not seem at all incredible. I know one instance of the bird flying from the woods into the village in daylight, and striking the door of the drug store, where it fell and was caught. At another time I was hunting in Ulster county, N. Y., when my beater drove a grouse out of the thicket into the open field where I was stationed in expectation of his flight toward me. I was a considerable number of yards from the thicket, but he came straight toward me and did not seem to realize his danger until very near my head, when he seemed to struggle to check his speed, as it were, fluttered, but he did not change his course. As he passed by I wheeled and dropped him. I think I might have reached him with my hand.

The other singular "catch" was made by a dog, not a greyhound, but one of remarkable ability for leaping, and formed somewhat after the mould of that fleet-footed dog. The dog had a peculiar propensity for running after and barking at all birds that flew overhead. One day a hawk swooped down and bore off a fowl; but the load was a heavy one, and in getting to the woods he had to pass over ascending ground. The dog seeing the thief, started in full pursuit, and, making one leap, brought the marauder to the ground and tore him to pieces. The chicken survived. This was told me by Mrs. Frances Strupe, who saw it, and who is above making a false statement. N. D. ELTING.

OLD SANK'S GOOD WORK.

Editor Forest and Stream:

How largely does a gunner's pleasure in the field depend on the good work of his dog. I have been out twice with my gun this week. Sank did some fine work on quail. They got up and I missed with both barrels. Then I hunted an hour for them and Sank took the trail and followed back over the first trail down to the very spot where they first rose. I thought he was on the old trail and tried to call him off, but could not. He started on and up a hill and came to a point. When I got to him he was pointing directly at three white hens in a tree near the ground. When the hens began to cackle he looked sheepish, dropped his tail for an instant and turned a quarter round and straightened out again. The hens began to fly and ten or a dozen quail rose. I was off my guard and rattled. I fired twice and got nothing. A woman came up and accused me of firing at her hens. I made that all right and came home, having seen the best piece of nose work I ever expect to see in that line. It was one trail doubled on to one a half hour old, and the old fellow knew it and wouldn't be called off nor bluffed by me nor by the hens. I resolved that I would never put my judgment of appearances ahead of Sank's nose again.

To-day I went out again till noon. Sank took a dim scent over in a valley. The birds had evidently been feeding and running about everywhere and I sat on the rocks and waited. At last he started off. Every few rods he would circle a while, find the trail, then go on. We went over rocks, brush, fences and at last down into the open swamp. I had no rubber boots on, but my faith did not falter and I followed along the borders of the swamp through tall grass, weeds and briers and out on some poles over a stream into some plowed land, where Sank halted for the first time. There was no cover and I was confident now that I would see my birds. Man proposes but the quail disposes. When I saw them they were in the air as usual, but I was not "left." I got down one with each barrel and Sank smiled. So did I. It was the triumph of faith. We had followed them almost a mile. Soon after I added an old partridge to my bag, but could not find the quail again in the time I had. They will keep for another day.

Sank and I have a pretty clear understanding now. He leads and I follow if I know myself. A. G. W.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

AN ARKANSAS BEAR HUNT.

IT was early in last December when E. H. B. Dupuy, H. B. Derrick, Dewitt Anderson, J. H. Hill, W. R. Hampton, F. B. Maton, Dr. C. W. Taylor and Longfield Lofton, left Marianna, Ark., for a bear hunt in the cane brakes of White and Cache river bottoms. This section is said to be the best hunting grounds in the State for large game, such as bear, deer, wolves, panthers, etc. It requires men of courage and endurance to undertake a hunting campaign in such a wilderness, hemmed in on all sides by massive cane brakes and primitive forests, wherein abound these vicious wild animals. The party pushed bravely on through the dense wilderness to the bank of Clear Lake, a small sheet of water a few miles east of White River. It was here they struck camp. The paraphernalia consisted of the usual camp equipments, Winchesters, cane knives, and a pack of twenty-six dogs of many designs.

Long before the sun had lifted his head from his Atlantic pillow, Col. Dupuy, the commander-in-chief, sounded the signal to move, and accordingly the party gathered around him for orders. "Take a northern course and move slowly," was the order. Proceeding about a mile as directed, the welcome notes of old Champion rang forth on the still morning air, and in a twinkling the entire pack chimed in melodiously. All knew a trail was struck, and "tones of rapturous joy" came from the boys. It was not long, however, until his bearship was at bay by the side of a large gum tree which served as a barricade to ward off an attack from the rear. When seen bruin was sitting up in all his majesty, slapping at the dogs with terrific force. A rifle shot had a tendency to stimulate him to greater activity until hard pressed by the pack, when he again stood at bay with a huge log to his back. The cane was exceedingly thick and heavy here, but it fell before his strong paw like grain before a a reaper. Fortunately the dogs were graduates of the school of beardom, but for this many of the dogs would certainly have been without a head, a shoulder, or probably an existence. While entertaining the pack with his sledge-hammer blows, another ball pierced his thick woolly skin, and he plunged into the cane, making it crack and snap like a volley of musketry. A long and exciting chase followed. Coming to a temporary stand he was welcomed by a stinging ball from one of the boys who happened to be in his way. The final retreat was in the shales of a cane cavern, under which was scarcely twilight. The cane was tall, and over its tops was a network of vines which served to bend the canetops within a few feet of the ground. It was beneath this dark retreat that bruin took his last refuge. While he was fighting the dogs with all his mad fury the hunter crept cautiously within a few rods of his game and fired the fatal shot. It is unnecessary to mention the hero lest it make him vain, but it may be added that each of the previous shots were very effectual in causing death. It was decided to call her the old she bear of White River bottoms. She weighed 605lbs. undressed, and 482lbs. net. A pretty good bear to say the least.

Fourteen bears and two deer were killed. The bears weighed from 605 to 200lbs. each. After spending ten days on our bear hunt the party returned to their homes brimful of a ten days' outing on Clear Lake, with firm resolves for a future return. WALTER D. CHILDRESS.

COTTON PLANT, Ark.

A NOVEMBER AFTERNOON.

EVERY season as it passes away leaves behind it in the minds of many sportsmen the remembrance of one day, or one afternoon, in particular as more enjoyable than any of his other outings during the same season, not so much for the number of game bagged as for the ease in which the game was got and good shooting made, the weather having been just so. Such an afternoon was the 27th of November last to me. I left home on the afternoon of that day a few minutes before 2 o'clock, accompanied by my black spaniel, and drove three miles to the covert, which was composed of poplar, red and white birch and cedar, with numerous narrow roads cut through it. The day was a lovely still day, with a few flakes of snow falling. Having tied my horse to a fence and thrown over her two heavy warm blankets, I started into the covert, and had proceeded but a short distance when the bitch gave a yelp, and up got a partridge with a roar, as only a partridge can. It rose straight up. I missed with the right barrel, shooting under the bird. It straightened out and made for a hardwood bush a quarter of a mile away; but when about sixty yards on his journey, the left barrel plucked a handful of feathers out of the bird and down it came. Gathering it in, I proceeded gently along the same path.

It was only a few minutes until the spaniel gave tongue again. I guessed from her eager, quick, sharp bark that she had a bird in a tree. Moving a few steps forward I saw a fine partridge sitting on the limb of a small birch alongside of an old fence, and only a few feet up over the dog, watching with head down and topknot erect the small black animal that was making such a noise. I had not stood half a minute before the bird left the tree and flew straight up the path toward me, presenting a beautiful shot, which I was not slow to take advantage of, dropping the bird almost at my feet.

Proceeding a short distance further, the dog started a hare (what a pity it is that spaniels will chase hares; it is the only bad habit my dogs have, and I cannot break them of it, they all do so). I decided to kill the hare, for the days being short, I did not care to wait half an hour or more on the spaniel; so taking up a position where the hare crossed the path, upon her return I shot her.

I now went over to the north of the concession, into a covert similar to the one I had been shooting in. On my stepping over a log a partridge flushed right from under my feet. I fired after the bird, when it turned around and flew a short way toward where I was standing, falling to the ground with wings extended, and when on the ground drumming at a great rate. This bird drummed as loud as any partridge I have heard drum; it was a large old hen and had received but one grain of shot, and that through its head. I would be of opinion after hearing and seeing this bird drum that a partridge can drum in any place and on anything, be it a log, rock or earth. This partridge, although dead to sensation, was as strong if not stronger than any living bird in the nerves of motion from reflect action.

A short distance further on the dog flushed another partridge out of a pile of brush; the bird flew across me, giving me a very pretty shot; I bagged him, and another immediately afterward, making five partridges for five seen, and all killed on the wing. I have killed numbers of partridge in my day, but do not remember ever to have killed five in succession on the wing, without a miss. It is seldom this bird affords to the sportsman a clear, open shot, generally managing to place a tree, bush or something between itself and the shooter.

The dog now started another hare; she had run it but a few minutes before it came and squatted under some brush not fifty yards from me; I fired and as the hare did not stir I knew that it must be wounded badly; the dog coming on the scent caught and killed her.

Immediately after killing the hare the dog flushed a partridge some distance away; I watched the bird fly into a small cluster of standing trees and heard it light. I am the worst hand living for seeing a partridge in a tree, but I knew this one could hardly escape, as I had but a few trees to look into. After looking over and over again into each tree, I saw the bird sitting close up against the trunk in a red birch within 30yds. of where I was standing. I shot it without the slightest compunction. The most of the partridges I kill I kill on the wing, but am not above shooting a partridge on a tree or on the ground. These birds are, in this neighborhood, much hunted, and are therefore pretty wild.

This season has been, in this locality, an exceptionally good one for partridge. There was a good crop of butternuts. Why is it that in a year when there is a good crop of butternuts there is also a good crop of partridges? What butternuts should have to do with this bird I do not know, but I have noticed that a fall when butternuts are plentiful, partridges are also plentiful.

I had now six partridges and two hares, about as much as I cared to carry. Being about one mile and a half from where I had left the horse and buggy, with evening fast approaching, I retraced my steps. The dog, on our way to the horse, put two partridges into a poplar, but they did not let me get near enough for a shot. Coming on dusk, and just as I got to the concession road, the spaniel flushed another bird, a nice shot, but I made a clean miss. However, I did not care to get any more; I had plenty, and had had a very pleasant afternoon; the weather was perfect, the walking good, and I never had gone from the roads. Getting to where I had left the horse and buggy, it was but a few minutes until I was at home. Saw the dog fed and horse attended to, and enjoyed a good tea, as I generally can after a tramp in the bush with gun and dog. H. B. N.

COOKSTOWN, Can.

THE VELVET TRAIN of the Monon Route between Chicago and Cincinnati offers the best and most luxurious service obtainable between those points.—*Adv.*

AMONG THE WILDFOWL.—XVI.

AN EXCITING MOMENT.

THE FOX LAKE REGION.

FOX LAKE, Wis., Dec. 13.—*Editor Forest and Stream:* The shooting and fishing, although good in this locality, is not what might be called great, and we have disliked to call attention to it as there have always been hunters enough for the amount of game; but "the jig's up" now. The real estate dealer in lots, the summer girl, the boy with the target rifle, and the "hog," whose only glory is in the size of the bag he makes, have nearly ruined the sport. If I were going to formulate a set of rules for sportsmen, I would be tempted to bunch them all in this one, "Don't be a hog."

The able pen of your Chicago correspondent has left little to be told of Horicon Marsh. About eight miles west of Horicon Marsh is Beaver Dam Lake, a fine sheet of water eight miles long, but nothing extra for ducks, as there is comparatively little of marsh and feeding ground. Two miles north of Beaver Dam Lake lies Fox Lake, which is about three miles by one and a half, and has plenty of marsh and feeding ground, and for the size of the lake has always been a good one for ducks. It is cut over half in two by three islands, now dotted by cottages; and as I intimated before, the shooting here will soon be a thing of the past.

Northwest of Fox Lake about four miles is the beautiful little Lake Emily, northwest of that another fine little sheet of water called Lake Maria, and still northwest of that a mud hole, formerly called Lake Marietta — an early French settler had three daughters, named Emily, Maria, and Marietta. A little fishing and shooting may be had on these lakes, but none of them equal to Fox Lake. About ten or twelve miles northwest of these lakes are the wonderful Pucawa lakes and marshes, but this place is familiar to many of your readers and I will not attempt a description. The shooting here on Fox Lake, owing to low water, would have been the best in years the past season, but as soon as the bluebills came, the sportsmen of Milwaukee flocked out, and by continual chasing in small skiffs by part of them and shooting by others in blinds built in the open water, the ducks were soon driven off. It's a small lake, and with steady cannonading fifteen hours a day the poor ducks had to leave. After a day or two, when they began to work back in, they found so many gunners awaiting them that they soon left. After the bluebills were gone that idiot among ducks, the rhoda or bullnecks, had to take it, and they were chased till so wild that nothing short of a cannon could reach them. We have a beautiful little lake, and might have more or less shooting every fall, if any reason were shown by the sportsmen, but seven fifteen-hour days of cannonading a week are more than most any kind of game will stand.

Our lake froze over very suddenly about the 15th of November, and the boys had great sport catching crippled ducks on the ice. Georgie Morrison, of Fox Lake, captured forty-six in one day. This is better than to leave them starve or to be caught by foxes. Wm. Williams, a big Welshman, living north of the lake, skated across the next day to do some trading. On his way over he caught a crippled duck, and leaving it on the island came into town. Starting back about 4 P. M., he got his duck, and had only gone about 50yds. when he skated into an air hole and was drowned. He was an immensely strong man, but did not or could not struggle a particle for life, for when he was found the duck was still under his arm.

We are having a little sport with rabbits and anxiously waited for a good tracking snow, when fun with the foxes will commence. We have no regular club, but every one who owns a hound joins in, and we manage to get not a little sport out of it. I have a big greyhound that is affording us some little sport when rabbit hunting; he will follow my old foxhound Duster till she starts a rabbit; then he takes the lead, and when he has any show at all picks up the game. We are hoping he will do the same trick on foxes, and if he will we'll gather in the brushes in great shape. W. E. W.

ALUMINUM.—Charlestown, N. H.—*Editor Forest and Stream:* "I want a match box, no uncommon want;" to parody the opening lines of Don Juan, and make it an excuse to ask through your columns why some of the manufacturers of, and dealers in, sportsmen's appurtenances do not advertise sundry articles, such as match boxes, dog collars, drinking cups, whistles, etc., made of the new metal, aluminum. All my mechanical papers are full of notices of it and its various alloys, and from the reports of their lightness and strength I should think them admirably adapted for all such purposes; if not the pure aluminum, at least the aluminum bronze, which is said to be of a beautiful gold color. And why, if its toughness and incorrodibility be what is claimed for it, would not the bronze be a superior article for gun barrels, provided always that it can be oxidized, or dulled externally, so as not to glisten, for no man would want to go into the woods with a pair of golden barrels. I ask these questions, hoping to hear from some of your advertisers that such wants can be supplied.—VON W.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

CHICAGO, Ill., Jan. 6.—Next Wednesday afternoon, Jan. 13, at the Sherman House, there will be held the annual meetings of the Fox and Kankakee Fish and Game Protective Associations, practically a joint meeting, as the presidency of the two societies is conjoined in one individual, Mr. Geo. E. Cole. Business of importance will come up. It is safe to announce that about half the men will be there who ought to be, or perhaps one-fourth. A good many will forget the day, and a good many will not remember it, and some will not think of it, and several won't go anyhow, because they will be too busy. But they will be glad if those who do go will fix it somehow so that the fishing will be better next year.

Not long ago I was speaking with a couple of friends here on things in general, and one of them asked, "Don't you think you give altogether too much space to protective matters?"

The answer to such a question is like that which the author of "The Lady or the Tiger" once made to a correspondent who asked him "which door really opened, or which came out, the lady or the tiger?" "That depends altogether upon what sort of person you are yourself," said the author.

It is easy to be bored by matter relating to the uninteresting details of protective work. Again, it is easy to be interested in it. That all depends on the individual. There are few unselfish acts which are not received with a reservation or a natural sneer. The doctrine of the world is selfishness pure. I tell my friend how to catch more fish, or where to kill more game. He is rejoiced. He loves me. I am his brother. I tell him he ought to catch fewer fish and hedge in the supply, and lo! he has cause of grievance with me.

Upon the other hand, I don't say anything about it: nobody does. No paper does. It is allowed to slip along unmolested, this question. After some years there are no fish and the game is no longer to be found. My friend comes to me. "Here," he says, "these sportsmen's papers have let this thing go along, hap-hazard, until now it is too late. The game is gone. We can no longer find any fish. These journals have been untrue to their constituency. They have been unworthy of their name."

Now, no newspaper can please everybody. The worst sort of newspaper failures are made by trying to do that. So that part of the question doesn't matter. The question militant is, Which of these two friends one would rather look in the eye when he appears with his grievance? So far as my humble part is concerned, I would rather answer the first man than the latter.

The mere fact that a thing never has been done is no reason why it should not be done. The fact that no sporting journal ever took game or fish protective matters, in the West at least, until FOREST AND STREAM did so, can not be urged as conclusive proof that FOREST AND STREAM should not have done so and ought not to do so. There is nothing Pharisaic in this, for very little has really been done by anybody: but it seems an easy guess to say that the day will come when much of actual good will be done on these same lines. It is the best paper which in the retrospect of those days will be found in line, and with a record of work and duty done.

It is easy to lay down a few propositions about the status of protective matters in the West. It is true, first, that the game and fish are going; second, that the protective laws are inadequate, confused, ill-judged, obscure, and of no similarity for States whose needs are the same; third, that the public is very generally ignorant of the laws such as they are. All these premises are easy, so easy that it seems hard to escape the conclusion that upon the sporting press devolves the duty of making the muddle more clear and of searching out a way for better and more practical measures. This is a duty which takes part of a paper's life, namely, its space. I have an idea that already half will say it was the lady, and half will say it was the tiger.

That prominent figure in Iowa sportsmanship, Mr. John G. Smith, of Algona—by the way, president of the Iowa State Sportsmen's Association—is evidence of the fact that the sportsman may not be without honor, even in his own country. Mr. Smith has been elected to the State Legislature, and starts for Des Moines to-morrow to attend his first session. I have an idea there will be a bill introduced for the improvement of the Iowa chicken law.

The following are the present officers of the Iowa State Association: John G. Smith, President, Algona: A. J. Zwart, Des Moines, First Vice-President; W. B. Leffingwell, Clinton, Second Vice-President; Nelson Royal, Des Moines, Secretary; C. O. Perkins, Des Moines, Treasurer. Directors—C. W. Budd, Des Moines; N. S. Young, Burlington; Geo. Converse, Des Moines; F. O. Davis, Davenport; Chas. Grim, Clear Lake. Law Committee—W. L. Read, Des Moines; S. S. Sessions, Algona.

Mr. C. W. Budd, of Des Moines, as aforesaid, writes once more that he is anxious to come to Chicago and tread the dark and bloody ground at Watson's Park with almost anybody. It seems to me that one of these many anxious men ought to take the trail for Chicago, and go into camp here. Maybe some of the others would follow along then. The Chicago men want to have some fun with somebody, anyhow.

Jim Elliott, of Kansas City, is also anxious, and is getting anxiouser right along. He wants to know what about that match which was made for him with Andy Thomas. This match was never really closed on account of the latter's sickness. I saw Andy to-day, and he was looking mighty "peaked."

George Kleinman, whilom sheet anchor of Chicago hopes, has gone off his form, as see late trap scores. He has a new gun, with which he can't hit a barn full of pigeons. Ill fared it then with George when he let go his famous $12 discount gun, that weapon which has inspired more enthusiasm here, I fear, than the sword of Bunker Hill. George could hit birds with the old gun; he can't with the new one. This is intended as a bait to anybody looking for a pigeon match; but I shouldn't like to give it away.

Mr. S. A. Tucker, the Parker gun evangel, left this city after a short visit, starting on Sunday for the East and to the works. Mr. Tucker has plenty of friends who hope that his shadow will never grow less. I don't believe it ever will, now.

Mr. Harvey McMurchy, paternal uncle of the L. C. Smith gun, is announced to glide upon the horizon here to-morrow, and will doubtless shed intelligence in the matter of ejectors as a class.

Mr. Fred. Kimble, of the Peoria Target Co., was here last week, and taught Rolla Heikes a new tune on the banjo. Not that Rolla needed any new one, but that Mr. Kimble knew one which Rolla didn't.

Mr. Paul North, of the Cleveland Target Co., is due here this week on a business trip, as I learn from a letter of late date. The 1st of January thaws out all the business people.

Mr. F. C. Damm, of the new U. S. Pigeon Co., left yesterday for Kansas City, after a pleasant business trip here. I understand that Von Lengerke & Antoine are to handle this target here.

Mr. Alex. T. Loyd is in Washington, D. C., getting out some patents, several of them on sporting articles. He is all right, because he has sent back to his banker here several times for more money.

Mr. Wolfred N. Low is just back to-day from his long stay in Mexico, and starts almost immediately for New York. He will probably return soon to Mexico. He is mixed up in an awful good chance to make about a wagon load of money, and no one deserves two wagon loads more than he.

Messrs. T. Benton Leiter and W. H. Haskell are about due back from Iowa, where they lately went on a visit to Mr. Leiter's farm for the purpose of shooting. Rabbits only.

Mr. Joel Kinney was down in Arkansas after quail this winter, and had some fun, though unfortunately without a dog.

I don't remember whether I ever said anything about the Joel Kinney rail story or not, although almost everybody here reminds that gentleman of it occasionally. Joel is very fond of rail shooting, and is about the only member of his club, on the Kankakee, who pays much attention to that bird. One day, when the rail were all over the wild rice in the marsh, Joel loaded up 300 shells and determined to make a big killing. He ordered his pusher to take him about eight miles up the river, and resolutely refrained from firing a shot until he got to the coveted position. Then he fired two shots, and that was all; for, alas! he discovered that he had forgotten to put any shot in his shells. Sadly he headed the boat for home. "An' all the way down the river," said the pusher, "them there rail-birds were a hollerin' 'Kinney, Kinney, Kinne-e-e-e! Oh, Kinney!'"

Jan. 8.—Mr. Harry Dale, who was brought up in the grass near Rice Lake, Ontario, tells some weird stories of sport in that locality, where ducks, bass and mascallonge seem abundant as heart could desire. "We never shoot flying over there," said Mr. Dale, "there's a rule in the club against it. I did kill one duck on the wing once, but it was an accident, and I regretted it. A fellow usually goes out into his blind in the morning and sits awhile. Maybe he gets one shot, maybe two. Then he sends out an Indian to gather his birds, and he goes in and sits by the stove with the other fellows.

"There is only one spoon-hook in that part of Canada," continued Mr. Dale, "and it belongs to old Hayes, who gave seventy-five cents for it before the war. One day Hayes was out trolling, and he snagged his spoon, thirty feet down in the ice cold water. He couldn't lose the spoon, so he stripped and dived for it. Somehow, in trying to loosen it from the log, he got one of the hooks caught through his nose, and climbed into the boat with things in that fix. Of course he couldn't stop fishing, so he cut the hook out of his nose—not a very good job, piece of nose left on hook—and went on trolling. He caught a load of 'lunge, and said he never saw them rise better. You can see where Hayes took a chunk out of his nose, and he was always mad because it never grew back in again.

"You can't come over to Rice Lake with any fly-book," said Dick Cox, Mr. Dale's side partner, taking up the story. "We don't fish with anything but white cardboard over there. A gentleman by the name of Clark, from New York, first put me on to that. We were in a boat one evening and he started to casting with a piece of visiting card for a fly. He would put on a new piece when one got soaked too much. I never saw bass rise better. They were all big-mouth bass, and were taken in the dusk of evening. We never take any bait but a pack of cards over there when we go out fishing. Small-mouth bass won't rise to anything but aces. I have caught slough bass on a pair of threes" (I think Mr. Cox's mind was wandering).

"You know how to paddle?" he said, waking up from his reverie. "No you don't. There don't anybody know how to paddle a canoe but a Rice Lake Indian. It makes my back ache to see a greenhorn try to paddle, clawing away forward with his paddle, and sweeping it away behind him before he recovers. A paddle wants to be just long enough so that the left hand, holding it by the top, just comes even with the chin in paddling. An Indian paddles with a very short stroke. He don't reach very far forward, and he bears downward on the paddle, pushing down as well as back. He never brings the right hand any further back than the thigh in the stroke. You can bet that's the easiest way to paddle or an Indian wouldn't do it that way. A Rice Lake Indian will send one of those teetery canoes along as easy as a bird, and you can't hear a sound from the paddle. That's the way to go trolling for mascallonge. A big 'lunge will tow one of those canoes. One time a feller—"

"Do you think you can get over 38 out of 50 selected birds, Dick?" interrupted a fellow citizen about then.

"I do think so, deep and plenty," said Mr. Cox, forgetting about the 'lunge.

"Fifty?"

"Fifty. That makes sixty I've made to-day, $10 in my business and $50 in this match. I guess I'll go home now."

It would seem that the intelligent compositor who runs the tick-a-tack machine can cast her shadow in even such high regions as the general offices of railways. This morning I am in receipt of a letter from one of the leading lines inquiring, formally, and after blank No. so and so, as to the "bona-fied" circulation of this paper. I am afraid I shall have to leave that for the office to answer. Yet another road speaks darkly of a "right-up," whatever that may be.

The Amateur Revolver Championship contest, which has for some time been progressing under the auspices of FOREST AND STREAM, for the distinguished Winans trophy, has attracted much attention. Chicago is, of course, not to be left out of anything of the sort, and it may be in the cards that Chicago will win the trophy. Shooting is now progressing in this contest at the gallery of Geo. McCune, 146 South Halstead street, with the prospect of a very good competition for this point. For those who may not be posted on the terms of this competition, it may be well to state the conditions briefly: For the Winans silver cowboy, open to amateurs, 20yds. off-hand, any pistol under 10in., 30 shots, or 5 scores of 6 shots, best 3 scores of the 5 scores to count, and string of the 18 shots selected to make the record. FOREST AND STREAM adds $50, $30 and $20 for first, second and third. Smith & Wesson add a best quality revolver for first. Finally, there is no entrance fee. Anybody can shoot. FOREST AND STREAM even furnishes the targets, one target for each shot. The pistol shot who won't go into this contest, under terms such as the above, must be of a truly cautious disposition. Fuller details can be learned for this city at McCune's gallery.

The Garden City Rifle Team meets weekly at McCune's place, Tuesday evenings. Their conditions are 25yds., 25 shots per man, open sights, off hand, Massachusetts target. The scores of this and future weeks, and also details of the revolver contest, will be found in the proper columns of FOREST AND STREAM; and nowhere else.

It should be borne in mind by those who live down East, or in other foreign parts of the world outside of Chicago, that the trap scores sent in by "Ravelrigg" from Watson's Park, usually headed "Burnside, Ill, are really Chicago scores, as Burnside is the suburb where the Chicago shooters meet.

Jan. 9.—The new FOREST AND STREAM is at hand. She struck twelve. E. HOUGH.

NEW YORK STATE CONVENTION.

THE Onondaga County Sportsman's Club inaugurated a movement at its monthly meeeting last evening that will result in the holding in this city early in February of a convention of sportsmen to consider the subject of the codification of the game laws of the State. Sportsmen have felt for years that the State game laws were in a bad shape and they have made many efforts to get them into some sort of shape that would not be a disgrace to the intelligence of the men who fish and shoot throughout the State. Their efforts, however, have failed mainly because the men who wanted the game laws amended were fighting each other. The fellows down on Long Island wanted to shoot ducks with batteries and hunt woodcock in July and August. These notions were regarded as barbarous by the shooters in central, northern and western New York, and when they all got together at Albany they did little but fight among themselves. The legislators, who were not all sportsmen, did not know what to do with such conflicting claims, so they did nothing.

Now it is proposed to hold a convention of the shooting and fishing men in this city, have them fight out their differences in the convention and when they are tired fighting agree upon what they want, and then go to Albany and ask the Legislature to give it to them. Gov. Roswell P. Flower is a mighty sportsman and he would be with them for a decent arrangement of the game laws. Senator John A. Nichols of this district is a great duck hunter and his assistance at Albany can be counted on. Judge I. G. Vann and Gen. D. H. Bruce of this city are strongly in favor of the convention and were among the first to suggest it. Horace White of this city, President of the New York State Sportsman's Association for the Protection of Fish and Game, thinks the convention idea is a brilliant one, and he brought it before the Onondaga County Sportsman's Club last evening. Mr. White said that he had received a large number of letters from sportsmen all over the State urging the sportsmen of Syracuse to call such a convention. The writers of these letters felt sure that the convention would be largely attended by men of influence. Mr. White said that he had conferred with members of the Anglers' Association, and they were heartily in favor of the convention being called. Ex-State Senator Donald McNaughton of Rochester had written Mr. White that he would attend such a convention and many others had written to Mr. White in the same strain. Mr. White suggested the appointment of a committee to confer with a committee from the Anglers' Association in regard to calling the convention.

W. S. Barnum, C. H. Mowry and others endorsed Mr. White's convention idea and upon motion of Mr. White this committee was appointed to act with a committee from the Anglers' Association: Horace White, W. E. Hookway, H. M. Chase and James Nolan.—*Syracuse Standard, Jan. 6.*

MAINE GAME.

VENISON is a drug in the Boston market, and the price is very low. Shipments from the West have been heavier than usual thus far this season, besides more has come through from Maine. Both sportsmen and those who buy the game of sportsmen find very little trouble in getting it through under the provisions of the new law, provided they do not attempt more than three deer to a man. But the close season is now on in Maine on big game, and it is hoped that the shooting will cease. A Lawrence Falls, Me., report says that A. B. Douglas, of Eustis, passed through the town a week ago last Friday with a party of Boston sportsmen. They had with them a magnificent specimen of a ten-year-old moose, weighing, dressed, some 750lbs. The moose was shot by one of the party after Mr. Douglass had been following his trail for eighteen days. The head is reported to be a magnificent one. I have made considerable inquiry, but am unable to find out the names of the sportsmen, if the report is true. This is about the only moose reported killed in the Dead River section of Maine this season. As showing that the days of fur hunting in Maine are not yet entirely over, it is worthy of mention that a Farmington, Me., fur dealer has a collection of twenty bear skins that have cost him from $10 to $25 this year. He has also eighty fox skins, thirty beaver, with nearly as many fishers. He has also about 1,000 mink skins, with nearly as many skunk. He has purchased over 2,000 muskrat skins this year. Indeed the most of the fur is reported to have been purchased within a couple of months.

SPECIAL.

THE BUFFALO IN GEORGIA.—Tomo-Chachi & I at his Desire go out tomorrow to hunt ye Buffaloe as far as the utmost extent of his Dominions towards Augustine.—*Letter of Oglethorpe to the Trustees, 16 March, 1736.*

NORTH WOODS GAME.

NORTHWOOD, N. Y., Jan. 4.—Several bears have been killed near here during the fall. A bounty of $10 each was paid for five of them; then bounty paying was stopped. Not long after a letter was sent to the treasurer with proof that a bear had been killed, but the bounty was not forthcoming. A few days after the bear killers, who had got a check on the county, received letters asking the return of the money; but the money had been spent or paid out, so they sent answers back to that effect.

Deer have visibly increased around the clearings, while around Moose River they are not so numerous as formerly. No trouble was had in starting them, however. A good many fair-sized bucks were killed this year in the southern part of the "big woods."

Six years ago a party of five men killed over a hundred deer for hides in the vicinity of Seeberry, Stillwater and Jock's Lake outlet. Their principal assistant was an innocent-looking setter. The men would go out to some favorable spot and go up wind in a line, with the setter ranging back and forth before them. When one of the men found a fresh track he would call the dog, and the dog would road the deer much as if it were a partridge. When within fifty or a hundred yards the dog would straighten out in a point, the men would then surround the deer, and when it sprang from the cover the men nearest would shoot it. Very few deer escaped the hail of buckshot. The deer in that region are increasing slowly.

More foxes have been killed here during the fall and winter than for years before. Rabbits are plenty, but few have been killed because there has been not enough snow to hunt them. Very few partridges (ruffed grouse) were killed during the fall, for they were very scarce and wild.

Guides and sportsmen who are acquainted with the Moose River country say that wolves can be heard on quiet evenings during the spring and summer months.

RAY SPEARS.

QUAIL IN FLORIDA.

LAKE COMO, Fla., Jan. 4.—While riding from Palatka to my home at Como on the Jacksonville, Tampa & Key West Railway a few days ago, I overheard a conversation between three gentlemen from New York city, who were on their way to South Florida for quail shooting. I was very much amused at their conversation, for they seemed to entertain the idea that the further south they went and the wildest country they could find was just the spot for No. 1 quail shooting. Now, this is a mistake as far as quail shooting in Florida is concerned, and those who anticipate coming to Florida for this sport should not go too far south, nor select a wild and uninhabited section of our country, but to go to some thickly settled country district where there are plenty of orange groves and cultivated fields, where quail are to be found in abundance and where they feed upon cow peas, partridge peas and crab grass seed. November, December and January are the best months for shooting in the pine woods; later than that, they are to be found more in the flat woods and swamps of our large lakes, returning again in March, when they pair off and raise their young.

To give you an idea how numerous quail are at Como, let me cite two cases of this season. On Dec. 19 I went out with my dog Sport (a Laverack setter), did not walk over 1½ miles; was gone two hours from the time I left my house until my return and bagged 16 quail. The other case is of a friend who came into my store with his bag full. I asked him what luck, and he dumped 49 quail on the counter and said he was after one more to make it 50; and I am told he got it. He left his house at 8 o'clock in the morning and it was 2 when he reached my store, which was a pretty good day's sport.

Those who are fond of this sport will find good accommodations at Como and a good clean woods to shoot in, but they must fetch their dogs with them and know how to point their guns in order to get the birds. Those who are fond of fishing for black bass will find that our lake is full of these fish; and they have been caught weighing as much as 14½lbs.

D. E. D.

TWO MEN AND A BEAR.

I WAS a boy of 10 years. My father and family resided in New Brunswick, where the Digdigquash River met the ocean. But few settlers were there, and the forest primeval stood around the dwellings of those few. Bears were plenty, and, like all bears, fond of mutton, sometimes chasing the sheep even to the doors of the inhabitants. Many had been victims of the hunter's gun, yet their number apparently had not diminished.

One day my father and a neighbor of the name of McLean were crossing the river in a log canoe, when they discovered a bear swimming in the same direction. Dexterously plying their paddles, they came between him and the place where he intended landing. This cut off enraged the animal, which immediately made for the canoe, putting one paw on its low gunwale. A smart blow with the edge of a hardwood paddle made the fellow relinquish his grasp. After a good deal of hustling McLean managed to get hold of the bear's hind legs, holding one on each side of the stern of canoe, father, at the same time, with his paddle keeping the craft upright until the creature was drowned, and thus the game was secured. He was a large brute and an old offender.

J. H.

SHEET HARBOR, N. S.

ST. LOUIS NOTES.—Jan. 2.—Pistol shooting is at a very low ebb at present. The St. Louis Pistol Club is practically dead, most of the members having taken to long range rifle shooting. Quail shooting ended on Thursday and some heavy bags were made during the closing days. Mr. J. B. Mattocks and Wm. Horner bagged 114 birds in three days shooting in Crawford county. The birds were all found in the timber. Hunters report an abundance of quail still left, which insures a beautiful supply for next year. A drummer who travels through Southwest Missouri confirms the report of the treachery of so-called guides. He says he has often heard the local hunters brag about doing up city visitors by putting them where game was scarce and making way with their camp supplies. He says emphatically that the local guides are not to be depended on. There was to have been some trap-shooting yesterday but the blizzard snowstorm prevented.—ABERDEEN.

A GUN FOR GOV. RUSSELL.—At the annual dinner of the Governor of Massachusetts and his military staff, the other day, there was a very happy prize in store for his Excellency, Gov. William E. Russell. Once a year the Governor and his staff draw upon the State for this dinner. This time it was rather informal, till well in the evening, when Commissary-General Charles H. Taylor, manager of the Boston *Globe*, arose, and in a few most kindly remarks, presented the Governor with as handsome a Scott gun as one often sees. Then he told of the Governor's wonderful skill with the shotgun, and in behalf of the other members of the military staff, he wished him much joy in the use of his new weapon. The commander-in-chief was completely taken by surprise, but managed to express his thanks for this most kindly remembrance in a few well-chosen words. The Governor will now have a better reason than ever for the little outings that he is so fond of taking.—SPECIAL.

NEW YORK ASSOCIATION.—New York, Jan. 12.—The forty-eighth annual meeting of the New York Association for the Protection of Game of this city was held at the Hotel Martin Jan. 11, Hon. Robt. B. Roosevelt in the chair. After dinner an election of officers was held with the following result: President, Hon. Robt. B. Roosevelt; Vice-President, Col. Alfred Wagstaff; Treasurer and Counsel, Thos. N. Cuthbert; Secretary, Wakeman Holberton. The affairs of the club were reported to be in excellent condition, and two new members were proposed. The counsel stated that the suits against Morillo and Kaiser were progressing favorably, and that he had received the amount due from the Hotel Brunswick. Resolutions were passed expressing the great regret of the Association that Mr. Eugene Blackford had been removed from the Fish Commission, where he had worked so long and faithfully, and had accomplished such excellent work.—W. H.

GAME IN THE MACKENZIE RIVER COUNTRY.—Dominion Land Surveyor William Ogilvie, who has been surveying in the Mackenzie River country, reports as to game: "From Athabasca to Edmonton the journey was made by horse, team and sleigh. The distance covered from the time of leaving Calgary was about 2,900 miles, of which about 1,900 was made in our canoe. Numerous signs of moose, deer and bear were seen on the Liard and Nelson rivers, but none of the animals were seen. Through this country the wood buffalo roams, but none of the animals came into view. Several bear tracks were crossed, but no bears were seen. A few fur-bearing animals were seen at a distance, but none was killed."

A MICHIGAN LOCAL LAW DECLARED UNCONSTITUTIONAL. Holland, Mich., Jan. 4.—*Editor Forest and Stream:* Deputy Game Warden M. T. Ryan, of Allegan, arrested C. M. Cook, of Saugatuck, Nov. 21, for shooting a deer in Allegan county. Justice Fuller fined him $25 and costs, amounting to $50. Cook appealed to the Circuit court, and Judge Palmer, after hearing the facts, knocked out the case on the ground that the special act passed by the last Legislature providing that it shall be unlawful to kill deer in Allegan and Van Buren counties for three years was unconstitutional. What is your opinion as to this?—A. G. B.

ANTELOPE IN NEW YORK STREETS.—On the night of Jan. 10 the police of the 30th Precinct, this city, picked up in 128th street, near Manhattan street, a dead buck antelope. On the following morning an alarm was sent out calling for an owner for the "deer." The animal was apparently in good order and fat, but the condition of the hoofs on the hind feet lead to the conclusion that it had been kept for some time in captivity, since the hoofs were a good deal grown out. On the left side was a slight abrasion, and there was some reason to think that the left thigh was broken, high up. As the body was frozen, this could not be determined with certainty.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

CHESAPEAKE BAY FISHES.

ABOUT the middle of September, 1890, the writer, accompanied by L. G. Harron and D. W. Kenley of the U. S. Fish Commission, located at Cape Charles city for the purpose of making collections for the marine aquaria, at Washington, D. C. They were well equipped with tents and all things necessary for camp life. For several days Mr. Barton A. Bean, Assistant Curator of the Department of Fishes of the U. S. National Museum, made one of the party, making collections of fishes, birds, etc., for the museum. The purpose of this article, however, is not to burden the readers of FOREST AND STREAM with the incidents of the trip, which lasted about three weeks, but simply to record a few observations concerning fishes in that locality, and especially on the "red drum" or "channel bass" (*Sciænops ocellatus*), as an addition to what has recently been noted concerning them in FOREST AND STREAM by several observers.

Mr. Bean has published in the Proceedings of the National Museum (Vol. XIV., pp. 83-94) a brief account of the trip with notes on the sixty-four species collected, taken from his own observations supplemented by the writer's field notes. I quote as follows from his paper:

"35. *Sciænops ocellatus*, L. Red Drum. U. S. N. M., 43,130. One specimen, 16in. long; weight, about 2¾lbs. This species was seined in a quiet cove of the bay, near Cape Charles City, at night. Quite a number about 16in. long were obtained and brought to Washington, where they do well in the marine aquaria. Mr. Seal observed them as large as 30in. or more taken from the pound-nets.

"I was very much surprised at the great abundance of red drum in the Norfolk and Portsmouth, Va., markets on Sept. 20, 1890. Cart loads of this species were to be seen, especially in Portsmouth. The fish ranged in weight from 1 to 3lbs., and were packed into the carts as thickly as they could be placed, standing on their heads or tails. No ice was used on them.

"In November, 1890, Mr. Joseph Ragan, of the Washington Market, called my attention to a red drum, which had, besides the two black spots on the caudal fin, three similar marks on either side of the body, those of the right side being very close together, while the ones of the left side were further apart; the body spots being the same, white-edged, as the one at the root of the tail, which is seldom, if ever, absent."

The interesting fact concerning these fish is that they were invariably taken during the night seining and not in a single instance during the day. They were taken close to shore with a forty-yard Baird seine, in sheltered coves only, where the water was not over 3ft. deep at the deepest part. Thus they seem to run in close to shore in the night to feed.

On the night seinings, also, we took the only skates and rays caught during the trip. There were also secured at night two specimens of that curious fish the naked star gazer (*Astrocopus anoplus*). To the marine collector, therefore, it would seem that night seining is quite as important as that of the day, and the chance of securing species not encountered during the day very great.

In seining along a long strip of beach the writer has often had his patience rewarded by the taking of rare species—sometimes in goodly number—only after persistent hauling with meager results, beginning each haul where the previous one ended and thus driving the more active fish ahead. On one occasion on Vineyard Sound, after taking a long stretch of beach and getting nothing but common stock, about fifty young pompano 1½ to 2in. in length and of two species, and three other species very much desired, were taken at one haul. They had possibly run out and ahead of the seine for a considerable distance and finally stopped in a patch of plant or had started to run back. One never knows just how far off luck may be and the finding of a rare specimen is ample reward for an exhausting day's work on blistering sands, exposed to old Sol's fervid embrace, with nothing better than luke warm water to drink.

One of the most remarkable sights at Cape Charles at this time was the enormous schools of mullet lining the shores. The mullet ranged in length from 4 to 12in. The water from the edges where it would hardly cover them to 100yds. or more out, and along the entire shores, was one seething mass of mullet. The schools were composed of both species, "gray" and "striped," intermingled. So thick were they for several days that seining had to be suspended. Once only was it attempted. There seemed at no time to be a spot where they were not very thick, and from the way they were jumping it was surmised that there were larger fish feeding on them. So a haul was attempted to see what they might be. When the seine was drawn close to shore the weight was so great that it was impossible to move it further. They jumped over it in thousands, and still the mass was so great that it could not be hauled. The only resource was to lift it and let them run out. Then it was found that almost every mesh in the coarse part of the seine held a fish, and it was a big job to remove them. Care was taken to extricate them without injury if possible, and this made it a very tedious proceeding. That was the last haul where there were large schools of mullet.

During the stay at Cape Charles City there were five menhaden steamers in that part of the bay, frequently running in there for shelter and sometimes to unload at the phosphate factory belonging to the great truck farm of the late Hon. Wm. L. Scott, of Erie, Pa. Advantage was taken of these opportunities to look for evidence of destruction of food fishes, but none was noticed. The writer watched the unloading of entire cargoes, but saw nothing but menhaden. Occasionally a large crab-eater (*Elacate canada* L.) would be taken with the schools of menhaden, of which they were in pursuit, and would be seen hanging on deck. It was a matter of complaint on board these vessels that they could not get enough fish for the mess tables.

It seems strange that Cape Charles City has not attracted more attention from anglers. It is located about twenty miles inside the cape, and is the railroad terminus of the New York, Philadelphia & Norfolk road. Powerful steamers connect with Old Point Comfort and Norfolk twice a day. There is a good hotel with rates astonishingly low. It is but four miles across to the seaside by rail, and Cobb's Island lies just outside, with steamer connection through the season to Nov. 1. It seems hardly possible that there are not fine fishing grounds in the vicinity. In the fall sea bass and tautog weighing from a quarter to three-quarters of a pound may be caught along the breakwater, not over 100yds. out, as fast as a hook can be baited. There must be ledges further out where big ones abound, for the waters thereabouts are alive with quite small ones.

Large sheepshead are caught as far up the bay as Point Lookout (mouth of the Potomac). While seining in King's Creek, at Cape Charles City, several young sheepshead about 4in. long were taken. A larger one, about 10in. long, caught at the same time, is still living in the aquarium at Washington. Mr. Bean states in his paper that "A few days before our arrival at Cape Charles City a hook and line fisherman had taken six fine sheepshead along the piles forming the breakwater at that place."

Bluefish ("tailor"), weakfish ("sea trout"), Spanish mackerel, pigfish, three or four species of scup or porgy, particularly the "fair maid" or "sailor's choice," gray snapper and other fine fish, in addition to those mentioned above, abound in this region, easily accessible, but as yet not much disturbed by the angler.

WM. P. SEAL.

CHICAGO, Ill., Dec. 30.

DEFORMED BROOK TROUT.—Washington, D. C., Jan. 4.—*Editor Forest and Stream:* In my note on albino trout in your columns of Dec. 24 I should have said that the albino, and not the deformed trout, lives to the age of ten or eleven months. The deformed trout grow to sexual maturity, and Mr. Creveling has sent a fine series for description in FOREST AND STREAM. Eggs have been taken at Allentown from some of these trout and successfully fertilized; their development will be watched with much intererest.—T. H. B.

TROUTING IN THE CASCADES.—V.

THE MOLALLA COUNTRY.

IT was now nearly dark and I must get to camp. Mike had tired of the sport and quietly slipped away alone, unnoticed by me, and gone to camp. His arrival at camp seems to have been taken, by my wife, as the announcement of my horrible fate. She had already commenced to fret over my non-arrival. Women are such peculiar, unreasonable creatures. I "must know that supper would be cold" and all that, and now as if to make certainty sure, here was the dog, come home alone; a thing he had never done before. That did settle it. Of course the cougars must have scared the dog terribly as they tore the quivering flesh from my bones, or he never would have left me so. Hall and his family, Billy, my wife, Mike and Hall's dog all started down the trail in search of my remains. My wife's notions would, undoubtedly, have been amusing to the Halls had she not been so distressed.

I heard them hallooing before I left the creek but thought nothing of it, and besides I was thoroughly infatuated with my job and had no time to give trivial matters proper consideration. But seizing my creel which, with my coat and vest had been laid aside at the commencement of the fun and without stopping to unjoint my pole I gathered up my trappings and fish and hurried out as fast as possible, fully appreciating at last that I was late. I had just nicely got out and into the trail when I met the procession. It was really amusing, to listen to the arguments and "I told you sos" of the relief party which, without the presence of Hall, could have all been driven out of the country by an old squaw armed with a hazel. It was a fine crowd to go rescuing a fellow from the fangs of a pack of hungry cougars. Still, as Hall said, "the sight of 'em would skeer the devil." Billy relieved me of part of my burden—the thirteen big fellows, of course. He could hardly believe his eyes, and when I told him that I got them out of the mysterious pool by the bluff he seemed half disposed to doubt it. But Billy knows how to appreciate a good thing and rebuked himself for not staying with me. He is a philosophical sort of fellow after all.

While I was eating my supper, which was not so very cold, Billy cleaned and salted the trout and stirred the fire. The Hall family again added to the cheerfulness of our camp by their presence. It was a delightful night. Out in the forest the owls were wooing their big-eyed sweethearts, while the crickets and the tree frogs sang their sad refrains. The stars twinkled merrily through the clear mountain. The long tongues of the crackling fire licked and cauterized the near foliage, while the sparks played hide and seek among the leaves above.

While the women talked of bonnets and styles, and Billy and Hall were trying, as usual, to outlie each other, I leaned lazily back against a stump, mentally rehearsing the events by the twilight pool in the curls of smoke that wreathed above me. Were it not for the pipe we would lose half the pleasure of our retrospective fishing by the camp-fire. Judge Cheney pleasingly expresses the thought (in which we all concur) when he wrote, "The fish in the pipe smoke has been as active as the fish in the water and afforded as fine play. My reel has clicked as merrily in the half dream as on the rod in the long ago."

No doubt excessive smoking is injurious. Doubtless the horrors of nicotian poison have not been half told, and all that; but suppose "the old woman" (as Billy affectionately calls his old sugar bowl of a pipe) was taken away from him, and it should be decreed that he must do penance for the remainder of his days by total abstinence, how many brilliant thoughts, sparkling ideas and dazzling whoppers might be lost to the world? As Bob Barr used to say, "Smoking may be a bad habit, but all I've got to say about it is that there's a darned sight of solid comfort about it." To the best of my recollection, I have never known an ardent angler who was not an ardent smoker also. There may be exceptions to the rule, but they are rare. The pipe and the rod are as inseparable as the Siamese twins. "He that doth not smoke refuseth himself the softest consolation, next to that which comes from heaven." Bulwer-Lytton must have been an ardent angler, for nothing short of the inspiration engendered by the fly-rod could have prompted these words. Lying listlessly by the camp-fire, when night has hushed the toiling world, dreamily gazing into the blue smoke that rolls up to mix forever with the elements, we see and feel and live again the pleasures of the past. The writhing waves, the curling wreaths of sensitive smoke fretted by the petulant air, are but ghostly pools and spectral eddies in which phantom fishes play. Sweet, dissolving visions frescoed on memory's walls, never to be effaced while life shall last.

"Good evenin'," said a voice behind me. I started as if lightning had struck my stump. There in the gloom stood the apparition I had seen that morning. "Good evenin'," repeated the apparition. I arose and shook his hand cordially and asked him to take a stool, but his modesty was equal to his other merits and he half declined. Whether the sight of so many women disconcerted him or the pressure of business matters forbade, I do not know, but I think it was simple bashfulness. Hall, with the grace of a Digger Indian, undertook the job of introducing us. I informed him that so far as I was concerned it was entirely unnecessary, as I already had the pleasure of an acquaintance with the young gentleman. Hall proceeded: "Mr. Bill, this is Frank; Mr. Robinson, this is Mr. Green's woman." Then followed familiar salutations between Frank and the various members of the Hall family; all except pretty Amy, who on Frank's appearance suddenly became deeply interested with the tucks in her apron. Human nature never shows off to so good an advantage as in the forest wilds. Benny, the kid, was happy, and lost no time in letting us know that he and our visitor were on very familiar terms. Encouraged by our hearty reception and careless manners, Frank sat down. I knew that he came to see me and I felt interested in knowing what he had in the fern-covered basket on his arm, but thought I would let him explain at his own pleasure. The merry-go-easy camp soon made Frank as much at home as any of us, and by the time Billy had told two or three of his most bald-headed stories and given an exhibition of a war dance he had once witnessed among the Brule Sioux up in Dakota, Frank threw off all reserve and made known his errand. He thought as how we mout be kind o' tired of feesh and had brought down a hunk of "mountain beef."

"Mountain beef?" said I interrogatively. "Well, that is very kind of you, Mr. Robinson, for we are all cloyed on trout, but I was not aware that cattle ranged above here."

"Well, no, they don't exactly," said Frank.

"Ah! I see, you probably mean mutton," said I.

"No, not exactly that either," said Frank.

Here Hall chipped in, to save further cross examination, with, "All the same it is better than bar meat."

I relapsed into silence and decided not to press the investigation further, but took the basket into the tent to relieve it of its contents. Frank followed me in, and when I called his attention to the resemblance the meat bore to venison, he significantly rebuked me with the information that it was close season now, and if the city fellers thought he was killin' deer they might make it tropical for him, but he never openly admitted anything. However, he incidentally mentioned that while he never killed deer just for their skins there was a salt-lick close to his shanty, and deer tracks were as thick as huckleberries around there. If I didn't want to eat it maybe the dog would "take keer of it." I could not find it in my heart to insult his homely joy at being able to do me a kindness. It was his way of manifesting his appreciation of the flies I had given him, and so I laid the "mountain beef" away with a mental reservation and took the matter under advisement.

"Them flies was fine," broke in Frank, "partic'ly them ones with white wings and a red streak around the body."

Evidently he was "dead stuck" on the royal-coachman. He would not ask for any, but significantly mentioned the sorrowful fact that after he had caught quite a lot, a "big un" took his best fly clean off. I got out my fly-book, and he fairly devoured the feathery pages as I turned the leaves. But when I got to the royals he slapped his knee, and with more force than elegance declared that "them's the fellers for the big uns," and I guess he was right. How would I like to take a fish on Canyon Creek to-morrow? Well, I wonder! It was just what I had dreamed about ever since standing in Moody's yard that first evening of our arrival I had looked up into its dark abode. But I did not know how to get there, and besides Billy had absolutely refused to accompany me on any such wild goose expedition.

"Well," said Frank, "you have been good to me, and if you have no objections I will meet you at sunrise to-morrow and show you a cut off that strikes Canyon just below Skunk-cabbage."

I had cast my bred upon the water and it was returning sooner than usual. So Frank, stealing a glance at Amy, bade the camp good night and disappeared in the darkness. I wondered if the two bright eyes that followed him into the gloomy forest made the old deer trail plainer.

"Frank is a darnation good fellow even if he won't work," said Hall.

"I don't suppose he'd lie or steal," rejoined Mrs. Hall, "but I have got my opinion of a skukum young feller like him that won't do nothin' but run wild through the mountains huntin' and fishin'." And then as a left-handed admonition for Amy's benefit she added: "The gal wot gits him will be drivin' her ducks to a poor market." Benny giggled, Amy blushed and the other girls laughed merrily. Hall knew when to close the arguments and so with another "Good night" all round we three were left to ourselves by the smouldering camp-fire.

"Billy," said I, "come along to-morrow and see Canyon Creek."

"Well," he replied, "if you haven't enough consideration for your wife to look after her welfare out in such a place as this, I have."

That settled it. Propriety is a big word in Billy's dictionary, and, although my wife and Hall's girls would be together all day whether Billy staid in camp or not, propriety and Billy's comfort required his presence in camp. Maybe, too, Elsie Hall's blue eyes had something to do with the old bachelor's chivalric ideas. My experience in camp with bachelors warns me that if I expect any good of them, never to pitch camp in the neighborhood of pretty country girls. However, I had well known he would not go and only asked him through courtesy.

PORTLAND, Oregon. S. H. GREENE.

THE SIX-INCH TROUT LAW.

AS you have opened up this question and asked for remarks, I will narrate the effect of this limit in the experience of one fisherman. Years since I made frequent trips to the streams about Redfield, N. Y., well known to trout fishermen from Rome, Syracuse, Oswego and Watertown. The catch was nearly always satisfactory, giving enough trout to eat while there and some to present to a few friends upon returning. The enjoyment of those days, when there was no conscious wrong committed, stays in remembrance and always will. There was then a 5 inch limit, or it was upon that supposition that fishermen acted. The smaller trout were delicious to eat and prized by friends, while among them were some fine-sized fellows, taken in favored pools, to set off the catch. The fishing was preferably on riffs, during the delightful days of May and June, and in early seasons the latter part of April; and to those that know those clear streams, so different from the dark waters of the Adirondacks, no further laudation is necessary. Upon the advent of the 6-inch law a new problem was presented, which, with a conscientious endeavor to keep within the limit, I proceeded to work out. The first trip curtailed former enjoyment, and soon thereafter, having sized up the whole matter by actual tally and measurement, I saw all my pleasure dispelled, and in disgust quit. The 6-inch law was prohibitory. Trout there were beyond 6in., but nine out of ten were under, and the result at night was always a few in the basket to scantily serve out the host's table, none for friends, and dreams to haunt the fisherman of victims maimed and dead strung along the day's pathway. I appeal to all fishermen familiar with those streams if the proportion mentioned is not correct, taken on riffs in May and June. I do not know how large a trout should be at any certain age, but I infer from my experience that a 6-inch limit makes a season's difference in growth above 5in., and takes a trout over one season, and off the riffles.

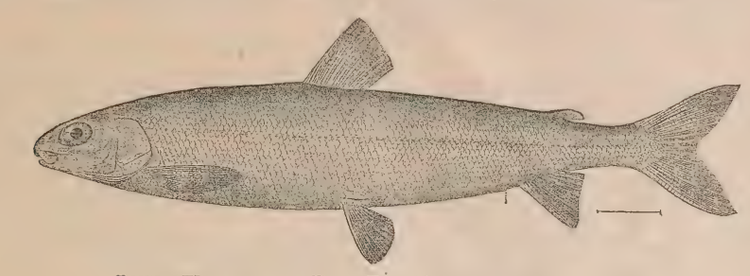
The Redfield riffs are now and always have been held by trout under 6in., and I give these as the proportionate sizes to be caught there—5in. limit, three-fourths or upward of the catch, 5½in. limit, one-half the catch, 6in., one-tenth. Why trout of 6in. and upward do not frequent the riffs I do not know, but as to that locality it is true. It is this fishing, standing in the stream in the shade of the tall maples, or amid the alders along the meadow bank, that the writer loves best, and it is the loss of this he charges to the 6in. law. Through all the region from Rome and Camden, northward, the same conditions hold good, and a man intending to visit any of those streams is, in his intent, guilty of one of two things before he takes his rod from the case, he is either to become a butcher or a breaker of the law. Please say some one whether either is good? If use only justifies killing what apology can be offered by any fair-minded man for the slaughter of a mass of victims which cannot be made use of under the law? If no man sustaining a 6in. limit can go on these streams and justify his day's work he must conclude it is prohibitory and quit, and then he can think over the law and his position. For myself I now make long trips to the Adirondacks, at quite an expense, and even there must avoid small streams and shallow waters. I must fish from a boat paddled by a high-priced man, and thereafter go home poor in pocket and, too often, poor in basket. When the Adirondacks fail, or the law is made 12in., I suppose I will haunt the backwoods of Canada or burn the rod.

Now let me ask why such care should be taken to preserve a large limit or to make a season very short? Should a season be unusually early, and beautiful days and prime conditions come in April, why smother the longing in nature to go abroad and enjoy them to the full? A winter of ice and chill is behind us and the calendar does not lie—spring has come. Who can begrudge the catch of a fisherman when ice and snow banks line the stream, should the season be very late? Why this dread of April when as a rule none can be then caught? Why say wait, when the season may not wait and thus vex and annoy our comforts? Why not follow the season which may permit fishing in April and may not by May 1? To what I would ask are our State hatcheries equal? If we fished down to 5½in. and included also April would their poor backs be broken? If our reliance is to be upon them in the future can they not add an extra dollar and give us one extra fraction of an inch or an extra week or two? PROTESTER NO. 1.

FROST-FISH.

IF any one should consult a standard ichthyological work to find what a frost-fish is, it would be found that it is another name for the tomcod, specifically known as *Gadus tomcod*, and that is all that would be found about the frost-fish. If a less scientific work is consulted it will be found that "the Atlantic tomcod is only in the western Atlantic, ranging from New York, at the south, to Cape Sable, at the north. It is ordinarily known as the tomcod, but in the Bay of Fundy and in various places south of Cape Cod it is called 'frost-fish,' owing to the fact that it becomes most abundant in the early part of winter, when it approaches the shore, and even ascends the rivers and creeks, for the purpose of spawning." This, however, does not describe the fish which is meant by the caption of this article, yet it is about all that the text books have to say about a fish with the common name of frost-fish.

Anglers who have visited the waters of the Adirondack region have heard, probably, of a fish which is found in some of the lakes, and which is called a frost-fish. If they have seen the fish they must have observed that it was very unlike the codfish, to which family the tomcod belongs; must have known that its habitat indicates that it is not a salt-water fish; that its adipose fin proclaims that it belongs to the salmon family, and that its general appearance indicates that it is a whitefish. And that is what it is, although the books have seemed to overlook it.



Acting upon this suggestion another reference to the books discloses the fact that while the ichthyological authorities are silent concerning any member of the whitefish family that is called a frost-fish, Goode's "American Fishes" says: "*Coregonus hoyi* occurs in Lakes Michigan and Ontario in deep water; the lakes of Western New York (particularly Geneva Lake), where it sometimes dies in great numbers. It is known as 'frost-fish' in some parts of New York." This, however, is not the fish that we are seeking, because *Coregonus hoyi* is the Lake Michigan cisco or lake mooneye, and it has a large eye and a large mouth, while our frost-fish has a small eye and a small mouth. Turning to the reports of the Fish Commissioners of the State of New York, we find in 1880 and 1881 this: "It has been claimed that the smelt is the same as the frost-fish found in some of the waters of the Northern Wilderness. It is true the anatomical structure and general appearance are the same, although those who have observed closely will hold that the smelt excels in symmetry of form. The frost-fish is somewhat firmer in texture than the smelt, and is the equal of the latter in flavor. Give any of the old guides or fishermen of the Moose River chain his choice between a trout and a frost-fish, and the chances are nine out of ten that he will choose the frost-fish. * * * The frost-fish take their name from their habit of running from deep water in the frosty months of autumn to cast their spawn. This is the only reason they are ever caught or seen by the fishermen. The only time the fish run is at night."

That is the fish we are searching for, and we know its habits to be as described, but this description does not tell all we wish to know. Another and later report says: "The adult frost-fish are very plentiful, more so perhaps than any other fish in the Adirondack country. As a food fish they are valuable. Their habits are not unlike those of the smelt, which they resemble when in the water. They are a very quick as well as a shy fish, and I have yet to see the first frost-fish swimming in a lake." Still another report has this to say: "It is only in the spawning season that these fish (frost-fish) can be taken, and, therefore, every one is trying to outdo his neighbor in capturing them. It will soon be the same old query: 'What has become of the frost-fish?'" A still later report has this contribution on the subject: "This finely flavored fish is found only in lakes with the lake trout. They inhabit the deep, cold water in summer, and derive their name 'frost-fish' from the fact that they come into shallow water and streams to spawn the first few frosty nights in November. This is the only time they are caught during the year."

All this evidence will be of use before this article is finished; still, we do not know as yet what the frost-fish really is, and might not be able to identify it by its common name in waters other than those of the Adirondack

region if it exists elsewhere. This is an example of the confusion resulting from the superabundance of common names of our fish. Undoubtedly the Adirondack frost-fish is described and perhaps figured under a different name, if we could trace it to the closet of the scientist; and it is a little strange that in this day when common names have been so carefully gathered, that this particular name, so generally applied to a fish over an extensive region, should have escaped being tagged to the scientific name of the fish. Still prosecuting the search, we find that in 1882 the superintendent of the Adirondack Survey requested Mr. Fred Mather to investigate the waters of the Adirondacks and make a report upon the fishes and other aquatic life, to be published in the appendix of the twelfth report of the Survey. The latter report has not yet been printed, but copies of Mr. Mather's paper have been printed as an extract in advance of the report, and in this we at last find the only connecting link between the Adirondack frost-fish and its classified name.

Mr. Mather recognized the frost-fish as the *Coregonus quadrilateralis* of Richardson, *Coregonus novæ-angliæ*

ROUND WHITEFISH OR FROST-FISH (*Coregonus quadrilateralis*).

of Prescott, *Prosopium quadrilaterale* (Rich.) Milner. It is the shad-waiter of New Hampshire, Menomonee whitefish, roundfish, pilot-fish and chivey of New England. No wonder that with so many names that of frost-fish was considered superfluous. Jordan and Gilbert describe the Adirondack frost-fish under the name of round whitefish, etc., as "Body elongate, not elevated nor much compressed, the back rather broad, the form more terete than in any of the other species. Mouth very small and narrow, inferior, the broad maxillary not reaching to opposite the eye, 5¼ in head. Head long, the snout compressed and bluntly pointed, its tip not below level of eye; profile not strongly decurved. Preorbital wider than pupil. Mandible originating under middle of eye, 3¾ in head. Adipose fin small. * * * Head 5 in length; depth 4¾. D. 11; A. 10; scales 9-80 to 90 8. Color dark bluish above, silvery below. Lakes of New Hampshire, Upper Great Lakes, northwestward to Alaska; abundant in cold, deep waters." The only figure that I can find of the "frost-fish" or round whitefish is in Dr. T. H. Bean's paper, "The Alaskan Salmon and their Allies," Washington, 1890. Dr. Bean says: "This fish does not reach a large size, seldom exceeding 2lbs. in weight, but it is very abundant and very palatable, and consequently it is an important food resource." Of its distribution Dr. Bean says that it "extends through the upper Great Lake region, the Northwest Territory and other parts of British Columbia into Alaska. Specimens have been obtained as far north as the Kuwuk or Putnam River, a tributary of Hotham Inlet."

Jordan, in "The Lesser White-Fishes," says: "The only name which I have heard applied to this fish is that of 'Menomonee whitefish.' The name of 'roundfish' is given to it by Richardson, and that of 'shad waiter' by Prescott. * * * I know nothing of its breeding habits."

In the foregoing I have quoted nearly everything that I can find that has been printed about *C. quadrilateralis*, either as a frost-fish or round whitefish.

In the Adirondacks the frost-fish is found in nearly all the waters that contain lake trout. In some lakes they have been planted, in others they were found originally. They are also native to the waters of Lake George. I know of no waters in which they existed in greater profusion than in Raquette and Blue Mountain lakes, nor do I know of waters in which greater numbers have been taken for food. It is customary to say that they run from one-half to three-quarters of a pound in weight, but I think that if the fish were placed on the scales they would fall short of that average. They are so long and slender that one is apt to overestimate their weight, the length being the striking feature. They do, however, as Dr. Bean says, grow to 2lbs.

Little is known of their habits except that for the greater part of the year they remain in the cold water at the deepest parts of the lakes that they inhabit. In the fall, after a few cold nights, they come out of the deep water at night in swarms and head for the brooks which flow into the lakes. Their coming is heralded by a noise, which, on a still evening, has been likened to the patter of rain or hail on a tin roof, and is made by flapping the tail on the surface of the still water as with curved bodies the school leaps above the water only to plunge back again. This flap, flap, flap of single fish, or one grand flap of hundreds of fish in unison, can be heard for a long distance if there is no air stirring, and it is a weird sound at night. The great schools of frost-fish make their way into the streams, crowding and pushing each other in their haste to spawn, and in the morning they are gone. It is at this time, and this time only, that they are caught in nets and traps and salted for winter use. I have known of but two instances of frost-fish taking a baited hook, and both were in winter while fishing in deep water through the ice for other fish. It has happened to several fishermen to see large schools of frost-fish in winter by looking into holes cut in the ice for perch fishing, and those who have thus seen them report that they swarm past the point of observation solidly massed in a procession that seemed to be endless. They moved slowly, but steadily, like well-drilled troops and paid not the least attention to a baited hook lowered into their ranks. One statement quoted above is that the frost-fish is never seen except in the autumn, when the schools come into the streams to spawn. This is not true of the frost-fish of Lake George, for in this lake they come to the surface in the spring when the ice first goes out. For years this fish was called a whitefish when found in Lake George, and even now that name is applied, except by guides who have seen the frost-fish in the Adirondacks and recognized it as the whitefish of Lake George. As soon as the ice disappears from the lake, frost-fish and lake trout make their appearance at the surface and remain for a few days. Perhaps I should use the past tense in writing of frost-fish in Lake George, for their ranks have been sadly depleted, and another whitefish has been introduced into the lake. The adult and young frost-fish comes to the surface at the same time. The adult fish are easily seen as they disturb the calm water, but it requires a keen and practical eye to discover the fry in the water. When a trout is taken, however, its maw may be filled with the little fish, their bodies scarcely an inch long and almost transparent.

In 1878 100,000 eggs of the lake whitefish (*C. clupeiformis*) were hatched and planted in Lake George, as it was thought that the frost-fish were becoming extinct. After a few years the result of this plant was noticed, or at least fishermen thought they noticed new schools of a larger whitefish in the spring at the surface. One evening in July last I was rowing across Lake George to Caldwell, where I was astonished to hear the flap, flap, flap, that is associated with the frost-fish, and the surface of the water appeared to be fairly alive with the fish that made the noise. After that I heard them often at night, and saw them frequently during the day, and the sound and sight continued through July, August and September. The question with me was: what fish is it? I could see schools and schools of these in every direction leaping out of the water, their bodies glistening in the sun, but I could not catch a single one. They might be frost-fish or they might be the lake whitefish, for certainly they were one or the other. One day coming up the lake on a steam yacht, the pilot, an old fisherman, and one who had fished Adirondack lakes as well as Lake George, asked if I had noticed the "frost-fish" jumping off Crosbyside Point. I told him that I had noticed the fish all over the water at the head of the lake, but I was not at all sure that they were frost-fish, and if they were their habits must have changed in a radical manner to be jumping at the surface in July and August, and jumping in the day as well as at night. My belief was that the fish were whitefish that had been planted rather than frost-fish native to the lake. I made some inquiries to find if the fish had been seen jumping in other parts of the lake, and could not find that they had been noticed at the northern part of the lake, which would be the most likely place to find them.

While trying in every possible way to support my belief that these fish were the lake whitefish rather than the frost-fish, I recalled the report that the United States Fish Commission had made a plant of whitefish fry in Lake George some years after the plant made by the State in 1878 and wrote to Chief Clerk J. J. O'Connor asking if he would have the records examined concerning such a plant. Mr. O'Connor wrote that after a careful search of the records in the office at Washington it was found that in February and March, 1887, the U. S. Fish Commission had deposited 761,000 whitefish fry in Lake George at Caldwell Station. Caldwell Station is at the head of the lake just where I saw the jumping fish, which I am now satisfied beyond doubt were whitefish (*C. clupeiformis*). The fish seen were young, some schools made up of numbers four or five inches long and others of double that length. That they have propagated and thriven is evidenced by the fact that on one still day I went up on high ground and as far as the eye could reach looking down the water was agitated by whitefish breaking the surface. In jumping they made the same flapping noise as the frost-fish and at night one would unhesitatingly call them frost-fish. A. N. C.

SNIGGERING AND GUDDLING.

Editor Forest and Stream:

I never heard the term "sniggering" used in England for what is here said to be "jigging" (your note in issue for Dec. 31), but have always heard "snatching" for this process.

"Sniggling" is a method of catching eels by means of a needle passed into a worm.

"Trimmering" is a set line with one or two hooks for fish of prey.

"Leistering" is a form of spearing.

"Tickling," or in Scotland "guddling," is the taking of trout from beneath a bank by tickling the belly with the fingers and then suddenly clasping the fish and throwing it out.

"Bobbing" is catching eels with a clot of worms threaded on worsted.

"Dibbling," "daping," "dopping," are convertible expressions for the use of the real insect instead of the artificial in fly-fishing.

"Lobbing" refers to the use of a bunch of the ordinary garden worms on the hook.

Doubtless there are other elegant terms in the vocabulary of the semi-poacher but I do not recall them now. "Guddling" is distinctly "heathenish," it strikes me.

J. HARRINGTON KEENE.

FLORIDA TARPON.—Fort Myers, Jan. 4.—The first tarpon of the season was caught by B. Gravielle on the 1st inst., after a fight of about an hour. The fish weighed 132lbs. and was 6ft. 3in. in length. Ed Law and myself shot 28 quail last Thursday afternoon.—WALTER F. MICKLE.

VIRGINIA TROUT AND BASS.

OWING to its proximity to the mountains, Staunton fishermen have fine trout fishing within a few hours' drive. Shiflet's, on North River, twenty-five miles away, and John Peere and Rodgers's, on Ramsey's Draft, about the same distance, are the favorite streams within easy range, and afford good trout fishing at any time during the season (which begins April 1 and closes Sept. 15); while the mountain streams of West Virginia, some two or three days' drive distant, afford still better fishing.

Owing to the lateness of the season and the unusually heavy snows of the winter, which lingered long in the mountain gorges and kept the streams full until late in the spring, but little fishing was done before May and June. The Greenbrier Club, composed of Messrs. R. P. Bell, George Beall, Capt. Jas. Bumgardner, C. L. Cooke, F. R. Webb and W. L. Weller, made their annual trip to the headwaters of the Greenbrier River in West Virginia in June, where they met with their usual success. I have not their score at hand, but the catch was considerably over 1,000 trout in six days' fishing, averaging in size from 6 to 12in.; all fish under 6in. are returned to the water. This club is a regular organization and owns a complete camping outfit, and makes this trip every year, some ten or twelve days being devoted to the trip, including the time spent in going and coming. I think the time chosen by the club is a little early for the best fly-fishing, although the fish rise freely. Nevertheless the barnyard hackle seems to be preferred by the fish.

They are somewhat capricious in their tastes, for in 1890 the favorite flies were the royal-coachman, queen-of-the-waters, professor and other bright flies on No. 6 and 8 hooks; this season the black-gnat, brown and black-hackles and other dark flies on very small hooks proved the most killing. The conditions of water and weather were about the same.

The fish commissioner, Dr. Henkel, with Messrs. W. W. Gibbs, Hampton Wayt and Mr. Davis, from Baltimore, visited the Greenbrier about June 1, a week or more ahead of the Greenbrier Club, stopping at Traveler's Repose, but they found the river high, and consequently did not meet with much success.

Several successful trips were made during the summer by various parties to the nearby streams—North River and Ramsey's Draft.

Messrs. C. L. Cooke, George Beall and F. R. Webb, of the Shenandoah Canoe Club, enjoyed some very fine bass fishing while on their annual cruise of two weeks on the Shenandoah River last August. The bass were plentiful and of good average size, and rose freely to the fly. The most killing flies proved to be the Parmachene-belle, professor and Governor-Alvord, with the preference for the dark fly. The largest bass was taken by Mr. Beall and weighed 4lbs. The Shenandoah and Potomac Rivers afford fine bass fishing, with the great drawback that both rivers are quickly affected by the rains and seldom stay clear long at a time; both are more apt to be clear late in the summer, say in August and September, than during the earlier months. Shendun, Elkton, Bear, Lithia Springs, Shenandoah, Luray (three miles from the river), Front Royal and Charlestown (three miles from the river) are the best points for the stranger desirous of fishing the Shenandoah to stop, and all afford good hotel accommodations as well as railroad facilities. COMMODORE.

MINNESOTA ICE FISHING.

MINNEAPOLIS, Minn., Dec. 31.—*Editor Forest and Stream:* I send you an account of the case of the State of Minnesota vs. Chas. Crigo and W. H. Wixon. The parties were first arrested at the lake and tried before a local justice, who found no case. Game Warden Stetson then brought them to the city, with the result that Judge Elliott found as follows:

"In order to discover what is inconsistent we must clearly understand what at that time was the existing law. The various statutes which have been passed contained no express repealing clauses, but by necessary implication they had operated to repeal various parts of prior statutes until at the time of the special act of 1891 the law seems to have been as follows:

"First—It was lawful to take fish with hook and line only during the months of June, July, August, September, October and November.

"Second—It was unlawful to take fish in any manner during the months of December, January, February, March, April and May.

"Third—It was unlawful to take fish in any manner, except with hook and line, at any time.

"Fourth—It was unlawful for any person to construct or maintain any trap, net or other contrivance across any stream, creek or other narrow passage of water, so as to obstruct the passage of fish therein.

"Fifth—It was unlawful for any person to build, erect, maintain or use a fish house, or any house, building, shed, tent or structure of any kind upon the ice on any lake or its inlets or outlets, or any river, creek or stream in Hennepin county for the purpose of catching fish, either with hook and line or any other device, or for the purpose of killing or destroying fish in any manner.

"This is simply a restatment of the existing law. An act making it unlawful to take fish 'otherwise than with hook and line' is not inconsistent with the existing law. The only effective part of the act of 1891, that is the only part in conflict with the existing law, is the penalty.

"Such being the state of the law the prosecution against the defendants can be maintained, and if convicted the provision of the act of 1891 would govern as to the penalty."

The penalty is a fine of from $20 to $50, or 60 days in jail. The defendants were fined $25. In giving his decision Judge Elliott stated that it was his purpose to make the fish laws of the county clear, as he thought they were not properly understood. W. F. D.

POTOMAC RIVER FISHING.—Christmas week a 1lb. bass was taken at the mouth of Muddy Branch, near the Great Falls of the Potomac, and prospects for some fair fishing were good until the heavy rainfall of the 25th and 26th. This settled the angling here for the season. Quite a number of yellow perch and the common sunfish were taken along the Virginia shore opposite Washington late in December. The perch are full of roe, considerable of which is found for sale in the market.

INTERNATIONAL FISH LAWS.

BY the courtesy of Gen. R. U. Sherman we give, in advance of its publication elsewhere, the full text of the report adopted at the recent Hamilton meeting of the international fisheries legislation committee:

REPORT.

To the Joint Commission appointed to confer on the subject of Fish Protection in the International Waters between the Canadian Provinces and the State of New York:

The undersigned, for the committee appointed by the conference of representatives from the respective Commissions of Canada and the State of New York to consider and recommend measures looking to the adoption of uniform laws for the protection, preservation and multiplication of the food fish supply of the international waters lying between these respective countries, respectfully report:

That they have given to this subject careful consideration, and in the light of facts have not deemed it practical to fix on such provisions in detail as would be requisite to form a uniform code applicable to both countries. Special needs depending upon geographical conditions, on climate, on different prevailing modes of legislation and of administering laws, forbid such uniformity, but approximation in general features and leading measures may be made to go far toward the attainment of the practical ends desired.

FALLING OFF OF FOOD FISH SUPPLY.

That the food fish supply of the great lakes has been for the past thirty years suffering rapid diminution is too apparent to need statistical proof. On the New York side of Lake Ontario, where formerly salmon trout, whitefish, and even the lordly salt water salmon were so abundant as to furnish all the near markets with an abundant supply at prices within reach of the means of the day laborer, the product now scarcely recompenses the netter, and these fish, once so abundant and cheap, are no longer available for food to the multitude, but have become table luxuries to be enjoyed only by people of ample means. On the Ohio side of Lake Erie there has been a nearly equal falling off of the higher grades of fish, but there still remains, on account of the greater fecundity of the coarser kinds, a fair supply of what are commonly known as pickerel, blue pike, pike-perch and bass, which still afford a fair market stock at moderate cost. Yet so enormous has become the draught on the north shore and islands of Erie that the cry of scarcity is already sounded from there. Further up the great lakes the stock of whitefish is yet abundant; not, however, by reason of providence in the use, but from the well sustained efforts that have been made by the States of Michigan and Wisconsin and on a lesser scale by Ohio and Pennsylvania, to keep up the stock by artificial propagation.

On the Canada side of the waters the supply, though showing each year an additional falling off, yet holds good for profitable netting, and it is from the fisheries of Canadian waters that the principal market supply for the State of New York comes. It may not be long, however, before the necessity of self-protection will force the Dominion government to shut out exportations of fresh fish. Such a condition should be foreseen in time and met by timely measures.

CAUSE OF THE GROWING SCARCITY.

The cause of the growing scarcity of food fish is too apparent to need discussion. The rapid and enormous increase of population in all the States and Provinces bordering on the great lakes, has caused a proportionately increased demand for food of all kinds. The increased want is made up in respect to the products of the soil by the constantly enlarging range of cultivation and by improved agricultural methods, but in respect to the products of the waters there has been no such extension of culture, and the field remains where nature placed it ages ago when there was comparatively no demand for fish as food for man.

THE REMEDY.

Given then, that the food fish supply needed for the consumption of the border States is approaching practical exhaustion, what is the remedy? Two leading measures are obviously necessary. They are protection and multiplication, and to make these effective, concert and harmony of action is necessary between all the Government authorities interested. Of the unnecessary causes of depletion, it is evident from observation and experience that the practice of inshore netting is the greatest. The setting of pound nets of small mesh with leads extending often a mile or more from shore, causes the capture of myriads of young fish, scarcely fit for human food, but which, if left to develop on their natural feeding grounds would add immensely to keeping up the market supply. And the innumerable fykes, trap and hoop nets and other effective devices for the capture of coarse and immature fish, which seek their food in the shallows and along the shores, is another of the leading causes of depletion. The use of small mesh gill nets is also a source of material waste. The small fish taken in these nets are of but little value for food, and are a nuisance to the market men on whose hands they are thrown. The remedy for the cure of the ills stated is to prohibit the use of nets of any kind within one mile of the shore line of the great lakes and rivers connecting these and the St. Lawrence River, and to require that the mesh of all pound and gill nets set outside this limit shall be not less than three and one-half inches stretch. And as an effective aid to the enforcement of such a regulation, to make illegal the sale or possession of any fish of less than specified weights, as follows, viz.:

Salmon trout, 2lbs.
Whitefish, 2lbs.
Bass, 1lb.
Blue pike, ¾lbs.

None of which fish would be likely to be held by a mesh of 3¾in. stretch. It is believed that were in-shore netting to cease, there would be scarcely need of a closed season for spawning fish, such as pike (commonly called pickerel), pike-perch and bass, as the natural fecundity and development of these fish are so rapid as to be proof against any netting that does not destroy them in their infancy.

CLOSE SEASONS.

As to close seasons for fall spawners such as salmon trout and whitefish, no changes from existing regulations where close seasons are provided are demanded. Exact uniformity cannot be prescribed on account of differences in temperature and latitude and other conditions which influence the spawning seasons.

NECESSITY OF INCREASED PRODUCTION.

What has been above suggested by no means embraces all the measures needed to keep up a food fish supply in the international waters, adequate to the wants of the population, who have only that source to look to. Artificial production, and that to the largest available extent, must be established and prosecuted. The States of Michigan, Wisconsin, Ohio and Pennsylvania have already proved what great results may be reached with comparatively moderate expense by suitably located and intelligently managed hatching stations. But the Canada Provinces and New York are yet in the background in this vital work. Relief is promised to New York by the proposed establishment at the east end of Lake Ontario, by the United States Fish Commission, of a whitefish hatchery of a hundred million annual capacity. But no steps have yet been taken by the Dominion authorities to second the great work so auspiciously commenced by the States of the Northwest. It is to be hoped that the agitation of this subject by the present conference will tend to awaken an interest in the important work, which Canada may do in the premises.

PROTECTION.

Laws serve no good purpose while they remain dead letters on the statute books. If we would have efficient fish protection, we should provide not only wise statutes but the constant means of enforcing them. The system in vogue in the State of New York, and which has been incorporated in the revised code recently framed by the special commission of that State, with improvements, is recommended to the consideration of all the States represented in this conference. The system is in brief, a distinct protection department, acting by itself and within itself, its members holding office only by good conduct, and having a head to direct and a working force at all times prepared for duty, properly compensated by the State for service and expenses, and with the constant duty of watching for any violations and conducting prosecutions.

APPLICATION OF REPORT.

The subjects and recommendations of this report are intended for the consideration, not only of those members of whom the conference was originally officially composed, but of all who by invitation have since become officially connected with it as representatives of the interest of their respective States. [Signed]

RICHARD U. SHERMAN.

SALMON FISHING IN CANADA.

EACH year sees a renewal of the protests of American owners of salmon fishing against the faults of omission and of committal of the Canadian Government. The subject is one of much importance. Thousands of dollars have been invested by men from this side of the line on the strength of laws passed in the Canadian Legislature, laws which are more honored in the breach than in the observance.

A large proportion of the rights are owned by Boston men, and naturally there is a strong feeling in this city that the present Canadian laws should at least be enforced, even if it is impossible at present to amend them.

Mr. Ivers W. Adams, speaking on this subject, said: "It is astonishing that the Dominion and Provincial Governments do not move in the matter, and work for the undoubted good of the people over whom they rule. I have no hesitation in affirming that in many districts the poor farmers see very little money except that left by the summer anglers.

"I certainly advocate three changes in the present laws. (1) The taking up of all nets in fresh water; (2) a prohibition of any netting in salt water during two days a week for the next five years; (3) the appointment of honest guardians to watch over the fish when once they have managed to reach the river. Not one in four of the salmon that enter a stream can be caught by the fly-fisherman. This is acknowledged by all experienced anglers, and fair fishing alone cannot depopulate any water frequented by salmon.

"As to the benefits to be derived by an increase in the number of fish, it will be found that every salmon caught has cost the captor about $1 a pound, the money going where it will do most good—to the almost destitute Canadian backwoodsmen. This seems a large sum, but the experience of thousands shows that it is about right when the expenses incidental to the sport are all taken into consideration. As a salmon caught in the net rarely yields more than 25 cents to the man who caught him, it is evident that it would be far better for the fly-fisher to be allowed to accomplish the fish's destruction. It would make no difference to the victim, while it would insure the greatest good to the greatest number.

"Even the present laws, faulty as they are in many respects, would insure plenty of fish were they but observed. From 6 P. M. Saturday to 6 A. M. Monday of each week the nets are supposed to be raised, but it is a legal fiction, and in few instances are the nets hoisted unless a freshet renders it more prudent to have them out of the water than in it. I am convinced that, were the laws amended and enforced, as they should be, thousands and thousands of visitors from the States would visit each year the glorious streams of the Lower Provinces and of Quebec."

Other gentlemen interested in Canadian streams are known to hold the same views.—*Boston Herald.*

MONTREAL, Quebec, Jan. 8.—The Restigouche Salmon Club of Metapedia, which is made up of gentlemen in New York, Boston, Philadelphia, and other cities in the United States, who are enthusiasts and experts in killing salmon, has purchased all of Lord Mount Stephens's fishing rights and the property and houses at Causapscal, on the Metapedia River, in this Province. This gives the club exclusive control over that river.

BLACK BASS AND SHAD IN UTAH.—Commissioner McDonald has been informed by Mr. A. Milton Musser, of Salt Lake City, that several young black bass have been taken in Utah Lake, and both shad and bass appear to be thriving in that body of water. On Oct. 12, 1890, the Commissioner sent from Quincy, Ill., to Utah Lake 1,418 large-mouth black bass and 436 ring perch.

SOUTHERN MASSACHUSETTS FISH AND GAME LEAGUE.

THE executive committee report that at the annual meeting of the League all the old officers were re-elected.

For the second time no licenses to set and maintain stationary apparatus for catching fish having been granted in Fairhaven it became still more apparent that many of the most valuable food fishes of Buzzards Bay were upon the increase, and were abundantly and easily taken by the hand line fishermen.

It was a source of some anxiety to the committee, and involved considerable newspaper discussion that the selectmen of the town of Mattapoisett should grant licenses to set traps and pounds in the waters of that town, as it had been agreed by them that if Fairhaven continued to refuse licenses Mattapoisett would grant none. We deem it a matter of the utmost consequence at the present time that stationary apparatus should not be set in any of the waters of the bay, and it is manifestly unjust that any of the selectmen of towns should have the right to grant licenses against the express wishes and sentiments of the people of those towns. To remedy or prevent this evil it is proposed early in the session to introduce an order so to amend Chap. 91 of the Public Statutes as to take the matter out of the power of the authorities of cities or towns to grant licentes to set traps, pounds or weirs in the waters of Buzzards Bay.

Early in the summer we received information that public meetings were held and to be held in the towns of Bourne, Falmouth and Wareham for the purpose of arousing the people to take action against the setting of pounds or weirs in the waters of Buzzards Bay and Vineyard Sound. Committees were appointed in these several towns to consider and report upon the subject.

Though we were apprehensive that public demonstrations might result in the union of all the forces of those opposed to protecting the fisheries and result also in depriving us of some of the many advantages we have gained, we corresponded with those committees with a view to harmonious action. We asked for a conference which has neither been granted nor refused. The result of their several meetings has been the formation of the "Old Colony Club," of which Mr. Joseph Jefferson is president and Charles F. Chamberlayne secretary.

We believe it to be the policy of this association to work in harmony with all other associations having a like end in view, so that while we have plans, purposes and views of our own, we shall be at all times ready to co-operate with other and kindred organizations.

The great end and object to be obtained is the protection and preservation of the fisheries, to accomplish which an enlightened public sentiment must come in and assist.

It is a matter for congratulation to us all that the people are getting waked up to an intelligent view of the subject, and are enough alive to their own interests to desire such legislation in the future as will prevent the depletion of our waters and the wholesale destruction of the fishes. GEO. H. PALMER, Sec'y.

NEW BEDFORD, MASS.

ANGLING NOTES.

"IT is an ill wind that blows no one any good," as the old saying goes, and although the past warm, wet weather has been very uncomfortable and unseasonable, it has saved an immense number of trout. As I mentioned in my last notes, the streams were dangerously low and if the cold weather had set in the supply of trout would have suffered terribly, but now they are out of danger.

Inquiry is often made as to how trout flies can be preserved from moths. In answer I would say that with a little care it is a very simple matter. Before the flies are put away for the season it is necessary to make sure that there are no moths or moth eggs among them. An empty cigar box is excellent to keep them in, or better yet the folding tin tray boxes sold in the tackle shops; these should be well wrapped up in paper; with this precaution moths will never trouble them. Camphor does but little good, in fact I believe that moths rather enjoy good camphor. That abominable smelling stuff sold under the name of "camphor balls" is much better and less expensive.

A few years ago it was almost impossible to get fly lines fine enough; but anglers begin to discover that the heavier lines cast better, particularly on a windy day, and a heavy line cast straight is much more likely to hook fish than a lighter one that drops in curves and circles on the water. As to color, if trout notice the line at all, which I sometimes doubt, they probably consider it a bit of weed or grass, and therefore a greenish or yellowish color is the best. Taper lines are not so much favored by anglers now as in the past, the taper part is very apt to break after very few days' fishing. It is a very good plan to splice on a length of stout gut and attach the leader to this instead of the line. It is easily done by winding it for an inch with waxed silk, and then coat it with a little shellac varnish. Leaders are now made for the short rods which are so popular, 7½ft. with sliding loops for two flies, 2½ft. apart, but anglers will find that one dropper in addition to the stretcher fly, (two in all) are more effective in clear waters than three. The practice of attaching flies to the leader by hanging loops is a poor one, at least when trout are at all shy, they show entirely too plain in the water. The best way is to insert the knot of the gut snell between the sliding loops and then cut the loop above the knot off, arranged in this manner the fly stands out straight from the leader and can be readily changed. SCARLET-IBIS.

A SALMON KELT.—On Dec. 9 a spent salmon weighing between 12 and 13lbs. was seen floundering in shoal water near the mouth of the Cabbasaconte River, at its junction with the Kennebec. The fish was not recognized by any one who saw it, and a correspondent forwarded the head and tail to FOREST AND STREAM for identification. According to our information the salmon proved to be a stranger in those waters—a striking commentary on the present condition of the salmon fishing in certain localities once teeming with these noble fish. During the breeding season the jaws of the male salmon

become greatly prolonged and curved, the teeth enlarged, the fins thick and frayed, the skin thick and slimy and covered with blotches of various colors. In this stage of existence they are known as kelts.

RED-EYED BREAM were distributed in Pennsylvania by the U. S. Fish Commission in the season of 1890–'91. The fish was described in our "Black Bass Supplement" July 24, 1890; it is known in the South as the war-mouth and in some localities as the black sunfish. This is a handsome game fish, growing to the length of one foot, and strongly resembling the rock bass. The plants in Pennsylvania aggregated 575 fish and were made at Waverly, N.Y., Callicoon, Lackawaxen, Port Jervis, Easton, Allentown, Harrisburg and Lancaster. It is probable that some rock bass or red-eye perch were in the distribution, but the red-eye of Quincy, Ill., from whence the supply was obtained, is usually the war mouth. Many anglers prefer this species to the rock bass.

Fisheulture.

MARYLAND POND CULTURE.

MR. A. W. SMITH, of Wheaton P. O., Montgomery county, Md., has met with considerable success in breeding and rearing carp, goldfish and a few rainbow trout. He expects to stock a pond with rock bass (*Ambloplites*) as soon as he can get the fish. The idea is to have a large pond for these fish and to let fishing privileges to hook and line fishermen. The goldfish are sold here in Washington at ten to fifteen cents each for the common ones. The carp, for the most part, are sold as food to neighboring farmers. Mr. Smith has a novel way of freeing the carp of mud. For this purpose he uses large packing boxes, sinking them in a stream of spring water, in which the fish are kept until fit for the table. After this simple treatment he says they are pronounced the equal of shad. Great annoyance and loss is caused by the predatory night heron, the water snake and other enemies of young fish, but, notwithstanding these, Mr. Smith has a good business started on a small scale.

PENNSYLVANIA BROOK TROUT.—Since our last account of the trout work at Allentown, Pa., we have received additional information about the success of Superintendent Creveling in the culture of brook trout. There are now in the hatchery 1,600,000 eggs. The collecting season closed about Dec. 20, when a number of gravid females remained to be stripped, but the work was discontinued because of unfavorable weather. The warm rains raised the temperature of the water so high as to make it necessary to run more water over the screens than ever before, in order to keep the eggs in the lower part of the troughs from smothering. The troughs of one hatching house are nearly filled with fry, and Mr. Creveling will begin in a few days to feed the young that were hatched out first. From the Allentown and Corry stations the Pennsylvania Commission expects to distribute about 3,000,000 brook trout fry during the present year.

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

FIXTURES.

(For fuller details see issue of Jan. 7.)

DOG SHOWS.

Jan. 13 to 16.—Columbia, S. C. F. F. Capers, Greenville, Sec'y.
Jan. 21 to 25.—Elmira, N. Y. C. A. Bowman, Sec'y.
Feb. 9 to 12.—Chicago, Ill. John L. Lincoln, Jr., Sec'y.
Feb. 16 to 19.—Jackson, Mich. Chas. H. Rund, Sec'y.
Feb. 23 to 26.—New York. James Mortimer, Supt.
March 1 to 4.—Philadelphia, Pa. F. S. Brown, Sec'y.
March 8 to 11.—Washington, D. C. F. S. Webster, 738 B'way, N.Y.
March 15 to 18—Pittsburgh, Pa. W. E. Littell, Sec'y.
April 7 to 10—Boston, Mass. E. H. Moore, Sec'y.
April 20 to 23—Los Angeles, Cal. C. A. Sumner, Sec'y.
May 4 to 7.—San Francisco, Cal. Frank J. Silvey, Sec'y.

FIELD TRIALS.

Jan. 18—Pacific Field Trials, Bakersville, Cal.
——, —.Southern Field Trials, New Albany, Miss.

CHARLESTON DOG SHOW.

THE years appear to roll round pretty quickly now-a-days and it seems but a matter of weeks since I journeyed down to this Southern city the corresponding week of last year. Then the gathering of fanciers in both dog and chicken departments was a large one, but this year's exhibition was merely an echo of the other. There were no familiar faces in the show ring and the long trip from the North was hardly worth while taking to judge so small an entry.

The Charleston people, while anxious to promote a "dogly" interest in the South, hardly go the right way about it. Prizes of $5 in the challenge class and $3 and $2 in the open with a $2 entry fee, will not draw the Northern dogs unless there is a circuit where better money is held out, and they can take this show on their way, as was the case last year. To provide challenge classes divided by sex for every breed is a farce at such a show. If they really wish to get the entries they must give the most money in the open classes, and considering the circumstances and the distance from the kennels where most of the challenge entries are located, it is hardly worth while catering for them to any extent, as they will not come so far.

There were in all about 65 dogs, but as no catalogue was used it was difficult to get at the exact number. The show was held in the German Artillery Hall, Jan. 5 to 9. The secretary, D. McInness, Jr., had all the dogs benched by Tuesday, but the stalls were not numbered, though each dog had its proper tag on the collar. The benching was rather of the old style, low on the ground, but instead of solid partitions a frame-works of thick slats were put up. This benching the club owns and it is so arranged that it can be taken apart with little difficulty. Several well-known faces were to be seen among the dogs. The Irish setter Laura B., pointers Spot Sting and Rosa May, Scotch terriers Rosie and Pansy, etc. Several dogs were entered from the North, but up to the time I left they had not put in an appearance.

President Ross A. Smith, Dr. McInness, J. Alwyn Ball, the treasurer, and others were around the show continually all ready to lend their courteous help either with the poultry or the dogs. The poultry roosted in the main hall upstairs and the dog show was set out in a room on the ground floor. The judging ring was outside the building in a grass yard. In waiting for the Northern dogs, judging did not commence till 2:30 P. M. and was concluded about 5 P. M. Mr. H. W. Lacy was the judge.

After the judging was over a mastiff turned up which proved to be Sumter, a son of Berkshire Caution, he by Ilford Caution. Not a bad little dog, nice skull, muzzle not deep enough, good body and fairly good on his legs. He was the only mastiff shown.

In St. Bernards the breed was only represented by one poorish specimen, Lady Warwick, a last year's purchase from a Northern invader I believe, though she has a nice body, her poor bone and mean, snipy head put her out for first, and a second only was given.

Newfoundlands had one entry in dogs, Jubilee, who, had he as good a head as he has coat and bone, would do to show anywhere, but, alas, his head is too long and not massive enough: besides this he carries his tail over his back. He was given first, however. In the next class Carlo, a weed, had to put up with a second only, and he was lucky at that; long faced, weak in pasterns, short of coat and altogether lacking true type he was, though only a pup, a fortunate animal.

Greyhounds had several entries but nothing that would get more than a c. in the North. In challenge bitches Purity, light in bone, weak in jaw, poor feet, capped hocks, too straight and long in loin, but nicely ribbed, was given the prize—a bloodless victory. In open dogs Flash was alone, and considering his six months the judge was lenient and acknowledged that, barring his open feet, there was nothing really bad about him. Nellie Bly, belonging to the same kennel, in the bitch class, also took a blue ribbon, but she is a poor one, bad feet, lacks rib development, is large in ear, very "long tailed," head fair, and will also do in loin and quarters. Flash won again in the puppy class.

Pointers came next, and I was glad to see that here was a little more quality. The first was the heavy-weight challenge bitch Rosa, a nearly all white bitch, thick in skull, good muzzle, gone in forelegs and straight behind, short tail; a rather coarse, cloddy specimen, showing age. In open dogs, Lodgerman beats Spot D, the second winner, in front, feet and hindlegs, is himself a little too much cut out before eye, but has not a bad head, though Spot D. has a better. Bob W. is straight behind and altogether too thick and coarse in head, and is throaty and wide in front. Queen, in bitches, is too cloddy, but has fair legs, though one hindleg was lame owing to a too close investigation of a mule's business end. In light-weight challenge class, Spot Sting, an old frequenter of Northern bench shows, was looking well and won. The open dog prize was withheld from a dock tailed all-round bad 'un. That nice bit of pointer flesh Rosa May scored her last win needed to enter the challenge class; she is well known, and though shown a trifle fat was looking well. In puppies two very young ones showed up, Larry B.'s better head and bone gaining the verdict over his kennel mate Wash.

English setters were the next brought out, and the challenge entry was Prince Gladstone. His head is of nice outline but too short and a trifle thick; his body is a bit cloddy too, and he is too straight behind; front, coat and ribs are quite good. There were no open dogs, but in bitches two turned up, and Isold La Belle beat Rosa Brow very much in head, body and front, the latter's quarters also fall away too sharply.

Irish setters were really the best classes in the show as regards quality. Of course the challenge entry, Laura B., was a host in herself, and excepting that she was a little above herself in flesh, I never saw her looking better or younger. There were four in open dogs, but Sandy S., nice head, better forelegs and body, beat Jack Heyward, who inclines too much on the large side, and though head is of fair shape, is too coarse. The pup Shamrock, Jr., vhc., ran him close, but his weak pasterns and lack of body development just lost him the red ribbon. Another one was entered but I could not get his name; he is hardly the right color and is a poorly made one. Red Fine Nellie was the only entry in the ladies' division. Her faults are lightness of muzzle and indifferent forelegs, otherwise a fairly good bitch. Shamrock, Jr. had a narrow squeak for first place in dog puppy class, as Bruce is quite his equal in every point but just behind shoulder, where he is a bit slack. In bitches, Emma, quite a nice one, showing lots of quality, would make a respectable bid for honors in any class.

Collies had only one dog in the ring, Jock; Dublin Scotilla being absent. The former is thick in skull, ears heavy and not carried right, coat soft and not much undercoat: in fact, although collies seem a favorite breed here, the climate is not such that a heavy or correct texture of coat can be looked for. In bitches, Woodbine had to give way to a bitch that was suckling a litter of puppies; Woodbine is one of the small, short-faced sort of Felch's strain; the winner has a good lengthy head, showing lots of quality, nice legs, a more symmetrical body, and though short of coat, it was of a better sort than the other's; neither bitch has good ears, nor do they get them up properly.

Then came a long break in the catalogue and one pug was brought in. This was Dandy, with a fair skull and wrinkle, but muzzle much too long, body, trace and legs good, but tail might be much improved.

Bull-terriers came next, the open dog class winner, Young Nelson, was all white, but head too short and thick, feet might be better, has a good body and legs, but his thick tail is carried altogether too gaily. Sport, the puppy, is quite a passable one, all white, barring a very small patch on the eye; his tail is his worst point.

The Sunset Kennels had a nice entry of beagles, which seem to be favorites down there. Only one was shown in the dog class, Count, quite a nicely made one, bit fine in muzzle and coat too soft. The same kennel had Flossie, the winner in bitches, she is well known, and since last year has improved very much in body; her carriage and action laid over the other two very strikingly. Mash, second, was better in body than Beulah, who was too fat and is also beaten in head, as she is rather dish-faced, is wide in front and a bit out at elbow, but has a straighter leg than the other; it was a near thing. Mash also won the puppy prize.

An old friend appeared in Scotch terriers, Rosie, in challenge bitches, and looking little the worse for her eight years, coat not so hard of course as it might be. In open dogs two promising pups were brought in. Bud Stubbons, a name suggestive of moonshiner or some other wild Southern law breaker, beats his litter brother Ned Wild in length of head and bone, but is not so straight in front, nor does he carry his tail so well, but his coat is harder. In bitches Queen is quite a nice little bitch, is a bit slack in back and coat is soft, but has nice action and is very smart looking, she afterward ran second to Ned Stubbons in the puppy class, as there was no getting away from his good head.

Black and tan terriers had no large-sized representative, but quite a neat little toy was shown, weight about 2½lbs., has a head showing little of the "apple" so commonly seen, nice head markings and perfectly marked in legs, with delicate thumb marks and pencilings. I saw its mother and would not give it house room—science of breeding! The father is a nearly black terrier.

Italian greyhounds brought up the rear with Vick, a winner last year, she shows too much white, but has a fine head and legs, but was shown too fat. In the puppy class a nice little pup of hers, Flossy, was alone and will make a better one than the mother. With the awarding of the specials, which all fell to the Fountain City and Sunset Kennels, the judging ended, not a very laborious job it must be said, but still a very enjoyable one, as considering there were no numbers on the stalls the ring was smartly served.

PRIZE LIST.

MASTIFFS.—*Dogs:* 1st, G. E. Davis's Sumter.

ST. BERNARDS.—*Bitches:* 1st, withheld; 2d, M. M. David's Lady Warwick.

NEWFOUNDLANDS.—*Dogs:* 1st, withheld; 2d, E. T. Vieth's Carlo. *Bitches:* 1st, Capt. O. Halverson's Jubilee.

GREYHOUNDS.—CHALLENGE—*Bitches:* 1st, J. P. Cartwright's Purity.—OPEN—*Dogs:* 1st, L. Brown's Flash. *Bitches:* 1st, L. Brown's Nellie Bly.

POINTERS.—HEAVY-WEIGHT—CHALLENGE—*Bitches:* 1st, Fountain City Kennels' Rosa.—OPEN—*Dogs:* 1st, L. Donine's Lodgerman; 2d, Fountain City Kennels' Spot D. Very high com., F. P. Upson's Bob W. *Bitches:* 1st, L. W. Buaise's Queen.—LIGHT-WEIGHT—CHALLENGE—*Dogs:* 1st, Fountain City Kennels' Spot Sting.—OPEN—*Dogs:* Prizes withheld. *Bitches:* 1st, Fountain City Kennels' Rosa May. *Puppies:* 1st, L. W. Buaise's Larry B. and Wash.

ENGLISH SETTERS.—*Dogs:* 1st, Fountain City Kennels' Prince Gladstone. *Bitches:* 1st, S. K. Prentiss's Isold La Belle; 2d B. McInness, Jr.'s Rosa Brown.

IRISH SETTERS.—CHALLENGE—*Bitches:* 1st, Fountain City Kennels' champion Laura B.—OPEN—*Dogs:* 1st, L. Brown's Sandy S.; 2d, W. B. Colson's Jack Heyward. Very high com., L. Brown's Shamrock, Jr. Com., name not given. *Bitches:* 1st, L. Brown's Red Fine Nelly.—PUPPIES—*Dogs:* 1st, L. Brown's Shamrock, Jr.; 2d, H. Hemine, Jr.'s Bruce. *Bitches:* 1st, W. P. Colson's Emma.

COLLIES.—*Dogs:* 1st, W. Lowndes' Jock. *Bitches:* 1st, Alfred Bertling's bitch; 2d, Rosa A. Smith's Woodbine.

PUGS.—1st, J. L. Simons' Dandy.

BULL-TERRIERS.—*Dogs:* 1st, L. W. Buaise's Young Nelson. *Puppies:* 1st, Julian Mitchell's Spot.

BEAGLES.—*Dogs:* 1st, Loring Brown's Count. *Bitches:* 1st, 2d and 3d, Loring Brown's Flossie, Mash and Beulah. *Puppies:* 1st, Loring Brown's Mash.

SCOTCH TERRIERS.—CHALLENGE—*Bitches:* 1st, Loring Brown's Rosie.—OPEN—*Dogs:* 1st and 2d, Loring Brown's Budd Stubbons and Ned Wild. *Bitches:* 1st, Loring Brown's Queen. *Puppies:* 1st and 2d, Loring Brown's Ned Stubbons and Queen.

BLACK AND TAN TERRIERS.—1st, J. M. Miller's Grover.

ITALIAN GREYHOUNDS.—*Bitches:* 1st, Mrs. W. L. White's Vick. *Puppies:* 1st, Mrs. W. L. White's Flossie.

SPECIALS.

Best kennel of pointers, J. P. Cartwright's (Fountain City Kennels). Best kennel of beagles, Loring Brown's (Sunset Kennels). Best kennel of Scotch terriers, Loring Brown's (Sunset Kennels). Best kennel in show of all breeds, Fountain City Kennels' pointers. Best dog or bitch in sporting classes, Fountain City Kennels' champion Laura B. Best dog or bitch in non-sporting classes, Sunset Kennels' Rosie.

ALBANY DOG SHOW.

THIS show opened Jan. 5, in the Academy of Music, Albany, N. Y. While the quality of the dogs present and the number benched—175—should have made an interesting exhibition, it was altogether marred by the inexperienced management. It is one thing to run a poultry show, but quite another to assume the management and proper arrangement of a dog show. This, no doubt, Mr. Rockenstyre, the ostensible superintendent of the Albany show, will now admit. As far as I could learn, the superintending ceased as soon as the dogs arrived. Even the express people were told not to bring the dogs to the building on Monday, as they would not be received, and the poor animals had to remain in their crates till Tuesday. The dogs were not numbered and not a dog had a tag on, nor did not have during the show. The judge's book was not made up, and this duty devolved afterward upon Mr. Farley; in fact, everything pertaining to the running of the dog department seemed to fall upon this man, even to the supplying of the benching and the feeding of the dogs. The management charged $3 entry fee, and did not even think it necessary to provide biscuits or any other food, and when food was asked for by the exhibitors, Mr. Farley was told he might get what food he liked and feed them himself. This he did on bread and water. There was naturally very much grumbling on the part of the regular exhibitors accustomed to receiving the attention that their entry fees entitle them to. The soiled straw was not removed from the building, but piled under the benching, where it reposed during the show an offense both to eye and nose. Mr. Mortimer was at the hall bright and early to begin his duties, but owing to the want of a judging book could not commence till afternoon on Tuesday and finished Wednesday afternoon. The judge's book was a most insecure arrangement, a common scribbling pad, whose leaves were quite loose when I got to them to mark a catalogue. The ring was well served, but not, as I was informed, through any exertion of the management; some one—no one knew who it was—assumed the duties of steward and got the dogs in in good shape, and how he did it with no numbers on the dogs was a mystery to all. No catalogues appeared till noon the second day, and reporters and every one were all abroad as to which dog was which.

Lucky it was there was such an old hand as Mr. Mortimer in the ring to see that each dog was assigned his proper number, which the judge's book showed he had to do in nearly every class. In the words of an old bull-terrier breeder who has followed the shows for the last eight years, "This beats all! Even the old Pittsburgh shows cannot come up to this in management." The veterinary surgeon commenced his examination of the dogs the second day, so I was told, and then started in with a sprinkler filled with Cynolina, which he generously applied to all suspicious places, and I must say, considering the amount of dirt about there was a singular absence of offensive odor, even on Friday, the last day. As there were no attendants, naturally the aisles were very much littered with rubbish. No! the Albany people must run their show on different lines another year or they cannot hope to have more than a small local entry, as the "regulars" had enough of it. These criticisms are not made in a cavilling spirit, for it is well known that we would rather praise if we are given a ghost of a chance; but in justice to exhibitors who paid $3 for each dog for attendance and service not worth $1, I am compelled to call attention to this gross mismanagement. The poultry were well looked after, but the dogs could—well go to the dogs for all they seemed to care. The superintendent was unapproachable, and we heard of several complaints of scant civility. But to turn to a criticism of the dogs forsooth a much more agreeable task, though not before I render unto T. J. Farley his due mead of praise. Had it not been for Mr. Farley the "boys" would have fared still worse, and though his name does not appear as superintendent he attended to most of the duties this position demands. To mention one more item, there were no tins even provided for feeding or watering until Farley got a few. Mr. Mortimer judged all classes, and the awards show that his judicial eye picked out the right ones, with few, if any, exceptions. As usual we commence with

MASTIFFS.—No challenge entries. The entries in the open class made up for this, however, for here we were introduced to certainly the finest mastiff ever bred in this country and one that will shake "mastiffdom" to its foundations even on the other side. "What a head! Never saw one like it in my life!" I only echo the general cry. Fancy a mastiff standing, at 15 months old, 32in. at shoulder, weighing, none too fat either, 183lbs., and with a skull measurement of 29in. tight. Excepting a tendency to show too much wrinkle, a point that may be carried to excess, and a little too much dewlap, his head must be perfect; such a massive skull, beautiful ears and such a black, deep, short muzzle has never been seen in this country. Beaufort's head can not compare with it and old Ilford Caution's is an abortion in comparison. At the same time, though it shows any amount of quality, I miss that serene look of dignity that one saw in Minting's face; of course, I am writing of a pup, and this may come with age, but I think the wrinkling will affect it somewhat. It's a grand head though. His forelegs

are good too, plenty of bone and straight, comparing well with his deep, well-formed body; his only fault, but one that does not seem to affect his strength or activity in any way is a straightness of hocks. He may let down here somewhat and now, owing to his great thickness throughout, his body looks a trifle short. However, he is a grand mastiff and all honor to his breeder Mr. Winchell, who evidently knew what he was about when he let this dog's sire return to the old sod. Gerda is the dam. But the dog's name, Beaufort's Black Prince—I had nearly forgotten in the enumeration of the dog's many good points. It was a grand tussle between him and the pointer Lad of Kent, the latter just getting the verdict, and they are both almost perfect in their way. Another good dog, Beaufort's Colonel, came second, he is small after looking at his kennel mate, but he has a good skull, muzzle bit plain, a beautiful small intensely black ear, which as a rule is thrown back, coat good, but hindlegs a trifle too straight, has nice action and is a dog with lots of quality. Ilford Rex was entirely out of it with his long head and shelly body. In bitches The Lady Gladys, showing age, was alone. In puppy class Beaufort's Black Prince was alone.

ST. BERNARDS.—These, as usual, were the attraction of the show, and numbered a goodly lot. In challenge rough dogs Kingston Regent won his first ribbon without competition. He was looking well but out of coat. So was Republican Belle in the corresponding class. In open dogs Aristocrat, one of the crack importations during the summer, had all he could do to beat Princelimmon. Both dogs are rather long-faced, but Prince's stop is not deep enough, and this fault of his dam, Lady Wellington, is intensified to a degree that spoils the whole expression. Aristocrat has a nice expression, a well-ribbed body, but is inclined to be a bit weak in hocks, forefeet turn out a bit. Both dogs were out of coat. Princelimmon, second, has a wonderfully good body and legs, and I wonder he has not been shown before. He weighs 194lbs., and can easily carry 15lbs. more. General Picton, vhc., is not half a bad one, good body and legs, but his queerly marked head gives him an odd appearance. Merchant Prince II. is too long in head and straight behind. In bitches I hardly agreed with the awards, taking quality and general make-up into consideration. Altonette, the winner, is the queerest $2,500 dog I ever saw, she has nothing but her good size, body and bone to recommend her, her feet are open, skull and muzzle not by any means what they should be, tail is curled and carried high on back. That this bitch should ever stand a ghost of a show to beat one side of Sir Bedivere, let alone the whole of him, as her former owner confidently told me he expected she would do, is absurd; as a brood bitch she will no doubt be useful. Ellen Terry, with her plain head and poor expression, good body and bone, but weak pasterns, is well known and took second. Lady Hibernia, vhc., I thought showed more quality, and her more symmetrical build, both of body and head and excellent legs and movement should, notwithstanding the size of the others, have placed her above them. Lady Challymead, vhc., is long in muzzle, has badly formed hindlegs but a good body. Lady Gair, vhc., loses in muzzle and size. Segrid, c., carries her tail too high, and her head is poor. Gen. Washington's good bone and size secured him the ribbon. Ridgefield Belle, second, has quite a fair head, nicely marked, but is a little slack in back. Empress of Contocock was alone in smooth challenge class. What a change has been wrought in this bitch, now she has a grand, deep body, and this, added to her lovely head and good limbs, renders her an animal much to be admired. There were no smooth dogs, and in bitches Lady Leeds had no difficulty in disposing of Princess, beating her in head, bone and size. Two very promising youngsters, Sir Richard and Florette, out of old champion Flora II., were easily ahead in the puppy class, the former beating the other in size, bone and head. Grenadier, vhc., I did not see.

NEWFOUNDLANDS.—The well known Prince Hal scored another win in this breed and he can make his son, Prince George, walk his best any day.

BLOODHOUNDS.—The fine-headed Victor was alone in this breed, Rosemary being absent. This dog has improved very much in head which now has excellent wrinkle and length; feet and pasterns are not very good, however, but body and movement O K.

GREAT DANES.—Pascha II. was the only entry in dogs, a well formed young dog though rather mastiffy looking. The bitch was not good, fat, big-eared, snipy-muzzled and faulty behind, and second was almost too much for her. In the puppy class Leo, only an ordinary specimen, weak in muzzle and pasterns, was alone.

GREYHOUNDS.—The two challenge entries were divided, champion Gem of the Season taking care of the dog class, looking fit as a fiddle, and Spinaway, the only entry in the bitch class, was in better flesh than I can remember seeing her, in fact too much so, but then in her case it does her good. That little beauty, Bestwood Daisy, was alone in bitches, and can win honors in almost any company.

POINTERS.—No challenge entries. In open dogs one of the best ever bred in this country won easily, Lad of Kent, and a better one it would be hard to find, and he was well described last week at Gloversville. To be critical, I don't like his fore face very much; his light eye and rather plain muzzle hardly give that sweet expression one saw in old Beaufort for instance. His superb condition was very noticeable, and this has been put on by honest work in the field down in North Carolina this fall and winter; his tail is if anything a little coarse, and here one must stop criticising and give nothing more but praise. He has the pointer specials at his mercy this spring. Trojan Ruffed Grouse was second, a big coarse dog, sour-faced, thick in skull, but well formed body, legs and feet fairly good; had no business with the winner. In bitches Faustina was given second, and am sorry I could not find her, but as she only took this prize without competition I perhaps did not miss much. In dogs under 55lbs. an old Irish setter man, W. H. Pierce, showed Frank W., and won; legs and feet might be better, but he has a nice body and fine action. Forest Ranger, second, is wide in front and skull. Light-weight bitches found a winner in Lass of Kent, well known, muzzle could be better, and feet and pasterns are not just right. Burt's Snip, second, is too short in muzzle, wide in front, but rest of her all right. Bessie Hessen, vhc., is rather long-faced, good bone, she also won in puppies, with Fra Diavolo second, who beats winner in head, but is beaten in front by the other.

ENGLISH SETTERS.—As a class this breed was not very well represented. In open dogs, there being no challenge entries, Sir Frederick, described at Lexington, just won over Glendon, whose condition was against him; nice head, little weak before the eye, a bit throaty but otherwise a good one. Sir Frederick is beaten in head by Glendon, but condition and his general good build are a little too much for the other at present. Reverdy, reserve, is well known and in his right place, Rockford, vhc., assuming the same relation to the latter as at Danbury, and Sir Howard, not straight in front, broad in skull and body not ribbed up enough, also took vhc. Paul H., hc., is big and coarse, with quite a Gordon head in make up. Donna Juanita, well known, won in bitches for the Rosecroft Kennels; second going to Spectre, weak in muzzle, ears set on too high and could do with more rib. Jess, hc., poor in head, finished the class.

IRISH SETTERS.—In open dogs Nicko won again, his excellent type of head though a little thick in skull, good front, body and hind parts, together with a rich color, make up a very noticeable dog, and he was rightly placed over Redstone, who loses in head, ribs and quarters. King Elcho coming next; he is a bit bowed in front and falls away in quarters too much; head is also a trifle plain. Ennis Lad, vhc., would be better with more rib, a squarer muzzle and a stronger back. Exile, c., loses in head and body. Belle Ida won in bitches. She shows age now but there is no passing over her well ribbed body, good head and action. Bessie Glencho II. is short and thick in neck, not nearly so good a head as the winner. Nellie Husted, reserve, is narrow-fronted and feet turn out a bit, otherwise quite a nice bitch, of good color. Cora B., shown too fat, but her typical head and rich color deserved the three letters. In puppies Gen. Husted won, a little out of shape but a typical, well-formed pup of promise.

GORDON SETTERS.—Hilda took care of the challenge class. Her tan is smutty in places, but her head is of good type, good body and was well shown. The open class winners were provided by Mr. Blossom with Heather York in dogs and Heather Bee in bitches, both new importations. York's head might be heavier, muzzle not deep enough, has excellent legs and body, and has put on more flesh than at Gloversville, where his condition was poor; ribs could be better sprung and quarters need not fall away so suddenly, and that is all the fault one can find; tan rich and well placed. Heather Bee is a well-known winner on the other side. She also loses to a good one in muzzle, nice skull, good body, legs and feet, coloring good, but lacks the feet pencilings. A nice bitch, showing lots of quality; and both are built on good field lines for work.

COCKER SPANIELS.—Cherry Boy, looking as well as ever, had not much difficulty in disposing of King of Obos, beating in head, front and body. In open dogs the good puppy of last spring, Adam, a little high in skull and not square enough in muzzle, won over Gothamite, who is heavy and long in head for a cocker, but has good body and legs, perhaps a little high for modern fancy. In bitches Lady Obo, a nicely made one, reversed her position at Gloversville. She has the better of Eve in head; body and legs about equal. Puzzle, vhc., is long in head and body, stands on good legs, but is hardly ribbed up enough.

COLLIES.—Roslyn Dandy and Metchley Surprise took the challenge honors, the latter hardly looking herself, and going off. In dogs we were introduced to a new one in Ormskirk Shep, a dog with a good English record, but how he got it is hardly explainable from his appearance. He shows lots of quality, head of good length, ears well carried, eye a bit full, but stands out at elbows and is wide in front, turning his toes in, coat is open and not of good texture, and he carries his tail over his back, and it's too short as well. Roslyn Conway, second, had he as much coat as the other, makes the better dog, better on his legs and more symmetrical in body, his head is not so good as the other's, too full in brow. It's a near thing, but I incline to second winner, forelegs especially. Scotilla IV., vhc., is rather thick in head, ears heavy but coat good. Roslyn Primrose won in bitches, her feet spread a bit and pasterns are weak, but head and coat good, in which respect she beats Rutland Arrow. In puppies, Metchley Scot, bit thick in skull and trifle out at elbow, but good coat, was alone.

POODLES.—The winner, Dexter, looks hardly the same dog without the tremendous cords he used to trail round, his coat is growing in nicely, however, and is very bright, and should be kept so; he had no difficulty in beating Belle, she losing in coat and head, and Beau is short-faced; it is a near thing between the two latter, but in the bad light I could hardly distinguish one from the other.

DACHSHUNDE.—Mr. Maurice's entry in the dog class, Windrush Rioter, has been described before; he seemed a little low in flesh. Then I took a look at Janet, certainly the best bit of Dachshund yet seen here, a beautiful long head, nice ears well hung, nice crook and chest very well let down, good strong body, well arched loin, strong quarters, and merry action, a bitch with whom little fault can be found and a welcome addition to the breed over here.

BEAGLES.—Not a very large exhibit, only three, and these from the Rockland Kennels. Ch. Racer, Jr., had no difficulty in getting the blue over Roy K., beating in head, ear, feet and body. Lady Vic, vhc., a sweet-faced little bitch, soft in coat, muzzle not just right and pads might be closer.

BULLDOGS.—Only two, Ch. Harper and Countess of Norfolk, and there was little trouble in judging them.

BULL-TERRIERS.—This was my first sight of Frank Dole's new dog Carney. A capital terrier and no mistake; feet might be better, otherwise he was well described last week and is sure to do a lot of winning for his owner; Winning Wagtail is well known and loses to the other in eye, tail, hind parts and head, especially stop. Luce, reserve, I did not see, nor the pup Peony. Keno, hc., has grown too coarse in head and has no depth of body.

FOX-TERRIERS.—This breed showed up well, as might be surmised from the locality. New Forest Ethel in challenge class had no difficulty in beating Starden's Jack, gone thick in head and heavy in shoulders, he in turn beating Ebor Nettle, who shows very wide and heavy in shoulders and was in whelp. In dogs that smart terrier Blemton Victor beats Dobbin in skull and loin. Bev. Punster and Tod had gone home but I hear they are very likely terriers. Spinster, a new importation, from the Blemton Kennels, won nicely over Regina; the former's head is hardly long enough and is weak in muzzle, stands on good forelegs, is a bit soft in coat, and ears could be closer carried. Regina is soft in coat and not strong enough in muzzle. Moonray, vhc., had also gone home and Woodale Radiant has been described before. Bev. Punster and Blemton Valeria won in puppies, both of which I was too late to see.

SCOTCH TERRIERS.—Two good ones met in battle but Kilstor's stronger and more punishing head, better length of body and lower leg got him the verdict.

IRISH TERRIERS:—Valley Boxer was placed over Adventurer, beating in feet, head and coat, though Boxer is a bit on the large side for my fancy.

BLACK AND TAN TERRIERS.—It was a pretty match between Broomfield Sultan and Prince Regent, an improved dog. Sultan beats in markings, better defined, Prince's black running in on legs, Sultan loses in front, not being so straight and true in movement as the other, but Sultan has a better skull. Sultan seemed to go a bit groggy behind.

YORKSHIRE TERRIERS.—The well known Venus, truer in blue and tan, was placed over a new one from the other side, body silvery, and tan a little smutty. Teddy, vhc., is a bit mixed in color; and tan not clear enough.

PUGS.—Nelly Bly had things to herself in challenge class, and the well known Kash, Jr., beats Otsego Duke in body, front, bone and head. Flipp was the winner in bitches, a rather small, weedy sort but Nellie M. was too fat, long in muzzle and flat in skull; neither will do to win with in good competition. Puppies saw Otsego Duke first and Little Duchess second; a close thing.

DANDIE DINMONTS.—King o' the Heather, in Heather Madge's present coat condition, had a good win. They will be seen again under better circumstances.

BEDLINGTON TERRIERS.—Thanks to Mr. Russell, a nice row of these game dogs were shown. Tick Tack, in the challenge class, is well known, and Chemist, in open dogs, had no competitor; he is a little weak in muzzle, otherwise good, nice in coat. Christmas Carol beats Polly Wentworth in coat, arch of loin and head, but might be stronger in muzzle.

MISCELLANEOUS CLASS.—That sweet headed bitch Mr. Huntington's Modjeska was easily picked out for first place. If type goes for anything, this bitch's head would seem to be about the right thing. Jumbo, a Japanese hairless, came next, and a neat little Boston terrier was given vhc. The Skye terrier prizes were withheld. H. W. L.

PRIZE LIST.

MASTIFFS.—*Dogs:* 1st and 2d, J. L. Winchell's Beaufort's Black Prince and Beaufort's Colonel. Very high com., M. T. Scudder's Ilford Rex. *Bitches:* 1st, J. L. Winchell's The Lady Gladys. *Puppies:* 1st, J. L. Winchell's Beaufort's Black Prince.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—1st, W. C. Reick's Kingston Regent and Republican Belle.—OPEN.—*Dogs:* 1st, Dutchess Kennels' Aristocrat; 2d, Halfway Brook Kennels' Princelimmon. Very high com., Mrs. J. Evans' General Picton. Com., Halfway Brook Kennels' Merchant Prince III. *Bitches:* 1st, 2d and very high com., Dutchess Kennels' Altonette, Ellen Terry and Lady Hibernia. Very high com., Ridgefield St. Bernard Kennels' Lady Challymead and John Marshall's Lady Gair. Com., Halfway Brook Kennels' Segrid. *Puppies:* 1st and com., Halfway Brook Kennels' Gen. Washington and Grandee II.; 2d, Ridgefield St. Bernard Kennels' Ridgefield Belle. Very high com. and high com., J. H. Ten Eyck Burr's Elsa III. and Lartie.—SMOOTH-COATED—CHALLENGE—Duchess Kennels' Empress of Contocock.—OPEN—*Bitches:* 1st, C. S. Baker's Lady Leeds; 2d, F. P. Hawkins' Princess. *Puppies:* 1st and 2d, New York St. Bernard Kennels' Sir Richard and Florette. Very high com. and com., Halfway Brook Kennels' Grenadier and Martha.

NEWFOUNDLANDS.—1st, John Marshall's Prince Hal.

BLOODHOUNDS.—1st, J. L. Winchell's Victor.

GREAT DANES.—*Dogs:* 1st, M. Pondeyn's Pasha II. *Bitches:* 1st, H. A. Lawson's Fritz. *Puppies:* 1st, G. Horn's Leo.

GREYHOUNDS.—CHALLENGE—*Dogs:* 1st, A. W. Purbeck's Gem of the Season. *Bitches:* 1st, Woodhaven Kennels' Spinaway.—OPEN—*Bitches:* 1st, A. W. Purbeck's Bestwood Daisy.

POINTERS.—OVER 55LBS.—*Dogs:* 1st, Geo. Jarvis's Lad of Kent; 2d, W. A. Gilbert's Trojan Ruffed Grouse. *Bitches:* 2d, Albany Pointer Kennels' Faustina.—UNDER 55LBS—*Dogs:* 1st, W. H. Pierce's Frank W.; 2d, John Marshall's Forest Ranger.—UNDER 50LBS.—*Bitches:* 1st, Geo. Jarvis's Lass of Kent; 2d, A. C. Burt's Burt's Snip. Very high com., Albany Pointer Kennels' Bessie Hesson. *Puppies:* 1st and 2d, Albany Pointer Kennels' Bessie Hessen and Fra Diavola.

ENGLISH SETTERS.—*Dogs:* 1st, Seminole Kennels' Sir Frederick; 2d, Rosecroft Kennels' Glendon. Reserve, V. L. Bossa's Reverdy. Very high com., D. S. Ellsworth's Rockford and W. P. Booth's Sir Howard. High com., Dr. C. E. Feiris's Paul H. Com., Alfred V. Brewster's Duke of Furness. *Bitches:* 1st, Jas. W. Wood's Donna Juanita; 2d, William Bryse's, Jr.,'s Spectre. High com., Henry Reineck's Jess.

IRISH SETTERS.—*Dogs:* 1st, John Mack's Nicko; 2d, A. W. Pearsall's Redstone. Very high com., A. W. Pearsall's Ennis Lad and Seminole Kennels' King Elcho. Com., Will J. Totten's Exile. *Bitches:* 1st, A. W. Pearsall's Belle Ida; 2d, Seminole Kennels' Bessie Glencho, II. Reserve, Grove Kennels' Nellie Husted, Jr. Very high com., Grove Kennels' Cora B. High com., A. W. Pearsall's Lady Alice. *Puppies:* 1st, Grove Kennel's General Husted.

GORDON SETTERS.—CHALLENGE—1st, Mount Royal Kennels' Hilda.—OPEN—*Dogs:* 1st, Jas. B. Blossom's Heather York. *Bitches:* 1st, Jas. B. Blossom's Heather Bee.

COCKER SPANIELS.—CHALLENGE—1st, C. G. Browning's Cherry Boy; 2d, Ancient and Modern Spaniel Kennels' King of Obos.—OPEN—*Dogs:* 1st, C. T. Sackett's Adam; 2d, Ancient and Modern Spaniel Kennels' Gothamite. *Bitches:* 1st, C. T. Sackett's Eve; 2d, Ancient and Modern Spaniel Kennels' Lady Obo. Very high com., Allen F. Campbell's Puzzle.

COLLIES.—CHALLENGE—Equal 1st, Seminole Kennels' Roslyn Dandy and Metchley Surprise.—OPEN—*Dogs:* 1st, Joe Livingston's Ormskirk Shep; 2d and very high com., Seminole Kennels' Roslyn Conway and Scotilla IV. *Bitches:* 1st, Seminole Kennels' Roslyn Primrose; 2d, James Taylor's Rutland Arrow. *Puppies:* 1st, Seminole Kennels' Metchley Scot.

POODLES.—1st, A. W. Purbeck's Dexter; 2d and very high com., Alan F. Campbell's Belle and Beau.

DACHSHUNDE.—OPEN—*Dogs:* 1st, Edward Manice's Windrush Rioter. *Bitches:* 1st, Edward Manice's Janet.

BEAGLES.—1st, 2d and very high com., Rockland Kennels' Racer, Jr., Roy K. and Lady Vic.

BULLDOGS.—1st and 2d, Frank F. Dole's Harper and Countess of Norfolk.

BULL-TERRIERS.—1st, F. F. Dole's Carney; 2d, Wagtail Kennels' Winning Wagtail. Reserve and high com., Wm. Wedgewood's Luce and Keno. Very high com. and com., E. R. Thompson's Peon and Tyro.

FOX-TERRIERS.—CHALLENGE—1st, Blemton Kennels' New Forest Ethel; 2d and reserve, Woodale Kennels' Starden's Jack and Ebor Nettle.—OPEN—*Dogs:* 1st, Blemton Kennels' Blemton Victor II.; 2d, Woodale Kennels' Dobbin. Very high com. and high com., Beverwyck Kennels' Beverwyck Punster and Beverwyck Tod. *Bitches:* 1st, Blemton Kennels' Spinster; 2d and high com., Woodale Kennels' Regina and Woodale Radiant. Very high com., Beverwyck Kennels' Beverwyck Moonray. *Puppies:* 1st, Beverwyck Kennels' Beverwyck Punster; 2d, Blemton Kennels' Blemton Valeria.

SCOTCH TERRIERS.—1st, Anglo-American Terrier Kennels' Kilstor; 2d, Henry Brooks's Kilbar.

IRISH TERRIERS.—1st, Anglo-American Terrier Kennels' Valley Boxer; 2d, T. Pulvertaft's Adventurer. Very high com., A. F. Campbell's Rose.

BLACK AND TAN TERRIERS.—Rochelle Kennels' Broomfield Sultan; 2d, Anglo-American Terrier Kennels' Prince Regent.

YORKSHIRE TERRIERS.—1st, Anglo-American Terrier Kennels' Venus; 2d and very high com., John T. Hooley's Sparks and Teddy.

PUGS.—CHALLENGE.—1st, New York Pug Kennels' champion Nellie Bly.—OPEN.—*Dogs:* 1st, Seminole Kennels' Kash, Jr.; 2d, John Feulver's Otsego Duke. *Bitches:* 1st, Jacob Reineck's Flipp; 2d, New York Pug Kennels' Nellie M. *Puppies:* 1st, John Feulver's Otsego Duke; 2d, Seminole Kennels' Little Duchess.

DANDIE DINMONT TERRIERS.—1st and 2d, Edward Brooks's King o' the Heather and Heather Madge.

BEDLINGTON TERRIERS.—CHALLENGE—1st, Wm. H. Russell's Tick Tack.—OPEN.—*Dogs:* 1st, Wm. H. Russell's Chemist. *Bitches:* 1st and 2d, Wm. H. Russell's Christmas Carol and Polly Wentworth.

SKYE TERRIERS.—Prizes withheld.

MISCELLANEOUS.—1st, H. W. Huntington's Modjeska; 2d, Roger T. Harrison's Jumbo. Very high. com., Wm. Lawrence Green's Handsome.

SPECIALS.

Best display by an exhibitor, J. L. Winchell. Best mastiff, J. L. Winchell's Black Prince. Best kennel of St. Bernards, Duchess Kennels. Best in open class, Duchess Kennels' Aristocrat. Best American-bred dog in show, Halfway Brook Kennels' Princelimmon. Best rough pup, Halfway Brook Kennels' Gen. Washington. Best Newfoundland, John Marshall's Prince Hal. Best kennel of pointers, Albany Kennels. Best kennel of Irish setters, A. W. Pearsall. Best kennel of collies, Seminole Kennels. Coll's Club special for best American-bred dog, Seminole Kennels' Roslyn Dandy. Largest and best display, Seminole Kennels. Best bull-terrier, Frank F. Dole's Carney. Best kennel of fox-terriers, Blemton Kennels. Best fox-terrier owned in Albany county, J. Mack's Flash. Best and largest display of Yorkshire terriers, John J. Hooley. Best kennel of pugs, New York Pug Kennels. Best display of Dandie Dinmonts, Ed. Brooks.

NATIONAL BEAGLE CLUB MEETING.

Editor Forest and Stream:

The annual meeting of the National Beagle Club was held Jan. 9, at Young's Hotel, Boston, Mass., President Brooking in the chair. Officers elected for 1892: President, F. W. Chapman, Melrose, Mass.; First Vice, B. S. Turpin, Dorchester, Mass.; Second Vice, H. L. Kreuder, Nanuet, N. Y.; Third Vice, W. S. Clark, Linden, Mass.; Secretary-Treasurer, H. V. Jamieson, Melrose, Mass. Additional executive committee to serve with above officers, O. W. Brooking, Lynn, Mass.; W. A. Power, Boston, Mass., John Davidson, Monroe, Mich. F. W. Chapman delegate to A.K.C.

The new amendments to the constitution were adopted. Mr. Chapman on taking the chair was heartily applauded, and replied in a few well-chosen words. The president announced that he should call a meeting of the club on Jan. 23, at 266 Washington street, Boston, Mass.

H. V. JAMIESON, Sec.-Treas.

POINTS AND FLUSHES.

[*From a Staff Correspondent.*]

CHICAGO, Ill., Jan. 9.—Considering the importance of the bench show which is to be held in connection with the World's Columbian Exposition in 1893, and the length of time which has elapsed since the announcement that the show would be one of the important features of that great event, it is strange that so little information has been published in respect to its purposes, details and progress, and equally as strange that breeders and owners are apparently so apathetic in the matter.

I had yesterday the pleasure of meeting Mr. W. I. Buchanan, Chief of the Department of Agriculture, and he outlined to me very fully the plans of the Department in arranging for the show and conducting it.

The chief consideration of the Department, one that will transcend all others, is to have only dogs of pure blood entered and exhibited. To attain this end, every precaution will be taken to guard against the showing of dogs having pedigrees which are doubtful, unknown, false or too short; or dogs which, having pedigrees, are not possessed of sufficient race characteristics, such as type, coat, etc., to entitle them to be classed as true representative specimens of their breeds. To enforce this, it is the intention to have a committee appointed to pass on the individual eligibility of each dog as a true specimen of the breed to which it belongs.

This is really a wise precaution and a benefit to all concerned, for it will elevate the character of the show far above the average; it will enhance the value of a win; it will establish confidence in the public at large in regard to the superior quality and pure breeding of the animals shown, and will be an assurance that it is not the purpose to show dogs in large numbers, regardless of true worth; it will be a protection to those who are interested in new foreign breeds; but who are not yet sufficiently informed as to the correct types and peculiarities; hence it reduces the chances of imposition to a minimum; it will be an assurance to foreign exhibitors that they will have the very best of competition and opportunity; and it will work no hardship whatever to those who own well bred dogs.

Concerning the relations which will exist between the Department and the American Kennel Club, there seems to be a misunderstanding by the public at large. The Department of Agriculture will insist on some guarantee that every animal, whether of dogs, cattle, horses, sheep, swine, etc., is pure bred, and in each instance the records, stud books and registrations are specified, which will be recognized as authoritative; therefore there is no more required in respect to dogs than is required of all other breeds.

Dogs owned in the United States or Canada are eligible, providing that each application for entry is accompanied by a certificate, signed by the secretary of the American Kennel Club, certifying that the dog entered has been registered in the American Kennel Stud Book under two of the rules of that club, namely:

Where the sire and dam are already registered.

When dogs possess an authenticated pedigree extending back three generations.

The certificates must contain the stud book number assigned to each dog.

The rules governing foreign competitors is as follows:

"Exhibitors of dogs owned outside of the United States and Canada must furnish satisfactory evidence that such dogs are recorded, or are eligible to record in some recognized foreign stud book, in which purity of breeding is the basis for registration."

As to the fee charged by the American Kennel Club, the Department of Agriculture is in no wise responsible and, in fact, has no voice. It simply demands an assurance from the American Kennel Club as to the eligibility of dogs under specified conditions: all else is between the exhibitor and the American Kennel Club.

Mr. Buchanan, however, said that he understood that the American Kennel Club would ask 50 cents for a certificate of registration, a fee which, for a number of reasons, is exorbitant.

Supposing that the show would have two thousand entered dogs, it would cost the owners one thousand dollars for certificates alone, vouchers which would have no other mission than to satisfy Mr. Buchanan that dogs owned in the United States and Canada are registered in the A. K. C. Stud Book. It is a very easy matter for those interested to figure the cost of printing the form for such certificates, the time necessary to verify two thousand pedigrees, and the time consumed in filling out a few blank spaces and appending a signature two thousand times, and then compare the results with the gross amount of possible receipts.

I learned that some space even at this early day, was claimed by exhibitors in the United States, and that there were numerous inquiries from Europe in regard to space and the general features and purposes of the bench show in connection with the exposition, which is most encouraging at this early stage of the enterprise. There is no doubt but what it will be the greatest show ever held in America; in fact, considering that the bulk of entries to all dog shows are sent during the last days of closing the entries, nothing could be more encouraging than the interest now manifested, a year and a half before the show.

The Department desires the earnest support and cooperation of the specialty clubs, which it probably will have before the show opens; but for the moral effect it will have on all exhibitors, particularly the foreign interest, specialty clubs should not postpone the publication of their intentions to too late a date. The following communication was received by the Department from Mr. Herbert Mead, secretary of the American Mastiff Club, which will explain itself:

"Our club is the owner of a number of silver cups and medals, and some of our members are custodians of two handsome cups which have been sent over to us by the Old English Mastiff Club of England, and we desire to offer all these as specials. Also discussing advisability of offering breeder's prize of $300."

The Mascoutah Kennel Club's show is most promising; indeed nothing could be more so, if a most liberal prize list, cash specials, energy of trained, able officials and wide and constant interest of the public are any indications of what constitutes the success of a show.

Nothing could be more encouraging, or indicate more the growth of dog interests in the West, than the fact that this important club should be able to select a satisfactory list of judges who reside or are identified with the West. It denotes a transitional stage in the development of canine interests which should receive the approbation of every lover of a dog, since it denotes a constant widespread and fixed growth. While it is most encouraging as it is at present, it is only the beginning of the possibilities of the vast Western country.

In addition to the numerous cash specials already offered, the Mascoutah Kennel Club has added this week $15 for the best kennel of Chesapeake Bay dogs, not less than four, owned by one exhibitor. The National Greyhound Club of America offers club medal for best greyhound dog and bitch respectively, best deerhound dog and bitch respectively, and same for best Russian wolfhound dog and bitch. The English Setter Club offers American Field cup for best English setter in show.

I received a most interesting letter from a correspondent to-day, the tenor of which indicates the misleading tendencies of some of the ideas and discussions advanced by contributors to the sporting press. Referring to some recent remarks published he says:

"I have, like many other sportsmen, spent a good deal of time and money trying to get a first-class 'plug-hunter,' and have found it rather difficult. If the breeders and field trial men are trying to breed fast runners and not hunting dogs it strikes me it would be fairer to start them on a good track and have the thing fairly understood."

Whatever may be the tendency of the times FOREST AND STREAM will keep its readers posted as to the proper form of all field trial dogs and doggy matters. No breeder can run a dog through on exaggerated or spurious qualities and achieve a reputation for him as a high class or first-class field trial or superior hunting dog without the public knowing the true standing of his merits.

I note Mr. Tracy's minute and exhaustive explanation of the circumstances connected with the heat between Antonio and Maid of Kent at the Central Field Trial Club's late trials, and I cannot forbear making a few comments on what appears to me like false reasoning, on his part, concerning matters which he says had weight with him in reaching a decision. This applies solely to his own explanation. He says:

"Fortunately the disability of Paul Bo gave Maid of Kent a bye, and so made matters even between her and Antonio. For the sake of complete equality we had Maid of Kent run her bye heat under Mr. Penry also."

Mr. Penry had charge of both dogs while running their byes, but outside of that the equality ceases. Antonio ran his bye on Wednesday, Maid of Kent ran hers on Friday, and they ran the final on the following day, Saturday. Wherein, concerning the bye, are "matters even between her and Antonio"?

Again he says: "Maid of Kent being a good retriever, her handler shot and killed birds at every opportunity, she retrieving. No less than twelve were brought to bag in the bye heat. The important rest afforded by this change from galloping and searching was not overlooked by the judges, and was thought to be something of an offset to Antonio's advantages."

Concerning Mr. Penry, he says: "Mr. Penry, I will say, has acted as steward at our trials for three years, and is a very good handler in private, so there can be no question of his competence."

Here is a most consistent collection of ideas: Mr. Penry had charge of the bye, duly authorized by Mr. Tracy. Maid of Kent was allowed to retrieve no less than twelve birds, under the sanction of Mr. Penry. The rules required that a dog should retrieve or suffer a penalty. Maid took time to retrieve, which was implied from the fact that retrieving was required; yet for taking this time, which Mr. Penry sanctioned if he did not order it, Mr. Tracy considers it offset some of Antonio's advantages. On the other hand, considering that she had not been required to retrieve at all, she could have kept on "galloping and searching," and might have found more bevies or single birds.

If the byes had been merely working heats to put the dogs on an equality so far as time and effort are concerned, there could not have been any possible objection to Mr. Penry taking charge of them, but when these heats are a part of the whole competition it is a question whether the judges had any right to delegate their powers to another. Having delegated their powers to another it was impossible to get a full and correct understanding of the work from a mere description by Mr. Penry, they not having seen it themselves. If the rule is good that the judges shall consider the work done in previous heats, how could they consider it if they had not seen it? A decision based on mixed data, observation and hearsay, is not the most positive imaginable.

In September, 1889, Col. Odell, the secretary of the Central Field Trial Club, published a card in which he stated that in the Free for All the heats would be four hours long, and that aside from this condition the published rules would govern. In that year and the following year, 1890, the club's advertisement of this stake mentioned that each heat would be four hours. Neither the rules nor the advertisements mentioned the length of heats of last year's Free for All, but in any event Mr. Tracy was in error in adopting any previous rules, since there was no authority for it, and there was some against it.

No one understands, outside those who regularly attend field trials, the complex nature of a field trial and the difficulty in reaching accurate decisions, one after another. In the spotting system, aside from the thorough knowledge a judge must have of the details of field work and field trial competition, he must have a most excellent memory to recall the performance of each dog and give it its proper relative value.

I wish to say right here that I think Mr. Tracy, with the other judges, did excellently well, considering the decisions as a whole. I simply endeavor to show wherein he has not considered his data in its full bearings.

One thing more: I think Mr. Tracy has said that some handlers train their dogs to "hie on" by a blast on the whistle, thus deceiving the reporters, who think that the handlers are endeavoring to turn or call in their dogs. I would suggest to Mr. Tracy, in a remote kind of a way, that when a handler tells him such guileless tales as that in future, he give him in return a bright sardonic smile, tell him that such talk is good for beginners, and mark a memorandum of a disobedient dog. B. WATERS.

BRUNSWICK FUR CLUB'S MEET.

Editor Forest and Stream:

The third annual meet of the Brunswick Fur Club will be held at Brunswick, Me., commencing Feb 15, and continuing from one to two weeks. Arrangements have been made with the Gurnet House to accommodate members and hounds for a dollar a day. The Gurnet House is five miles from the depot, and teams will be waiting at the station at 6 P. M. on day of meet to convey members to the hotel. Hunters arriving after that time can easily secure teams to take them out.

The annual election of officers will be held at 8 P. M. the first day of meet, and hunting will begin on the following morning.

Foxes are reported to be very plentiful, and fox hunters from all parts are invited to come and bring their hounds, and participate in an old-time fox hunt. The absence of snow and ice at this time makes excellent going for both hunters and hounds. Prizes will be given for the first fox killed, the largest fox killed, and the greatest number of foxes killed.

The resident members of the club, always whole-souled in their hospitality, may be counted upon to give all a royal welcome. A. C. HEFFENGER, V.-P., B. F. C.

PORTSMOUTH, N. H.

DEATH OF BUCKELLEW.—Saratoga Springs, N. Y., Jan. 5.—*Editor Forest and Stream:* Old Buckellew is dead! Old Reliable is no more! He passed away at the kennels, in Hoosick Falls, N. Y., on Dec. 28, 1891, of paralysis, accompanied by old age, having lived 13yrs. and 2mos. He was whelped Nov. 7, 1879, and sired by champion Druid out of Ruby. He died as he lived—in my possession. I refused some very large money considerations for him, but I gave my word to Mr. Connolly, now dead—one of the best and truest men that ever stood in shoeleather—that I would never sell him; and I am happy to say I kept my trust with him. Aside from this the mere jingle of shekels never entered as a factor to tempt me to part with him; and I comfort myself in the knowledge that in his old age he passed these days in peace, plenty and comfort. May the hands he has fallen in treat him no worse.—WASHINGTON A. COSTER.

CANADIAN KENNEL CLUB RULES.

Editor Forest and Stream:

I cannot forbear sending you a line touching upon what seems to me to be two very extraordinary rules adopted by the executive committee of the Canadian Kennel Club at its last meeting, held in Toronto on Dec. 18, 1891.

The first of the rules referred to is to the effect that before a dog can obtain the title of champion he must win three first prizes in challenge classes, one of such prizes having to be won at a show where there are at least 500 entries. The implied intention of making such a rule as this is, that dog shows generally may be boomed and large entries secured. I fancy, however, that the true intent is to glorify the Toronto show especially at the expense of smaller exhibitions held elsewhere in the Dominion. By all means, let us have as large entry lists as possible; but will any person tell me what the number of dogs at a show has got to do with the prizes won by a dog in his own particular class?

Under this idiotic rule it is possible for one of the hottest classes that ever faced a judge to be found at a show which is not up to the standard insisted on by the wise men of the C. K. C., and really good dogs are, therefore, liable to fail in gaining the distinction due to them.

The other rule I refer to is, that hereafter English prize winners who have not before won prizes in Canada may be exhibited in the novice class.

Here we are again. What lofty wisdom; what excessive care to foster the interests of breeders; what grand encouragement to bring forth young stock. Under this equally idiotic rule a man may buy and import from England the best known prize winners, dogs which stand head and shoulders above all their fellows across the water, and can enter them here in the novice class as unknown and untried animals. What do your readers think of this for a rule? and how long will the members of the C. K. C. allow such rules as these to govern them?

I make no comments on the rules alluded to, because I fear lest I should become uncomplimentary; but I hope that others will take up this matter, and that we shall hear the opinions in support, if possible, and if not, in condemnation of these absurdities.

We have in the *Kennel Gazette* a paper in Canada devoted to the interest of the dog and his breeder. Unfortunately, however, the editor of that paper, which is the official organ of the C. K. C., is also secretary of that body, and I am watching anxiously now to see whether, as the editor of the *Kennel Gazette*, Mr. Donovan will smite these idiotic resolutions hip and thigh, or whether he will feel himself bound to support the committee through thick and thin because he is its paid servant. A. D. STEWART,

President Hamilton Kennel Club.

HAMILTON, Ont., Jan. 8.

FIELD SPANIELS AND COCKER HEADS.

Editor Forest and Stream:

It will at once be admitted that spaniel breeders throughout Canada and America differ as to the true type of head of the cocker and field spaniel. It is in the interest of all that the question should be settled finally by those who are best competent to judge. I was very much struck by a letter written two weeks ago by Mr. C. H. Mason in which he deprecates the criticisms of many so-called critics and calls for the opinions of qualified judges, the men who take an interest in dogs for the sake of the dogs themselves, and dog breeders who breed for the advancement of the species and who devote time and money to the question. For my own part I am anxious to know whether I am right or wrong in the position I have taken with regard to the head of the cocker spaniel and that of the field spaniel. I have never discussed the question for my own advantage or for the purpose of proving my opinion to be correct, but solely with the view of arriving at the true type that I might breed to it and that the best dog in every case might win.

In order to show to every one that I am sincere in what I say I now propose and strongly advocate a meeting of judges, dog breeders, and all members of the Spaniel Club at the coming New York show, at which the whole question may be discussed and a proper type agreed upon, all classes of dogs will be present and can be produced for the purposes of illustration or as may be desired. I intend to have two or three different types on exhibition and should be glad to give my views if called upon, and whatever type shall be then agreed upon, will be my type for the future, and I shall try in honest rivalry and competition to outstrip competitors as I have always endeavored to do in the past.

My only object in writing this letter is to endeavor to get such a meeting as I speak of, have the matter properly discussed and threshed out, and the real true type of the modern cocker spaniel and field spaniel fixed and agreed upon, so as to avoid discussion in the future. I firmly believe that all fanciers of dogs and breeders will assist in this move. G. BELL.

TORONTO, Jan. 9.

THAT IRONCLAD COURSING RULE.

Editor Forest and Stream:

With all due respect to the opinion of Mr. Wade, whose friendship for fair play no one who has read his many letters to your journal would for a moment question, I consider the coursing rule that punishes a man for riding over a hound, even when enforced with "Draconian severity" as eminently just, I think were I to ride over or collide with an opponent's dog, would be glad to prove that it was an accident by giving him the course.

But it seems to me that the hound has, as it were, "right of way," and the rule merely says (in effect) to owners: "See all you can of the course, but keep off the dogs." The hound has a right to go wherever the business of the course calls him, and it would seem to make no material difference in the penalty that should be enforced in case of collision, whether the horseman overtook the dog or the latter crossed the path of the horseman. L. I. FLOWER.

MCDONALD'S CORNER, N. B.

DR. JARVIS BUYS BLUE ROCK.—Bruceville, Ind., Jan. 3.—*Editor Forest and Stream:* I have just sold to Dr. Wm. Jarvis, of Claremont, N. H., the famous Irish setter dog Blue Rock. He was imported last spring by George H. Covert of Chicago, and after his failure was bought by the writer. As a stud dog I consider he has no equal in America, in fact he is just what the Irish setter breeders are looking for to cross with their Elcho bitches; he being of a different strain, and bred to some good bitches should produce some fine fielders. He was placed in my hands shortly after his arrival in this country to be prepared for the trials. He is thoroughly trained, as the reports will show, and no dog has any license to beat him when in condition. He was heavily handicapped at the trials, having caught cold from the exposure to the night air after riding a long distance in a hot baggage car and was slightly off in nose, but for all this made several stylish points. He is a very wide, rapid ranger, hunts his ground intelligently, has a merry tail action, and above all carries a high head. He is a field trial winner on the other side, also first prize bench show winner at Birmingham. My bitch, Elcho's Maid, was bred to him last month, and in '93 I hope to be able to show some Derbys with red hair that compare favorably with other breeds.—GEO. E. GRAY.

DOG CHAT.

ONE of the dogs in whose interest testamentary provision was made in this country is dead. It is often remarked that pensioners are noted for longevity, and in looking over some old cases in the Registrar's office the other day at Pittsburgh, Pa., a Mr. Newton Petrie found that dogs were no exception. A Mrs. Simpson made her will on March 13, 1868, and took her departure soon after. Mrs. Simpson's likes and dislikes were evidently very strong, as she remembered every person and brute with which she had been on good terms. She ordered one horse to be shot, as its services to her might not find proper recognition; and the other, a blooded horse, was confided to the care of the executors, who were to see it had a good home. A Mrs. Gransinger was given the testatrix's cow Doggie on condition that she would be good to the dogs. It was charged that instructions on this point to Mrs. Gransinger be very pointed. The executors were directed to see that fifty cents a week were expended for meat for the dogs, and to give Mrs. Gransinger a reasonable compensation for their care. Mrs. Simpson appointed her brother and another gentleman executors, and the former never got through with his trust until July 27, 1883, when Squire Glenn officially reported the death of the last dog, and the fact that it died $7.50 in debt to Mrs. Gransinger. In addition to grooming, medical services, etc. Mrs. Simpson's pet poodles cost her estate after her death $392.50. The age of the last canine survivor is not given, but as he was an adult when the testament was made, and lived fifteen years, two months and fourteen days afterward he must have been gathered to his fathers full of years and surfeited with honor.

A touching dog story is told in connection with a late Paris railway accident. A gentleman went to the school house where the dead bodies were laid to identify the remains of his wife and daughter. The bodies were so disfigured that he could not recognize his dear ones. He returned home to fetch a little dog, who was a great pet of the two victims. The animal was let loose in the dead house, and, after smelling about for some time stopped by two charred bodies, which he began licking, while whining plaintively.

There are still too many people who enjoy seeing a tin pan tied to the tail of some other man's dog.—*Ram's Horn.*

There's an exhibition of canine equestrianism to be seen on the streets of Chicago almost any day, which has fully as much, or even more, real merit about it than one will see in similar displays that are made in any of the "greatest shows on earth," says the Chicago *Daily Tribune* The performer is an exceptionally intelligent water spaniel, and he is a rider of skill. His act consists, in a word, of riding a delivery wagon horse whose driver usually enforces a pell-mell gait. The spaniel sits his mount with his hind feet on the horse's collar, or where the collar would come, and his front feet, one ahead of the other, on the narrow ridge of the horse's neck, his claws clutched in the mane. The faster the horse goes the better the dog seems to like it, judging from his many barks and the lively way in which he wags his tail. The sudden rounding of a corner never catches the plucky little animal off his guard, but at such times he will "curve in" with apparently the intelligence of the most accomplished circus rider, and so never loses his balance. He has fallen but once in the two years that he has been riding, and that was when the horse came near being killed by a cable car. The horse never goes so well as when carrying the dog, and that, of course, means that horse and dog are warm friends. Woe to the person or animal who bothers either of them when the other is around, for between the kicking of the horse and the biting of the dog the two old chums make it exceedingly unpleasant for intruders.

We are gratified to hear that Mr. H. W. Huntington's Psovoi (late Barzoi) bitch Modjeska (Krilutt—Elsie), winner of second prize at Toronto, 1891, was bred on the 28th ult. to Mr. A. W. Purbeck's Sailor. Modjeska was sent to the Hornell-Harmony Kennels to be bred to their prize winner Vladimir, but the dog dying from congestion of the lungs, Mr. Huntington wisely decided to breed to Sailor. Mr. Huntington accordingly shipped her to Salem, Mass., telegraphing Mr. Purbeck of the fact. As Sailor was at his farm, eight miles from Salem, Mr. Purbeck, to expedite matters, telegraphed for the dog to be expressed to town at once. On arrival of the express Mr Purbeck's boy (who well knew Sailor) was sent to the train to get Sailor, as Modjeska was not due till some hours later. He brought his charge to the office, where both Mr. Purbeck and Mr. Symonds, of the Anglo-American Kennels, were awaiting his arrival. As the messenger entered with the hound, they simultaneously remarked, "Isn't Sailor in fine condition, but hasn't he grown very much smaller?" They examined "him" carefully, when all at once they discovered it was a bitch and not a dog. This is a good joke on our two worthies. When Sailor finally arrived the two were placed side by side. Of course the dog was very much larger, but in color, markings, carriage, coat and expression they are alike as two peas, and even when playing together it was difficult to tell t'other from which. Let us hope the issue will be successful, and demonstrate that we can breed good puppies on this side of the water.

Mr. Thos. Statter, whom we recently spoke of as writing a book on pointers and setters during his illness, died at his residence, Stand Hall, Bury, England, on Christmas Day. He was 76 years old, and during his life was an ardent sportsman, and he always had some good sporting dogs round him. *Stock-Keeper* says he was one of the originators of the English field trials. Personally we remember him more from the beautiful hackneys and high-stepping horses he used to exhibit.

Mrs. Forder has withdrawn the well-known King Charles spaniel ch. Ben D'Or from the show bench. This dog has won more prizes than any other King Charles, and is the only champion dog in England.

Owing to our absence from the office last week Mr. Francis G. Taylor's name was inadvertently omitted from the letter he wrote of the death of Mr. N. B. Thomas, that appeared in our last issue.

At the last regular meeting of the California Kennel Club, Mr. Frank J. Silvey was elected secretary, vice H. L. Miller resigned.

We are pleased to see that Col. J. Ruppert, Jr., does not show any apparent intention of going out of St. Bernards. His recent purchase is the well-known St. Bernard Baroness Cardiff. This bitch is a daughter of the celebrated Baron Cardiff out of the no less noted bitch Pievna that died a few months since in Mr. Sears's kennels. She is white, with orange brindle markings, and was whelped Aug. 23, 1887. She was purchased from Mr. Tom Shillcock of Birmingham. Though not a crack show bitch, she has already made her mark as a breeder, for she is the dam of what are counted nearly the best dogs in England now, Sir Hereward and Young Bute. She will be bred to Marvel before coming over, and will be here in time for New York show.

Mr. Mercer, of Ottawa, has had a hard time of it since the fall shows. On Oct. 7 he was thrown from a buggy, sprained his back and dislocated his knee, and to improve matters an abscess formed on the spine. As the treatment was burning with white hot platinum every week, Mr. Mercer has had a gentle hint of what we are told the lower regions will afford us if we do not behave ourselves. His dogs did not fare well through this, owing to his kennelman's neglect, so he shipped them to young Spracklin, of Brantford, Ont., who keeps Mr. Nelles's spaniels, and as he is a first-rate man this will relieve him of one anxiety. We have seen a copy of Mr. Mercer's letter to the Spaniel Club *re* the Clumber Newcastle entry at Ottawa, and though we cannot make it public, will say that Mr. Mercer did not commit such a very big wrong when all things are explained.

The Elmira premium list has been received. The classification is very liberal, all the important breeds having challenge classes and many of them divided by sex, with premiums of $5 and $3. In open classes the prizes are $5 and $2 and puppies have the same amount. Spaniels have very liberal classification and prizes. Mr. Otis Fellows, who will judge, should draw a good entry of this breed. There are numerous cash specials offered in addition to the regular money, and as the entry fee is only $2 the money to be won is almost equal to a $10 and $5 list. Judging commences Jan 21 at 1 P. M. Entries close Jan. 16 with the superintendent, Mr. W. J. McCaffrey. As the Binghamton show comes directly after there is a good chance for exhibitors to kill two birds with one stone. Elmira is not under A. K. C. rules, but this should make no difference in the entry.

A number of queries must remain unanswered owing to want of space this week.

Mr. Henry Jarrett is the sole owner in the Chestnut Hill Kennels, Mr. Harrison having severed his connection with the business altogether. The kennel comprises among others Christopher, Wellesbourne Charley, Flurry II. and III., Roslyn Dolly, etc., surely a formidable team. Mr. Jarrett rents the kennel buildings, without doubt about the finest in the country, together with the land attached from Mr. Harrison, and the business, friend Jarrett tells us, will be continued in the same old style, and he always intends to have the "best kennel of collies in the world." As his accommodations are so extensive it is his intention to allow Western breeders who own good stud dogs of any breed to have their dogs stand at his kennel at stud, and this in itself will be a great advantage that should be eagerly sought after. Roslyn Torfreda, dam of Roslyn Dolly, and Roslyn Gaylass, sister to Roslyn Dolly, and dam of Roslyn Regent, are in season and will both be bred to Christopher, and from these he expects to supply the Produce winners at New York in '93. Out of Roslyn Dolly's litter by the English dog Gladdie, Mr. Jarrett has sold the Seminole Kennels a good dog pup, Roslyn Clarence. A grand young dog by Christopher he has sold to Mr. Louis Bregg, of Philadelphia, and he expects this to do lots of winning.

Stock-Keeper now publishes the name of the crack Psovoi, Argos, that Mr. Huntington is getting over and which should now be nearly here. This journal says: "English exhibitors have reason to congratulate themselves on this sale, for since it has been emphatically denied from Russia that black is objectionable, the position held by dogs that have hitherto been put over Argos on account of his color became somewhat uncertain. Argos is a fine big dog, he has a beautiful head, full of grace and power, and we believe him to be the soundest hound of this breed that has ever come under our notice. He is better than anything that has yet landed in America, and there will be no further need for breeders on that side to send their bitches to England now they have such a grand stock dog in their midst." It will be remembered that recently we spoke of two bitches having been sent over to be bred to this dog.

We are pleased to be able to print the above, as we quite unintentionally, in giving the notice of Mr. Huntington's importation and describing its color, in the same issue printed a letter from the Duchess of Newcastle condemning the black. This letter, we may remark, should have appeared some time since when it first came out in *Stock-Keeper*, but lack of space precluded it.

Mr. A. E. Hagans, president of the Mascoutah Kennel Club, writes us that the following specials will be competed for at their dog show, to be held Feb. 9 to 12: The pug breeders' challenge cup, offered by Dr. M. H. Cryer, open to all American (including Canadian) bred pugs, to be competed for semi-annually and must be won three separate times by separate dogs, the property of the same exhibitor, who must also be the breeder. As Dr. Cryer is the judge, competition for this handsome trophy will be more open than in the past. A member of the Mascoutah Kennel Club offers a special prize or $10 for best pair fox-terriers (litter brother and sister) between three and six months of age. The Boston Terrier Club offers the following specials to be competed for by members: Best dog and bitch, 10 to 20lbs., $10 each; best dog and bitch, 20 to 35lbs., $10 each; best kennel, $10.

In giving the first report of the Gloversville show we stated there were 100 entries. Mr. Dole's 13 entries were not mentioned in the catalogue sent to us, but were afterward inserted in another edition. This accounts for the discrepancy.

Now that Mr. Bell has written a letter that from its tone shows that the question as to whether a field spaniel's head is the same type as a cocker's is not, after all, the matter of certainty he astonished us with by claiming, we will do all in our power to have the question discussed in an amicable manner. Here there is no accusation involving the personality or the opinion of any one man and as such we welcome any discussion that may take place, and if the subject can be aided by photographic illustrations showing the different types, so much the better. We should like to have the opinion of such well-known breeders and judges as J. P. Willey, A. C. Wilmerding, C. H. Mason, Otis Fellows, E. M. Oldham, Andrew Laidlaw, James Watson and others, of course including Mr. Bell. Personally we have always supposed that there is a difference but we did not care to take up the gauntlet thrown down in the manner Mr. Bell thought fit to do it. Now it is different, and we trust that this important question, which merits the attention of all interested in spaniels, will be finally and thoroughly threshed out.

Before every New York show the cables are kept going by our breeders to secure something that will add reputation to their kennels. One of our most prominent breeders, hailing not a thousand miles from Boston, will very likely have a surprise in store for the New York judge. That is if anything in fox-terriers can surprise Mr. Raper.

The Anglo-American Terrier Kennels have been very quiet lately, but, none the less, they have had their lines set and have hooked a fox-terrier that will take some beating. This is the smooth terrier Ebor Spendthrift, whelped on our national holiday, Feb. 22, 1888. His winnings number over 100 firsts in England, including the Fox-terrier Club Derby, and the Produce Stakes. He is by the great Result, and is acknowledged to be his best son. The dam is Ebor Enrichment. In color, he is white with a little black on ear. Ebor Enrichment has been recently purchased by Her Majesty, the Queen, at a high figure. The dam is by Pitcher, who is now in Mr. Thayer's kennels. We shall very likely have some more surprises of this sort from the same quarter by the time another issue comes round. We must, however, congratulate this kennel on their efforts to improve the terrier breeds of this country, and trust they will continue the good work.

During Albany show Mr. Geo. Jarvis looked as proud as Lucifer whenever he thought of his grand pointer Lad of Kent and the offer of $1,500 he had from a prominent beagle man did not tempt him. He is holding the dog at $2,000, and considering Lad's breeding and his own excellence, Mr. Jarvis evidently appreciates his good fortune at its proper worth. A good pointer will soon pay for himself nowadays. King of Kent was a cheap dog at $1,200, for since April last he has already nearly earned his price.

That friend Dole did not get the "stiff" he was said to have purchased in buying Gully the Great is evidenced by the dog's success in the stud since he came over. He has sired 31 pups in three litters and now Attraction and champion Starlight are in whelp to him. By the way, after two years hard trying Mr. Dole has at last rescued Maggie from the clutches of the man in Toronto who stole her as a pup at Toronto show in 1889, and she will be called Edgewood Maggie in future. She is the dam of Duke of Wellington, that smart youngster that was shown at the Canadian shows this last fall.

As a slight indorsement by the exhibitors present at the Albany show, Mr. Farley was presented with a numerously-signed testimonial, thanking him for his kind endeavors to remedy the mis-management of others in their behalf.

Scotch terriers seem to be the favorite terrier down Macon, Ga., way. Mr. Loring Brown, owner of the Sunset Kennels, who got his stock from Mr. John Naylor, tells us he can sell all he can raise at fair prices, of from $15 to $30. Their gameness and companionable qualities have taken a firm hold on the Southern fancy, and deservedly so. Speaking of these "braw little Scots" reminds us of the merry five minutes that the "boys" had in a quiet corner of the show building at Albany with two of the breed not unknown to fame on the bench. It was very amusing and seemingly made no impression on the dogs.

A meeting of the National Beagle Club will be held at 266 Washington street, Boston, Mass., Jan. 23, 1892, at 7 P. M.

One of the old-time pointers and one who was shown extensively at New England shows with good success, Mr. C. A. Parker's William Tell, has gone the way of all flesh. He was whelped Jan. 2, 1884 and died of paralysis.

Mr. C. C. M. Hunt, of Palmyra, N. Y., well known to field trial men, is having a good time down at Homosassa, Fla., with Grouse and Bendigo. In changing the address for his FOREST AND STREAM he writes: "Please be sure to send me your paper as requested. I am out of the world and can't get any news here, so for goodness sake send it to me at once."

The cry at Albany on Friday afternoon was "What price fish, German?" not to mention the sauerkraut.

Messrs. E. W. Woodward, of Chicago, and William Mariner, of Milwaukee, are importing the brindle and white bull bitch Peckham Lass (Sir Garnet Wolseley—Kit). This bitch made her début at the last show of the Bull-Dog Club, of England, held at Royal Agricultural Hall, London, May 13, 1891, winning first prize in medium-weight bitches and first prize in novice bitches, also special for second best bitch in all open classes. Since then she won equal first at Bray (Dublin) with Rubagas, a dog well known as a prize-winner in this country, who has since returned to England Peckham Lass is said to be extremely short and deep in face. And as she has had such a successful career, her advent here is looked forward to by the bull-dog men.

The Gordon Setter Club has been trying to have their breed known only as Gordon setters, and now we are informed from the following letter that the A. K. C. has acceded to their request, and hereafter bench show committees should head this breed of dogs as "Gordon setters" only in their catalogues and premium lists. This relieves the Gordon setter of the special legislation of the 62½ per cent. resolution and puts it on a par with other setters.

[COPY.]

NEW YORK, Dec. 14.—Mr. A. P. Vredenburgh, Secretary American Kennel Club: In accordance with the request of the Gordon Setter Club of America the stud book committee of the American Kennel Club decides that all black and tan setters which are entitled to be registered as such in the American Kennel Club stud book under A. K. C. rules, as well as all black and tan setters heretofore registered in the stud book as American Gordon setters or Gordon and black and tan setters, be known as Gordon setters; and that the class or term "black and tan setters" be hereafter dropped from the stud book.—JAS. WATSON, Sec'y A.K.C. Stud Book Committee.

We hear that Mr. Henry Brooks is importing the noted Scotch terrier bitch Zenberry (?), giving $325 for her. She was third at last Crystal Palace show.

Champion Harper, the bulldog, will have a hard time to remember who is really his master, he has changed hands so often lately. Milwaukee will now be his home, together with Countess of Norfolk, and Attraction, one of the best bull-terrier bitches in the country, comes to Mr. Dole's kennels as a result of the deal.

Speaking of bull-terriers the cables are waxing warm with negotiations for a bitch, that according to *Stock-Keeper's* "retrospect," has created a great sensation on the other side. Mr. Dole has sold champion Monty, a winner of fifty firsts in England, to Mr. Geo. W. Clayton, Burlington, Ia.

A capital poodle was brought into the show at Albany for sale. A son of champion Styx, he has a great look of his sire, and is on the way to having some good cords and is good enough to hustle the great Dexter.

We always associate the commencement of the spring circuit of shows with the receipt of the Westminster Kennel Club's premium list. On glancing through this programme for the sixteenth annual show we find that it surpasses all previous efforts. A great deal more money is given and the different specialty clubs have liberally shown their appreciation of the standing this dog show has in the minds of all exhibitors. Mastiffs, St. Bernards, greyhounds, pointers, all setters, collies and smooth fox-terriers have divided challenge classes with prizes of $20 and $10 and open with $20, $15, $10 and $5, and puppy and novice classes $15, $10 and $5. No one need grumble at that, surely. Great Danes have the same but the challenge class is not divided. Deerhounds and spaniels have challenge classes with prizes of $15 and $10. The other classes with $20 $10 and $5 are for deerhounds, foxhounds and spaniels. Other breeds have $15, $10 and $5 except schipperkes, which are given $10 and $5. Most of the important breeds have puppy and novice classes with the same liberal inducements offered. We

have not space to enumerate the host of valuable specials ranging from $10 to $500 in value. The usual club kennel prizes of $25, $15 and $10 are given for different breeds according to importance. Altogether the W. K. C. must be congratulated upon the fact that it does not rest upon past laurels, but still strives to excel all other shows in reality as it does in sentiment, for a win at New York is the *ultima thule* of all exhibitors, and the money to be won is not all the attraction. The names of the judges have already been given, and—with the exception of Mr. Geo. Raper, who is so well known as thoroughly qualified for any task that may be set him in this particular, and Mr. William Tallman, whose name we are pleased to see on the list, as exhibitors will be guaranteed a careful examination of the Irish setters and a conscientious and capable decision — are familiar to past exhibitors at this show, and the list is a good one. Under Mr. James Mortimer's well known and very capable superintendence the show is bound to be a success. The entry fee of $5, exclusively spoken of before in these columns, is intended to curtail somewhat the immense entry, so that every exhibit shall be on the ground floor. Spratts Co., of course, bench and feed, and the show will be disinfected with Walker's disinfecting sawdust. Entries close Feb. 8 with Mr. James Mortimer, 44 Broadway, New York city.

The great Sir Bedivere and the bitch Hepsey are on the market. This may be a surprise to many, but is none the less true, so we were told at Albany.

Among the dogs for sale this week we notice that Handsome Brook Kennels have cocker spaniels; H. G. Hammett, bull-terrier pups; Box 513, foxhounds; Glendyne Kennels, Irish setter pups; Box 75, pug and toy spaniels; Fairmead Kennels, Great Danes. At stud, Chestnut Hill Kennels have collies and Irish terriers, and Wyoming Kennels St. Bernards. Boarding kennels advertised are the Retnor and Liberty Kennels.

From New York to Charleston, S. C., and then up to Albany, N. Y., is a far cry, but the FOREST AND STREAM representative managed to do both shows within the four days, leaving New York Monday night.

GREAT DANES.—Philadelphia.—*Editor Forest and Stream:* In reply to "Stewart's" inquiry as to temper, etc., of great Danes, the "Great Dane Monograph" will give full particulars of this breed, which is, I firmly believe, unequalled for the combined qualities of gentleness, having intelligence and general desirability as companion, guardian or house dog. The FOREST AND STREAM can doubtless furnish copy. Pages of FOREST AND STREAM could be filled with instances of the wonderful kindness and intelligence of these dogs, and I know from experience that they naturally become efficient protectors of children, women, and their masters.—A. M. JAGGARD.

UNITED STATES FIELD TRIALS CLUB.—Indianapolis, Jan. 10.—*Editor Forest and Stream:* The annual meeting of the United States Field Trials Club will be held in the Palmer House club room, Chicago, Ill., Thursday, Feb. 11, at 2 o'clock P.M.—P. T. MADISON, Sec'y.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Charming May. By Jas. Black, Sheepshead Bay, L. I., for blue greyhound bitch, whelped May 28, 1891, by Prince Albert (Macpherson—Brighton Lady) out of Grace Briant (Aberbrian—Grace Ridley).

DEATHS.

William Tell. Liver and white pointer dog, owned by C. A. Parker, Jan. 1, of paralysis.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.

F. E. A., Waterbury, Vt.—Will you kindly advise me as to whether in your opinion a pointer dog some 19 or 20 weeks old is too old to attempt to train by Hammond's method? He was one of a litter of thirteen and was certainly too small and weak to do anything with when he was eight weeks old, but he has developed into a good-sized pup, and is now strong and healthy, and being of good breeding and the best in the litter I want to make something out of him if I can. It seems hard to teach him anything, as he is headstrong about obeying, but is a very timid dog—seems afraid of everything. Ans. We should say he is not at all too old. Patience, perseverance and kind treatment will no doubt bring him on all right.

Business.

NORTH TARRYTOWN, N. Y., Dec. 29.—*Editor Forest and Stream:* Please send me ten or twelve sales and a few visit blanks and oblige. I have a list of sales I wish published in your paper, as all were made through your journal. As an advertising medium the FOREST AND STREAM beats any paper I ever advertised in, and I believe I have tried them all. WM. H. HYLAND.

Rifle Range and Gallery.

AMATEUR REVOLVER CHAMPIONSHIP.

TARGETS for the Western marksmen who will participate in the first bout for the Revolver Championship have been sent to the Western representative and shoots have been arranged for in Cincinnati and also at Chicago. This will bring a number of good revolver shots from that section into competition with the Eastern experts with the small weapon. In Boston a number of the clever revolver shooters there are fixing upon a time for a general shoot, and with one, or possibly two, more evening shoots in New York city, at Conlin's and the New York Pistol Club galleries, the competition will close. As soon as those dates are announced the last call will be made for entries and as soon as possible thereafter the count up will be made.

"FOREST AND STREAM" TOURNAMENT

FOR NEW JERSEY RIFLE CLUBS.

THE following scores were made last week in the FOREST AND STREAM tournament:

Essex Indian Rifle Club vs. Essex Amateur Rifle Club, shot on Essex Amateur range, Jan. 5, distance 25yds.:

Captain, L. P. Hansen. Scorer, C. Boag. Judge, John B. Perry.

Clubs competing in the FOREST AND STREAM tournament are reminded of the fact that they must mail to this office the scores of a match within twenty-four hours after said match is shot. Monday and Tuesday night scores should be mailed the same night in order that they may appear in the current issue of the paper. Hereafter a score sent in after the expiration of twenty-four hours from the time the match is shot will be declared void. The secretary of the home club should attend to this matter.

The following changes are announced in the schedule: Our Own vs. Jefsen, on Our Own range, announced for Thursday, Jan. 21, will be shot on Tuesday, Jan. 19. The dates for the matches scheduled for Feb. 22 and May 30 will also be changed, as both of these dates are legal holidays on which riflemen do not care to be tied down to match work. Due notice will be given of the dates substituted in place of those above mentioned.

Owing to a delay on the part of the printer the targets were rather late in reaching the clubs. The Standards of Jersey City traveled to Newark on Jan. 8 to shoot against the Volunteers, but owing to the non-arrival of the targets the match did not take place. Another date will be set for the above match.

The following is the schedule of matches for the balance of January:

Home Ranges.					Home Ranges.		
Mon., Jan.	18.	Essex Am....	vs.	Palisade	Mon., April		4
" "	18.	Hudson.....	vs.	Excelsior....	" "		4

New Jersey Rifle Shooting.

[*Specially Reported for Forest and Stream.*]

HEADQUARTERS OF CLUBS.

Miller R. C., 80 Hudson street, Hoboken.
Union R. C., 223 First street, Hoboken.
Friday Night R. C., 210 Washington street, Hoboken.
Excelsior R. C., 78 Montgomery street, Jersey City.
Palisade R. C., 254 Palisade avenue, Jersey City Heights.

EXCELSIOR RIFLE CLUB, Capt. L. P. Hansen, Tuesday, Jan. 5. The following scores were made in the shoot for weekly class medals:

L P Hansen	25	25	25	24	24	24	24	23	23	23—240
W Channing	25	25	25	25	24	24	24	23	23	22—238
F Kittridge	25	25	25	24	24	23	22	22	22	21—233
W H Hallowell	25	25	24	24	24	24	23	22	22	21—233
C Boag	25	25	24	24	23	23	23	22	22	20—231
J Speicher	24	25	25	23	23	21	20	19	18	18—217
W Weber	25	24	24	23	23	22	21	21	21	21—225
J Hughes	25	24	24	23	23	21	20	20	20	20—220
C Bauchle	25	25	23	23	23	23	22	22	22	21—228
C L Penney	25	25	24	24	24	23	22	21	21	21—230
Thos Hughes	25	25	24	24	23	22	21	21	20	20—224

The medal winners were: First class, L. P. Hansen, 240; second class, C. L. Penney, 230; and third class, C. Boag 231. Chris Bauchle entertained the members with a wild story of life with the Fiji Islanders. His incomparable several X's mixed ale drops were also on hand. A slight mistake in regard to the Miller—Excelsior match in the "Forest and Stream Tournament" appeared last week. It read Miller 1,145, Excelsior 1,152. It should have been Miller 1,154, Excelsior 1,152.

MILLER RIFLE CLUB, Hoboken.—Capt. Richard W. Dewey. Wednesday evening, Jan. 6. The following scores were made in the shoot for weekly class medals. Ten shots, off-hand, 25-ring target, possible 250:

First Class.

D Miller	25	25	25	24	24	23	23	23	23	22—237
F Brandt	25	25	25	24	24	24	23	23	22	22—237
A Meyns	25	25	24	24	23	23	23	22	22	21—232
Capt. Dewey	25	25	24	24	24	23	22	22	22	21—231
F Lieli	25	25	24	23	23	23	23	22	22	21—230
L Sohl	25	24	24	23	23	23	22	22	22	21—227

First Class medal was won by Dave Miller with a score of 237.

Second Class.

J H Kruse	25	24	24	24	23	23	22	22	22	21—230
J Carragher	25	25	24	23	23	23	23	21	21	19—227
R Zoch	25	24	24	23	23	22	20	20	20	20—221

Second Class medal was won by J. H. Kruse with a score of 230.

Third Class.

H Seltenreich	25	24	24	23	22	22	22	22	22	20—226
A Stadler	25	25	24	24	23	23	21	21	21	18—225
H F Meyer	25	25	24	23	22	22	22	19	16	15	213
F Kammel	24	24	23	22	21	21	19	19	17	16—206

Third Class medal was won by H. Seltenreich with a score of 226.

The regular monthly meeting followed. H. Fred Meyer was elected a member. Treasurer Ernest Fischer made his report in regard to the late two-days' shoot, and reported a total gain of $65. The secretary was notified to acquaint every member with the fact that the yearly election for officers will take place on the first Wednesday in February. A motion was made and passed to donate a handsome gold medal to the member selling the most tickets for the coming festival of the club at the Union Hill Schuetzen Park on Decoration Day. This will no doubt prove a hard fight between Capt. Dewey, who usually had a walk over, and Fred Meyer, new member elected, as previously mentioned, on Jan. 6. The latter is a hustler in the ticket selling line, he having disposed of over 200 tickets for an affair of a social organization of which he is a member. He says Captain Dick will have to sell over 300 to win the medal. A motion was also made, to be acted upon at the next meeting, in regard to non-attendance of officers and members. A merry social session followed.

NOTES.

The Standard Rifle Club have withdrawn from the FOREST AND STREAM tournament. A majority of the members found that it required too much persuasion to get their better shots to leave the city and meet other clubs, and another reason is that a number of clubs found that the club possessed but one range, and it would take too long to shoot the home matches. In case two or three of the best shots stayed away, the only men that could be put in would be good for about 190 each out of a possible 250. What further acted as a damper on their feelings occurred a week ago Tuesday, when they went to Newark to shoot the Volunteers and found that no FOREST AND STREAM targets had arrived.

The Jefsen Club's team showed up poor in their first match making an average of about 198. It was their first match, and they were all attacked by the disagreeable feeling which attends the members of a team shooting their first matches.

J. H. Kruse was entered by both the Standards and Palisades. He was to shoot through the season with the first club he shot with. By mistake, his name was not published in the Palisades team in the FOREST AND STREAM when the names were published. If any one will take the trouble to look back, it can be seen that the Palisades have only nine names entered. As the Standards, of Hoboken, have withdrawn before shooting a match, Mr. Kruse will now shoot with the Palisades.

NEWARK, Jan. 13.—The annual meeting of the Our Own Club was held last evening, the reports of the officers being very flattering. The election of officers under the new by-laws resulted as follows: President, Andrew Mihlon; Recording Secretary, Albert Wolf; Financial Secretary, Chas. Miller; Statistical Officer, C. H. Townsend; Captain, John Bander. Shooting Committee, W. H. Watts, Chairman. Bowling Committee, J. M. Kiefer, Chairman. Athletic Committee, F. W. Fetting, Chairman.

The Wurffleins.

PHILADELPHIA, Jan. 8.—The regular weekly practice of the members of the Wurfflein Rifle and Pistol Association at their private range, 227 North Eighth street, for the week ending Jan. 8, at 25 ds., American ring target, using Wurfflein rifles, .22cal., off-hand. Below is the official score:

H J Mehard	22	23	24	24	25	25	21	25	25	24—238
J J Mountjoy	25	23	22	24	24	23	23	24	24	23—234

WALTER WINANS, THE REVOLVER CHAMPION.

A View of the Expert as he Appears before the Bisley Butts.

FROM a well-taken photograph FOREST AND STREAM to-day presents a capital picture of Mr. Walter Winans as he appears in the act of making one of his star targets during the recent Bisley meeting. The view lets the reader right into the midst of the great English shooting gathering. There is the line of shooters crowded along in not very convenient fashion, with the smoke of one revolver blowing down the line to bother the other marksmen. There are the members of the regular army who are employed by the National Rifle Association from year to year to act as score keepers, markers, and in clerical work generally. The system of the great range during a big meet is of the most exact sort. There are so many targets, so many minutes in the shooting hours of the day, and so many men down on the entry lists. It is then merely a matter of figures to make the men fit into the hours and to have the hours fully occupied at all the butts. The schedule of shooting assignment is made up weeks in advance and an entry is required to present himself at a certain target firing point on a certain line of butts at a certain moment in a certain hour of a certain day during one or the other week of the fortnight's meeting. He may catch a roaring morning wind with rain accompaniment, or he may hit the calm gray light of an afternoon. Hardships apparently are worked under the system, but a lack of some such method would knock the whole meeting into hopeless confusion. This exact method is particularly operative in the rifle end of the work. The revolver shooters have a much more free and easy go-as-you-please system. Entries may be made at the firing point, and the competitors in this way have a choice of weather conditions. This is simply because the shooters are few and the butt facilities ample. In time, when the revolver shots grow in number, entries long preliminary to the meeting will be the rule, and the same schedule as now holds for the riflemen will prevail.

WALTER WINANS, THE REVOLVER CHAMPION, AT THE BISLEY BUTTS, JULY, 1891.

As the ranges were arranged for the recent meeting, the revolver range was on the extreme left, near the "running deer" (which range is also used for the "running man"), next the stationary range for hunting rifles and next to that the 1,000yds. range. The volunteer ranges were further off to the right. By this arrangement the civilian members of the English National Rifle Association have all their ranges together, separate in a measure from the great throng of volunteer militia shooters.

The revolver range is about as perfect as it well can be. There are two disappearing targets and two sliding targets, which move sideways, all at 20yds., the firing points being on a line with about 6ft. between each competitor, except at the sliding targets, where the space is some 12ft., there is no partition between competitors, which is a great comfort to competitors, as the old wooden partitions used to almost deafen one by confining the noise of the explosion, even the boards behind the target and down the side (which used to add to the echo and noise) have been done away with, the boards at the side being unnecessary for safety, as the firing point is in line with the "running deer" and other firing points, so that nobody gets forward in a dangerous position. The objections to the range is that it faces the setting sun, making it unpleasant in afternoon work, and the exposure of the site when the wind is high.

The bullets are stopped after they go through the cardboard targets by an earth butt, covered with grass, some 12yds. behind the targets, not close up to them, as the boards used to be. This will still further deaden the noise. The tickets for entries are sold at a little wooden house between this range and the "running deer," and the range is roped off to prevent spectators getting too close to the competitors.

In the course of a meeting about a thousand entries are made in the revolver shoots. The majority are civilians or militia and volunteer officers who have little personal interest as competitors in the rifle matches.

Before the year 1885 there was no revolver shooting of any account done in England, there being no clubs for that purpose, and the English National Rifle Association not giving any prizes for that arm, so there was no inducement for men to practice.

In the year 1885 the English National Rifle Association gave a series of prizes for revolvers at their annual meeting at Wimbledon, but they were so afraid of accidents that it was confined to officers of the army. The scores made were very poor, the top one being 34 out of a possible 36, on a 31in. bullseye (counting 6), at 50yds.

The next year, 1886, the scores were still very poor, 35 points winning the first prize. An American, Mr. Walter Winans, was allowed, as a favor, to shoot a few shots, but not for competition, as the prizes were still confined to English officers. In this year several revolver clubs were started in London, the principal one being in connection with the South London Rifle Club; at this club Mr. Walter Winans won the championship for the year with a score of 64 out of a possible 72, at a 3in. bullseye, at 25yds. (which still stands as the English revolver record at this distance), and took the gold jewel of the club (using a Colt's revolver). Both he and Mr. C. F. Lowe beat the scores (at 20yds.) made at Wimbledon by the officers, so they would most likely have won first and second prizes there if they had been allowed to compete.

In 1887 for the first time the revolver competition at Wimbledon was thrown open to others than officers, as members of the English National Rifle Association were allowed to compete. As Mr. Walter Winans is a member he was allowed to shoot.

The target and rules were different this year. The targets consisted of the head and shoulders of a miniature man cut out of a wood board, with a bullseye 4×5in. marked in the center in outline. The prizes were divided into two series, one at targets moving across the line of fire (very slowly), and the second at a target rising and disappearing at intervals of five seconds. Distance as usual 20yds.

As may be imagined there was no difficulty in making highest possibles at these for any one who could shoot worth a cent (especially as after a few shots at the disappearing target the partition behind it got marked with the bullet holes so that competitors could aim at a spot on it and fire when the target appeared between them and it). Mr. Walter Winans made a highest possible score at both targets, dividing the prizes with several others who also made highest possibles (the rules not permitting shooting off ties).

There was also a prize given by Kynoch, the maker of a patent revolver, for the best score made by a pistol of his make at the sliding target. Mr. Walter Winans won it with a score of 23 out of a possible 24 (the next competitor being two points behind), which is the best-on-record score to this date with this make of revolver. In 1888, at Wimbledon, in the two revolver series the bullseye was reduced to 3in. (counting 6 points) on a circular target divided into rings, and the disappearing target came up at intervals of three seconds (which is its speed to the present date). Mr. Walter Winans' possible scores, using a .38cal. Smith and Wesson, gallery ammunition (the rules said "any ammunition" and Mr. Winans submitted his cartridges and had them passed before competing). He also won every competition he shot for at the South London Rifle Club that year (two shoots a week all the summer), and the championship and gold medal of the club with the same revolver.

In 1889 the Wimbledon target was altered by having a 2in. ring made in the 3in. bullseye (counting 7), and revolvers had to be not less than .45cal. and to take the English service ammunition. Mr. Walter Winans won both prizes again, the disappearing one with a Smith and Wesson altered to take the English ammunition (making a score within one point of the highest possible), which is the record score up to date; and winning the other with a Colt (which he used to show that he would shoot with any good make of revolver, a competitor having declared that it was the revolver and not the shooter that won). This score was 40 out of a possible 42, and is the record for that style of shooting.

He also won the revolver championship of the South London Rifle Club and all its competitions (some dozen) he shot in, using a Colt revolver.

In 1889 the English National Association removed to their present shooting ground at Bisley.

The revolver prizes were the same conditions as the year before. Mr. C. Haig, a very fine English shot, won both with a Colt revolver, making 39 points in both (Mr. Walter Winans, though present, was not permitted by his doctor to shoot, having only just recovered from a severe attack of typhoid fever). Mr. Haig is the gentleman who came next to Mr. Winans in 1887 and 1888.

The year 1891 brought no diminution in the interest. There were several thousand entries, and as usual Mr. Walter Winans, though suffering somewhat from the effect of a powder flash which had reached his eye, led in all of the three matches and also in the revolver aggregate. As showing the close competition in the scoring the leaders in each of the competitions are given:

FIRST SERIES.

Six shots at a target about 20yds. distance, and moving across the line of fire at about the rate of the "quick march." No sighting shot allowed:

Mr Winans, N R A (Smith & Wesson), first prize...39
Mr Haig, N R A (Colt).....39
Pvt Green, 2d Gloucester (Green).....37
Pvt Martin, 10th Lanark (Colt).....36
W W C Dixon (Webley)...35
Capt Barchard, Inspector of Musketry (Colt).....35
Maj McKerrell, 1st V B R Scots (Colt).....34
Lieut Tryon, 1st Battery Grenadier Guards (Colt).34
Capt G Hamilton, 14th Hussars (Colt) 34
Pvt Ellicott, 2d Cornwall (Colt) 33
D Wilson (Webley).....33
Capt Lamb (Colt).....32
Maj Williamson (Colt) 32
Mr Breton (Colt).....32

SECOND SERIES.

Six shots at a target appearing and disappearing at intervals of three seconds at a distance of about 20yds. The following are the best scores:

Mr Winans, N R A (Smith & Wesson)... 40
Mr Haig, N R A (Colt).....39
Dudley Wilson (Webley)...38
M Breton (Colt)..... 36
Mr Dixon, N R A (Webley)36
Maj McKerrell, 1st V B R Scots (Colt) 36
Mr Green (Green) 36
Capt Cowan (Colt).....36
Pvt Carter, 1st Stafford (Webley).....35
Capt Lamb, Cheshire Regt (Colt).....35
Surgeon Warren, N S W M I (Webley)..... 34
C M Hall, Canada (Colt)...34
Capt Lamb, Cheshire Regt (Colt) 33

THIRD SERIES.

The best scores made in this series are given below. Six shots are fired at a target about 20yds. distance, which is shown for twelve seconds only. No concession is given for miss-fires or any failures of the revolvers or ammunition:

Mr Winans, N R A (Smith & Wesson)..... 39
Mr Haig, N R A (Colt).....38
Dudley Wilson (Webley)...35
Maj McKerrell, 1st V B R S Fus (Colt)..... 35
Pvt Carter, 1st S Staff (Webley)..... 33
Mr Breton, N R A (Colt)..33
Capt Millner (Webley). .. 31

A Smith & Wesson engraved gold-plated .38cal. target revolver, pearl stock, to the highest scores in the above three competitions, constituted the revolver championship of England:

Walter Winans.....39 40 39—118
C E Haig.....38 39 38—116
Dudley Wilson (professional).....33 38 35—106
Maj McKerrell.....34 36 35—105
Mr Breton.....32 36 33—101

The revolver shots held a sort of fraternal advice meeting at the conclusion of the competitions, acting as an advisory committee of experts to make suggestions to the council of the N. R. A. for next year's and subsequent meetings of the N. R. A. The schedule of suggestions which was adopted is particulary interesting as showing the trend of revolver shooting in Great Britain. It stands as follows:

1. That the revolver 20yds. target should have a 2in. instead of a 3in. bullseye, also that this 2in. should not have any subdivision, as these latter give advantages to "fluking" shots, also that the value of the bullseye should not be indicated by a figure printed in white in it, as that spoils the blackness of the bullseye.

2. That the rings round the bullseye should be "hair lines," invisible from firing point, and that these lines should be very close to the bullseye for the first lines and gradually get further on the principle of the American pistol target, not at regular intervals like the English target.

Every one agreed to this except one, who said that he did not approve of imitating America, but that Bisley ought to keep to its own way of scoring.

3. That there should be more target accommodation and that "pool shooters" should be put by themselves so as not to interfere with the serious competitors.

4. That there should be competitions at 50yds, at a 6in. bullseye.

5. That revolvers should be divided into two classes, military and "any revolver," and competitions given for each.

6. That military revolvers should not have "bead" front sights or movable sights, but real practical bolster sights was proposed by Major MacKerrell and Walter Winans, but voted against by all the rest.

7. "Any" revolver to be allowed any ammunition. Caliber, sights, weight and length of barrel was agreed to unanimously, but most thought that the trigger pull should be the same as for military revolvers, viz., 4lbs., so that competitors who shoot both classes of revolvers should not be confused by two sorts of trigger pull.

The meeting was greatly in favor of a 100yds. range for pistol, as through the kindness of the Association they had been allowed to try a few shots at that distance and found they could do good shooting; but they thought 50yds. would be far enough for the next few years till the poorer shots had been educated up to long distance shooting.

The revolver competitions have been such a success, and the Council of the N. R. A. being so obliging when they know that the bulk of competitors desire anything, it is likely most of these requests will be complied with.

A Personal Sketch.

The following personal notes of Mr. Winans as an expert marksman, have been sent by a London correspondent, and will prove interesting in this connection:

Walter Winans, eldest son of William L. Winans, of Baltimore, Md., was born in Russia in 1852, at Alexandrofsky, near St. Peters, burg, his father having a contract in Russia at that time with the Russian government for the management of the St. Petersburg & Moscow Railway. Young Winans took to shooting almost as soon as he could walk, and used when very young to shoot a Flobert pistol with bread pellets. When 17 years old he shot his first stag in Scotland. Between the years 1870 and 1885 he shot 1,200 deer (nearly 1,000 of them stags) in Scotland, which is the most ever shot by one man in that country. In one season of eight weeks he killed over 120 deer (100 of them stags), a showing which has never been equalled in Scotland. Mr. Winans hardly ever shot "hinds" or female deer, since he does not consider it sportsmanlike. He has killed twelve stags at one day's still-hunting or "stalking," which is the most ever shot in one day in Scotland at stalking, and has killed seventeen stags in one deer drive, which is the most ever killed in one day (except by his brother Louis W. Winans, who has on two different occasions killed twenty stags in one day).

Mr. Winans has won several pigeon shooting competitions and clay-pigeon competitions, but does not use the shotgun much; has shot pigeons with a single barrel shot pistol, averaging rather more than half his birds.

As a rifle shot, he has won many matches, including a silver medal won at Mont Dore, France, nine prizes with the Martini rifle at 200, 500 and 600yds., and a prize at the "running man" at Wimbledon. At Wimbledon in 1886 and 1887 he won the Hillhouse cup each year for double-barrel hunting rifles at the "running deer," beating Edward Ross (the champion Scotch deer stalker and winner of the Queen's prize).

In 1886 revolver shooting was started at the South London Rifle Club, and Mr. Winans has competed there each year (except in 1890, when through illness he was unable to shoot), making the following record: In 1886 he won 23 first prizes and 2 second out of 26 competitions, winning also the gold jewel representing the championship of the club. In 1887 he won 12 out of 13 competitions and the silver jewel of the club. In 1888 he shot in 21 competitions winning 18, divided first prize twice and won second prize once, besides winning the gold jewel and championship of the club. In 1889 he shot in 12 competitions and won first prize in all, besides winning the gold jewel and revolver championship of the club. In 1890 he did not shoot. In 1891 he shot five times, winning first prize each time, and also the gold jewel and revolver championship of the club.

At Wimbledon in 1886, for the first time, others than English officers were allowed to compete in the revolver competitions. From that time up to now (with the exception of 1890, when illness prevented his shooting) Mr. Walter Winans has won every first prize in the revolver competitions. In 1886 he won all three revolver prizes, making a record in one which was restricted to Kynoch revolvers which has never been beaten by that make of revolver. In 1887 he won both first prizes in the Wimbledom revolver competitions; as the rules said "any amunition," he naturally used a light charge. At this some of the competitors, who had not sense enough to provide themselves with light amunition, "kicked," so in 1889 the rules were changed to "military amunition." Result, the same; as Mr. Winans won first prize in both the revolver competitions. In 1890 he did not shoot. In 1891 he won first prize in all four of the revolver competitions at Bisley, making his seventy-eighth revolver victory.

He holds the following world's records for revolver shooting:

Six shots at a 2in. moving target, at 20yds., army ammunition and 4lbs. trigger pull; score 41 out of 42, at Wimbledon in 1889.

A highest possible score for nine shots at a 2in. bullseye, appearing and disappearing at intervals of three seconds, at 20yds., in practice in 1891; and a score of 41 out of 42 under similar conditions for 6 shots at Wimbledon in 1889.

Six shots into a 2in. bullseye in 12 seconds with a military revolver and ammunition (Smith & Wesson), at 20yds., in practice in 1891, and a score of 39 out of 42 at a similar target in competition at Bisley in 1891.

He also holds the following records for England (in addition to the above world's records) for revolver shooting:

Ten shots in a 2in. ring at 20yds. and 15 shots in a 3in. ring at the same distance.

Sixty shots in a 3½in. ring at 14yds.

Twelve shots in a 2in. ring at 14yds.

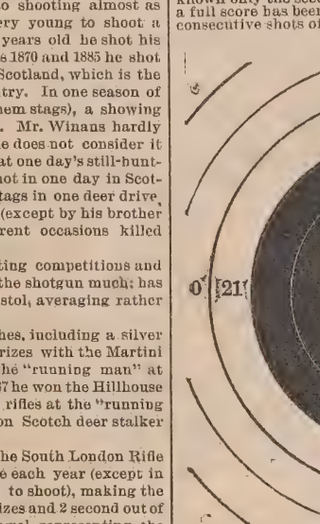
Five shots in an inch ring at 14yds.

In the course of his work at the butts he has competed at Wimbledon and Bisley seven times against the English champion professional revolver champion, Mr. Dixon, and beaten him each time.

In shooting deer or other large game there is often a difficulty in using a rifle, in the early morning or evening, on account of the difficulty in seeing the front sight. Mr. Winans has patented in England an invention designed to overcome this difficulty by means of a temporary front sight, consisting of a very small incandescent lamp, covered with a metal shield. The shield has a small hole in it, toward the shooter, through which the light shines, and is used as the "bead" in aiming. A small electric battery in the stock of the rifle generates the electricity for the lamp. This device has been tested by the editor of the London *Country Gentleman*, who has expressed himself as much pleased with it.

Mr. Winans is very fond of fox hunting, and hunts five days a week during the hunting season, he also drives 2:20 trotters. To his other accomplishments are added those of art—he is known as a talented artist, sculptor and etcher. Of a practical turn of mind as well, he has patented a lady's side saddle, in which the pommels fold flat so as to prevent their injuring the rider in case of the horse falling and rolling on its rider.

Mr. Winans is at present at work at a piece of sculpture for the Chicago exhibition.



In conclusion let me note an interesting fact, which may help to explain Mr. Winans's steadiness of nerve and his sure aim: He has never smoked in his life, never drinks beer or spirits, and hardly ever touches wine (only when ordered to do so by his doctor); so, practically, he is a teetotaler. BOW BELLS.

THE WINANS TROPHY.

It was only natural that Mr. Winans should wish to see his favorite pastime become general among his American countrymen. He knew that the best revolvers in the world were of American make. He himself led the British shooters with a Colt and after with a S. & W. revolver, and while there came over such experts as Paine and the Bennett brothers, and while there was in the aggregate a large amount of revolver shooting done in America, the fact remained that there was no recognized championship here, no system as to distances, etc., and that no general competition had ever been held to test men and weapons. The offer of the Winans Trophy followed as a matter of course, and with its scoring the start will be made in placing on a satisfactory basis the now inchoate and muddled question of revolver records in America.

Dorrler's Fine Holding.

BELOW will be found a full-sized fac-simile of a full-score target shot by M. Dorrler, the champion gallery shot, on the Zettler range, 219 Bowery, this city, on Dec. 29, 1891. This is so far as known only the second time in the history of rifle shooting that a full score has been made on this target. The conditions were 10 consecutive shots off-hand (with left elbow on hip), distance 92ft.,

Ballard 5½lb. .22-cal. rifle. Every one of the shots cuts full into the 25-ring, the score being 250 out of a possible 250. As Mr. Dorrler says, "Such targets are rare, and once a man secures a full possible he is bound to be happy."

Mr. Dorrler's past exploits both in the gallery and on the 200yds. ranges have placed him in the very first rank of riflemen. His best work in a gallery was done about two years ago, when he made 2,447 out of a possible 2,500 in a 100-shot match on the Our Own range in Newark.

National Rifle Association.

AT the annual meeting of the National Rifle Association, held at its office in Temple Court, New York, Jan. 12, Directors Geo. W. Wingate, Joseph G. Story, John Ward and Bernard Walther were re-elected for three years, and Gen. Chas. F Robbins elected to the vacancy in the Board. The report of Secretary John S. Shepherd is as follows:

NEW YORK, Jan. 12, 1892.

Mr. President and Life Members of the N. R. A.:

Your secretary submits the following report of the transactions of the Association for the past year. The last annual meeting was held on Jan. 13, 1891, at the Seventh Regiment Armory, at which time the following named directors were elected: Messrs. Broun, Duane, Shorkley, Shepherd and Bruce, for the term of three years, and Messrs. Duffy, Oliver and Rand for two years; the officers of the Association were all re-elected at a meeting of the board of directors held the same evening. Including those whose terms of office expired to-day we have seven vacancies in the board. The treasurer's report shows a balance on hand Dec. 31 of $895.74, at which time there were no outstanding bills; the difference between this amount and that on hand the first of the year, is some $225, which represents the deficit of the fall meeting. The meeting netted a smaller loss than for several years past, the attendance was not as large as we had hoped for, but this can be partly accounted for by the fact that several of the neighboring States, that in former years sent teams to Creedmoor, held annual meetings at about the same time. The inter-State and Hilton trophy matches were won by the team representing the State of New York, the only other team being that from the District of Columbia. The weekly matches again show a steady gain both in the number of competitors participating, and in the scores made. From July 4 to election day there were 18 matches, 9 for each class. In the marksman's badge matches (200 and 300yds.) 900 of the 1100 competitors won the State decoration, while in the sharpshooter's match at 500 and 600yds., 200 out of 400 men made the necessary 42 points or over as against 150 the previous season, and the sale of tickets for this match alone amounted to $1,900, while the net profit to the Association in the two matches was over $1,400. We are again indebted to Messrs. Tiffany & Co., Messrs. Benedict Bros., and the staffs of the First and Second Brigades for valuable prizes, and to the *Army and Navy Journal*, FOREST AND STREAM, *Spirit of the Times*, *Shooting and Fishing*, *Turf, Field and Farm*, and the *Volunteer Service Gazette* for copies of their regular publications. The State Commissioners acquired by purchase and condemnation some 80 acres of land adjoining the Creedmoor Range, and materially increased its usefulness by replacing the old iron targets on the west range with 20 double canvas targets of the Brinton pattern, that can be used up to 600yds. To make the range what it should be, about 50 acres more should be purchased and a large amount of work done on the range proper, and I would urge every member to do all in his power, and to use his influence with the proper authorities to accomplish this object.

Respectfully submitted, JOHN S. SHEPHERD, Sec'y.

Drill Regulations.

THE new code of military instruction has abolished the old-time tactics and now drill regulations will govern the movements of regular and, in many cases, of militia forces. Individual endeavor is to be exalted instead of concerted action. In the new regulations the marksman is pushed forward to his proper prominence, and the greatest efforts are made to teach the men the necessity of not wasting their ammunition and making their fire as effective as possible. Here are some of the general rules:

Never load until the movement for firing.

Never fire except when ordered, and then only the number of cartridges indicated.

Never fire after the command or signal cease firing.

Never fire except at the named objective.

Never fail to adjust the sight at the range named.

Always aim at the feet of the enemy or, if he is hidden from view, at the lower line of smoke.

Notwithstanding these rules, it is allowable, especially for scouts, to fire when necessary:

(a) To give the alarm.

(b) When a good opportunity occurs to fire upon a leader of the enemy.

(c) In self-defence.

Individual men who may be acting beyond the immediate control of leaders will observe the following:

They will not fire at distances over—

400yds. at a man lying down.

500yds. at a man kneeling.

600yds. at a man standing.

700yds. at a horseman.

800yds. at a small squad of men or a line of skirmishers.

Sharpshooters may, when permitted by an officer, fire upon the enemy at greater distances.

537. Volleys by squads are used against troops in close order at distances not exceeding—

800yds. at a line equal to the front of a squad.

1,000yds. at a line equal to the front of a platoon.

1,200yds. at a line equal to the front of a company.

These limits are not invariable; they may be exceeded under favorable conditions when the range is accurately known, but should always be reduced when the men are tired or out of breath, the range uncertain, the enemy under cover, or the conditions of wind and light unfavorable.

When the supply of ammunition is ample and the enemy is in large bodies, volleys may be fired at extreme ranges.

The fire at will and the fire with counted cartridges are used at distances ranging from 800 to 400yds.

The rapid fire is used at short ranges at the decisive moment of the attack.

The ranges are classified as follows:

0 to 300yds., short range.

200 to 600yds., mid range.

600 to 1,400yds., long range.

1,400 to 2,000yds., extreme range.

Millers vs. Manhattans.

THE Miller Rifle Club, of Hoboken, Capt. Richard W. Dewey, met and defeated the ten-men team of the Manhattan Shooting Club, of New York, Capt. Wellbrock, at the range of the latter, Zettler's Gallery, 219 Bowery, in the first of a series of best two out of three matches, for a handsome $50 silver trophy. The light was excellent. Frank Kammel was the Millers' most enthusiastic rooter, and in his own words was "ready to put his 'chink' up, too." With a few exceptions the Manhattan boys did poorly. L. Flack, for the Millers, made the highest score, 241, with Dave Miller, George Schlicht and J. Vogel a close second, with 240 each. W. Garbade and C. Eiser, for the Manhattans, led their club with 235 each, W. Lappe having 234 and H. Bulthaupt 230. The Miller team led from the start and were never passed, they winning in a canter by 131 points. The trophy is now on exhibition in the show windows of Ernest Fischer, in First street, Hoboken. The scores are appended below:

Miller Rifle Club, Hoboken.

D Miller	21	23	23	24	25	24	25	25	25	25	—240
G Schlicht	23	24	24	24	23	25	25	24	24	24	—240

H W Meyer	19	19	15	19	20	21	22	22	23	25	—202
D Wellbrock	19	21	21	22	23	23	22	22	23	25	—221—2225

The scorers were Messrs. Wellbrock and Dewey. The referee was Michael Dorrler. At the close of the match refreshments were served to which all paid due attention. The next match takes place on the Miller Club's range, 80 Hudson street, Hoboken, on Wednesday evening, Jan. 13. The Millers' average was a fraction over 235, while the Manhattans' was $222\frac{5}{10}$.

Walnut Hill.

BOSTON, Jan. 9.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day. The directors' match was shot, Mr. Fellows winning the gold medal. Messrs. Fellows, Carter, Busfield and Bergholtz won association medals. Following are the scores made to-day, distance 200yds., standard American targets, all re-entry matches:

All-Comers' Off-Hand Match.

W Charles	84	W C Hawley	77	I B Thomas	65	
J B Fellows	81	O Moore	74	S Gleason	63	
A Sharp	79	E H Foote	73			

All-Comers' Rest Match.

J Francis	115	J W French	100	J B Hobbs	87	
O Moore	112	M T Day	99	D Martin	85	
A H Ballard	105	D N Winn	96	A S Hunt	83	
I B Thomas	104	H N Haven	91			

Pistol Practice Match—50yds.

E H Foote	85	A D Stevens	81	D N Winn	74	
P S Day	84	J B Hobbs	76	I D Snow	72	
M R Barter	82	A S Hunt	75	F W Hooper	71	

Third Brigade N. G., N. Y.

ALBANY, N. Y., Jan. 7.—The following scores were made by the Third Brigade Rifle Association, Standard American target, off-hand:

Major Chas. Gaus	10	6	7	8	10	6	9	10	6	8	—80
	10	8	9	8	8	10	8	5	8	7	—81
W C Gomph	7	5	6	5	8	8	6	7	10	10	9—74
	8	10	10	8	5	7	10	10	9	9	—86
Wm T Mayer	5	8	5	6	7	6	8	8	10	6	—69
	10	6	10	3	9	3	3	7	6	6	—63
Capt A Donner	6	6	4	10	8	8	8	7	9	9	—75
	5	8	7	8	10	6	7	5	5	3	—69
Geo Zautner	4	7	8	6	6	8	10	6	9	7	—71
	10	8	10	9	6	9	7	6	7	9	—81
J B Taylor	6	6	9	9	5	9	5	8	10	5	—72
	6	8	10	8	10	8	10	8	10	6	—84

W. C. G.

Empire Rifle Club.

NEW YORK.—The following scores were made by members of the Empire Rifle Club at their last shoot, held on the 5th inst., at their headquarters, 12 St. Mark's place, 10 shots on the 25-ring target, distance 100ft., possible 250 points:

J Grimm	238	W Maisenholder	226	G Tallman, Jr.	209	
W Miller	236	C Zettler	217	G Hillmeyer	208	
H Zettler	228	A Nowak	215	G Bernhardt	203	
W Rosenbaum	227					

W. MILLER.

Garden City Rifle Team.

CHICAGO, Jan. 6.—The Garden City Rifle Team met for their weekly contest last evening at Geo. McCune's Shooting Gallery, 146 South Halsted street. Conditions were: 25yds., 25 shots each, open sights, free off-hand position, Massachusetts paper target, possible 300 points: W. J. Gibbs 268, Geo. McCune 262, H. S. Burley 261, Roy Taylor 254, G. L. Cutler 252.

Trap Work Over the Snow.

WELLINGTON, Mass., Jan. 9.—There was a fair attendance at the grounds of the Wellington Gun Club to-day. The light was rather dazzling for good shooting, the reflection of the sun on the snow making it rather difficult to sight the birds. The winners in the several events follow: Six targets, Gale; 3 pair targets, Herrick; 5 targets, Archibald; 6 targets, Bennett and Cowee; 3 pair targets, Cowee and Herrick: 5 targets, Cowee; 6 targets, Bennett; 10 targets, keystone match, Cowee; 10 targets, keystone match, Gale; 6 targets, Bennett; 3 pair targets, Gale; 5 targets, Stone and Cowee; 6 targets, Climax, Archibald and Bennett; 3 pair targets, Gale; 5 targets, Cowee; 6 targets, Stone, Archibald and Herrick; 10 targets, keystone match, Herrick and Bennett; 10 targets, keystone match, Climax.

Trap Shooting.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Jan. 14.—Newark Gun Club, monthly club and open shoot, at live birds, on John Erb's Old Stone House grounds, Bloomfield avenue, Newark, N. J.

Jan. 16.—John Erb's grounds, Newark, N. J., 100 bird match, for $100 a side, between Gus. Freche and Chris. Reinhardt. Also Cole vs. Wells, 15 birds each, for $25 a side. Open sweepstake shooting to follow.

Jan. 16.—South Side Gun Club, weekly shoot at artificials, Newark, N. J.

Jan. 16.—Amateur Gun Club, weekly shoot at artificials, Newark, N. J.

Jan. 21.—Willimantic Rod and Gun Club, all-day's tournament, at artificial targets, Willimantic, Conn.

Jan. 21.—Essex Gun Club, monthly shoot, at live birds, for club members only, at Mar on, N. J.

Jan. 23.—John Erb's Old Stone House grounds, Newark, N. J., match and sweepstake shooting, at live pigeons.

Jan. 26-28.—Hamilton Gun Club, grand live pigeon and artificial bird tournament; $1,100 guaranteed. A. Smyth, Sec'y-Treas., Hamilton, Ontario, Canada.

Jan. 28.—Atlantic Rod and Gun Club, team of two match, 50 birds per man for $100 a team, West End, Coney Island.

Feb. 9-11.—Reading Shooting Association's tournament, Reading, Pa.

April —.—Ridgewood Gun Club tournament, at Ridgewood, N. J.

May 17-20.—Annual tournament of Kansas City State Sportsmen's Association, at Council Grove. G. W. Cleek, Sec'y.

June 6-11.—Eighteenth annual tournament of Illinois State Sportsmen's Association, at Chicago. W. L. Shepherd, Sec'y.

June 13-18.—New York State Association's Thirty-fourth Annual Convention, at Syracuse, N. Y. Chas. H. Mowry, Sec'y.

Manufacturers' and Dealers' Association tournaments:

Baltimore, Md. Second week in March.

Staunton, Va.—Second week in April.

Savannah, Ga.—First week in May.

Pittsburgh, Pa.—Second week in May.

Brooklyn, N. Y.—Second week in June.

Watertown, N. Y.—Fourth week in June.

DRIVERS AND TWISTERS.

THE new magazine shooting vest is one of the latest novelties, and unlike many others that appear from time to time, it seems to have considerable merit. On either side of the front of the vest are four tubular pouches, each of a length sufficient to hold six shells. The upper ends of these pouches are protected by a flap, while the lower ends part way down into a convenient pocket. The shells are inserted into the top of the tubes and are delivered directly into the hand as needed. The arrangement admits of a proper and comfortable distribution of weight, protects the shells from dampness, makes it impossible to lose a shell and withal the vest presents a neat and substantial appearance. The Fairfield Rubber Company is to be commended upon its enterprise in presenting such a convenient article to the sporting world.

* * *

A big crowd of lovers of trap-shooting are expected to visit the grounds of the Atlantic Rod and Gun Club, on Coney Island, Jan. 28, when the attraction will be a live-bird shoot between two teams of well known experts. Judge Newton and Judge Sutherland will comprise one team, and their opponents will be G. F. Kleist and A. C. Jamison. The conditions are 25 live birds per man, 25yds. rise, for a purse of $200.

* * *

The Fountain Gun Club will hereafter hold a clay-pigeon shoot on the last Wednesday of each month. The member making the highest average in six shoots will become the happy possessor of a handsome gold medal.

* * *

C. H. Burbridge, the well-known and popular trap expert of Hartford, has constructed a 40yds. testing range on the grounds of the Hartford Gun Club, and is carrying on an extensive series of experiments with smooth-bores. The target is an iron plate 36in. square, with a 15 and 30in. circle. For testing the penetration a box open at each end is used, containing a number of card boards .045 of an inch thick, with ½in. space between. In addition to this a simple device is used for testing the velocity of a charge of shot. Mr. Burbridge claims that the object of these tests is to establish what is the proper load of nitro powder to use in a 12 gauge gun, and after testing over 100 shells (loaded with nitro powder) such as are now used by many of the leading trap shots, claims that shells supposed to be all loaded alike produce too many unaccountables, and says that if the shooters could see all the unaccountables with these hand-loaded nitro powder shell they would cry their eyes out, and that he will soon demonstrate that without changing either the shells, wad or quantity of powder or shot in the loads such as are now used that the velocity may be increased 30ft. in 40yds. This will be obtained by the amount of pressure on the wads, and shells to be loaded uniform must be loaded on an automatic loading machine.

* * *

The various cartridge companies have done themselves proud in the handsome work done on their 1892 calendars.

* * *

A large number of sportsmen braved the elements of Jan. 12 to go to Al Heritage's Marion grounds and see a 100-bird match between Fred Lumbreyer of the Larchmont Y. C. and Frank Class of Pine Brook, N. J. Mr. Lumbreyer was on hand but Mr. Class failed to materialize, nor was any word received from him. Naturally the yachtsman felt aggrieved, and demanded the forfeit of $100 which had been placed by Mr. Class in the hands of L. Westervelt of New York. On Saturday last I was informed that on Wednesday Mr. Class was in his bed under a doctor's care. If this is the case I am confident that Mr. Lumbreyer will not retain the forfeit money, but will take his chance of shooting the match when his Pine Brook opponent comes back to shooting form.

* * *

The Amateur Gun Club, of Newark, is moving to the front with rapid strides, although but one year old. The club is comprised of enthusiastic shooters, and its Saturday shoots usually call out the full strength. On Jan. 5 the annual meeting was held, and the reports of the officers showed that the organization was in a flourishing condit on. The election of officers for the ensuing year resulted as follows: President, Wm. Eckert; Vice-President, R. Limpert; Recording Secretary, W. Huxter; Financial Secretary, S. Lynn; Treasurer, W. Gehring; Sergeant-at-Arms, B. A. Rist; Team Captain, C. Hughes; Scorer, W. McMahon. At this meeting two new names were added to the roll. Saturday, Jan. 30 will be the anniversary of the formation of the club and the event will be celebrated with a big shoot in the afternoon, on the club's Fifth avenue grounds. In the evening the members and invited guests will discuss a banquet.

* * *

The Active Gun Club, of Newark, held its annual meeting on Jan. 4 and elected the following officers: President, Geo. Dammeron; Vice-Vresident, Herman Schlegel; Secretary and Treasurer, Arnold Brandorff; Captain, Conrad Hartenstein; Board of Directors, C. V. Baumann and Robert Liblin, along with the President, Secretary and Captain. This club has a handsome club house and well-appointed grounds in rear of the old ball grounds, adjoining the Newark Shooting Park, and holds a club shoot at live pigeons on the first Tuesday of each month. The club allows no sweep shooting for money on its grounds.

* * *

Saturday will be a lively day on John Erb's Old Stone House grounds, the principal attraction being a match at 100 live birds each, for $100 a side, between Chris. Reinhardt and Gus. Freche, both of the Newark Gun Club. This match will be started promptly at 12 o'clock. At 2 o'clock a 15-bird match will take place between two local experts, and afterward a couple of 10 and 20-bird matches will be shot.

* * *

Thursday, Jan. 21, the Essex Gun Club will hold its regular monthly live-bird shoot on the Marion grounds. In the club shoot each member will try his hand at 10 birds. These contests are open only to members.

* * *

Eastern shooters are in hearty accord with Brother Hough's proposed tournament to be held in conjunction with the World's Fair at Chicago in 1893. And what better time or place for a series of world's championship contests. Not a single match at 100 live birds per man, but a contest at say 200 birds per day for five days, or 1,000 birds in all for each contestant. Let the trapshooters of the world contribute their mite toward purchasing something valuable and costly in the way of a trophy to represent the championship of the world. It is safe to say that every country on the globe would have at least one representative in the contest. And while on the subject, would it not be feasible to decide the championship at artificials on the same general plan? What is the opinion of our American sportsmen on this subject, and likewise what do our foreign brethren think of it? Give us your views and start the ball rolling.

* * *

So "Captain" John L. Brewer has gone West looking for the scalps of the experts whom he insinuates were loth to visit him in the East. Well, Jack is a shooter from Shooterville Creek. The further you travel up this creek the more expert are the shooters, and Jack lives at the extreme upper end. Within a few short days we expect to hear of his having shot against Kansas City Elliott on the latter's stamping ground, for the possession of what Jack ironically terms Elliott's "tin cup." "I will come to Kansas City," said Brewer at Marion nearly a year ago, "and take your tin cup from your own dooryard." "If you ever shoot in my dooryard," said Elliott, "I'll send you home barefooted!" Wonder if the Kansas City man will be able to make good his boast?

* * *

The new trap score sheet issued for gratuitous distribution by Von Lengerke & Detmold is a decided improvement over their old sheet. On each sheet there are spaces for 24 scores of 25 shots each. The paper is a good quality of manilla.

* * *

So the sportsmen of Chicago are ready to back George Kleinman against either Fulford or Brewer or both of them, or against any other man in the United States. Well, Captain Jack will probably be on hand to "see" the amount of the stake are this appears in print, and Mr. Kleinman will not have to wait very long for a match. And if such a match is arranged and the birds are really "first-class" Mr. Kleinman will have to make the biggest score of his life if he cares to win over the New Jersey Giant.

* * *

I see that the old fever has again seized Capt. A. H. Bogardus, the oldtime champion, and that once more he hankers for a go at some of the experts at live pigeons. Several months ago I understood that Samuel Castle, the old veteran of the Newark Gun Club, was ready to shoot a match against Capt. Bogardus, but for some reason or other was unable to make arrangements with the latter. There should be any number of men willing to try conclusions with the ex-champions, among them being C. W. Budd, Wm. S. Crosby, the Kleinman brothers and J. A. R. Elliott, or perhaps here in the East he might coax out Frank Kleinz, Frank Class, Fred Lumbreyer, John Riggott or others.

* * *

The West End Rod and Gun Club, of Newark, held its annual meeting on Jan. 6 and elected the following officers: Pres., Anthony Freund; Vice-Pres., Charles Gemeinder; Sec'y, Louis Hemhauser; Treas., Anthony Bratsch; Sergt.-at-Arms, Adam Freund; Capt., Eugene Astfalk; Asst. Capt., Gottlieb Burkhardt.

* * *

The majority of artificial target shooters with whom I have come in contact seem to be bitterly opposed to the new classification of the Inter-State Association. A number have said that they would prefer to shoot in the expert rather than in the semi-professional class, as in the former it is an even chance of getting hard or easy birds, whereas the semi-professional is bound to get four extremely difficult shots in each ten-bird event, or two for every five rounds. Shooting from No. 1 point at a bird from No. 5 trap and vice versa they claim to be the hardest shooting that can be devised and several, as I have stated, prefer the class which gives them the unknown angles throughout.

* * *

I see by a communication from Secretary Clinton that during the shooting at the coming tournaments of the Inter-State Association in all classes the man who shoots at No. 1 trap will then go to No. 10 and back the man there, No. 2 going to No 1, No. 3 to No. 2 and so on. The letter also states that as soon as an amateur makes 80 per cent. he will be advanced to the semi-professional class and when he makes 90 per cent. he will be pushed into the expert class.

* * *

FOREST AND STREAM has recently received a number of requests for copies of the rules of the Interstate Association, but has been unable to comply. In a few days we will have a supply of the Standard Keystone rules, which, with a few modifications, are the same as those used by the Interstate Association. These modifications are to be embodied in an addenda slip and pasted in the Keystone books, a copy of which will be sent to any one inclosing a stamp for return postage.

* * *

The Sewaren Land and Water Club will hold the third individual contest for the Ballard prize on Saturday, shooting to begin at 3 P. M. A revised handicap will be enforced, and it is anticipated that the contest will result in close scores. On Saturday, Jan. 23, the regular team and individual practice shoots will be held. A number of interesting matches are also being arranged for Saturday, Jan. 30.

* * *

Saturday will be a lively day on the grounds of the Brunswick Gun Club, at New Brunswick, N. J., when the weekly sparrow shoot will be held. As this club is the only one in this part of the country which makes a specialty of shooting these pests from the trap, its work is watched with interest by sportsmen at large.

* * *

Trap-shooters who wish to have a good day's sport at live pigeons will have an opportunity on Monday, Jan. 18, when Wm. H. and Jas. Wolstencroft, Harry Thurman and Albert Rust will engineer an all-day's tournament at Philadelphia. The main event of the day will be at 25 pigeons per man, $12 50 entry. A big turnout of experts is anticipated.

* * *

At the last shoot of the Manhattan Gun Club the attendance was rather lighter than usual, owing to bad weather. In the regular medal shoot at 7 live birds M. Lichtenberger with a score of 5 kills was the victor. In a match at 5 birds each for $10 between Lichtenberger and J. Greenville the former killed 5 to Greenville's 2.

* * *

New Year's day was lively on John Erb's Old Stone House grounds, in Newark, despite the small attendance. During the day Samuel Castle shot at 40 birds and killed 41, F. Cockefair killed 31 out of 36, Mr. Ensen killed 31 out of 38, Irving Castle (14 years old) killed 5 out of 8, Harry Smith killed 14 out of 18, these being in regular sweeps. Castle, Sinclair and Erb also shot two three-cornered matches at 10 birds each, with the following results:

Castle	2211122121	1221122112—20
Erb	1021111011	1121212120—17
Sinclair	1022101022	0220111021—14

* * *

In a neatly printed circular announcing their coming tournament, the Willimantic Rod and Gun Club states that the shoot is gotten up with the understanding of several clubs to get Connecticut State shooters together to see if they cannot arrange to have team shoots once a month during the season on the various club grounds.

* * *

Wm. R. Hobart, secretary and treasurer of the South Side Gun Club, of Newark, has submitted a very interesting report of the condition of the club. The officers of the club comprise E. L. Phillips, President; W. R. Hobart, Secretary and Treasurer; J. H. Terrill, Manager; these officers along with R. H. Breintnall and Asa Whitehead comprising the Governing Committee. The roll shows the names of 32 active and 19 honorary members, the majority of the latter being old ex-members of the club. During the year ending Jan. 1, 1892, one member was suspended, four resigned and four new members were elected. The club is also sound financially, having on hand the neat sum of $351.15. Last year 30,806 targets were scored, about 90 per cent. of this number being blueroks and the rest Ligowsky clays.

The club prizes for 1891 were won as follows: First half year—E. L. Phillips first, R. H. Breintnall second, E. A. Geoffroy and I. H. Terrill divided third, W. R. Hobart fourth. Last half year—W. R. Hobart first, R. H. Breintnall second. In the contests during the last half of the year each member was required to shoot up to an average computed on his previous scores, each point made above his rating counting to his credit.

During the eleven years in which this successful club has been in existence it has thrown the grand total of 294,538 targets, these comprising glass balls, Ligowsky clays, Standards, bluerocks and others. During all these years the club house has been open every Saturdays and on holidays.

* * *

On Jan 6, when the Class-Lumbreyer match was supposed to take place at Marion, several little sweeps were shot at 4 birds each, $3 entry. The scores of the shoots are here summarized:

S Castle	1121	2221	1111	1011—15
M F Lindsley	2002	2012	2112	1222—13
F Lumbreyer	1111	2222	1211	2100—14
C Smith	0011	1111	1201	2021—12
J E Wheaton	2202	0011	1211	— 9
C M Hedden		1121	0211	2121—11

In a practice shoot at 10 birds each between Fred Lumbreyer and C. M. Hedden the scores were:

Hedden.....1122112121—10 Lumbreyer.....0112121121—9

* * *

Every once in a while we run across one of the oldtimers, men who have decided to give up trap-shooting, but who have been at last persuaded to take the gun off pegs and try "just one sweep." These men are always accorded a warm welcome when they return to the fold, and as a rule the "one sweep" stretches out a long way. One of the old experts who has kept in the background for a couple of years was seen at Marion last week, and the sight of his jovial face recalled the days of 1888-'89, when Dunnellen Marion, Claremont and Trenton comprised what was termed the "Jersey circuit." Charley Smith, more familiarly known as "Dutchy," was one of the shining lights during the circuit shooting, he and T. H. Keller ("Tee Kay"), and Jeph. D. Miller, who at that time represented the Ithaca Gun Co., being termed the "Dutch Triplets." But now "Dutchy" is back to the ranks once more, "Tee Kay" says he intends to "redeem" his gun and get down to solid work, so that at future tournaments in this section at least two of the "triplets" will be on hand, and who knows but "Jeph" may be persuaded to complete the trio.

* * *

The Onondaga Sportsmen's Club will have a lively time this season unless all signs fail. It has decided to inaugurate a series of matches at 100 artificials per man, for medals, and the arrangements have been placed in the hands of a committee comprised of Wm. Prettier, Chas. W. Walters and A. E. Spangler. It is also likely that at the next meeting a medal will be decided upon as a trophy to be shot for at the monthly club shoots. As we go to press a team from this club should be busily engaged in shooting a match against the crack team of the Auburn Gun Club.

* * *

The alleged retirement from the pigeon shooting world of E. D. Fulford has caused considerable comment in sporting circles. The plain truth is that Fulford's retirement is but temporary, owing to business engagements. He will not shoot any big matches at present. If the weather should grow colder and more snow should fall he will be obliged to di-band his forces until spring, in the event of which he will probably be inclined to meet the great world beaters, several of whom have been anxious to meet him since his alleged retirement was announced.

Freche Defeats Reinhardt.

LAST Saturday afternoon was just the kind of time when one would like to sit in front of a hot fire discussing a fragrant cheroot and an interesting story, rather than stand in front of a shooting house with a score card in one hand and a pencil in the other, the wind meanwhile whistling through your whiskers and the cold, raw air from the Orange Mountains chilling the marrow in your bones. And this was the opinion held by the sportsmen who visited John Erb's "Old Stone House" grounds, for it was nearly 4 o'clock before they could be tempted to leave the comfortable hostelry and go over the snow-covered paths to the shanty.

But business was business with at least two of the party, who were there to try conclusions in a match at thirty birds each for $50 a side, Hurlingham rules to govern. The principals were Gus. Freche and Chris. Reinhardt, both members of the Newark Gun Club and men who have often been tried but never been found wanting in trap contests.

The writer went up the road with Mr. Freche, who bemoaned the fact that while his old favorite Lang gun was broken his recently ordered L. C. Smith had not yet arrived, so that practically he was at the mercy of the world. "But," said Gus., "I guess I can find some kind of a cannon with which to win this race."

Arriving at the "Stone House" we found a party of a couple of dozen on hand, all of them being disposed to hug the stove. In the party were Samuel Castle, Curtis Reinhardt, Thomas Engling, Clinton McGall, Samuel Cole and W. H. Green. "Well, Chris.," said Freche, "I guess you'll have this thing all your own way; my old gun is broken, my new one has not arrived, so I'll have to depend on the charity of my friends for a shooting iron."

"You can shoot with mine," said Reinhardt; "Or with mine," followed John Erb; "And mine is at your disposal," chimed in Clint. McGall. So down to the shanty the party went, and by way of practice it was proposed that Freche and Reinhardt shoot at 5 birds preparatory to the match. Each killed a bird, Freche killed his second; Reinhardt stepped up and started to load his gun, when lo and behold his gun refused to lock and upon examination he found that the bolt-spring was broken. Nothing remained but to borrow a gun apiece, so Freche took Erb's while Reinhardt took McGall's, and they finished the warming shoot with the score as below:

Freche.....22121—5 Reinhardt.....11110—4

Immediately after the main match was begun, John Erb performing the functions of referee, official scorer and trap-puller.

Freche was first to the score and he quickly sent to grass a medium-paced right-quarterer, Reinhardt following with a miss on a left-quartering incomer. Freche killed four straight but caught a goose egg on his fifth, a very fast twisting driver, which dodged both barrels. Reinhardt's third was a tricky left-quartering incomer, which carried shot as far as it could and fell dead just inside the boundary. His seventh was a fast left-quartering driver, that caught both barrels full but had sand enough to fall outside the boundary, stone dead. His nineteenth was a "corker," turning seven ways for Sunday but finally falling dead just inside the boundary.

On his 23d bird Caris. had a stroke of luck. The bird was hit lightly with the first barrel but missed clean and clear with the second. It alighted near No. 5 trap, and John Erb's black setter Lem went after it. Just as Lem started to grab the bird it recovered itself and started to fly, but, quick as a flash, Lem made a spring, which took him more than his length straight up, and caught the bird. Chris.'s twenty-second bird was a circling incomer, and white at that, which managed to go over the fields toward Bloomfield, Freche's twenty-third, a circling right incomer, followed suit, and Chris.'s twenty-fourth, a very fast blue checker, went over the fence to keep company with the other lost ones. Reinhardt also lost his twenty-seventh, an ugly circler, and Freche lost his twenty-eighth, a left-quartering incomer. Gus. killed his next two birds, and Chris lost his thirtieth, a rather easy left-quarterer, this giving Freche the race by a score of 27 to 24. The detailed scores follow:

Freche.....2212011112111111111210111022—27

Reinhardt.....0222110211211121110210202020—24

The birds were, as a whole, only a fair lot, but the fact of the ground being covered with snow, and the majority of the birds in the first half of the race being low-flying white ones, made the shooting extremely difficult.

Neither man was satisfied with the result of this match and they decided to try conclusions again on Saturday, at 100 live birds each, for $100 a side. As Rheinhardt has never shot at more than 50 birds, the outcome of the match is problematical.

C. H. T.

Fountain Gun Club.

THE Fountain Gun Club had a good attendance at its first monthly shoot of the season, held at Woodlawn Park on Jan. 6. The day was fair from a pleasant one for outdoor sports but still the members were full of shoot. The main event was at ten live birds per man, handicap rises, for the club medal. The scores were as appended:

A Brook (25)	10	R Woods (28)	8
C Plate (28)	10	W Blattmacher (25)	5
C G Morris (30)	9	C Detlefsen (28)	7
J G Lake (27)	9	Dr Van Ord (25)	7
E H Garrison (28)	8	A Allen (27)	6
A Schumacher (25)	8		

The next event was a match at fifteen birds each between "Snapper" Garrison and Dr. Shiels, 30yds. rise, for $50 a side. Dr. Shiels won by killing twelve to Garrison's ten.

C. Plate and C. Jericho, Jr., next tried their luck at five brids each for $1 a side, the boy killing five to Plate's two.

The Hamilton Tournament.

THE tournament of the Hamilton Gun Club, to be held at Hamilton, Ontario, Can., on Jan. 26, 27 and 28, will be an immense affair, judging from the following fine programme of events, just received from Secretary A. Smyth:

Jan. 26.—Event No. 1, 15 live birds, $300 guaranteed, $5 entrance. First prize $100, second $75, third $50, fourth $30, fifth $20, sixth $15, seventh $10.

No. 2, 15 singles, $25 guaranteed, $1.50 entrance. First prize $5, second $5, third $5, fourth $5, fifth $5.

No. 3, 20 singles, $35 guaranteed, $1.50 entrance. First prize $5, second $5, third $5, fourth $5, fifth $5, sixth $5, seventh $5.

No. 4, 20 singles, $40 guaranteed, $2 entrance. First prize $8, second $8, third $8, fourth $8, fifth $8.

Jan. 27.—No. 5, 15 live birds, $300 guaranteed, $5 entrance. First prize $100, second $75, third $50, fourth $30, fifth $20, sixth $15, seventh $10.

No. 6, 15 singles, $40 guaranteed, $2 entrance. First prize $15, second $10, third $7, fourth $5, fifth $3.

No. 7, 20 singles, $30 guaranteed, $2 50 entrance. First prize $10, second $10, third $10, fourth $10, fifth $10, sixth $10.

No. 8, 15 singles, $25 guaranteed, $1.50 entrance. First prize $5, second $5, third $5 fourth $5, fifth $5.

No. 9, 10 singles, $25 guaranteed, $1.50 entrance. First prize $8, second $7, third $5, fourth $3, fifth $2.

Jan. 28.—No. 10, 10 live birds, consolation purse $100, $5 entrance. Open to non-winners of a prize in events Nos. 1 and 5. First prize $30, second $25, third $20. Fourth $12, fifth $8, sixth $5.

No. 11, 25 singles, $75 guaranteed, $3 entrance. First prize $15, second $15, third $15, fourth $15, fifth $15.

No. 12 20 singles, $50 guaranteed, $2 entrance. First prize $15, second $10, third $7, fourth $7, fifth $6, sixth $4.

No. 13, 10 singles, $25 guaranteed, $1.50 entrance. First prize $5, second $5, third $5, fourth $5, fifth $5.

No. 14, 20 singles, entrance free. Open to all shooters who have taken part in at least seven of the previous events and failed to win a prize. Fifty per cent. of the surplus money accruing from the artificial bird events will be divided into five equal prizes.

Specials.—No. 15, 20 singles, $1.50 entrance. First, Marlin Rifle, donated by the Chas. Stark Co., Toronto, and a book donated by J. W. Bowman, Hamilton; total value, $28; second, 2,000 trap shells, donated by Dominion Cartridge Co., Montreal, and a book donated by J. W Bowman, total value, $18; third, 12lbs. of caribou powder, donated by Hamilton Powder Co., and a book donated by J. W. Bowman, total value, $10.

No. 16, 20 singles, $1 50 entrance. First, handsome silver cup donated by Frank S. Taggart & Co., Toronto, and a book donated by J. W. Bowman, total value, $20. Second, 2,000 trap shells, donated by the Dominion Cartridge Co., Montreal, and a book donated by J. W. Bowman, total value, $18; third, 12lbs. of caribou powder, donated by Hamilton Powder Co., and a book donated by J. W. Bowman, total $10.

The Hamilton Gun Club rules, which are very similar to those of the American Shooting Association, will govern all events. In the live bird events the conditions will be 80yds. boundary, 30yds. rise, entries for events numbers 1 and 5 will close on Jan. 25, with the secretary, Brunswick Hotel, Hamilton.

Watson's Park.

BURNSIDE, Ill., Jan. 6.—The following scores were made in practice at live pigeons, selected, American Association rules:

W P Mus ey	2222111101—9	Capt Anson	2101201123—8
C E Willard	1010101103—5	G Kleinman	0222012201—7

Same day, match at 50 selected live pigeons each, $50 a side, I. W. Dukes vs. W. P. Mussey, American Association rules:

I W Dukes	20221202222222222222212220120122220102202221—41
W P Mussey	10011110002012121220101211112212100102222201220—37

Same day, sweep No. 1, 10 birds, $5.50, 60 and 40 per cent., A. A. rules:

G Kleinman	2101011012—7	L M Hamline	1122212002—8
Capt Anson	1110111123—9	R B Wadsworth	1122002202—7
J W Dukes	2121222210—9	J E Price	0022211221—8
Bob White	2103101001—6		

Sweep No. 2, same conditions:

Kleinman	1222212230—9	Anson	2100210010—5
Price	2021101100—6	White	0121211201—8
Hamline	2120200010—5		

Sweep No. 3, same conditions:

Kleinman	1122231122—10	Price	1110201210—7
Anson	0100122120— 6	White	0222111001—7
Hamline	0201112022— 7		

Sweep No. 4, 5 live birds, $3, 60 and 40 per cent.:

Kleinman	20121—4	White	12222—5
Anson	20121—4	Hamline	22021—4
Price	11121—5		

First div., Kleinman second.

Jan. 8.—The members of the Chicago Shooting Club turned out in fair numbers to-day for the monthly club shoot at 20 live birds per man, under Illinois State rules. The main prize was the handsome club medal, but in order to make the event the more interesting each contestant put a small amount in the pot, this being divided into two moneys. The birds were good and the shooting in prime form, as the appended table shows:

Wadsw'th	01220222021012122111—16	Ed Steck	21220221110112011122—17
Kleinman	10122110022222211121—17	*Mussey	01112221201212221222—18
A Reeves	10012021001021122120—13	*W Price	00210101012122211101—14
M J Eich	12122117201122120110—17	*Ed Marsh	12121220210221122102—17
R Cox, Jr	11010112222121111202—17		

* Not in for the money.

In the shoot off for first money Steck won, killing 6 straight; Wadsworth won second. Cox and Steck being allowed two dead birds each tied for the medal, and Mussey, who is allowed one dead bird, also went into the tie. This will be decided at the next shoot.

Same day and place, shoot for the Peoria blackbird medal, 25 targets per man: Kleinman and Reeves 20 each, Atwater 19, Cox 14, Steck 13. Kleinman and Reeves shot off the tie for the medal at 10 targets each, Reeves breaking 8 to his opponent's 6. The next event was a live bird sweep, 7 birds $5 up. The scores:

Steck	1221212—7	Atwater	1210110—5
Reeves	1221110—6	Kleinman	2002120—4
Cox	1210011—6		

Second money div.

Final shoot, $2 freeze-out:

Cox	1222212222	Reeves	10
Atwater	1121112220	Marsh	20
Kleinman	211220	Steck	0

Cox pocketed the pot. RAVELRIGG.

Words of Appreciation.

Editor Forest and Stream:

As regards the work done by the men in the Fulford-Brewer match at Woodlawn Park I have the following: Mr. Fulford seemed to be shooting a gun which did not suit him or the loads he used were not adapted to the gun, and while the birds were unexceptionably good they were not so hard but that more of them could have been killed by a proper gun and suitable loads for it in the hands of such an expert. Mr. Brewer is credited with handling a gun which he had not used for some time but with which he had done some very fine work in the match with Mr. Elliott, using other charges. His loads seemed weak and many birds were centered with the charge which went over the boundary. Birds which were scored dead, while easily gathered, did not always show clean killing. Mr. Fulford certainly wished to make a reputation and Mr. Brewer to save his which had some hard knocks in the three Marion matches. Whether the inducements said to have been held out to him to shoot the gun and loads he did had any weight with him, of course he is the judge. It was evident to all fair minded persons who witnessed the match that he handicapped himself by the change.

As to the report of the match no praise is too great. Such an elaborate and painstaking article has never appeared in any sporting newspaper, and you are to be congratulated in having the services of such a reporter. W. R. HOBART.

A New County Association.

COLUMBIA, Pa., Jan. 11.—On Thursday, Jan. 7, 1892, a number of lovers of the gun met at Hambrigat Hotel, on the Columbia and Lancaster pike, and organized the Lancaster County Shooting Association. After a few matches at inanimate targets and at live birds the following temporary organization was effected: President W. A. Fendrich, of Columbia; Secretary, H. O. Leachey, of Mountville. A constitution and by-laws was presented by H. O. Leachey and, after a few alterations and additions, adopted. The association is formed for the purpose of protecting game by enforcing the game laws and for the pleasure as well as the advancement of its members in the art of trap and wing shooting. The association starts with a membership of twenty eight, with the following officers for one year: President, H. E. Anderson, Lancaster City; Vice-President, J. W. B. Bauseman, Esq., Lancaster; Secretary and Captain, H. O. Leachey, Mountville; Treasurer, Dr. W. G. Taylor, Columbia. The following comprise the membership: N. E. Anderson, Geo Franklin, J. C. Leaman, B. Frank Saylor, Geo. Crane, Dr. W. G. Taylor, J. C. Broom, Geo. E. Hoffman, H. Martin, W. S. Martin, Dr. M. M. Deplinger, F. L. Clark, Horace Martin, S. Clay Miller, N. Kauffman, Wm. Sherzer, J. W. B. Bansman, Ernest Zaho, G. C. Kennedy, T. C. Wiley, Dr. J. E. Baker, Saml. Hoffman, J. W. Gardner, I. H. D. Ralph, Peter Dommel, H. O. Leachey, B. Miller and W. H. Fendrich. It is also the intention of the association to restock a number of farms throughout Lancaster county with quail, and our secretary would be very glad to at any time receive bids from parties here dealing in same. FEN.

Rochester's Lively Shoot.

ROCHESTER, N. Y., Jan. 7.—*Editor Forest and Stream:* The Rochester Rod and Gun Club had the liveliest shoot of the season, Jan. 1, on the new club grounds, on Monroe avenue. There was a large attendance of participants and spectators, who remained until darkness put a stop to the shooting. The weather was all that could be asked for, and the Peorias simply flew perfect. The programme called for nine events, and after that was finished other contests were made up by the shooters until twelve events were shot off. The scores follow. Ties divided unless stated:

No. 1, 10 Peorias, 4 moneys, 12 entries, entrance 25 cents:

Union Gun Club Shoot.

THE initial shoot for the season of 1892 of the Union Gun Club was held at Springfield, N. J., on Jan. 7, the attendance not being as large as was hoped for, the bad roads probably keeping a number away. In addition to the monthly prize shoot a regular programme of ten events was shot, bluerock targets being used. The scores follow:

Event No. 1, 10 singles, $1 entry: Miller 9, Brantingham 7, Breintnall 6, Lindsley 5 D. Larry 4, Manning 4.

No. 2, same: Miller 9, Lindsley 8, Breintnall 8, Brantingham 8, Manning 5.

No. 3, same: Miller 10, Lindslay 9, Terry 7, Breintnall 6, Manning 3, Brantingham 3.

No. 4, same: Breintnall 10, Lindsley 10, Brantingham 9, Miller 8, Collins 8 Manning 4

No. 5, same: Miller 9, Lindsley 8, Collins 8, Breintnall 6,

No. 6, 5 pairs, $1 entry: Lindsley, Collins and Miller tied for first on six breaks each. Miller capturing the pot on the shoot off, Breintnall second with 5.

No. 7, 25 singles, $2 entry: Collins 22, Lindsley 22, Miller 20 Breintnall 14.

No. 8, 10 singles, $1 entry: Collins 10, Miller 10, Lindsley 9, Breintnall 7, Brantingham 4, Manning 2.

No. 9, practice shoot at 25 singles preparatory to the club event: Breintnall 23, Miller 19, Lindsley 18.

The final event was the club contest for the class prizes, the 90 per cent. men comprising class A and those under 90 per cent. being in class B. The scores:

Class A.

Miller	1111111111111111111111—25
Collins	1110111010111011111111—21
Lindsley	1111110001111011111111—20
Breintnall	1111101101111100101111—19
Brantingham	0011111011011100110011—16

L T Terry	0010110000001000011001100— 7
Manning	0000001001000100110000100— 6

On the South Side Grounds.

SATURDAY'S disagreeable weather had some effect on the attendance at the opening shoot of the season of the South Side Gun Club, of Newark, but still there were enough on hand to keep the traps working at a lively rate. The opening event was at 10 bluerocks, $1 entry: Hobart powdered 9, Breintnall 8, I. H. Terrill 7, Hedden 5, Baar 4 and Kierstead 3.

No. 2, same: Hobart 9, Breintnall 8, Hedden 8, I. H. Terrill 7, Whitehead 7, Thomas 7, Kierstead 5.

No. 3, 10 singles, Hobart rapid-firing system: Hobart 9, Hedden 8 Kierstead 8, Breintnall 7, Thomas 4, Young 4.

No. 4, same:

Breintnall	1111111111—10	Thomas	1011011110— 7
Hobart	1111111011— 8	Kierstead	0101111001— 6
Osterhout	1111110101— 8	Whitehead	0001011110— 5
Hedden	1011110111— 8	Terrill	1010101000— 4
Young	1000111111— 7		

No. 5, same: Hobart 9, Breintnall 8, Osterhout 8, Whitehead 8, Hedden 7, Thomas 5, Kierstead 4.

No. 6, same: Hobart 10, Breintnall 9, Hedden 7, Osterhout 7, Kierstead 7, Thomas 4.

No. 7, same: Hobart 10, Osterhout 9, Hedden 8, Breintnall 6, Kierstead 6. Terrill 6, Whitehead 5, Baar 4, Thomas 3.

No. 8, same: Breintnall 10, Hobart 9, Hedden 8, Osterhout 7, Thomas 6, Whitehead 4.

No. 9, same: Thomas 8, Hobart 8, Hedden 8, Breintnall 7, Osterhout 6, Kierstead 5.

In the Hobart system of rapid-firing from unknown angles the traps are set as for regular shooting. Three men go to the score, standing as closely together as convenient with freedom to handle their guns—say 2ft. apart. The indicator is turned once for each five shots, the men shooting in rotation. Each man will get one bird from each of the five traps. The system may also be used for two or four men. When three men shoot under this system at 10 targets each the time consumed is about 1½ minutes. This system is particularly adapted to grounds where the traps are placed in a pit and the distance between traps is only a few feet. One sprightly man can handle the five traps, this amounting to considerable of a saving in the matter of trapper's wages.

Cleveland vs. East End.

CLEVELAND, O., Jan 8.—The Cleveland and East End gun clubs shot a match yesterday on the grounds of the latter club, the teams comprising 7 men each and each man shooting at 25 artificial targets. The weather conditions were decidedly unfavorable during the earlier part of the shoot, a strong wind causing the light targets to execute some eccentric gyrations. Later, however, the wind decreased in force. Each club was obliged to call upon substitutes to fill their teams. The scores follow:

East End Gun Club.

Phare	1011110111111111000111001—18
North	1111011110011101010911100—16
Murray	1011110110010000101001001—13
Forester	1110101111111101111111110—21
Swetman	0010010100001011011011110—11
Reynolds	1010111001011000101101111—15

Wauregan Gun Club.

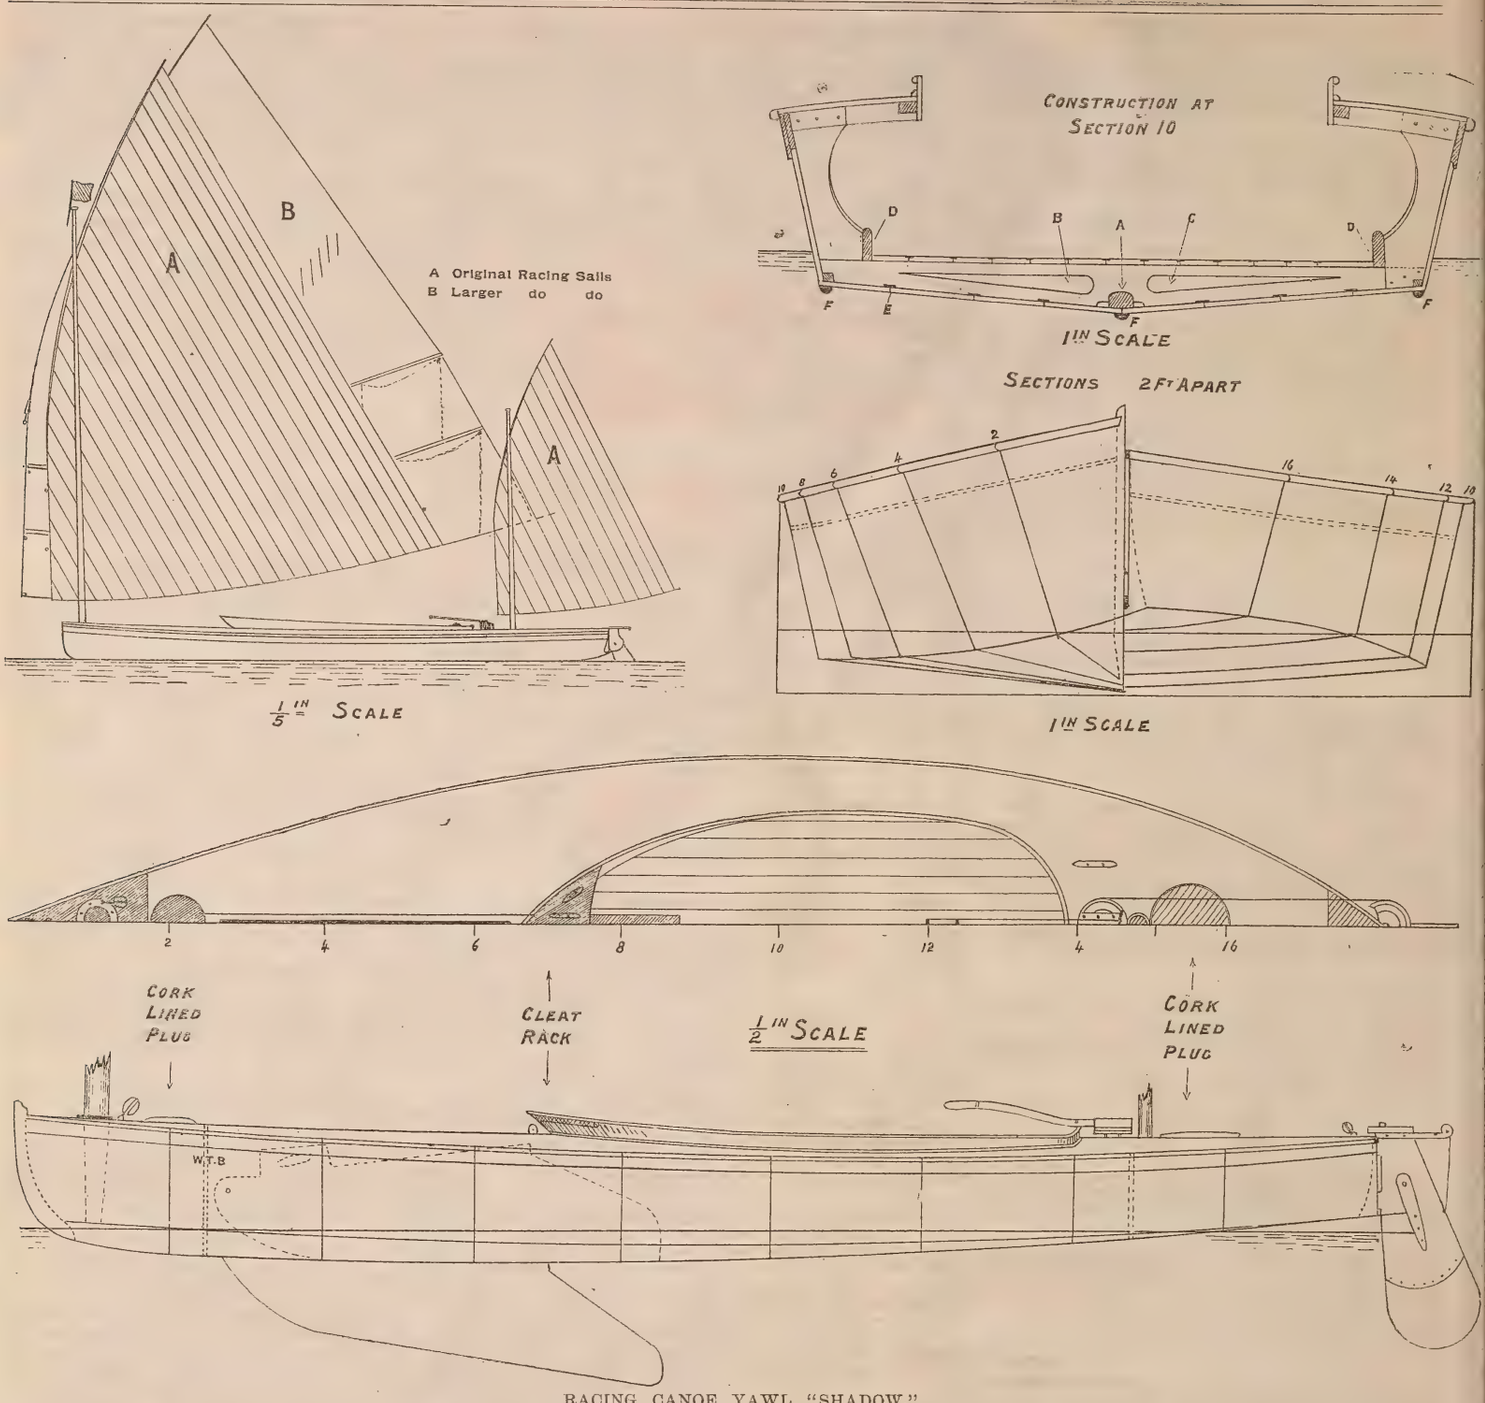
THE members of the Wauregan Gun Club had a lively time at Dexter Park on Jan. 7, when a number of private matches and sweepstakes were shot. The opening match was at 25 birds each for $100 a side, 28yds. rise, 80yds. boundary, between President Bornhoeft and Michael Fay. The latter won with a score of 24 kills to Bornhoeft's 19

M. F. Brickner next shot a 15-bird match against J. Loonie for a stake of $100, Brickner killing 10 to Loonie's 9. L. Kramer and A. Gloistein next had a go at 25 birds each from the 25yds. mark for $25 a side, the match ending in a tie according to the decision of the referee.

The next event was an open sweep at five birds each, $5 entry, club handicap. The scores follow:

M Fay (30 ds.)	5	J Pilkington (30)	3
J Fay (28)	5	E Bornhoeft (28)	3
D Meyers (30)	4	W Silberhorn (28)	3
R Darling (28)	3	W H Brickner (25)	2

The next event was at 3 birds per man, $3 entry. J. Pilkington killed 3. S. Fay 3, R. Darling 3, M. Fay 0, W. H. Brickner 1, J. Loonie 2.



Boiling Springs Club.

RUTHERFORD, N. J., Jan. 2.—Monthly shoot at 25 bluerocks, Keystone rules:

World's Fair Champions.

ENGLAND is already preparing to have its representative pigeon shots compete with honor in the world's big championship shoot to be held during the World's Fair at Chicago in 1893. The Hurlingham Club have five and the Gun Club three of its best shots prepared to fight for that championship.

RACING CANOE YAWL "SHADOW."

Tournament at Willimantic.

THE Willimantic Rod and Gun Club will hold a tournament on their club grounds, at Willimantic, Conn., on Thursday, Jan. 21, and the following programme has been announced: No. 1, 10 singles, 75 cents. No. 2, 10 singles, 75 cents. No. 3, 15 singles, $1. No. 4, 30 singles, team shoot, 3 men from any club of State, $10. No. 5, 15 singles $1. No. 6, 10 straight away, 24yds., 75 cents. No. 7, 10 singles, 2-man team, $2. No. 8, 6 pair doubles, 75 cents. No. 9, 15 pair doubles, $1. No. 10, 10 pair doubles, 75 cents. Keystone system. Four moneys in all events, except team shoot. If four or more teams, 2 moneys. Shooting to commence at 9:30 A. M. Light refreshments on grounds, also loaded shells. Birds included in entrance. If stormy on the above date the tournament will be held on Jan. 28.

Chicago Teams.

CHICAGO, Jan. 9.—Among the highly important matches of the day is a team race concluded between Messrs. R. S. Cox and Doc Malcolm of the first part, and "One Lung" and Antoine of the second part, twenty-five birds and $25 a corner.

Harry McMurchy is in town as expected to-day, and is looking for the galaxy of noted Western trap shots who have been threatening to come here. He is of the opinion that the other noted shots have heard of his coming and so have staid away.

E. HOUGH.

Pittsburgh Gun Club.

AT a meeting held Jan. 7, the following officers were elected to serve during 1892. President, G. E. Painter; Vice-President, James Crow; Secretary-Treasurer, Elmer E. Shaner; Directors, C. A. Painter, C. M. Hostetter, Samuel Shaner and Joseph A. Glesenkamp.—ELMER E. SHANER, Sec'y P. G. C.

Missouri Tournament.

KANSAS CITY, Jan. 9.—*Editor Forest and Stream:* The fifteenth annual tournament of the Missouri State Fish and Game Protective Association will be held in Kansas City, Mo., from May 2 to May 7.

W. V. RIEGER, Sec'y.

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $2.00. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

ARLINGTON C. C.—The totem of the Arlington C. C. has been changed from a five-pointed star to a starfish. The club house will be enlarged before next season to meet the growing needs of the club.

RACING CANOE-YAWLS.

THE accompanying drawings, to which we are indebted to the *Model Yachtsman and Canoeist*, show a peculiar type of racing boat that has recently come into use in England under the title "canoe-yawl," though very different from the boats commonly classed under that elastic and comprehensive title. While their birthplace was on the Thames, they are obviously American in type, and unlike any of the native small craft. We quote the following description by the builder:

The Shadow is not, as some may suppose, the result of a "happy hit" in the way of design, but is rather the result of careful original thought, based upon close observation of the performance of various types of boats of light displacement that have appeared on the river at Oxford. Although the first of the Oxford canoe-yawls she was preceded by several boats of the sharpie type, which were purely experimental, the first of these being the Yankee, followed by the catamaran Domino, the sloops Merlin and Skipjack, and the canoe Iris, boats which have in turn under favorable circumstances shown a remarkable pace. For instance, the Domino might have been seen careering over Port Meadows with about 12in. of water under her at a pace that could not be short of 10 to 15 miles an hour. This occurred three years ago, during a strong S.W. wind; and instances have been noted when the sharpies have gone apparently three times the pace of other boats in competition. By a peculiar adjustment of the surplus buoyancy and the displacement the Oxford yawls have the faculty to a greater or less degree of "skidding" over the water, and not "wallowing" in it as most boats do. The same faculty has been attained even in round-bodied boats, such as Wisp and Torpedo.

The Shadow has made some remarkable records. Two years ago she was sailed single-handed, with all camping gear aboard, from above Teddington to Queenborough, on the West Swale, in one day's run, the distance being about 75 miles. Another remarkable run was from Rochester to Port Victoria in one and one-half hours, timed, distance about 14 miles. In her first year, at Medley, Bourne End and Dartmouth, she secured over 20 first and second prizes, and this term at Oxford she secured two first prizes from boats built expressly to beat her.

The Shadow is no "racing machine," as will be seen by a glance at her design. She is of peculiar construction and very strong. The bottom and deck are ⅜in. pine, the floors 1in. oak, the sides ⅛in. cedar with a top strake of ¾in. cedar. The seams of the bottom are covered inside with copper strips about 1in. wide, the deck is covered with canvas, painted white. The shaded parts shown in deck plan are of mahogany varnished. She is the heavieet of the Oxford yawls.

The design published is taken from the original drawings, with a few modifications. Some recent alterations are not shown. The well has been lengthened aft as far as the bulkhead, and a long tiller fitted to rudder heal, and the mizzen discarded.

Much of the success of this boat is due to the excellent handling of her owner. "May his 'Shadow' never grow less."

THEO. SMITH.

A. C. A. MEMBERSHIP.—Eastern Division: Reginald Birney, Daniel S. Morrell, Hartford, Conn.

SMALL CRUISERS.

Editor Forest and Stream:

As one of your correspondents remarks, the small boat men appear to "have the floor" in your columns of late, and before we relinquish it will you allow me to comment upon "Cayuga's" letter in last issue.

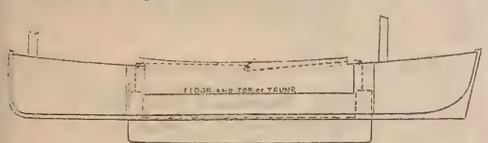
First, as to model, he can not see the use of the long overhang at stern, as in the design you published on Dec. 17, except as a matter of beauty, and thinks it difficult to get a "fair" sweep for the counter. Cut off the last two feet or less of the design and put in a flat transom with a scag underneath and you will have precisely the type of stern he has in his sneakbox. The planking is merely carried out to intersection with the deck, giving a stronger and handsomer finish and a stern less liable to be "pooped" by a following sea. As compared with a sharp-sterned model of equal length over all the model is lighter and gives more deck room and an opportunity to fit a traveler for the mizen sheet—something which has bothered the canoe men for some time back; in fact this is the main reason for the extreme length shown in the design; viz., to do away with a bumpkin, or outrigger, one of the principal arguments against the yawl rig. I deny the extra difficulty in building as compared with the sharp ender and have found it in my own experience just as easy to sweep the planking out to a horizontal edge as to twist it into a vertical one. I doubt the greatly superior ability and power of the double ender of same over all length; the area of load water line plane would show but little difference and the stability would be but little more, while there is a very much larger amount of skin surface shown, and of dead weight, which in the counter-sterned boat is replaced by larger centerboard and rudder, giving greater lateral resistance and more ballast where it will be of most service. Over all length should I think include the length of rudder, in which case the comparison should be still more in favor of the overhang.

The bow in the design is a compromise between the ordinary canoe bow with a sharp knuckle and that of his "spoonbill." It is stronger structurally than the latter, has much of the same virtue in beaching, without being so difficult to drive against a head sea and wind, or, which is much the same thing, she will ride easier to an anchor in a blow. "Cayuga" makes a point about weeds getting entangled in the rudder, which is a good one; and for some localities a small scag or guard might be advantageously added to the design. But I have found that the worst entanglements are where the weeds work in between the sternpost and rudder, when they can only be removed with an oar or by hand, whereas with a rudder of the type shown in the design it is only necessary to luff the boat into the wind. On reaching open water let her gather sternway and all accumulations float off to windward as she falls off again. The overhang does not preclude the use of a drop rudder with tripping line. My intention is to use the device with the line leading up through the rudder stock, which is of gas pipe or brass tubing.

Coming now to the question of rig, the advantages of the yawl rig on a working boat have been so often gone over in your columns and elsewhere, that it seems unnecessary to repeat; but independent of handiness, it is possible, by lowering the center of

effort and spreading sail along the slim, narrow canoes and yawls, to get probably 40 or 50 per cent. more area than could be carried in a single sail such as "Cayuga" uses; and as I have before said, the object of the lost foot or so of overhang in the design is to admit of a good-sized mizen being set efficiently without the use of a bumpkin and so that the sheet shall be in no danger of fouling the steering gear, as often happens in canoes. In a comparatively wide boat, such as "Cayuga's," the high center of effort is less avoidable and even desirable as counteracting the tendency to "squat" in running before a breeze, which such a model would evince.

The "spoonbill" style of boat has no doubt many excellent qualities and for its own waters and purposes it would be no doubt very hard to equal it in general type, but for open waters and general cruising I should prefer to put the same amount of timber into a longer and narrower boat and to cut the canvas into two or more pieces.



In explanation of the rather peculiar lines of the design in your issue of Dec. 25, I may say that she was intended for a general purpose boat to be used occasionally as a singlehander. Being obliged to leave a large well to accommodate three or even four persons, steering gear and a central position for the crew of one was inadmissable, hence the very full lines aft to carry his weight without too much change of trim. It was also a *sine qua non* that no ballast should be necessary, hence the flat floor. The model would undoubtedly have been much improved by cutting the foregripe away, as in the later design; but such things were not in fashion at the time and builders were afraid of innovations. While not what I should build for my own use even for the locality, the boat answered her owner's purpose well. The rig is now a cat with a single gaff sail, and for reasons given above is perhaps more suitable for afternoon sailing than the yawl with such a short beamy boat. HENRY K. WICKSTEED.

COBOURG, Ont., Jan. 5.

A CENTERBOARD FOR CANOES.

Editor Forest and Stream:

I send you herewith a rough sketch of a housing centerboard, which I intend to adopt in a new canoe that I hope to have built next season. It leaves the whole of the 6ft. cockpit free to move around and to sleep in.

I think it fills the bill as nearly as anything can be got for a cruising canoe or yawl.

Board 7ft. 8in. x6in. x3-16in. boiler steel, and should weigh about 75lbs. Keel is to be 2in. deep below garboards, and flooring in four removable pieces, in case I want more leg room while sailing or paddling or rowing. N. SILSBEE.

BOSTON, Jan. 7.

BROOKLYN C. C.—The annual election of officers of the Brooklyn C. C. has been held with the following result: Com., Charles P. Weeks; Vice-Com., M. M. Davis (re-elected); Purser, M. V. Brokaw (re-elected seventh time); Meas., D. A. Nash (re-elected). Messrs. M. V. Brokaw and F. L. Dunnell were elected trustees for three years. President Board of Trustees, Robert J. Wilkin; Secretary, Frank L. Dunnell. The committees have not yet been announced. The annual dinner will be held at the Clarendon Hotel on Jan. 12; the annual cruise will occur May 27 to June 6, and will probably be from Hancock, N. Y., down the Delaware. The annual regatta will be held on June 25.—UNQUA.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

Yachting.

Small Yachts. By C. P. Kunhardt. Price $10. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

Yachtsmen who do not see what they want under this heading will please look under the hatches of the *Canoe*, peep into the *Kennel*, squint down the barrel of the *Rifle*, open the *Fish Car* and *Game Bag*, inquire of the *Sportsman Tourist*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising Departments*.

INTERNATIONAL RACING.—The Boston correspondent of the English *Yachtsman* has attempted to break the present deadlock over the new deed of gift by assuring that paper, on behalf of "leading American yachtsmen" whose confidence he claims to possess, that a challenge unaccompanied by the dimensions would be accepted. He says: "It is evident that the British yachtsmen have not given careful consideration to the old and new deeds of gift of the America Cup. Americans are strongly of the opinion that the leading British yachting journals have deliberately misrepresented the terms of the new deed, and have not fairly placed its terms before the public." We are not aware of the identity of the "leading American yachtsmen" who have empowered the *Yachtsman's* correspondent to speak for them; but, as we showed some time since when the proposal to omit the dimension clause was made in Boston, the New York Y. C. has no power in the matter as long as it stands by the new deed, and it can take no official cognizance of a challenge which does not contain the four required dimensions. This point has been brought up three times in recent years, in 1884, '85 and '86, the decision of the club in each case being that it could recognize no letter nor notice of challenge unless it came at the exact time and was framed in the exact form laid down in the deed of gift.

Unlike the genuine deed of 1857, in which the first step was a mutual agreement by the two parties, the new deed, now pronounced so much fairer to the challenger, requires that at the very outset he must bind himself to certain dimensions and furnish them to his opponent, after which he may ask for a "mutual agreement" and be thankful if he gets anything more than "generous concessions." There has undoubtedly been a great deal of misrepresentation over the terms of the new deed, but that is a point on which its friends and apologists cannot say too little.

If the correspondent in question will himself give a careful consideration to the original donors' deed and the new "lawyers' deed," he can hardly fail to see that in the first the challenger and holder are on an equal footing, while in the second the challenger must at the very outset bind himself to impossible conditions, and place the dimensions of his vessel in the hands of his opponent with no guarantee that she will not be outbuilt in some manner.

As a matter of fact even the sponsors and warmest friends of the new deed are heartily sick of it now, and would gladly drop the dimension clause and accept a challenge on terms equally fair to both parties, but there is only one way in which this is possible—by heaving the whole document over the side with the hope that it may sink so far that some day it may be forgotten, and thus relieve the New York Y. C. of the odium of having given birth to it.

In commenting editorially, the *Yachtsman* says: "The new deed of gift is not a legal document, and has absolutely no binding power, and it is felt in England that it was an unsportsmanlike thing to draw up such an instrument, even if our friends across the water were not sufficiently versed in the law to know of its illegality. The reason for such a step may not be clearly understood in England, but if the American press will state what those reasons are, not in any wise mincing matters, it will be found that Britishers will be ready to weigh them impartially."

If the correspondent of the *Yachtsman* is in earnest, and really wishes to throw light on the new deed, let him take up its history from the beginning, say in the afternoon of Friday, Sept. 30, in the middle of the last race between Volunteer and Thistle, following through the various incidents of the same evening, the receipt of the notice of challenge from Mr. Sweet, the hurried call for a special meeting on the following Monday, Oct. 3, the details of the resolution there adopted, the appointing of a committee, and all that followed down to the meeting in November, at which the members of the club were told for the first time what had been done in their name. This bit of history remains to be written, and when it is there will be some interesting reading for both American and British yachtsmen; in the meantime the dimension clause is in the new deed to stay and it will take a very sharp lawyer to kill the one without at the same time destroying the other.

CANOE-YAWLS AND HALF-RATERS.—Even the great naval war between the United States and Chili which is now waging fiercely in the daily papers is thrown in the shade by the conflict between the two rival types of the Lilliputian navy, the canoe-yawls and the half-raters, which is agitating yachtsmen in England. The so-called canoe-yawl of the controversy is by no means what we have been accustomed to under this name, but, as will be seen from another page, she is a morfydite craft derived from the American sharpie, skipjack and sneakbox. These extreme skimming dishes, of a type that will doubtless awaken a feeling of relationship in the breast of the designer of the Red Jacket, Bouncer, Watermelon and Chippeway, have shown great speed on the Thames, at Oxford and in other places, and also on Hendon Lake; and late last summer several invaded the sailing ground of the new half-rater class, miniature "fin keel" cutters of elaborate design and build, used about Southampton. The war over the respective merits of the two now wages furiously; while one party cries out "sink" the other retorts "capsize," and none can say what the end may be. Each type seems well adapted to racing in a special locality, but while the draft of the half-raters, about 3ft., keeps them away from the shoal waters in which the canoe-yawl has flourished, the latter are able to reach the seacoast by rail, if necessary, and defy the half-raters in their chosen waters.

WADENA.—The new steam yacht Wadena, the property of Mr. J. H. Wade, of Cleveland, O., has been in Boston for the past month, where a number of alterations were made by the Atlantic Works. In spite of the glowing descriptions of the yacht which have appeared while she was building, she is in many respects a failure, after making all allowance for a first attempt, as well as for the evident intention to do good work. The design itself is defective, the displacement being so small that the yacht is far below her lines, the side lights being uncomfortably near the water. In addition to this, the design is lacking in harmony and symmetry. Some parts of the work, such as the plating, are well done, but neither this detail, the "specially designed" furniture nor the elegant and elaborate interior, including, according to one description, a "musical conservatory" with a real piano, can make up for the serious faults of design and the lack of sea-going qualities, which are likely to be severely felt before the yacht completes the voyage around the world, for which she was built.

PAPPOOSE.—The 37ft. Burgess cutter Pappoose, the first boat of the 40ft. class, sold last year to Mr. Davenport Galbraith, of Erie, Pa., on Lake Erie, has found a new owner in Mr. John Mott, of Oswego, N. Y. The report which has been widely circulated, that Pappoose has been purchased for racing, and in particular to defeat the Fife boat Yama, of the same class, owned by Com. Ames, of the Oswego Y. C., is entirely incorrect, as Mr. Mott will use her only for cruising, and will enter none of the circuit or club races. While Yama is the more modern boat and has an advantage in construction, a race between the two would prove interesting, the opinion of Eastern yachtsmen being that Pappoose would prove the faster. The question is not likely to be settled by actual trial, as Pappoose will not fit out for racing.

YARANA.—The British racing fleet, already small enough in numbers in the classes above 40 rating (60ft. l.w.l.) has lost another of its best yachts, the Watson cutter Yarana, a very successful craft of 66ft. l. w. l., built in 1888. Under a new name, Maid Marion, transferred from another yacht, and a new owner, she has sailed an unsuccessful season, and is now at Fay's yard, Southampton, for alterations to fit her for the cruising classes. This leaves but four yachts over 60 rating—Iverna, Valkyrie, Columbine and Blue Rock, and it is questionable whether Iverna or Valkyrie will fit out for racing next season.

TACKING SHIP.—There are many good fore-and-aft sailors, and not a few clever yachtsmen among them, to whom the handling of a square rigger is a mystery, and who will be able to learn something from the interesting description of the work of tacking a ship, on another page. Our readers will doubtless remember the stirring poem on the same subject, by Walter Mitchell, published in the FOREST AND STREAM. The description here given will make clear the technical accuracy of the poem, one of its notable features.

FOREIGN BUILT YACHTS.—A decision has been rendered in the Conqueror case, which, so far as it goes, is favorable to Mr. Vanderbilt, though the main point at issue has not yet been reached. Gen. Coggswell has just introduced a bill in Congress providing for the admission of foreign built yachts on payment of a duty of only 15 per cent. of the purchase price, they being allowed to fly the American flag, but not to secure an American registry.

YACHTING FIXTURES.—We would remind the clubs that dates for the coming season are now in order, and we will be glad to publish any fixtures received. A little careful work now on the part of each club will prevent a hasty scramble for dates at the beginning of the season, with the accompanying clashing, which is so undesirable.

ELECTRA.—Mr. L. Q. Jones, of Hartford, Conn., has taken his auxiliary naphtha yawl Electra to Florida for the third season. Mr. and Mrs. Jones will cruise on the west coast.

YACHTS VS. SAILING BOATS.

THE question of drawing a line between yachts and sailing boats is one that comes up frequently in different localities, and usually gives trouble before it is finally settled. It has arisen within a few years about New York through the entry of genuine sandbag boats, but fitted with the lightest possible cabin trunk by way of an excuse, and thus gaining an entry into the cabin classes intended for legitimately built cabin boats. At present the sailormen of the Thames and Solent are embroiled in a somewhat similar warfare over two different types, while during the summer there has been a discussion in the St. Lawrence Y. C., of Montreal, over the eligibility of an unballasted open sailing boat to sail in the regular class for small yachts. The yacht class, of which Valda, whose lines were published on Dec. 24, is a member includes what are commonly called "open boats" about New York, but which are yachts in build, rig and ballasting, though of light draft and mostly without cabin trunks. The sailing boats include Thora, recently described in our pages, and the modern racing skiffs of the St. Lawrence River.

The question of classing these craft together or separately has been submitted to us, with a request that other yachtsmen would give their views, and though the matter has just been settled by the club, there can be no objection to an expression of opinions.

It is often desirable, in order to make up a class of respectable size, and to induce as many as possible to take part, that a number of different types shall be classed together; in fact, in many localities racing could never be established on any other basis, owing to the small number of craft of any one size or type. At the same time there are serious objections to such an arrangement, and when possible it should be avoided. In the case of open boats and cabin craft, for instance: each is built for a specific purpose, their uses differing greatly; and each in its way is an excellent boat. While the majority of the cabin craft are slower than the open sandbaggers, they can have plenty of racing among themselves, with an accompanying improvement of model and rig. The advent of an open boat among them by virtue of a light cabin trunk fitted to evade the rules, will in all probability put an end to the class, or if not it will lead to the building of a type having neither the speed of the open boat nor the accommodation of the others, a mongrel that does more harm than good.

There are times when much may be learned from the close competition of two or more different types, but as a rule the influence which, under any hard racing, each must exert on the other is only detrimental. A fair comparison of the merits of the different competitors is often impossible, from the fact that one special type, though inferior in essentials, is better suitted to local conditions than the others, and thus makes a better showing in the races. In the Solent-Thames controversy, to which we have alluded, it is claimed by the Solent men, and apparently with reason, that their "fin-keel" half-raters, miniature yachts of elaborate design and construction, are far better suited to local conditions, racing in the open waters between Southampton and the Isle of Wight, than the flat, saucer-shaped skimming dishes, derived from the American sharpies, sneakbox and skipjack, that under the name of canoe-yawls have proved so fast at Oxford and on the Thames about London. These canoe-yawls have raced this fall on the Solent with good success against the local type, the half-raters, and it is now proposed to separate the two. The line just drawn by the Montreal yachtsmen between their two classes is an arbitrary one, but will probably meet the desired end; though not of general application. A yacht is limited to a minimum beam of one-third the waterline, or she must carry 20lbs. of ballast for each foot of waterline. The boat class has a minimum beam of one-quarter the waterline, with no restrictions as to ballast.

OFF CAPE ELIZABETH.

BY DR. W. H. WINSLOW.

I KNOW of no more trying place for a small yacht to get in by a run up or down the coast than Cape Elizabeth. The larger craft generally give it the go by and sail from the Shoals or New Castle to Booth Bay, or in the reverse order, in a day's run; but little fellows like to keep near shore, it is too long a run for one day, and Portland is made for a night's rest and a good harbor, and it is often made then with difficulty and danger. I have myself sailed past it in a small yacht seven times, picking the kindest and most favorable weather in the morning and getting into a peck of trouble before night. I changed members of the crew so often that, being myself the only one not changed, I concluded I must be the Jonah, but I risked being swallowed by a whale instead of going ashore, and, therefore, have something to write about.

We were bound east and ran up along the coast as far as Richmond Island with a moderate southwester, but, as sunset drew near the wind hauled around more and more to the north until we had to trim in sheets flat, off the Cape. The sun set in a wicked sky and the wind increased rapidly and, abreast of the lights, we struck an ugly sea caused by the tide against the wind and went bowsprit under at every jump. It was an awful strain upon the gear and, with only jib and mainsail set, I expected to carry away something soon. With every plunge there was a roll to leeward and the sea swept along the lee rail a foot deep. My poor boys were all sick and wretched. One lay along the weather side, one aft of the cockpit, one below, all heads down and stomachs in their throats. Jack asked if we would live through it; Bert lifted his eyes aloft occasionally and shuddered, my man forward clung to the mast and jumped over the seas, and I closed my teeth and worked the tiller painfully. It blew harder and harder, a reef ought to have been put in, but two of us were not able to do it, and it was imperative to carry the sail to get to windward and to get in out of the gale, or be driven off to sea and perhaps lost. So we plunged on until we ran under Cushing's Island, into easier water, then beat up the channel past Portland Head, running great risk of getting ashore in the darkness, and anchored at 9 P. M.

A hard gale blew all night, and over the supper we cooked, we congratulated each other and filled our empty stomachs. Only my man and I knew the great risk we had run and the narrow escape we had made from going to Davy Jones's locker.

Another time in company with some smart yachts we sailed out of Portland and away for Portsmouth. The sea was heavy from a dying gale, the wind was light and tide running into the harbor. We all worked out under the land puffs and got outside of Trundy's Reef and abreast of the lights, when it fell calm, the main boom took charge, the vessels became unmanageable and the current and swell set us all shoreward. Kites were set and boats taken ahead with little effect, there seemed a magnetic attraction between the shore and the yachts, and we rolled and drifted steadily towards the breakers. Fortunately we had stood off pretty well and were outside all the other craft and got the first zephyrs of a southeast breeze which helped us off and finally down the coast to Wood Island at dark. So great was the peril, that several large and elegant schooner yachts were obliged to anchor and pay out most of their cables to hold themselves from shipwreck.

On another occasion we ran past the cape, bound in, the breeze was moderate from the southwest and a heavy sea running. After passing Trundy's Reef, we had to jibe, but, considering that too dangerous, I brought the yacht to the wind, tacked and payed off sheets. The plunging was severe and when the mainsail was nearly out a terrific plunge and rise threw the mast forward so heavily that one backstay pulled a long bolt out of the rail and both mast runners broke their lanyards like ropeyarns. A trifle more strain and the mast would have gone over the bow.

Again we started south in September and found a southwester outside when it was northeast in the harbor. The sea was rather heavy but we plunged on until past Richmond Island and well into the light off Old Orchard, when the wind and sea increased and it became such a hard strain upon the yacht to get to windward that we up helm and ran back before dark.

The next morning we had the same kind of work, got mad over the constant opposition to our cruise south, and kept at it until we reached Wood Island. The sea was long, deep and heavy, indicating a hard blow to the southeast, or else the approach of one, and we wished to get as far in as possible. We beat through quite a fleet of fishermen and coasters lying just inside Negro Island and anchored between the monument and spindle. The jib was down and we were about lowering the mainsail, when a breaker arose four feet high and a few feet from us and went thundering in upon the beach. As the yacht settled down the keel just touched bottom, and there was yet another hour's ebb. The chart showed 16ft., we drew 7½ft., and it made us shiver to feel the jar. Three of us, experienced sailors, looked pale and frightened.

"We can never float here, and shall be swamped," I shouted.

"No, let us get out while we can," replied Arey.

"Heavens! look at that breaker starting almost under our bilge," said Johnson.

"Stand by the jib halliards; run up the anchor! Quick out with it, men!" The anchor was up in a minute, the jib hoisted, sheets to windward. "Heavens! She is on bottom now! No, she swings; she moves, she is pointed outward, and is safe!"

We ran through the fleet, watched the heavy breakers along shore, saw the sea break upon Negro Island ledge, fathoms below low tide, scanned the threatening southeast sky and started back to Portland with free sheets. We passed through the numerous reefs off the Cape, having made the bell buoy, were almost upon Bulwark Shoal,

which broke in a mountain of foam under the faint light of the stars, and ran into Portland about 10 P. M.

The next morning the wind was light northeast, and we ran past the Cape easily. The wind gradually hauled to the southward, and a dense fog came down upon us, and we could not see a hundred feet. We turned back, ran by compass, sounding the horn often, kept accurate record of the time, speed and courses, saw buoys in proper places, and arrived inside the breakwater of the inner harbor without mishap, though it was thick and almost dark. It was an anxious run, but gave us considerable confidence in our compass and judgments. We rested a day and sailed out at 9 A. M., having a pleasant day and light northeast wind which drew to the east-southeast and died out at sunset, leaving us broad off shore about six miles east of Boon Island. We could not get anywhere, and concluded to stay out all night. There was a smooth sea, bright starry sky, warm atmosphere, and there were the lights upon Cape Neddick, Whaleback, Boon Island and White Island in sight for hours. Early morning breezes found us in sight of Thatcher's, a good breeze from the east came with the sun, and before breakfast at 7 o'clock we had sailed gaily between the Londoner and Thatcher's, and were bowling merrily along toward the west. At 10 A. M. the anchor was let go off our Corinthian Y. C. stage, and we dressed ship with forty lovely craft around us.

PITTSBURGH, Pa.

THE CORINTHIAN SWEEPSTAKES.

THE full conditions for the fourth annual sweepstakes of the Corinthian Y. C. are as follows:

The Sailing Committee, pursuant to its authority under the sailing regulations to institute special rules to govern particular races and in accordance with the special rules for the annual sweepstakes, promulgated in the Routine Book of 1891, announces the following conditions to govern the fourth annual renewal of the above race:

I. The sweep will be open to single masted yachts exceeding fifty and not exceeding sixty feet sailing length. Formula $\frac{\sqrt{S.A.}+L.W.L.}{2}$=sailing length.

[N. B.—S. A. and l. w. l. as per rule of measurement of the C. Y. C. of N. Y.]

II. It will be open to yachts enrolled in any recoganized club—American or foreign.

III. It will be sailed off Newport, R. I., on the Monday succeeding the termination of the New York Yacht Club's cruise (probably Monday, Aug. 15, 1892).

IV. The stakes will be $100 each, $25 on entry ($50 forfeit if not declared out by July 1, and $75 if not declared out by Aug. 1). Entries will close on the first day of June, 1892.

V. The course will be an equilateral triangle of twenty-five nautical miles, whereof one leg (if practicable the first) will be laid off dead to windward.

VI. The start and finish will be at Brenton's Reef Lightship.

VII. The start will be flying and (unless hereafter changed by the sailing committee in the exercise of its discretion) no time will be allowed for delay in starting.

VIII. Full professional crews, including helmsman, will be allowed, viz., one man for each full four feet of sailing length and one for any fractional excess.

IX. There will be no time limit for the race nor any restriction upon the sails to be used.

X. No person shall be interested in more than one yacht entered for the race.

XI. Owners must furnish certificates of their sailing length under the Club rule by their respective Club measurers to the Sailing Committee at least ten days before the race (any boat failing to do so will not be timed); the same will be accepted as final unless a re-measurement be demanded by a competitor in writing within twenty-four hours after the race; in the event of such demand the re-measurement must be by the measurer of this Club; to cover the expense of such re-measurement the demanding party must deposit the sum of $20 to be returned if the prior measurement be found materially erroneous.

XII. Seventy-five per cent. of the entry moneys will be given in silver plate to the winning boat; twenty per cent. to the second and ten per cent. to the third, or in the event of less than five starters, seventy-five per cent. to the first and twenty-five per cent. to the second.

XIII. With every protest or objection a sum of $20 must be lodged, which amount will be forfeited absolutely to the use of the sweepstakes fund in the event of the protest or objection being on consideration deemed frivolous.

XIV. The sailing regulations of the C. Y. C. of N. Y. will apply to and govern the race except as modified by the above special conditions.

Dated, 56 Wall street, New York, Nov. 20, 1891.

FOREST AND STREAM
ROD AND GUN

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The Editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The Editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Subscriptions may begin at any time. Terms: For single copy $4 per year, $2 for six months. Rates for clubs of annual subscribers:

Three Copies, $10. Five Copies, $16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain.

Foreign Subscription and Sales Agents—London: Davies & Co.; Brentano's; Sampson Low & Co. Paris: Brentano's. Foreign terms: $5 per year, $2.50 for six months.

ADVERTISEMENTS.

Inside pages, 30 cents per nonpareil line. Special rates for three, six and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money, or they will not be inserted. Reading notices $1.00 per line. Only advertisements of an approved character inserted.

Address all communications:

FOREST AND STREAM PUBLISHING CO.,
No. 318 Broadway, New York City.

Answers to Correspondents.

OZARKS.—Will some reader who is familiar with the fishing and shooting of the Ozark country give me information through FOREST AND STREAM columns?

N. N. N., Newton, N. J.—The shooting seasons in North Carolina will close on deer Jan. 31, on quail March 14, with many county exceptions (given in detail in the *Book of the Game Laws*); in Virginia, deer and quail season closed Dec. 31; with local exceptions.

J. McD., Renfrew, Ont.—Would you please give a short description of the woodcock in next issue? Ans. The woodcock is 11 to 12in. in length, including bill, 2½ to 3in.; plumage below, russet-brown; on upper breast, sides of neck and forehead, ashen-gray; crown black, with cross lines of tawny; back mottled with tawny, ash-gray and black; tail feathers black, barred with tawny; tip smoky gray above, snow white beneath. Legs and feet pale flesh-color; bill dark horn-color at tip, pale at base. Eye large, brown, set far back in the head. See a drawing of the bird in our issue of Oct. 8 last.

J. H. F., Scranton, Pa.—I am particularly anxious to catch a red drum. Can you tell me where I would be most likely to find the best fishing grounds and fishing guides on the North Carolina coast? I shall appreciate an answer. Ans. The best month for red drum fishing in North Carolina is October; but we are informed that many fine specimens of the fish are found in January in Beaufort and Wilmington markets. Wrightsville, nine miles from Wilmington, and accessible by rail, steamer and road, is one of the best places in the State for red drum fishing. W. H. Yopp and W. E. Davis, of Wilmington, can give detailed information. Smith's Island, at the mouth of Cape Fear River, according to Mr. S. G. Worth, is one of the most delightful places on the coast for winter fishing and hunting; it is covered with a virgin forest, and has numerous sheltered strips of beach, on which lizards may be seen actively feeding in winter. A few fishermen settlers are on the island. At Wrightsville complete facilities for fishing are found.

J. G. H., North Adams, Mass.—A pond or lake of probably fifty acres lies in the town of Wilmington, Vt., nearly at the summit of Haystack Mountain; it is very deep on one side, the other has a nice gravelly botton. The bottom is very clear and cool. Trout have been put in at different times as far back as seventy-five years ago, and black bass within four or five years. No fish have ever been seen in the pond. The outlet is a good trout stream and they can be caught clear up to the outlet. There is a large spring near this pond; it is the head of a brook that runs off in another direction, and little trout can be seen in this spring at any time. Now, if there is some mineral deposit there, as some people predict, that destroys the fish I should think it would affect the spring so near by and also the outlet of the pond. Considering you the best authority to explain the mystery I refer it to you. Ans. Without more definite information as to the fishes native to the lake we cannot solve the mystery of the disappearance of the trout and bass. If pike and pickerel are found, they would be able to dispose of bass and trout faster than they could be introduced. The existence of mineral substances in quantities sufficient to injure the fish is extremely improbable; recent explorations in the Yellowstone Park have shown that mineral water is not fatal to fish.

It is sometimes difficult to select an acceptable present, something that will give real pleasure. For the sportsman there is nothing more pleasing than a book which deals with his favorite topic. He enjoys its perusal, and the satisfaction it gives him is a lasting one. FOREST AND STREAM'S *free illustrated catalogue gives the intending purchaser a wide range of selection and offers many suggestions which at this season of the year are very timely.*

THE ART OF SHOOTING.
An Illustrated Treatise on the Art of Shooting. With extracts from the best authorities.

By CHARLES LANCASTER.
LONDON, 1891. PRICE $3.00.

AUTHOR'S PREFACE.

At the special request of many gentlemen who have placed themselves in my hands for instruction in the Art of Shooting, I have written this treatise. I have endeavored to meet the special requirements of those who are anxious to become proficient in the art, and who have hitherto been unable to obtain, in a precise form, the information necessary for studying the first principles of shooting at moving objects.

I have had the honor of coaching many gentlemen, and have carefully studied the points especially requiring attention that have cropped up from time to time while giving instruction. I hope that those who favor me by studying this treatise may quickly gain the knowledge so essential for the making of an average if not brilliant shot.

I have purposely refrained from touching on the several merits of any class of gun—being a gun-maker myself; and, indeed, so many good works on the subject have been written, that it is really unnecessary.

I trust that authors from whose writings I have made extracts will pardon me when they recollect that I have at heart one object, viz., the advancement of a manly sport which gives pleasure, health and occupation to many, and to the patronage of whose followers I am indebted for many pleasant days.

Forest and Stream Publishing Co., 318 Broadway, N.Y.

BIRD PORTRAITS.
Some Native Birds for Little Folks.
BY W. VAN FLEET, M.D.

A handsome imperial octavo volume of untechnical descriptions of the lives and ways of fourteen American birds. The list comprises:

Robin, Chickadee, Kingfisher, Great Horned Owl, Bobolink, Blue-jay, Woodcock, Nuthatches, Meadowlark, Ruffed Grouse, Cedar Bird, Killdeer, Summer Duck and Crossbills.

Each of these birds is beautifully illustrated by the photogravure process from drawings by Howard H. Darnell. The paper is substantial, and the 147 pages of large, clear, handsome type contain just the sort of information necessary to make little folks better acquainted with the birds described, and to awaken a taste for extended study. Everything has been done to make the volume one of the most handsome gift books of the year. Price, postpaid, $3.00. FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.
DAVIES & CO., 1 Finch Lane, Cornhill.

Book and Boy.

The visitor from New Jersey came in and said his wife wanted to give a book to a boy friend—a manly boy, blessed with a taste for *Forest and Stream* subjects; the book must be a manly book, and one to encourage these tastes. We named it—"Nessmuk's Woodcraft;" and the suggestion carried conviction. The boy has doubtless by this time read his book through three times at least, and has found something in the third reading that he missed in the first. And if he retains his sportsman's tastes he will read the book when he shall be old.

The Man and the Book.

For Read this note from Gen. D. H. Bruce, of Syracuse, in praise of "Woodcraft:" "Good old Nessmuk. I could have known him for years. What a delightful book. How every page rivets the attention of the woodsman, by its happy language in dealing with practical, every-day things, and imparting hints of originality in respect to many things. I took up the book one evening, and could not sleep until I had read every page and looked several times at the quaint portrait of the veteran. I like such men."

FOREST AND STREAM PUBLISHING CO.,
318 Broadway, New York.

UNCLE LISHA'S SHOP.
Life in a Corner of Yankeeland.
By ROWLAND E. ROBINSON.

A book that appeals to all who know anything of the old-fashioned New England life. These are some of the chapters:
The School Meeting in District 13. Uncle Lisha's Spring Gun. In Uncle Lisha's Shop. Concerning Owls. Uncle Lisha's Courting. How Zene Burnham Come It on His Father. A Rainy Day in the Shop. The Turkey Shoot at Hamner's. Sam Lovel's Thanksgiving. Little Sis. Sam Lovel's Bee-Hunting. In the Shop Again. The Fox Hunt. Noah Chase's Deer-Hunting. The Hard Experience of Mr. Abijah Jarvis. The Coon Hunt. In the Sugar Camp Indians in Danvis. The Boy Out West. Breaking Up. The Departure. The Wild Bees' Swarm.

They make a handsomely printed volume of 187 pages, bound in cloth. Sent, postpaid, on receipt of price, $1.00.

FOREST AND STREAM PUBLISHING CO., 318 BROADWAY NEW YORK.

JANUARY DAYS.

IN these mid-winter days, how muffled is the earth in its immaculate raiment, so disguised in whiteness that familiar places are strange, rough hollows smoothed to mere undulations, deceitful to the eye and feet, and level fields so piled with heaps and ridges that their owners scarcely recognize them.

The hovel is as regally roofed as the palace, the rudest fence is a hedge of pearl, finer than a wall of marble, and the meanest wayside weed is a white flower of fairyland.

The woods, that frost and November winds stripped of their leafy thatch, are roofed again, now with an arabesque of alabaster more delicate than the green canopy that summer unfolded, and all the floor is set in noiseless pavement, traced with a shifting pattern of blue shadows. In these silent aisles the echoes are smothered at their birth.

There is no response of airy voices to the faint call of the winter birds. The sound of the axe-stroke flies no faster than the pungent fragrance of the smoke that drifts in a blue haze from the chopper's fire. The report of the gun awakes no answering report, and each mellow note of the hound comes separate to the ear, with no jangle of reverberations.

Fox and hound wallow through the snow a crumbling furrow that obliterates identity of either trail, but there are yet tracks that tell as plain as written words who made them. Here have fallen, lightly as snowflakes, the broad pads of the hare, white as the snow he trod; there, the parallel pairs of another winter masker, the weasel's tracks and the squirrel's, linking tree to tree.

There the leaps of a tiny wood-mouse are lightly marked upon the feathery surface to where there is the imprint of a light, swift pinion on either side, and the little story of his wandering ends—one crimson blood drop, the period that marks the finis.

In the blue shadow at the bottom of that winding furrow are the dainty footprints of a grouse, and you wonder why, he so strong of wing, should choose to wade laboriously the clogging snow even in his briefest trip, rather than make his easy way through the unresisting air, but the snow-written record of his wayward wanderings tells not why. Suddenly, as if a mine had been sprung where your next footstep should fall and with almost as startling, though harmless effect, another of his wild tribe bursts upward through the unmarked white floor and goes whirring and clattering away, scattering in powdery ruin the maze of delicate tracery the snowfall wrought; and vanishes, leaving only an aerial pathway of naked twigs to mark his impetuous passage.

In the twilight of an evergreen thicket sits a great horned owl like a hermit in his cell in pious contemplation of his own holiness and the world's wickedness. But this recluse hates not sin, only daylight and mankind. Out in the fields you may find the white-robed brother of this gray friar, a pilgrim from the far north, brooding in the very face of the sun, on some stack or outlying barn, but he will not suffer you to come so near to him as will this solemn anchorite who stares at you unmoved as a graven image till you come within the very shadows of his roof.

Marsh and channel are scarcely distinguishable now but by the white domes of the muskrats' winter homes and here and there a sprawling thicket of button bush, for the rank growth of weeds is beaten flat and the deep snow covers it and the channel ice is one unbroken sheet.

The lake's sheltered bays and coves are frozen and white with snow or frost, and the open water, whether still or storm-tossed, black beneath clouds or bluer than the blue dome that arches it, looks as cold as ice and snow. Sometimes its steaming breath lies close above it, sometimes mounts in swaying, lofty columns to the sky, but always cold and ghostly, without expression of warmth or life.

So far away to hoary peaks that shine with a glittering gleam against the blue rim of the sky, or to the furthest blue-gray line of woodland that borders the horizon, stretches the universal whiteness, so coldly shines the sun from the low curve of his course, and so chilly comes the lightest waft of wind from wheresoever it listeth, that it tasks the imagination to picture any land on all the earth where summer dwells amid green leaves and bright flowers, the music of birds and running waters, and of warm waves on pleasant shores, or that anywhere spring is just awakening fresh life or autumn yet lingers in the gorgeousness of many hues.

How far off beyond this world seems the possibility of such seasons, how enduring and relentless this which encompasses us.

And then, at the close of the brief white day, the sunset paints a promise and a prophecy in a blaze of color on the sky.

The gray clouds kindle with red and yellow fire that burns about their purple hearts in tints of infinite variety, while behind them and the dark blue rampart of the mountains flames the last glory of the departing sun, fading in a tint of tender green to the upper blue. Even the cold snow at our feet flushes with warm color and the eastern hills blush roseate against the climbing, darkening shadow of the earth.

It is as if some land of summer whose brightness has never been told lay unveiled before us, its delectable mountains splendid with innumerable hues, its lakes and streams of gold rippling to purple shores seeming not so far before us but that we might, by a little journey, come to them.

GUIDES AND HUNTING.

THE tearful protestations of a correspondent who writes from Bald Knob, Ark., in his own defense, arouse our sincere sympathy, and our own experience in somewhat similar cases moves us to say a word in regard to it. The facts appear to be these.

Some time ago certain gentlemen of St. Louis went down into Arkansas on a shooting trip. There they hired the above-mentioned protestant as guide. The success of their hunt did not equal their expectations, and on their return they complained vigorously about this, throwing the blame of their failure on the incompetence of their guides. This complaint was transmitted to us by our correspondent "Aberdeen," and we published it. Of the exact facts in this case we have of course no knowledge. Perhaps on both sides their statements may be a little colored by the feelings of the persons interested.

There are few thing in life that are more touching than the absolute confidence in himself felt by the novice in big game hunting. It does not occur to him that anything more is needed for a successful hunting trip than a good weapon and good ammunition. Given these, and the ability to walk or ride about, and he regards success in killing game as assured, provided there exists any in the region which he chooses as his hunting ground.

He starts out with or without a guide, and wanders about. He does not know where to look for game nor how to approach it. If he is alone, perhaps he whistles a merry tune as he walks along or hums an air; at all events he steps on sticks and breaks them, or noisily pushes his way through the crackling underbrush; he walks rapidly, for he desires to cover as much ground as possible before returning to camp. If he is in company with a guide he very likely keeps up an animated conversation with the latter, asking questions about the strange things that he sees, or trying to learn something about the habits of the animals that he is pursuing. If there is much game in the country, and it is pretty open, perhaps he sees some, but much more likely he does not. However, if game is abundant he very likely sees tracks that look to him quite fresh, and possibly even a running deer, or elk, or a mountain sheep, far above him, just disappearing over the crest of some bluff, or perhaps standing statue-like outlined against the sky on some lofty crag, watching him for a moment before it seeks safety in some situation which is still more inaccessible. All this perplexes our young friend, and he wonders why all these animals appear to be alarmed, and what can have frightened them.

When he returns to camp after a day of fruitless hunting, he thinks that now at all events he will have some fun and try his gun, and so he sets up a tin can or a bottle on a stick, and amuses himself by shooting at it, making the echoes ring for miles around, and arousing to unusual alertness and suspicion every wild creature within hearing.

As may be readily imagined, the young man whom we have described is not popular with old hunters in whose company he may find himself in camp. He is a veritable thorn in their sides, and withal so entirely innocent and well intentioned, that one cannot get angry with him except in the inmost recesses of one's own heart. It is better to have the hunt a failure than to hurt your companion's feelings. In the midst of our rage at losing a good chance to kill a deer, when the camp really needed meat, we have been obliged to laugh at the delicate attempts of an experienced companion to hint to such a novice that it would perhaps be better not to shoot at a rabbit or a grouse, when it was quite likely that within a hundred yards there was another deer that might be secured.

It is often to be noted that the novice, no matter how little he really knows, imagines his knowledge of woodcraft, of the habits of wild animals and of hunting to be great. Having read and digested many books on the subject, he has a theoretical knowledge, and desires to apply his theories on all occasions. He will even make suggestions to old hunters, and try to demonstrate that he is right! He does not know — what experience alone could teach him—that in hunting no two sets of conditions are exactly alike, and that hard and fast rules are of no use in the pursuit of big game, The hunter must adapt himself to circumstances; what he wishes to do is to approach within shot of his game, not to follow out the unbending rules laid down by some individual who, perhaps, never in his life killed any thing except by the help of a guide, although he could write learnedly enough about stalking.

Books are good things in their way, but it is very certain that no man ever learned to hunt by reading books. Experience and observation are the only teachers—or perhaps it would be better to say imitation and experience. We believe that no one can learn to hunt so easily and so well as by going out with and following about an old and skillful hunter. When doing this, the novice should make up his mind to occupy a subordinate position throughout, and should feel that his day is to be devoted to learning something, not to finding his own game. He can easily make some arrangement with his companion by which the latter shall give him all the shots, for in hunting—as all true hunters know—the pleasure is not in killing the game, but in circumventing it; not in shedding blood, but in proving that, notwithstanding the possession by this wild animal of senses trained and made acute by the accumulated experience of hundreds of generations, you have been able to creep up near enough to it to make it—if you wish to—your prey.

When the novice goes out, therefore, he should follow behind his companion, and strive in all ways to imitate him. He should not speak, unless addressed, and then must answer in the same low tone. If he sees anything of interest, which he imagines has escaped his companion's eye, he may call his attention to it, but not by speaking; a low whistle or hiss will be enough. The human voice has a very penetrating quality, and is, moreover, an unusual sound in the solitudes. Imitate your companion. If he does anything that you do not comprehend, make a mental note of it, and after you have finished hunting—when the necessity for silence is over—ask him about it.

Any one who has patience, good powers of observation and opportunities, will during a few hunts of this kind learn ten thousand times more than he could from a lifetime devoted to book reading.

A convention of the New York State Association for Protection of Fish and Game has been called to meet in Syracuse Feb. 12, for the purpose of discussing the codification bill.

BUFFALO IN YELLOWSTONE PARK.

NOT very long ago Captain Anderson sent out Burgess, the civilian scout attached to the post in the National Park, to make a journey south to the Hayden Valley. The purpose of the trip was to see whether any signs of poachers could be found and also incidentally to discover what could be learned as to game in the open country to the south.

The scout has recently returned and made his report, which announces that there is an abundance of elk in the Hayden Valley; but it is in respect to the buffalo his discoveries are most encouraging. In the Hayden Valley he saw and approached quite close to several herds of bison, which he counted. One of these contained 78 individuals, a second 50, a third 110 and a fourth 15. Besides these, several single buffalo were seen and, at quite a distance, some other scattering groups which could not be counted. Mr. Burgess does not hesitate to say that he saw fully 300 buffalo.

It is not to be supposed that at the time of this visit anywhere near all the bison in the Park were collected in the Hayden Valley, and it is altogether reasonable to believe that there are 100, and perhaps 300, other buffalo in the Park besides those which Mr. Burgess saw. Taking, however, the lowest number, we would have 400 buffalo in the National Park at the present time. This we believe to be a conservative estimate and to be considerably under the truth. These bison are to be divided into six classes, calves, yearlings, two-year-olds, three-year-olds, bulls and cows. This would give us at the lowest estimate from 50 to 70 breeding cows. While all these cows may not produce calves each year they must represent an annual increase of at least from 36 to 40 head. This is taking the most unfavorable view of the number of cows and the rate at which they breed. We are entirely disposed to think that the calf crop among the bison of the National Park will this year be from 75 to 100 animals.

However this may be, it is quite clear that there is in the National Park living under entirely natural conditions, and yet protected from attacks by man, a breeding stock of buffalo sufficiently large to keep that reservation fully stocked for all time.

SNAP SHOTS.

THE game bill prepared by the New York codification committee has been introduced into the Assembly at Albany. No very material changes have been made in the text as submitted last year. The close seasons are: Deer, Nov. 1–Aug. 15 (does not to be killed). Hounding forbidden; Oct. 11–Sept. 10. Hares, rabbits, March 1–Sept. 1. Black and gray squirrels, Jan. 1–Sept. 15, Wildfowl, March 1–Sept. 1. Quail, Jan. 1–Nov. 10. Woodcock, Jan. 1–Sept. 1. Plover, mud hen, gallinule, grebe, bittern, surf bird, curlew, water chicken, bay snipe, shore birds, Jan. 1–Sept. 1. Robin, blackbird, meadow lark, Jan. 1–Oct. 1. Trout, Sept. 1–May 1. Salmon trout, landlocked salmon, Oct. 1–May 1. Black bass, Jan. 1–May 30. Muskallonge, Jan. 1–May 29. Salmon, Aug. 15–March 1. There are numerous local exceptions.

In the U. S. Senate, Jan. 13, Mr. Morgan, chairman of Committee on Foreign Relations, introduced a resolution which was agreed to calling upon the Secretary of the Treasury to furnish a copy of the report of Mr. H. W. Elliott on the condition of the Seal Islands of Alaska, made in obedience to an Act of Congress approved April 5, 1890. Mr. Elliott's report was submitted to the Secretary Nov. 17, 1890. The publication of this important document which will contain about 250 printed pages, besides numerous illustrations, will be awaited with interest, for it must doubtless show clearly that the fur seal is not to be saved by arbitration, but by agreeing upon and enforcing an adequate close time.

A marked change during late years, which is likewise to be recorded as an advance of common sense, has been the growing recognition of the reasonableness, value and dignity of field sports. "In my young days," writes Mr. Clarke, "angling was generally regarded as an idle and almost disreputable pursuit." Even more notable than the development and perfection of appliances is the change which has been wrought in this respect. The beneficent qualities of care-free recreation are better recognized than ever before, and the world's workers are discovering that there is no other care-free recreation which can compare with that of the field and the stream.

Notwithstanding that a large number of extras of the issue of Jan. 7 was provided, the edition was exhausted the week of publication, and we have been unable to furnish that issue to new subscribers. Provision has been made for a new supply, however, and all demands will be filled.

Yates county, N. Y., has just adopted a Supervisors' ordinance which requires a license fee of $10 to be paid by non-residents who shoot game in the county. It is an interesting question whether such laws as this are constitutional.

The Sportsman Tourist.

EPISODES IN THE LIFE OF A VERY BAD BOY.

Continued from Page 8.

II.

ABOUT the period when my social standing was at a very low ebb, in consequence of a variety of enterprises entered into of a character that by no means met the approbation of the more straight-laced portion of the community, I began to feel a growing disgust for such an unappreciative lot. They even refused to see the hand of retributive justice in the very great change that took place in the general appearance of the white horse of a crabbed old chap, who had set his dogs on us one Saturday afternoon, and ran us out of a blackberry patch on his land, which was profitless to him. The natural color of that old horse had been white, and when it was discovered one day that his tail had been shorn and his color had changed to jet black, there was much wonderment. Some said it was a miracle or climatic effect, and some said it was black paint—which latter opinion generally prevailed. But who the artist was remained a mystery; Rosa Bonheur had not made the town a visit. It was noticeable, however, that many who had no love for the old farmer who owned the animal, looked knowing, and smiled as I passed; while other people severely virtuous and proper laid it at my door. The owner of the chameleon quadruped lodged his complaint with my governor, who being a lawyer naturally demanded proofs to substantiate the charge; and being as it were retained for the defense, was politic enough not to ask his client if he was guilty, the natural inference being that he was innocent. No doubt that it was to strengthen his opinion in that belief that he made a careful inspection of the contents of our little kitchen closet, where paint pots were kept. He did not, however, carry his researches as far as the village wagon shop, nor question an apprentice thereof, who was frequently accused of being my ally.

Indignation at the injustice (?) of the accusation together with a long series of charges of similar imputations brought the determination to get away from such a country at the earliest possible moment, and a passing circus company gave direction to my thoughts. The previous year a circus had made our village a visit, and fired my ambition to emulate the brilliant performance of its artists. With this view I had improvised a circus ring in the cornfield a short distance from the house, and pressing our old mare into service, organized my company among the most promising of the boys. Practice was carried on with great industry and earnestness. There was one feat I was particularly ambitious to accomplish, and that was to turn a back-somersault through a paper-covered hoop. I had overheard a circus man say that it was easy to turn forward with the motion of the horse, but turning backward, reversing the motion, had never been done, and would result in breaking the neck of the performer who undertook it. With a proper appreciation of the value in which my neck was generally held by the community, I resolved to accomplish the feat, neck or nothing. It was my ambition to shine in the profession I had secretly chosen as the road to distinction.

Practice demonstrated very nearly the prophecy of the circus man, and how I did escape breaking my neck was a wonder; it was owing to the kind influence of some guardian angel or the softness of the ground—one or both, for I must have landed on my head several hundred times, and left the cast of my cranium in every square foot of ground in the ring. But I persevered, and we all know the results of perseverance. The day came when I could say I was an artist.

One day I announced that my benefit would take place; a grand performance would celebrate the closing of the season, as that corn would soon be harvested. There was great excitement among the boys as to the prices of admission, and whether their financial condition would permit their witnessing the performance. A scale of prices was finally arranged. There was no reserved section for aristocrats, and the management scorned to enter into secret compacts with ticket scalpers to give them all the best seats on a divy of profits, and then to publish a card lamenting the impossibility of preventing the scalpers from obtaining all the front seats, and robbing the public (and by a singular coincidence to have the public see the manager's wife and daughters appear a few days later in brand new seal skin sacks). There was no such monkey-shining in this instance; everything was fair and above board. Boys from 8 to 12 paid full price, ranging from a one-bladed Barlow knife to so many red apples; they must be red to be current at the door. Boys under 8 half price, or an elderberry box of not less than two dozen pins; or, if preferred, so many yards of kite string. Eggs were currency also, six for the small boy, a dozen for the large one. Great was the preparation for the event. Corn stalks were cut and a stockade formed to prevent outsiders from obtaining free sight. The old white mare was converted into the proverbial circus horse by being decorated in spots and colors with elderberry juice; and as for myself, I lay awake all night studying up a befitting costume. Inasmuch as the first act was the wild Indian scalping business, I concluded it would do to continue in the same dress minus the tomahawk and feathers. Immediately after breakfast I proceeded to gather materials for my make up. A wild and very hot chase after the old rooster resulted on his losing his tail feathers. My sister, whom I had made my confidant, set out to supply sundry articles surreptitiously obtained from the house, to help out. A red table cover impressed for a blanket, an old pair of trousers converted into leggins by sewing curtain fringe down the seams, etc. The final touches in the way of paint were supplied at the last moment by a liberal application of elderberry juice in streaks from nose to ears.

At last, after the audience was seated on their heels or kneeling in the dirt and breathless with expectancy, I burst into the ring with a wild yell, and my appearance was so ferocious and fearful that about half the smaller boys rose *en masse* in wild alarm, and made a break for liberty. They were finally quieted, and around the ring I dashed, standing flourishing the tomahawk and yelling, presenting an aspect of dreadfulness and ferocity to strike terror to the bravest Comanche that ever graced the plains. A small boy had been subsidized to be the victim of the scalping, and a corn shuck and tow wig had been carefully prepared. At the given signal he was to rush into the ring as an escaped captive, when I was to swoop down on him and scalp him then and there. He managed to get into the ring considerably scared, but when I dashed for him with an unearthly yell it seemed too real; he couldn't stand it, but broke for the outlet, leaving his scalp that had become displaced, which I, however, to save the day, reached down and caught. It required a powerful imagination to carry out the idea; there never was perhaps an instance of scalping at such long range. However, determining to carry out the programme, and seizing the scalp I held it aloft, and giving a yell that could have been heard five miles turned a somersault, and landing behind my horse, was about to make my bow and receive the expected applause, when I was astonished to see every boy panic-stricken apparently, and making a break for the open, knocking down the barrier and tumbling over each other, and in less time than it takes to tell it there was not a boy left, and I stood alone wonderingly. I had not long to look for the cause, for there stood my governor, with folded arms, surveying the surroundings. He had heard my wild Indian yells at the house, and had come down to learn whether a murder was being perpetrated. It had not occurred to me that such a conscientious and thorough rendering of the part might arouse the whole village.

I can see my governor now, as he stood there, surveying the deserted scene of my recent triumphs. He was what we are wont to call a gentleman of the old school, who maintained the fashion of his earlier years—in wearing ruffled shirt and wristbands, a buff vest, blue dress coat, white cravat and high collar, long white hair, clean shaven face and boots of immaculate shine. His associates were men of like stamp, who came to visit him once a year to have a week's deer hunt. Fenimore Cooper, Chancellor Kent, the Van Rensselaers, Livingstons, and a sprinkling of judges and lawyers came for their annual frolic, for when they all assembled at a good dinner of game and venison, the result of the day's hunt, all dignity was put aside and they were very jolly and as boys again. I mention this that it may be better understood what a shock it must have been to my governor to see the vent of my ambition, for the circus in those days was rated as a pretty low business, the performers being generally a hard lot, a carousing, fighting class, very low in morals generally.

For a moment the governor stood; and then taking off his hat in mock respect, said, "Pardon me, most noble Chief of the Wyandottes, for this interruption. When your scalp dance is finished, I request that you will take yourself and the mare to the creek and remove your war-paint, as otherwise you might strike great terror to your mother and sisters; after which I shall be happy to see you in the office."

That intimation, and "see you in the office," carried with it views of vigorous exercise on the part of the governor, in which a very tough birch rod performed a very active part. In the present instance, however, it was not called into service. The governor opened the interview by complimenting me on my proficiency, saying it was very evident that my talent pointed to the ring as my future profession, and he prophecied I would reach the highest pinnacle of fame, if my neck held out, and other similar complimentary remarks, all of which were worse than the thrashing I expected, for sarcasm was more cutting than the birch. I was dismissed with the intimation that I could call a meeting of my suddenly departing audience and invite them to see how quickly I could illustrate the feasibility of civilizing the noble savage by showing them how speedily I could gather a corn crop and put it in the barn. I knew what that meant, my punishment was to cut, gather and put into the barn about four acres of good stout corn—a big job for a chap of my size.

I called a meeting of my creditors, to whom was due a part of an unperformed performance; and proposed a "bee," as we called it, a joint contribution of services, on the next day, the Saturday holiday, promising a return of the wealth entrance fees had brought me. The proposition was received with great enthusiasm. Early next morning we went at it; and with a couple of borrowed teams we made things lively, and by night the job was so nearly finished that in a couple of days more, and with a boy or two to help, that corn was gathered, and a diversion created in my favor. It was pretty generally admitted that "that darned boy" had the stuff in him, if it could only be steered in the right direction. My stock had advanced several points. My governor, who greatly admired pluck, was heard to say that I displayed considerable versatility, as I made a pretty good warrior one day and a very fair farmer the next, with a probable preference for the scalping line as being the easiest.

III.

The advent of a circus in a country town in the days I write of was an event. All business was suspended. The farmer left his plow in the furrow, and the horses were transferred to the farm wagon with its double chair for the old farmer and wife, while behind the hired man and a boy or two sat on the straw and a bag of oats, and for creature comforts a cheese-box was provided filled with head cheese, cold potatoes and doughnuts. The admission money (25 cents) was a serious matter, and the old lady had to bring forth the long stocking containing the family savings kept hidden away in a secret place only known to herself. In those days a dollar was as big as a cart wheel. The hired man had to make a special draft on his wages of $8 per month and the boys had to do some tall financeering to raise their 12½ cents. Boys in those times knew nothing of pocket money, velocipedes, silver watches and nickel-plated skates. I had the reputation of being a bloated capitalist, it being known that I was possessed of the sum of $3, and in consequence had numerous applications for discounts, with collaterals of skates, sleds and jack knives. The approach of a circus, heralded by large handbills, threw the whole town into a state of intense excitement. The one at hand combined a menagerie, with a real elephant, a rhinoceros and a fierce mountain lion (represented on the bills as dining on a couple of unfortunate Africans). There were to be two performances. In a rash moment I had invited a certain young lady with a wealth of very red hair, for whom I had a secret passion; and when I ushered her to the entrance a wild shout arose from sundry small boys who for financial reasons

could not obtain admittance: and sarcastic allusions touching upon the incendiary possibilities of the young lady's hair, led to serious consequences later, for I soundly thrashed the culprits. Considering myself a connoisseur I criticised the performance, much to the edification of the young lady, who could only ejaculate, "Oh my."

The following day, by a bribe to an usher, I obtained admittance to the morning rehearsal and made some criticisms on the clumsiness of some of the performers; and these being overheard by the ring-master, he asked me what I knew about it. I replied that I was somewhat in that line myself, whereupon I was invited to give an exhibition of my skill, which was just what I was longing for and proceeded to do, not omitting my back somersault. It attracted the attention of the manager, and overtures were at once made to me to join the company, and the munificent salary of $3 per week was offered, resulting in an agreement on my part to join. The circus was to leave at early daylight the next morning, and my time for preparation was short. My personal wardrobe was not extensive; making it up into a small bundle I slipped out about 10 o'clock, and as per agreement met a small boy—a waif and hanger-on of the circus whom everybody kicked and cuffed. I was to sleep with him, but was somewhat staggered when I discovered we were to lodge on a bundle of straw under the cage of the rhinoceros, which we had reason to regret before morning, as the cage was leaky.

As no provision seemed to have been made for me I climbed up on one of the wagons with the driver and by sunrise we were several miles on our way. When it was light enough to recognize faces I was surprised to find in the driver a native of our village, Charley W., who on discovering me was greatly astonished, exclaiming, "Why, Dick, you little cuss, what are you doing here?" Mutual explanations followed. Charley had as much reason to keep shady as I had, for his people were among the aristocrats of the village, his brother being a rich man and his brother-in-law the village parson.

It was agreed with the manager that I was not to appear in the ring until we were beyond the probability of recognition. Some days later, when several towns distant, I was notified that the next night I was to appear. A stunning costume had been prepared, and my dress of crimson satin and silver spangles gave me great delight. I was billed as "Muchacho Don Ricardo, of Cuba," and my skin was to be stained to imitate a Spanish complexion. Thus disguised, I had less fear of recognition. The evening came upon which I was to appear. That day I had rehearsed satisfactorily to the management; and my dress having been donned and face stained, I stood ready awaiting my cue. The horse selected for me was a splendid old fellow, steady in gait and reliable. I peered into the tent and saw that it was crowded to suffocation. I could not help feeling a little nervous; and the manager was equally so, for he had visions of being held responsible for my neck. My friend Charley did duty as ring attendant, and when at last my turn came and he gave me a leg to mount, he whispered words of encouragement. The band struck up; and as I took my preliminary canter around the ring the vast area of faces turned toward me brought my heart into my throat. I was first to give an exhibition of riding; and in this acquitted myself very creditably, judging from the applause. Then came the hoops and back somersault feat. The band struck up, and after riding once around under the hoops, I rose to my feet, nodded to the men holding them, and gathered myself for the spring. The first three I was to go through forward, the last two backward. I accomplished the forward ones easily and successfully. As I approached the last two I nerved myself, and when at the proper distance sprang into the air and through, landing firmly on my horse. Encouraged by this, I determined to outdo myself; and motioning the man holding the last one to raise it higher, I bounded into the air through the hoop and turned a second somersault, landing squarely on my feet behind the horse, as I intended. I think the roar of applause that followed could have been heard five miles. They yelled for an encore, but my manager did not see it; he was not inclined to hazard a repetition nor to trust too far in Providence. My status was established; I was a star and too valuable to be made common. It must be borne in mind that in those times circus performers had not reached the perfection of skill of the present day; much more difficult feats are now an everyday affair.

A few days later we struck Cooperstown, the county seat of Otsego; in expectation of a grand house the full strength of the company was called into requisition, and as anticipated, when the evening came the tent was filled to its utmost capacity. The court being in session, the management had set aside a special section for the judges, lawyers and aristocrats of that very aristocratic old town. I was again to wind up the riding acts with my "daring feat," as the bills had it. I had a new and more elegant dress for the occasion, and was resplendent in tights, crimson satin and silver spangles, and a silver laurel wreath on my forehead. I was simply gorgeous, and I resolved again to outdo myself on this occasion. I had by this time become accustomed to the sea of faces, and never allowed my mind to be distracted from my work. Suffice it to say I did my best, and introduced much fancy riding, and when the hoop business came I had a notion to do three somersaults, but prudence finally kept me within bounds. It so happened, or was by design of the manager, that my last hoop was directly opposite the grand stand containing the dignitaries, and when I landed on my feet and, by instructions, faced them to make my bow, what was my consternation as I glanced up to see my governor and Fenimore Cooper directly in front of me. I saw him start as I turned and flew out of the ring, while Mr. Cooper peered at me curiously and said something to my governor, which I fancied was touching on my identity. A few hours later we were safely out of town, greatly to my relief. Our next exhibition was to be twenty miles away and I fancied, as I had heard nothing, that the governor had not recognized me, but had simply been startled at some fancied resemblance.

Things had not been going along quite to my satisfaction. My salary was in arrears, and a feud had sprung up between the clown and myself. He had two boys in the company who seemed to make no progress; my success angered him and he never missed an opportunity to give me a cuff or kick when I passed. I complained to the manager, but received no satisfaction. On the occasion of the performance on the first night out from Cooperstown, when having just stepped into the ring with the pole I had been holding for the garter act of one of the female riders, as I passed the clown he gave me a vicious kick. On the spur of the moment I whirled around and brought the heavy pole down on his poll with a resounding whack, which dropped him in his tracks; but he was soon on his feet again and came for me. I ran and jumped over into the pit, the clown after me. A big six-foot lumberman rose up and said: "Here, here, now, you leave that boy alone," and opposed his passage. The clown was rash enough in his rage to hit the big fellow, who returning the blow with a will, knocked the clown clear into the ring. The old circus call to arms "Hey, Rube!" brought the circus men to the rescue. The big fellow's companions rallied also; and in about two minutes there was the biggest kind of a fight going on. The audience, panic stricken, rushed for the exit, women screaming, children crying; and in no time not one remained. Meanwhile the lumbermen had cleaned out the circus party, driving them out into the wet grass and under the wagons. The animals became excited; the lions roared, the jackals and hyenas "tuned up," the elephant became excited and trumpeted, all of which added to the confusion and scare. Even the fighters thought the animals had got loose; and there was some tall scrambling on to the wagons, which ended the fight, every fellow being intent on saving himself. I was carried out with the rush, knocked down and trampled on; and when finally getting clear, I was but a faint resemblance of the gorgeous youth of a half hour previous. My beautiful spangled dress suffered dreadfully in the melee.

While I was thus half stunned and confused, who should stumble over me but my defender. He stopped and looked at me, saying, "Ain't you the little cuss the clown was after?" I told him I was. He then interrogated me as to what I was going to do next. I said I didn't know. "Well," he said, "come with me;" and taking me by the hand led me to the little village hotel and handed me over to the landlord, saying, "Take care of this boy; I'll pay the bill." It was a cool evening, and being chilled I got as near as I could to the fire—an old-fashioned fire place. In the corner in an arm chair I saw an old gentleman calmly smoking, who eyeing me closely said, "Are you the boy all this fight was about?" I said I believed I was. "Goin' along with the circus again?" I said no, I was through. He then questioned me as to who I was, and being in too forlorn a condition to prevaricate I told him the truth. His astonishment was great. "What!" said he, "You Squire ——'s son, and in a circus?" I confessed the fact. To make a long story short, the old gentleman, who knew my governor well, took me home, and his old wife holding up her hands in holy horror washed me and put me to bed. The next morning dressing me up in a suit of one of their boys, he hitched up his old mare and drove me to Cooperstown, where my governor was attending court.

It would lengthen this yarn out to an unreasonable length to describe my reception, and how I was packed off home, and was received with tears and rejoicing by my mother and sisters, who looked upon me as the long lost prodigal son returned. In the eyes of the village boys I was a hero; in the sight of the old tabbies and other good people I was an unredeemable little reprobate. I had saved and brought home my very much damaged dress, which was surreptitiously exhibited to my admiring crowd of boys, when they could escape the vigilance of their parents, for every boy in town was forbidden to speak to or associate with me.

I awaited the governor's return with great anxiety and uneasiness. When he finally arrived, I was called into the much dreaded office; and asked what I had to say for having disgraced myself and family, and shown such a low taste for such associates. It suddenly occurred to me what the governor had said on the occasion of the cornfield episode, so replied, "I was simply following your advice, sir. You said you thought the circus my forte and that I would be a success; and I acted on it."

It was the only occasion when I ever saw the governor nonplussed. He was, as the boys say, "fairly stumped" at my cheek and impudence. He evidently wanted to roar when his astonishment was over, but dignity must be preserved. I was dismissed with the remark, "We will renew this subject later." It is needless to say it never was renewed, and the episode was ever after a forbidden topic in our family. It was too painful to be spoken of. The old tabbies aforesaid who were itching to extend their sympathies to my mother met with such a frigid reception that they confined their gossip to their own circle, but they wagged their heads and prophecied more trouble and sorrow "for his poor mother," the most conservative opinion being that I would turn pirate and eventually be hung.

My country career, however, was soon after cut short by a summons to a Western city to prepare for West Point, and I lost my chance to fulfill their prophecy of pirating, which disappointed me, as my early reading rather influenced my fancy in that direction, and I had some serious plans in that line of business, resolving, however, to institute a reform in the pursuit so far as to prohibit and omit all the plank-walking part of the proceedings. I had gone so far as to have selected a name for my "low, long black craft" and a fanciful one for myself, and had planned a very rich and and gorgeous costume with silver-plated pistols in belt, a plumed hat with a golden tassel hanging down over one eye. The old ladies did not imagine how near they were to the possibility of the truth in their prophecy.

As to my circus experience, all I had to show for my services was a much-soiled suit of satin and spangles and 25 cents drawn on account of salary, the balance never being realized. Even to this day a circus performance always has the preference over anything else; and as I sit and look on I feel the old spirit come over me, and an almost irresistible inclination to pull off my coat, jump down into the ring, mount a horse and do the old double somersault again—and I have always had an abiding faith and belief that I could do it, *malgré* the gray moustache.

IV.

Twenty years later, dating from my circus experience, I was on one occasion seated on the box or driver's seat of one of those splendid six-horse stage coaches, crossing the Sierra Mountains. We had just changed horses and drivers. The new man and myself soon got into conversation; and he happened to mention his birth place. I replied, "Mine, too. Your name?" "——" "What," said I, "Charley W.?" Charley replied, "Circus," and nearly rolled off the box, laughing until the tears rolled down his face. Then, turning suddenly, he said, "In the old biz yet?" Well, we did have a good laugh over our early-day experiences. We had never met since the night of the row. Charley had heard that I reached home safely; and here we met again with an interval of twenty odd years. Charley's love for horses had led to his driving other people's, never being able to own any himself; and as we rattled down the grade at a keen run into Lake Valley, Charley gave a yell and the old war cry, "Hey, Rube!" and in imagination I was again in the ring, with lights flashing, the band braying, and in the air doing my "double backward" through the hoop. PODGERS.

CAMP LIFE AMID THE PINES.

IT was in August. Inspired by such fairy tales as "Winthrop's", "Nessmuk's" and those of others, we insisted upon exploring something also. The laurels of those men did not let us sleep. Besides we suspected ourselves to be ailing and deemed it imperative to recuperate. Our project was to "discover" the infant waters of the Wisconsin, supposed to be enwreathed with arabesques of Indian legends, and to see its wavy cradle, the history-enshrouded Lac Vieux Desert.

We started from Fond du Lac. Our packs weighed 40lbs.; with gun and revolver perhaps 50lbs. The ride over the Lake Shore & Western was entertaining. At State Line we alighted. This flourishing town consisted of the station. Here my troubles began. My boots—new ones—chafed my ankles, which during the nine days of our stay was a constant annoyance. For the last days blood and socks were so pasted together that the latter were not taken off before the return. The lake was not reached that evening. We camped under a very primitive hut, erected of poles and brush, in a rocky glen. Instead of an epicurian supper of bear, venison, grouse, maskallonge, etc., as we had fondly imagined, we gourmandized on coffee, crackers and cheese.

Next morning we cached our duffle for a while and arrived at the placid mere, where we selected a fine camp place, near which my first partridge on that ramble was potted. We visited the only pale face in that region. His wife is a squaw. We bought some potatoes and hired his dugout at fifty cents per day. We intruded upon some summer ducks that spent their honeymoon up there, and they quacked off in disgust. While we were on the beach writing letters which were to be carried to the nearest post-office by a half-breed there approached a birch-bark canoe. The telescope revealed two Indian women, who handled the paddles with an enviable dexterity. Landing again at the camping site, we built a brush shanty, and our hammocks were suspended. Then we fished. The night following was very cool. Especially the damp draft from below seemed to be directly imported from Greenland.

Friday, glad when the gray of morning came, I cut a path through the undergrowth down to the margin of the water, chopped wood, etc., while my companion still snored the snore of the righteous. He is an accomplished sleeper. The invigorating morning air, the rising sun gleaming through the woods at the silver-crested expanse, whose indented coasts have beheld in ages gone by flotillas of pirogues filled with war-painted savages, rallying in grave council at the camp-fire, eager to fall on the settlements further east; to the right an interesting isle of historical value; in the vicinity chirping birds and gossiping squirrels; from afar the maniac laughter of the loon; nearer the splash of a leaping fish; here a screaming kingfisher, there one that sat motionless on the leafless branch of a topless tree; around the virgin forests—all this, leaning on my breechloader, the dog at my side, I contemplated, and enjoyed the ceaseless motion of the lapping element at my feet, and then slowly wended my way toward camp. The day was spent in improving our cottage, fishing, eating, smoking, playing sixty-six and a mouth-organ, making loafing and lounging about a specialty, and by the time the gloom had gathered over the forest and the last embers had changed from red to gray we were in the land of dreams.

Already the night before we had listened to startling crackling in the neighborhood. Our spaniel had whined but dared not leave our domicile. So we made sure that our blunderbusses, charged heavily with buckshot, were within easy grasp. At the first blush of Aurora we were aroused by the growling and snarling Hector. We could plainly distinguish the scratching of a ponderous animal descending an immense pine not far off. Knowing discretion to be the better part of valor, we urged the dog to go out and fight, which he did with a warlike roar. A few moments later we heard him howl and yelp piteously. Doubtless his flanks were being torn up by bruin. We were about (bravely but cautiously) to rush to the assistance of our canine, when we saw him return with an expression as if some one had snubbed him, and his mouth full of porcupine quills, which he in vain tried to wipe off. The insinuation of Bob's that the chronicler had had the bear fever is not forgiven to this day. He, lazy like a porcupine, went to hammock again, and your bear hunter paddled out and trolled. Returning with a mess, Bob was caught still sleeping like a log, and the quill pig of this morning was "targeted" near our mansion. This forenoon we had a call from a Michigan hunter. After noon we harvested five black bass. They averaged 2lbs. Otter-like, we only used the backs. When our fish were browned to a nicety they were put away until the potatoes were baked. It was somewhat dusk in the cabin, the fire having gone down. Bob stepped into the full pan. The bass had a delicious flavor.

Sunday morning an eagle was seen floating through the azure. They are said to be of frequent occurrence at Lake Desert. Afterward we amused some loons by wasting powder at them. After dinner we went to the island, where was an Indian village, to barter moccasins from its coffee-tinted inhabitants. These are remnants of a once powerful tribe, who were removed to Minnesota. A number of roaving bands stole back to their native haunts in the Kahtakitikin country, as they term the territory around Vieux Desert; and nobody begrudges them this display of patriotism. When our gondola grated on the pebbles we left our guns and stepped ashore. A pathway crawled up to six or seven cedar-bark lodges. Behind the cleanly looking huts were patches of garden planted with corn and vegetables. Strewn about were utensils of birch bark. Everything was still as death. We knocked at every door. Not a stir. We had to leave without

making a bargain. The next day the white man's Indian wife confided to us that the chocolate damsels had hidden distrustfully when they saw us come. As we are good-looking, this seems to be indisputable evidence that these frowsy heathens cannot be civilized.

Our object of the exploration had been to have a view of the Wisconsin's babyhood. It here is a narrow, struggling creek, that emerges from its source in a southwesterly direction. Monday, while our bark meandered down its serpentine course, which frequently was curtained to the water's edge by emerald portieres of cedar branches, extensive areas of birches were passed, which either Indians or porcupines had husked of their rind. One of the latter, espied and respectfully kept at bay by Hector, was dropped. No further game was encountered except a devil's needle zigzagging along the river, and here and there a fish fanning the gravelly bottom with his fins. At one place, near the ford (the former bridge being broken down), the stream was pencilled. The highway here is, or was at that time, the only one in that whole district.

When we neared our fire-place again we perceived an animal sporting in the moist element. The relater coveted its scalp. To facilitate the interview, Bob was asked to row a little nearer. He was heedless in laying down his shooting iron, a report rang across the waves, the creature dove, and didn't show up again. It was too large for an otter. Nymphs, to my knowledge, are not denizens of those waters. What was it?

In the evening, delighting in a rank old pipe and the warmth of a blazing woodpile, we decided to abandon our hermitage, and to wander further south toward Twin Lakes and Eagle River. Tuesday morning the spear was separated from its knotty pole, the axe from its home-made handle, and the lines from their rustic rods. A hasty sketch was drawn of our sylvan headquarters, the luggage was harnessed on, and our frail ship restored to its owner; leaving nothing behind but a heap of ashes between the stakes that had supported the camp kettle, and taking along a host of pleasing recollections.

Our programme had been to use the "military road," but as an Indian trail had been mentioned, which also led toward Twin Lakes and thence to Eagle River, we chose that. We hoped to reach Eagle River by sundown. As subsequent paragraphs will demonstrate, we never got there. Another long look at the crystal depths, at whose woody strand we had experienced five delightful days, and away we marched across the Wisconsin along the trail. It threaded into valleys and over hills, and was "blind" at so many places that I, who conducted the caravan, had ample opportunity to practice this line of woodcraft. Sundry times we lost it entirely, but found it again by zealously quartering the ground, but it was more difficult to follow than the path of virtue. My feet, being moccasined, got along passably. We caught glimpses of divers lakes, nestled in the embrace of beautiful timbered slopes, which invitingly enough smiled upon us. But on we tramped, forward, along at the top of ridges, through deep ravines, over stony bluffs into picturesque gullies, over barren lands along rippling brooks, skirted burnt districts and passed long-grassed prairies—always along toward Twin Lakes. At one place there dangled a piece of ornamental buckskin, probably an Indian's offering to the spirits.

We wandered till the shades grew gigantic, when we came to Twin River. This was not Twin River, as I learned from an aged trapper two years later, when I again traversed that region. That trail must have swerved off to the east. Here, in the sweet glimmers of twilight, when Luna rose in all her silvery splendor, the rustling wood became so dreamy, so full of fantastic scenery, that I sauntered onward in silent fascination. The Indian village that we had been promised to find here did not realize, but we thought it quite romantic to kindle the flickering camp-fire where some half-burnt logs lying within the tepee frame of a deserted wigwam indicated where the mirth and, perhaps, the spooning of eagle-eyed buck and black-tressed heifer had been witnessed by the Norway's somber majesty and the gurgling woodland stream. On slumbrous, aromatic pine browse and swelling moss, taking our repast, we hatched out the ill-starred idea to pick our way to the railroad track by crossing the swamp-forest to our right. In the first place, since the landmarks didn't agree with those pointed out by the Indian woman, we were not positive that this path would guide to Eagle River, our destination. Secondly, according to the map, we had but five miles to the railway. We expected to reach till noon the nearest station, whence the only daily train could whirl us along.

We could, by aid of map and compass, ascertain our bearings to a point. (?) Next morning we inserted ourselves into our long-shafted boots, crossed the river and set out in a due westerly direction. A great number of fresh deer tracks were observed yesterday and to-day, especially at the water courses. From one bed the deer could have arisen but shortly before. But none were scared up except once. We traversed wide, treeless plains that were covered with fallen pine logs, we pressed through cedar swamps, tamarack brakes and thickets of spruce; with throbbing temples we panted through heaths defended by blackberry bushes—and ever and ever a new kind of troublesome, weary tramp and our own discomfiture opened before our vision. Whenever we had straggled about thirty minutes we were obliged to sit down a while (with traps kept in their place). We perspired like icicles in July. The heat quivered in the air. We afterward learned that this was the hottest day of that summer. The axe and the hammocks had been cast away, and yet our burdens became heavier and heavier. Moments of delight were when rows of willows promised a supply of water. Deer trails were our only stimulants. After 10 o'clock we hoped every second to detect the track, our only chance. Suddenly there echoes from afar the war whoop of the locomotive. We race to reach the iron goal. Once more reviving hope imparts strength to do the utmost. A few hundred yards further a stream impedes our progress. "Can't we cross some way?" "Here is a log. Hurry up!" Over we are; clambering over charred trees ankle deep into treacherous ground, gasping, stumbling, the blood galloping through our veins, quivering, groaning. "Stop!" The rumbling noise grows fainter, dies out in the distance and all is serene again. Thus we had lost twenty-four hours, which, under different circumstances, would not have been mortifying, but we yet needed four meals and had but two, and scanty enough they were.

We now craved to dine and for convenience returned to the opposite shore. Bob's reluctant attempt to slip off the log was crowned with howling success; scolding and spouting he wriggled himself ahore. What he said, "I dinna care to tell." Above the upper button of his vest everything was dry yet. He draped a shrub with his underwear and his statuesque beauty with a blanket in true antique style, while his friend endeavored to discharge his duties as housewife, and fried the few remaining potatoes and dressed two grouse that had been secured. It was a pity to skin one of them; it ought to have been preserved intact for the scribe's intimate, Mr. H. Nehrling, the popular author of the latest ornithological success, "North American Birds." It was one of the rarely met *Tetrao canadensis*. But that appetite of ours spared neither friendship nor science.

When our lunch and his pantaloons had their proper place, it was after 3 P. M. We had to hasten if we wanted to escape these "bad lands" before the sunshine did. To get the exact direction we had to recross Bob's bath-tub. With firm, graceful steps his acrobatic feat began. Presumably, however, some of that fish fat was still lingering about his soles—at least the result seems to justify this inference, for suddenly he squirmed in the water again. He had been rather taciturn the whole day, but thus refreshed he presented a combination of moisture, mud and profanity that would have caused a smile of serious dimensions on the countenance of even an indifferent spectator. My smile could be heard for eighty rods, until a stare that meant a library threw me into convulsions. This time he was wet only up to his hips. He acknowledged in this hour of confidence that he had but one more wish in this vale of tears, viz., that your correspondent slide in also. But the tfates were against him.

The two pilgrims took up their wearisome, drudging route once more with the apathy and resignation of a lame dray-horse. Enthusiasm and perspiration oozed away alike. The day was fading into dusk, and fading were the hopes of clearing the swamps that night. Already a location some distance off, guarded by some patriarchs of the forest, had been suggested as a suitable bed-chamber, when Bob exclaimed, "There!" and pointed to the horizon, where he had descried the telegraph poles that usually line railroads. Much more jubilant than we, the crew of Columbus could not have shouted, "Land!"

The beginning of the end of our afflictions in view, our ardor was inspired. We hoofed on until dark. Many deer trails on and beside the track. Thumping and crashing in the underbrush, betraying some antlered monarch's stampede, at one time induced your tenderfoot to hobble back a distance, but it was love's labor lost.

Though we had to brave the mutiny of our bowels, we went without supper in order to have a meal in the morning. Too fatigued to cut down browse, we threw our weary limbs down under some stately pines, and soon there reigned at the dying embers the silence of a well-merited repose, which even that feathered hermit, the owl, could but little disturb.

Tuesday, after the last coffee and the last crumbs of crackers had been disposed of, we had five more miles to walk, when we sighted Scott station. At noon the steam horse dashed up and hurried us homeward. At Eagle River station lay two bear skins and one bear that had been killed recently. At Pelican Lake an admiring crowd surrounded a 30-pound maskallonge, whose fortunate possessor was proceeding to pack it in ice. In the evening we anchored at Oshkosh. Having been without a shave for two weeks we closely resembled porcupines. Our clothing, impregnated with smoke and excessive sweating, smelled rotten. We limped along with lacerated ankles and unwieldy packs like Jewish peddlers. With our dilapidated slouch hats and the dust and dirt of swamp and railroad travel clinging to our garments, we were, without flattery, the disgrace of respectable scarecrows: and we were glad when, two hours later, we could enjoy home and a huge bar of soap.

The narrated chain of disappointments hardly confers the idea of recreation, but as we both are cranks on camping, we consider it so. The undersigned has been in that section four times since—twice alone—and contrived to amuse himself prodigiously by avoiding several crying follies, to wit: Hammocks, new, ill-fitting boots, too heavy packs, too many cartridges, etc. (Of etceteras we had about a bushel too much.) He took a tent and enough cash; and if another enthusiast contemplating an excursion to those wilds profits by these remarks, the above account has accomplished its mission.

MILWAUKEE, Wis. TAMARACK.

Words of Appreciation.

FOREST AND STREAM, the most delightful of the weekly journals devoted to the rod and gun and out door life in general, is enlarged to thirty-two pages with the new year. "Our boyhood number" it aptly labels the first issue of the year because of the entertaining collection of boyhood reminiscences of the rare old fellows whose recollections go back to the days of flint-lock guns. "Cleaning the Old Gun," by Rowland E. Robinson, of Ferrisburg, Vt., has a mellow charm about it that will touch the heart of many a sympathetic reader; and Orin Belknap's story of the treacherous flint-lock which would go off with alacrity at any small game, but positively wouldn't shoot at a deer, will tickle to laughter the venerable sportsmen who recall the trials of the fickle precursor of the percussion lock. In addition to the liberal space devoted to fishing and shooting, FOREST AND STREAM pays considerable attention to canoeing and yachting. Hardly a week passes without a presentation of plans and description of something novel in the way of canoe or yacht.—*Springfield (Mass.) Republican.*

FOREST AND STREAM, commencing with the thirty-eighth volume, has been enlarged to thirty-two pages owing to the growth of the special interests to which the paper is devoted and a demand for more space. This very popular journal was established eighteen years ago, and has encouraged sports with the rod and gun, and has been instrumental in developing manly recreations. It has steadily grown in worth, influence and circulation, and is one of the leading publications in the country.—*Chester (Pa.) Times.*

The FOREST AND STREAM came out this week with a new cover and in an enlarged form. The reading matter, as always, is of an interesting nature.—*New York Times.*

Die Herausgeber des Sport- und Jagd-Blattes "Forest & Stream" in New York haben uns eine sehr schön ausgestattete, reichhaltige Nummer ihres Blattes zukommen lassen. Wir können dasselbe jedem Liebhaber des edlen Waidwerkes auf's angelegentlichste empfehlen.—Sioux City Courier.

Natural History.

THE SUMMER ROOSTS OF BIRDS.

Editor Forest and Stream:

The article in FOREST AND STREAM, entitled "Summer Robin Roosts," was a great surprise to me. I had studied the subject for years and thought I owned the copyright. It was the first intimation I had received that others were engaged in the same study.

While the article is exhaustive on the methods of flight, etc., it fails to give a satifactory reason why such resorts are established.

My disposition is such, that I am never satisfied with a fact because it is a fact; I want to know why it is a fact. To this end I have studied the summer roosts of birds.

I commenced my observations in Maine, but did not meet with success in that State. But my seven years of bird study on the Cape has resulted in giving me a clue to the mystery.

In this locality the robin is persecuted by the gunner. He has become a wary, suspicious bird. A limited number, however, breed on the Cape, and several small roosts are known to me.

One roost is in a mixed grove (oak and pine), near a brook, and not far from my cabin. During two seasons I patiently watched this roost, but not a hint of its origin did I receive to repay me for my trouble.

About this time I noticed that other birds formed roosts, or resorts (as I called them in my note book). I noticed also that in these resorts the birds were such as rear two broods in a season.

One resort, in thick shrubbery surrounding a small pond, was patronized by catbirds, song sparrows, Maryland yellowthroats, brown thrashers and towhee buntings. All these birds rear two broods in a season. I at once adopted the theory that the rearing of two broods had something to do with establishing roosts or resorts.

The next season, after forming this conclusion, I carefully watched the first broods of all the robins in my locality. I discovered the mystery, but not through the robins. A pair of pet towhee buntings gave me the clue. These birds nested near the cabin, and the female brought the first brood, when large enough, into the dooryard. For some time she fed the little ones on bread, supplemented by insects gleaned in the flower garden. The male did nothing toward the support of his family until the female commenced a nest for a second brood. Then he took charge of the first brood. He fed the young birds in the dooryard day after day, until the second brood was out of the shell, when he removed his charge to a bird resort. He spent the most of his time about the dooryard with his mate, usually flying away to the resort twice a day to look after the welfare of the first brood. Every night he flew away to the resort.

When the birds of the last family could fly and had learned to peck food, the banished ones were brought back. Both families were taken to the resort at night time. As the season advanced, more and more of the daytime was spent at the resort.

Thus the pet towhee buntings gave me a clue to the origin of bird resorts.

Since that day I have watched many broods of birds: towhee buntings, robins, song sparrows, catbirds and others. I have found it an invariable rule that the male removes the first brood to the resort before the second is hatched out. The object of this is to give the female a chance to rear the last brood unmolested. That this precaution is adsolutely necessary, is evident when one observes how persistently the deserted birds pursue the mother and clamor for food. She can escape them only by hasty flight.

Birds possess intelligence far beyond the realm of instinct. The features of song, nesting and migration are educational and not instinctive. HERMIT.

THE DEER-LICK BIRD.

IN reading your paper I see that there is some difference of opinion as to names of birds and animals. Now, we boys that were brought up or rather came up in the backwoods, neither knew nor cared for any of the scientific names of birds and animals, "and the names which we first learned are the proper names for us still," and will remain so during our lives. With us the ruffed grouse will always be a partridge, and the porcupine will always be a hedge hog. However, the class of backwoodsmen which I represent have nearly all passed away.

In my boyhood days one of my favorite song birds was (perhaps) the wood or hermit thrush. We called it the little night lark or deer-lick bird, as its notes were heard the first in the morning and the latest at night. It was mostly found far back in the deep forest, and was seldom seen near the clearings.

The scream of the bluejay is not much to his credit as a song bird, but a close observance will prove him to be quite an interesting bird. I have sat for hours under the beeches watching the singular antics of the bluejay. He is the liveliest of all birds, never sits still moping on a limb, but alights on a treetop, drops along down on every limb, picking up here and there a bug, seed or nut which has been hidden under the bark or moss by himself or some other bird or squirrel; and on the lower branches he meets perhaps his mate, when he pours forth such a flow of soft musical language, all the while bowing and scraping as politely and gracefully as a French dancing master. I could not distinguish the language from German, Choctaw or French, but presume that it was just pure bird language. Then he starts up the tree again hopping from branch to branch until he reaches the top, during which time he has counterfeited some of the notes of several song birds that happen to be near by. In fact his meddling propensities makes him a sort of terror and a nuisance among song birds. The bluejays do not migrate; the woods that keep them all summer hold them through the winter, and let it be never so cold they are out all the same.

Speaking of winter birds brings to mind the little tomtit or chickadee. These beautiful little innocents seem to be just as happy during the coldest winter days as in the heat of summer. Far back midst the deepest of deep snows and the stormiest of stormy days, I have shared my lunch with these little feathered mites as they would drop down by the half dozen or more from the thick branches of the treetops, and their tameness was pleasing

to me. During the summer seasons they are occasionally seen near the borders of clearings, when they sometimes appropriate a woodpecker's hole in some small low stub, where are deposited eight or nine eggs nearly white and about the size of a marrowfat pea.

The chickadee is seldom if ever found here in the South, but they were quite plenty at the North in my boyhood days. ANTLER.

GRAND VIEW, TENN.

NORTHERN BIRD LISTS.

WE have recently received two lists of birds, which, treating of the species found in distant and little known regions, possess a peculiar interest for the ornithologist. We notice them in the order of their receipt.

"The Check List of British Columbia Birds" is by John Fannin, Curator Provincial Museum, Victoria, B. C., and bears date September, 1891. It is the result of observation extending over a number of years and enumerates 308 species, by no means all that may be expected to be found in this great Province, which, besides its latitudinal extent, includes within its borders regions the most diverse. In British Columbia we have areas which are most arid and others of great precipitation, mountain and prairie, an enormous line of seacoast and peaks which are always white with snow. In such a varied region we should expect birds of all kinds. On the other hand, observation in British Columbia is difficult. The distances are great, the modes of travel over a large part of the Province are slow and expensive, and much of the country is still an unbroken wilderness.

Mr. Fannin, in speaking of the range of birds in the Province, divides it into four sections (1), "The Coast" or "Coast Line of the Province (2), "West of the Cascades," meaning all the country west of the Cascade Mountains;" (3) "East of the Cascades," the dry, open country immediately east of the Cascade Mountains, and (4) "The Rocky Mountain District," which includes the wooded country beyond and reaching to the Rocky Mountains.

The western Cascade district is a wooded country, noted for its gigantic coniferous trees, some of which reach a height of three hundred feet. The undergrowth consists of vine-maple, willow and alder, beneath which is a rank growth of moss, matted weeds and ferns, so that most of the moisture which, during the winter months, is so characteristic of this Northwest coast, is retained in the forest floor. Open stretches of land are found occasionally, and these are the resort of many birds, for but little of bird life is met with in the deep woods.

The Eastern Cascade district is a dry, open country of rolling hills, the higher summits being sparsely clothed with coniferous trees, while deciduous species, such as the aspen, dogwood and willow, grow along the borders of rivers and small streams. This is a grazing country, sometimes with alkali flats and sage plains, but on the whole producing a luxuriant growth of bunch grass.

The Rocky Mountain region is rough and wooded, and abundantly supplied with small lakes, the breeding places of many water birds. The forests are mostly coniferous, though birch maple and cottonwood abound in many places.

It is in this vast and varied region that Mr. Fannin has made the collections upon which his list is based, and as time goes on we may expect to see the number of species contained in it greatly increased. The list represents a great deal of work and contains much information. We notice a few proofreader's errors, but on the whole the mechanical part of the work is well done. Two editions of the list appear to have been published, one containing a colored plate of the pigmy owl, which is omitted from the other. Both contain an uncolored figure of the black merlin (*Falco columbarius suckleyi*).

In a modest pamphlet of 34 pp., put out as No. 865 of the "Proceedings of the United States National Museum," Mr. R. MacFarlane, F. R. G. S., has given us his most interesting "Notes on and List of Birds and Eggs Collected in Arctic America, 1861–1866."

The region embraced in this title includes the territory bounded on the north by the Polar Sea, from the eastern outlet of the Mackenzie River to Cape Bathurst; on the east, by the west coast of Franklin Bay from Cape Bathurst south to the depth of Langton Harbor; on the south by the 67th parallel of north latitude west from its intersection with the meridian of 124° W. to the Mackenzie River, and on the west by the Mackenzie River to its mouth. It is explained, however, that only a few specimens were collected south of latitude 67° 30′ N. or west of longitude 129° except from the Lower Anderson to the Mackenzie River. The chief center of observation was Fort Anderson (now abandoned), situated on the right bank of the Anderson River in about lat. 68° 30′ N., long. 128° W.

The region in question is generally flat, but is here and there intersected by hilly ridges. Most of its surface is forest-clad, with many open marshy spots, streams and lakes of varying size. North of the parallel of 68° the trees become sparse and stunted, except along the ravines and banks of the larger rivers, where the fringe of timber soon rapidly narrows, disappearing altogether at about 69°. From there to the coast, and again toward the southeast, the wide steppes, or undulating plains, known as the "Barren Grounds," stretch away for hundreds of miles. Here the lakes and streams are fewer, wood is absent and marshes occur at more or less frequent intervals. On the whole the region is admirably adapted to the breeding of a great variety of birds and is the summer home of a very large number of species of unusual interest.

Mr. MacFarlane has long been known as an enthusiastic observer of birds, and is frequently quoted in Baird, Brewer and Ridgway's History of North American Birds, having gathered for the Smithsonian Institution a great mass of ornithological material and information. For many years he has been a constant correspondent of eminent naturalists such as the late Professor Baird, Captain Bendire and others, and has, perhaps, done more to advance our knowledge of the avifauna of the far north than any other person. He first brought to our knowledge the nest and eggs of a number of species of rare birds and was the discoverer of the Siberian chickadee (*P. cinctus obtectus*, Cab.) in this country.

The notes contained in the present list cover 131 species, of which, as might be expected, a majority are water birds. The notes on the breeding habits are often full and the paper as a whole is the most interesting one of its kind that we have read for a long time.

A KANSAS MYSTERY.—Cimarron, Kan., Jan. 9.—I have just heard rumors of a strange animal in Garfield county, Kan., near Ravanna, that has been killing colts and calves. The animal has been seen by several settlers. I think it is a mountain lion or cougar. Last fall two cubs of some animal were killed by horsemen, who ran them down, and one was captured alive and is now owned in Garfield. It somewhat resembles a dog, but has a big chuckle head like a cat. I think it is a half-breed wolf from a big wolf that used to be seen out in Garfield county, near Ravanna, and that always had a big black ownerless Newfoundland dog as a companion. The animal now talked about is, I think, a different one. Calves are killed in two ways. Some are caught in the flank and eaten into the intestines, some are caught at the base of the tail and eaten in the inside of the ham. Some tracks are described as 6in. in diameter and no claw marks, others are said to be long and to have protruding claw marks.—W. J. DIXON.

A WOUNDED RAIL.—We have received from Mr. Geo. Stacey the body of an adult male sora rail (*Porzana carolina*), which was caught alive on Jan. 10 near Geneva, N. Y. The bird's wing had been broken, and it was exceedingly thin in flesh, no doubt having perished of starvation. In a note which accompanied the specimen Mr. Stacey says: "This rail was caught yesterday in a small piece of marsh just outside the village. You will see that a wounded wing prevented its migration. The wonder is that it has lived until yesterday. We have had cold weather since last Monday, and yesterday morning the mercury was 8° below zero, and we have had good sleighing for the last four days. The bird was found by Mr. John S. Crawford, and was alive, but died before he arrived home."

Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price $2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. Price $1.50. Shore Birds. Price 15 cents. Woodcraft. By "Nessmuk." Price $1. Trajectories of Hunting Rifles. Price 50 cents Wild Fowl Shooting; see advertisement.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

CHICAGO AND THE WEST.

[*From a Staff Correspondent.*]

CHICAGO, Jan. 14.—As a result of the sparrow crusade in this city 12,000 sparrows have been killed. Numbers of boys have bought those abominable little toy rifles which shoot a large shot as a bullet. These they have used with a boy carelessness in the general hunt after the sparrows, and accidents innumerable have the result. At the Illinois Eye and Ear Infirmary thirty cases have been treated which were due to accident at the agency of the sparrow gun. The physician in charge of that institution has been obliged to remove the left eye of one boy, and a little girl, Annie Wright, had her right eye removed. Another boy still is in danger of losing an eye. A host of minor accidents may also be laid at the door of this measure.

An attempt will be made to prevent the Cherokee Indians from reserving a quarter section for each family out of the domain yielded to the Government in the Cherokee strip. If the tribe were successful in this plan the strip would be practically of Indian settlement. This would mean that the game of that country would last much longer. Within the past four years it has been killed off very rapidly.

At Red Rock, in the strip, the Indians are this week indulging in the ghost dance. All the Pawnees are now reported in the dance lodges. Hunting in the Nations this winter would seem to be attended with more than the usual amount of discouragement for the white poachers.

Apropos of the above comes a rumor that the Indians at Pine Ridge Agency, Dakota, are planning to resume the ghost dance.

Jan. 14.—Talk with Mr. W. N. Low, earlier mentioned as lately back from Mexico, shows something of the advantages offered by that country as a shooting territory. Mr. Low was invited to join a hunting party bound for Tampico, on the east coast, and was assured that at that point the wildfowl, ducks, geese, cranes and all other sorts, were so abundant that the shooting was only a matter of choice and could be continued as long as wished. Back of that place, from five to fifteen miles, deer, bear, wild turkeys and wild hogs were declared to be abundant. In the city of Mexico ducks brought only eighty cents a dozen. At Guadalajara ducks sold for ten cents a pair, and were so easily killed on the river that they did not seem to be hunted much, although Guadalajara is a place of 100,000 inhabitants. At Santa Rosalilla, on the Mexican Central Railway, they had trouble to keep the wild geese scared off the wheat fields. Leaving the railway at Hermanes for Paral, and then taking burros for twenty-five miles, one finds himself in the Sierra Madres toward the west country, and there trout, bear and mountain lions are easy to get at. Fowl shooting at or near Vera Cruz, on the east coast, is good. There is no fishing in Central America. In New Mexico and Arizona the blue quail are numerous. At Tucson, Arizona, Mr. Low met an old gentleman 70 years of age, who one day brought in over seventy quail. Mr. Low says he has found the universal game bird of North America, and that it is the blackbird. He has found this bird in flocks from Manitoba to Central America. He thinks the time approaching when the blackbird will be shot for sport. Mr. Low had joined in the popular opinion that the game of California was as abundant as ever and never would be exhausted, and that perhaps our wildfowl were now making their migratory flight further to the West. Yet at Denver he met a Californian from San José who assured him that the failing of the California game was becoming more and more apparent. This convinced him that the days of field shooting at our present game birds were numbered.

Mr. J. W. Schultz, of Piegan, Mont., the mountain guide lately mentioned in these columns, says that as a result of the mention he has word from a gentleman of South Amboy, N. J., inquiring about a bear hunt next May. It is very likely that the gentleman would find his bear. On another matter Mr. Schultz writes as follows:

"We have been thinking of taking a family of Piegans to the World's Fair, and would like to have your opinion of the scheme. We would have a large lodge (tepee) made of elk skins and painted with animal figures, and everything, in fact, as it was thirty years ago. The Indians also would be dressed in the ancient manner. We would sell polished buffalo horns, Indian stove pipes, shields, cone sticks, moccasins, &c., &c., rugs, antlers, &c. Will you kindly tell us if you think there is any go in this project or not, and if you think we could get a piece of ground 20x40 feet for our purpose."

To bring a party of Indians to Chicago at the time of the World's Fair would cost some money, and it is hardly fair to ask one for off-hand advice as to the safety of such an undertaking, though it would seem that it should pay out at least. As to the space, there is only one way of finding out. Mr. Schultz should write to Gen. George R. Davis, Director-General of the World's Fair, Chicago, explaining the purpose in view, and requesting space. In return he will very promptly get a letter from the Department of Installation, inclosing blanks, which he can fill out, asking for a certain amount of space for a certain purpose. Then he would have to wait awhile, though probably not so very long, before he could learn finally about it.

Certainly it would seem that those coming to see America should see America as it was as much as it is. The old Indian life is gone, interesting as it was. If it can be made to live again for a brief space, here in this crowded city, at that most momentous time, certainly that is matter of entertainment and instruction. It is American to think of this idea. It would be American to show it fully carried out. I know the directors intend to have some such features at the great exposition, and am inclined to think that they will respond favorably to Mr. Schultz's request for his Piegans.

Jan. 15.—Mr. L. W. Harrison, of Minneapolis, is just back from a trip to Mexico, and is tarrying awhile here in the heart of the banana belt, incidentally waiting for some of those much proclaimed shooting matches. Col. W. H. Jacoby and Mr. M. Whitcomb, of Minneapolis, are also in town.

Mr. H. McMurchy still remains here, waiting for some one to accept some of his challenges. He says he will not cut his beard till he has got some one to shoot a match with him.

Mr. C. W. Budd should be in town this morning, he having wired his promise to be here to-day. Elliott will hardly be here, for we hear he is sick.

Mr. Paul North, of the Cleveland Target Co., arrived in town yesterday and will tarry till the crisis in shooting matters is over. It begins to look as if to-morrow would see somebody get together.

Mr. M. T. Hart, of Crown Point, Ind., was here Tuesday, and will be here to-morrow if anything happens.

A very risky looking accident befell Mr. A. J. Atwater last Wednesday while shooting at Watson's Park, which resulted in the ruining of his fine, high grade J. Hollis & Son gun. He felt no such jar as might have been expected, but on attempting to open the gun found the barrels sprung from the breech so that a knife-blade could be inserted, and the solid steel frame, to every appearance a magnificent piece of metal, broken squarely across and nearly through upon the left hand half. It is providential the shooter was not killed. The load was 3drs. of a nitro powder, 1⅛oz. of No. 7s, 1 card and 3 black edge on powder. Mr. Atwater loaded his own shells. Mr. Atwater had shot 20 wood powder shells and more than that number of Schultze shells, and as he does not himself pretend to say which load did the damage, this seems to offer a chance for the pow-wow men. The gun still cocks and ejects, and might possibly still be fired, though that would appear hazardous now.

Fort Dearborn Club elected officers for 1892 last Monday night, Jan. 11, at the Sherman House. H. D. Nichols was elected President, A. Kleinman Vice-President, C. K. Herrick Secretary and Treasurer, and Al Hoffman, Harry Loveday and C. D. Gammon Directors for the ensuing year. A proposition was submitted to increase the membership of the club from thirty to forty, and was referred to the Board of Directors. George Hoffman and Frank R. Rissell were elected members. It was decided to hold the return shoot between the club and the Milwaukee Shooting Club some time before Feb. 22.

Audubon Club elected officers last Tuesday night, Jan. 12. Mr. Chas. Kern was elected President, Mr. W. L. Shepherd Secretary, Mr. John Kleinman First Vice-President, Mr. Chas. Morris Second Vice-President. Messrs. R. B. Organ, B. Dicks, J. E. Price, Chas. Morris and Dr. N. Rowe will constitute the Board of Directors.

Jan. 16.—Mr. J. C. Morris, of Hinsdale, a suburb of Chicago, reports having seen a ruffed grouse in a strip of woods near that place. Last fall he saw about a dozen prairie chickens near the city limits in that direction. Mr. Morris is late of Baltimore, Md., and these were the first prairie chickens he had ever seen.

Dick Turtle has a ferret. He keeps it at Water Valley. He lends it. Some of the boys took it out. The ferret caught a skunk in a hole. The ferret yanked the skunk out of the hole.

Charlie Gammon has been rabbit hunting again at De Motte, Ind. The party had three beagles this time and got 50 rabbits. The party consisted of Mr. Gammon, Mr. Ed. Hughes and Mr. Al. Baldwin, of Chicago; Messrs. Hank Granger and Ed. Spencer, of De Motte; and Chas. Cook, of Grand Rapids, Mich., the latter owning the beagles.

The date of the Amateur Revolver Championship contest for the Winans Trophy, under the auspices of FOREST AND STREAM, is set, that is for the Chicago contest, for Wednesday evening, Jan. 27. The following will enter for the contest: Messrs. W. J. Meyers, H. S. Burley, J. O. Hobbs and son, H. Furrman, Messrs. Cregier and Anderson. Others will probably also enter. Mr. Meyers is the present revolver champion of Chicago.

The date for the Cincinnati shooting in the same contest is not yet set, but will be close to Jan 24.

I notice in the daily papers this morning that horses are worth only about $13 a dozen in Australia. At Great Bend, Kan., where they have the coursing meets, they are not worth that much.

A straight wisp of faded hair stuck out from the small coil at the back of her head.

"Air you the druggist?" she asked.

"I am, madan," he replied.

"Leadin' druggist o' the city?"

"Without doubt, madam."

"Keep all the moderndest remerdies, I s'pose?"

"Certainly."

"Got any o' this yer bi-chlorate o' gold?"

"We have the bi-chloride, yes, madam. We are Dr. Keeley's exclusive agents."

"Same thing they gives to drunkerds to break 'em o' drinkin'?"

"Precisely."

"Does it cure drinkin'?"

"Makes a man hate it."

"Will it cure fits?"

"Certainly."

"Cure a man o' chawin' terbacker?"

"Our guarantee goes with every bottle, and there is a hypodermic syringe in every package."

"Go 'way!"

"Yes, indeed. This is a most wonderful discovery. There have been thousands of cases—"

"Does it make a man come home reg'lar o' nights?"

"If it does not, we will cheerfully refund the money."

"Jest nacher'lly breaks a man o' every bad habit he ever had?"

"Madam, the moral renovation experienced by patients submitted to this treatment is comparable only to the absolute purification and rejuvenation of the entire physical man."

"Dear me suz!"

"Most cases yield to a few bottles, but it is well to be safe, and take along about—"

"I'll take six bottles, ef you think it'll help my husband."

"Madam, what is the matter with your husband?"

"Matter with him? Say, man, do I look like you could insult me? I guess I orter know him."

"Yes, but what is the trouble with him?"

"Trouble? I guess I orter know. He's more trouble than the hull rest o' the fambly, an' they's nine of us now. Trouble! I sh'd think he wuz!"

"But what is his complaint?"

"Complaint? Look at here, now man, do I look like a womman 'at 'd stand talk like this? Complaint? He ain't got no mortal complaint in the world, not with a wife like me! It's *me* that's got the complaint!"

"But what's wrong with your husband—what does he do? Does he use tobacco?"

"Wuss'n that."

"Drink?"

"Wuss'n that."

"Gamble?"

"Wuss'n that."

"What?"

"Goes huntin'!"

The druggist heaved a long sigh, "Madam," said he, "I fear the case is hopeless."

Jan. 16.—Mak-saw-ba Club held a business meeting last night. The constitution of the club was changed, so as to make the annual dues $50 instead of $25. A rebate of $15 is made on all dues paid before March 1. The offices of secretary and treasurer were consolidated. An appropriation was made for fencing the entire marsh owned by the club. This will cost $1,300. E. HOUGH.

GUIDES AND GUIDED.

Editor Forest and Stream:

I would like to say a few words in my defense if you will grant me space in the columns of your paper. I noticed in your Dec. 24 issue a report from St. Louis from one "Aberdeen," who states that Bud Weaver and party had returned from an eight-day trip near Bald Knob, Ark. And he wishes "to warn hunters against so-called guides, who will conduct parties to regions where game is scarce," which was the experience of his party. That was the experience of Mr. Bud Weaver I'll admit. But why? Mr. Weaver would not hunt under my instructions; he had ideas of his own, and would only hunt where it suited him. He hunted about half a day in a plantation in the grass, expecting to jump them up like rabbits, I suppose.

I am sorry to state that he misrepresented the time they hunted; they were in camp not quite seven days; and it rained hard one day all day till hunting was out of the question, and two more days were spent hunting according to Mr. Weaver's ideas and one day in driving with dogs; and that only left three days to hunt according to my directions. The three days one of the party accompanied me. The first day we saw four deer, one stopped at about 60yds. broadside, but I was unable to get Mr. H. to see it till it ran; he then scored a miss. The other got away without being shot at. The second day five deer were sighted, and fourteen shots fired at them; one five-point buck got up at 50yds. and we fired nine shots at him, but he got away without a scratch. The third day three deer were sighted, and one shot, I think, was all that was fired.

Mr. Weaver fails to state, I suppose, that he shot at squirrels, owls, etc., whenever it came handy (which is quite often in Arkansas); and in the name of goodness, who can expect to find deer when they are firing a 10-bore shotgun every few minutes? And who can expect to kill deer when placed on a stand, and after jumping one and it ran contrary, would not stay till the drivers had time to call off the dogs and try again? Such was the case with Mr. Weaver and party the last day in the woods. And after riding over two miles at breakneck speed to turn the deer through the stands, I succeeded in putting four fine ones through, and not a man there. I will leave the reader to guess who is to blame.

I wish Mr. Weaver would write up his views on the requirements of "so-called guides." Does he expect a guide to know the exact spot where a six-point buck takes his daily nap and quietly to surround him, and the guide to go in and say "shoo!" and out he goes to be riddled with buckshot? Or does he expect to discover a place where deer can be found and jumped up at 20yds. rise? And wild turkeys done up in 5-cent bunches? The party while in camp sighted some twenty-five deer, and I know of twenty shots being fired; and still Mr. Weaver "kicks." Does he want the earth and the fulness thereof?

HARRY ESSLINGER.

BALD KNOB, Arkansas.

HEALTH AND A MOOSE IN MAINE.

THE front doors of a down town bank in New York had closed after an unusually busy day, in which everything had seemed to go wrong. The cash had not balanced, a bad counterfeit bill had been received unnoticed, and the employees were cross and tired. Listlessly counting out bills at a desk in this bank was a young man, almost exhausted, his heart heavy and weary and his mind far from his work; the fact was, he was overworked and nature was rebelling. I was the young man, and I knew the cause of my ill health quite as well as nature; but saw that no good could come by rebelling, so kept quiet. I had noticed the cashier looking at me rather sharply several times of late, and the cause was explained when he came up to me and, laying his hand on my shoulder, said, "Young man, I've been watching you often the past week, and have come to the conclusion you can't stand it here another day. You need a change and a radical one. I've engaged some one to take your place for five weeks, which will probably give you time to recuperate. I would advise you to go to Maine hunting."

To say I was overjoyed at this would be putting it mildly. I went directly to the office of a lawyer chum, where I found him looking pale and tired like myself. He was an excellent hunter and I soon had his approval to my plan of a five weeks outing in Maine, without guides; and I knew if he approved of that I could get him with a little urging. He went with me to the studio of our artist friend, whom we found only too ready to join the party; and, after much poring over maps and guides, we selected the south branch of the Penobscot River, Me., as our chosen field. We engaged passage on the steamer Lucy P. Miller, which plies between New York and Bangor; and the third day after our first talk found us on board the Lucy, with tent, rifles, cooking utensils and everything necessary for a long outing.

The Lucy's jolly captain seemed to regard our hunting trip in the light of a huge joke. When we filed in the dining room to partake of our second meal on board he slyly glanced at us, muttering, "Three bold hunters from New York; three bold hunters from New York. Were there not three young men killed by bears in Maine a few months ago?" he asked of the purser.

"I believe there were, sir," answered the purser.

"There were three young men who went up with us in July," the Captain continued, "who were going to kill deer by the dozens; when they came back their clothes were in rags, their shoes soleless; I had to lend them money to get home. Ha ha." The purser took up the ha ha, and it was faintly echoed by a few passengers.

We looked sad, but had our revenge later. We found out the weak spot in the Captain's armor—he disliked to answer questions, so the first thing we did when seated at the table was to open fire on him. At a signal from the one stopping, another would take charge of the battery, and so we would continue until a cold, steely look from the Captain warned us he had enough. We slept on board the Lucy Thursday night at Bangor and arrived at Mt. Kineo at 4 P. M. on Friday.

We bought provisions to the amount of $17 at the Mt. Kineo store and two canoes, one valued at $16 and a smaller at $11. Here we discarded our city clothes and "boiled shirts" for the more comfortable flannels, corduroys, moccasins, etc., and hurriedly paddled out into the center of the lake, anxious to get the full effect of the landscape, for we had heard and read many accounts of the wild, rugged scenery of Moosehead at this hour, and when the sun finally took his last peep at stately Mt. Kineo, his rosy face reflected so many varied and beautiful colors on the glassy water and sky that we were held in enchantment, and did not reach Farm Island until it was too late to pick out a good place to pitch our tent, so after building (as we thought) a rousing all night's fire, we lay down to sleep with the sky as our roof and a rocky beach as bed. About 1 o'clock I awoke to find the fire burnt out, and it seemed as if the thermometer had dropped 40° so cold had it grown, and yet my companions were snoring peacefully. I started another fire, picked out a place where the stones looked unusually soft and small, and incasing myself in a big red army blanket, tried to snore as loud as my companions. But it was of no use, the fire went out at 3, and being too cold and lazy to start it again, I slumbered and froze alternately until morning.

We paddled up the lake to the Northwest Carry in our canoes instead of going by steamer, as is the usual method, and it was well for us the water was moderately smooth, as Moosehead is apt to kick up some pretty heavy seas in the late fall.

We were welcomed heartily at the Seborne House, Northwest Carry, by mine host F. Lane, who dined us and carried our canoes through the woods a distance of two miles, when we came to a small stream. Launching our canoes in this we paddle up it for a mile when we come out into the broad beautiful Penobscot, and the change is indeed gratifying.

Would that our minds could always be as contented as they were as we paddled up this lovely river, enjoying to the fullest the many pretty pictures nature presented us at nearly every hand. Not a sound disturbed the solemn wildness, but a gentle rustle of the wind in the trees and the dipping of our paddles in the still deep water. Now the thickly-wooded banks rise far over our heads, then deviate to the water's edge into coarse grass and sand, where we see many tracks of deer, who have come to drink. When we come to the south branch we thought the scenery even more beautiful than that of the west; immense, dome-shaped mountains looming up in many directions, and when the leaves turned on these a few weeks later they looked like giants' flower gardens.

We were two days paddling up the river before we reached our destination on the south branch, between Hale and Alder brook. We were delayed considerably by being obliged to drag our canoes over rocks and shoal water for a mile above Dunn's farm, and by a five-mile carry from the Forks to Bog Brook. We were now 27 miles from where we had entered the Penobscot and here found an old lumber camp owned by Mr. F. M. Cunningham, of Oldtown, who had kindly invited us to occupy it.

With this camp we were delighted. There were a few things in it that could even be classed as campers' luxuries—an excellent cooking stove, six good lamps, barrel of kerosene oil, and two stationary beds. After making everything as homelike as possible, we planned out equal divisions of the labor to be done at camp. The Artist and the Lawyer were to do the cooking, while I was to set table, wash and wipe dishes, start fire, chop wood and get water; and, lest any one say that this was an unequal division of labor, let me tell them that 80 biscuits entirely disappeared in three days. (They were biscuits we would hesitate a long while before eating at home, too.) And such was our gourmand appetites that after a week's work the cooks declared they had the worst of the contract.

It was noticeable to see how each one of us took to some particular game as naturally as we had to our chosen profession. The Artist was for bear; at the mention of anything smaller his look of scorn would crush a bed of rocks. Every morning he would betake himself to the woods, and come back just in time for dinner saying he saw bear tracks. We had grave suspicions that he spent his mornings seeking much needed rest. He probably thought we eyed him too seriously on one of these occasions, for he came back next day bringing a few partridges; but never during all the long three weeks we were there did he sight a bear, nor, as he owned afterward, any tracks either.

The best hunter of the trio was the Lawyer, whose chief ambition was to kill a moose. He fairly haunted Alder Brook, where moose tracks were thick, and every evening would give us an account of the many new tracks there, or of the narrow escape some deer or moose had had from his rifle. He was unusually late one evening, when the Artist unthinkingly shot his rifle to let him know he was late for supper. When he returned there was such fire in his eye we gently asked him the cause, but received no reply. After eating a hearty partridge supper, he gradually cooled down, and told us the cause of his displeasure. "I was paddling up the river," he said, "giving up all hopes of getting anything for to-day, when I heard a crashing and cracking quite a distance down the river. I paddled up close to a high bank and waited, as the sound was coming toward me. I could see the low alders that line the river at that point move and bend, and knew either moose or deer was coming. I had watched the alders sway and listened breathlessly for full twenty minutes to the great noise they were making, until they were just on the verge of coming out in an open space directly opposite me, where I could have had a dead shot. At this critical moment your supper signal arose on the air. I heard two deer give their peculiar danger whistle, run a short distance and whistle again, and continue whistling until they were a long distance away."

This experience only served to make the learner more determined, and when he returned a few days later with a fine fawn we were not at all surprised; such perseverance was sure to bear fruit; but instead of his looking pleased there were tears in his eyes, and he looked more like a pall bearer than a successful hunter. "I'm never going to kill another fawn," he exclaimed despondently, "I've heard a great deal about their eyes being human, but never believed they could be so much so until now. The look that poor fawn gave me as I cut its throat haunted me as if I had committed murder."

The writer was the fisherman. To catch the gamy trout had always been one of the joys of my life. The river was too low for big catches, yet I had good success tempting the moderate sized ones to accompany me to camp and would consider fifteen speckled companions ranging from ¼ to 2lbs. a good mess. On one of my trouting expeditions I met a gentleman from Boston and his guide who were passing through the forks; I extended the hospitality of our camp to them, which they gladly accepted. They seemed much surprised at the manner in which we were living.

"Why, here you are a hundred miles from nowhere and living much better than I do at home," exclaimed the guide glancing at our small library, pantry and some ginger cakes that lay on the table.

"Were you ever camping before?" asked the Boston gentleman.

"Yes," replied the Artist, "we were in Maine about three years ago, in the vicinity of Eustis, with nothing to protect us from the stormy weather we had nearly all the time but a small lean-to tent which the guides provided. We tramped many miles each day and never got even a sight of big game, but were game for black flies and mosquitoes. We lived on pork, beans and oatmeal, until we were sick; this time we planned differently."

"Do you not feel the want of a good guide?" continued our Boston guest.

"We did while dragging our loaded canoes over the shoal waters and rocks, and that is the only time. If we were following a land route their services would be indispensable, but for this inner route, and coming direct to this log cabin, we have enjoyed ourselves much better without one, and it is certainly much cheaper. This trip will not cost us more than $50 apiece at the most."

The guide seemed anxious to change the subject and began a long story describing his killing the king moose of Maine. We made some old-fashioned molasses candy, and gave some to the guide just as he had come to where he was running around a big tree for the thirtieth time, with the moose closely following. He commenced chewing and the story stopped abruptly. As we had heard our Eustis guides tell how they had killed the king we could guess the rest. They seemed to enjoy themselves greatly, however, and when they left laughingly told us not to dissipate too much.

The guide's story had made us more anxious than ever to get a moose. We scoured the woods daily, saw many tracks, and some trees whose bark was partly eaten off by these animals. Once we sighted two fine specimens of caribou, but they were too wary for us, and saw us long before we did them. After a week of this kind of hunting we decided to wait for the moose to come to us, it being less trouble and the chances of success being about equal. I was beginning to get a little dicouraged, and asked the Lawyer if it was possible the many moose tracks we saw were made by one or two animals. "You heard what the Boston man said," he replied. "He has been all over Maine, and he considers this the best moose and caribou district East."

"It's funny we don't get one then," I replied.

"Come with me," he said, "and see what I go through with to get one." I went with him up Alder Brook, and there we waited at what we knew was a favorite place for moose to drink. After an hour had passed and never a moose had showed his ugly mug, I was beginning to get impatient, for that was my waiting limit. Twenty minutes more passed. I began to realize that it was a very cold day. I stood it for half an hour longer and had to give in.

"Let's go back to camp," I said, "I'm frozen."

"All right," replied the Lawyer, "but this is nothing. I've frequently waited here for three or four hours."

We paddled softly, but swiftly, going down Alder, and were about half-way down when what should we sight when coming around a sharp bend but a bull moose, standing in the middle of the brook, and probably as much surprised at meeting us as we were him, for he stared at us in savage wonder. We fired simultaneously, the huge awkward beast staggered forward a few feet and then fell. We jumped from our canoes trembling with excitement, bled the animal well, and dragged him ashore. So sudden had the whole thing happened that we did not fully realize what we had done until then. We had killed a magnificent specimen of the moose tribe. It was well for us, too, that our bullets had proved fatal, for had they merely wounded him he would in another minute probably have been trampling us far in the mud of Alder. To drag this immense beast to camp whole was an impossibility. We skinned him where he lay, and were carving, or rather hacking at him until it grew dark, and had to make three separate trips to camp with parts of his carcass. When we at last had all the good meat at camp and his hide hung up we were tired, happy, and covered with blood.

The meat was delicious, many parts tasting similar to good veal. For the next few days we did nothing but rest on our laurels and eat moose; and, best of all, we had the proof of the killing in a fine hide and magnificent head and antlers; but when we showed these to friends at home, they swore we had patronized a Bangor game store. Among our doubters was an old weather-beaten hunter, who with great sagacity asked for our hunting corduroys. When we brought forth these blood-stained trophies they were convinced and pleased; but more pleased were they with our ruddy looks, for our five weeks' stay in Maine ozone had turned our pale cheeks to a healthy brown. When asked by the old hunter for five reasons that made our trip such a complete success, we replied: To our going direct to a log cabin in a good hunting district and staying there; to good food; to the river route; our going in the fall of the year; and to one of the most important things on such a trip, jolly fellowship. D. A. FAIRCHILD.

BRIDGEPORT, CONN.

ONE OF THE COONS OF MEMORY.

THE beautiful weather of last month caused the recollections of boyhod days; each day and each slight change in the weather were associated with some happy event that is indelibly written on my mind. These are times that are passed and gone forever. I am by no means an old man, it is only twelve years since I left the old country home where I have spent so many hours of pleasure with my dog and gun after quail, rabbits and squirrel; and with several good hands, a negro or two the woods were made to ring at night, when an old boar coon was being driven at the rate of twenty miles an hour.

Coon hunting got hold of me when I was about twelve years old, and I followed it and enjoyed it keenly for fifteen years, and some of my happiest moments now are when in reverie. I am following my favorite dogs with my colored companions; and when I am awakened from my reverie, how sharply can I realize how "blessings brighten as they take their flight."

I recall one Saturday night many years ago, when I was anxious for a hunt. So was Jim, my colored partner, but some boys from another neighborhood, some distance off, had slipped down and carried off two of our dogs, leaving us with only one, old George, the best treer but the poorest fighter. After supper we met at the barn, and Jim looking up at the moon said, "Boss, dis is too pretty er night ter stay at home, less have dem dogs and go er hunting." "Yes, but they are five miles from here. No doubt the boys have gone out with them by this time." "I tell you how we can git em. Less git on some horses and go up there; and when we hear de dogs running git in ahead of em and ketch ours as they come up; they will come with old George."

The idea struck me favorably. It only needed a suggestion; the moon, the atmosphere, the night, everything was suggestive. It was one of those ideal nights in which everything invites the hunter to the woods, and in five minutes we were a half mile from home going northward, with a solitary hound following us. In another half hour we were three miles from home and could hear our dogs trailing, but every effort failed to get them and we started home.

In going through some open woods old George started a hot trail and in five minutes treed in a small coffee-bean tree about one hundred yards from us. On riding up we found the tree to be only a shell, and having a good ax we soon brought it down. The dog located the coon in the hollow, when out he popped right on top of the dog. They clinched, but before I could render any assistance to the dog the coon persuaded himself that he had business up a big red oak about twenty feet away. The dog jumped up six feet after him but he was an old coon and too sharp for George. We had no gun and I knew that one dog could never kill that big coon. I had no faith in Jim as a coon fighter, neither could he climb. But I was determined to try it again and told Jim to get a big stick, and I started up the tree. When near the top I saw the coon out on a limb toward the south, and told Jim to go to a stump which I pointed out to him and as soon as the coon struck the ground to kill him.

Satisfying myself that Jim was at the right place, I handed Mr. Coon my hat on a long stick. As the hat passed over him he went, and the limb sprang back to its place. I hallowed to Jim, "He's coming," and saw the negro running down the hill from the tree as fast as he could go. I yelled to him, "Go back to that stump," which he did, but not until he heard the coon strike the ground and saw him going the other way. Old George again tackled him, and coon and dog were standing on their hind feet like two dogs fighting. I was coming down the tree as fast as I could. Jim ran up with his two-handed club (he was a man, not a boy) and struck with all his might—I guess, with both eyes shut. Everything was quiet when I reached the ground a few seconds afterward. I ran up to where they were and found Jim standing speechless, with his club in his hand, and old George lying on the ground as dead as Hector. I was almost beside myself with rage. The coon was gone, of course, but that was nothing; he had killed our best dog. Jim knew what was coming from me, and as soon as he got the use of his tongue said, "Dar now! I done killed old George; I made sho I was hittin de coon." I said nothing, but sat down and took the dog's head in my lap. In a few seconds he gasped, and Jim said, "I bleve my soul, he's coming to." In a few more seconds he raised his head and began to lick himself; then staggered to his feet and began smelling around for the coon. He struck the track and went about a half mile across a corn field. Our other dogs came to him and we followed close up, but they did not tree; and the first thing we knew George had gone off with the other dogs and we went home. After I realized how ridiculous the whole thing was I laughed for ten minutes. L. S. EDDINS.

MISSOURI.

MASSACHUSETTS ASSOCIATION.

THE annual meeting of the Association was held at the American House, Boston, Jan. 13, President Edw. A. Samuels in the chair. Messrs. D. Currie Doleman, George Ellis, Col. Chas. E. Fuller, Sumner Paine, Nathaniel C. Nash, Victor J. Loring, Eugene E. Partridge, Alfred A. Pocock, Walter C. Baylies, Chas. S. Bird, Winthrop M. Pitman, Geo. W. Foster and Lee Hammond were proposed for membership and their applications referred to the committee. The Membership Committee reported favorably on the applications of Messrs. L. W. Newell, Albert S. Watson, Dr. H. A. Baker, M. J. McIntire, Henry W. Wilson, Wm. H. Varney, Harry W. Read, Franklin B. Daniels, Daniel C. Holder, Jr., John F. Hooper, Chas. A. Cutter, Frank W. Chapman, W. A. Rawson, David Conway, and they were elected members. Chas. F. Munroe, chairman of committee on auditing the treasurer's accounts, reported they were correct, all bills had proper vouchers, leaving balance on hand of $944 85, as per treasurer's report. Treasurer F. R. Shattuck presented a detailed statement, as follows:

Cash Received.		*Paid.*	
For membership	$760 00	For propagating game	$350 00
Dues	1,291 00	Five monthly suppers	871 25
Sundries, including annual dinner	1,151 75	Printing	232 95
		Added to permanent fund	357 00
		Sundry accounts	396 70
		Cash on hand	944 85
	$3,202 75		$3,202 75

On deposit in savings bank $926.26 and one year's accrued interest.

BOSTON, Jan. 13, 1892.

Mr. Henry J. Thayer, Secretary of Committee on Game Importation, reported as follows:

This, the third season's work of this committee, has proved the most laborious as well as the most fruitful in result.

The third season we must date from some point, and as July is the breeding season and in which no work can really be done, we have made that time. The work of the committee has embraced the importing this year of prairie chickens, Southern quail, Oregon mountain quail or plumed partridge, also Northern white hares.

Although the year has been exceptionally poor for breeding, and allowance must be made for liberating birds in the middle of the pairing season after having been shipped and confined, when consequently they are ill prepared to withstand their new trials, we have been much more than gratified with results so far.

We have conclusively proved that the quail are a success, and the results are lasting, more or less according to care and amount of shooting, everyone, almost, confirming this statement.

We have good grounds for hoping that the prairie chickens will be a valuable acquisition in this State; those that have been heard from so far have been reported as being on the increase.

The Oregon mountain quail are beautiful birds and apparently possess good game qualities. Northern white hares have been least successful as a whole than anything else, and although every one who has had them begs for more, the loss and trouble in handling do not encourage the committee to pursue the subject with much ardor. The time, trouble, and money can be put to better advantage elsewhere. To the sharp-tail grouse the committee pins its faith, first, foremost and most confidently. The committee has worked the hardest and with the least success to obtain them, and at last we feel confident that our trouble is to be rewarded. The seventeen sharptails received and planted have been reported as doing well. Summary of importations:

July 1, 1890 to July 1, 1891.		*July 1, 1891 to Jan. 13, 1891.*	
Prairie chickens	255	Sharptail grouse	17
Oregon mountain quail	8	Arizona mountain quail	269
Southern quail	443	Oregon mountain quail	18
Northern hares	87		
		Total	340
Total	793		

The total number liberated since organization: Prairie chickens, 255; sharptail grouse, 17; Arizona mountain quail, 320; Oregon mountain quail, 26; southern quail, 1,020; northern hares, 87; total, 1,725.

Mr. Thayer stated that a larger number had been imported, but about twelve and a half per cent. were lost or died in transit, reducing the actual number liberated to the above figure.

Mr. John Fottler, Jr., chairman of the committee, stated that he had recently met the party who had shipped the sharptail grouse, and learned that a consignment of Mongolian pheasants was on the way.

Mr. Edw. E. Hardy, chairman of the Committee on Enforcement of the Game Laws, made the following report:

The Committee on the Enforcement of the Game Laws has little of interest or encouragement to report as the result of its year's work. This is due mainly, we believe, to two causes; first, because of the unpractical working of our game laws, and secondly, to the want of a properly paid prosecuting officer. Under the existing laws an officer or deputy has no power to search or arrest without a warrant. The right to search under certain circumstances is absolutely essential to the effective protection of game, and with this power should be given the right to arrest if found in possession of unlawful game. The experience of your game committee, while on an investigating tramp, puts the matter in a very practical light. A man was seen shooting marsh birds in Marshfield, in May last, and after some little conversation your committeeman was accused of being an officer. The gunner didn't care a sou whether he was or not, and proceeded to demonstrate to your member his interpretation of his security under the law by opening his game bag and exposing to view several kinds of marsh and shore birds, shot that morning—some of them in sight of your member—and adding, "Now follow me; find out who I am, if you are smart enough; and swear out a warrant for my arrest, and I will wait for you." Gentlemen, there is no use mincing matters; your law to-day for the protection of game is, to a large extent, a dead letter. What do you propose to do about it?

Under existing circumstances the appointing of this committee is of no avail, except so far as it distributes printed laws on paper and linen, which surely does not require the services of three men. Therefore, in closing this report your committee respectfully and most urgently recommend that the members of this Association, as members collectively, and as individuals, use all possible influence during the coming winter with their respective members to the General Court to the end that fish and game deputies be vested with the same power as constables.

We wish to add that all complaints received during the year have been immediately turned over to the Fish and Game Commissioners, as well as any information obtained either by the practical experience of your committee, or received from others through the medium of pen and paper. We also recommend that the Association provide itself with a competent and well paid officer, whose duty it shall be not only to prosecute cases brought to his notice, but to find out who the law breakers are and proceed against them legally. Respectfully submitted,

EDWARD E. HARDY, EDWARD BROOKS, EDWARD J. BROWN
Committee on Enforcement of Game Laws.

On motion the report was accepted and adopted.

The following officers were unanimously elected for the ensuing year: President, Hon. George. W. Wiggin; Vice-Presidents, Edward A. Samuels, Augustus Hemenway, Edward E. Hardy, Ivers W. Adams, Hon. James F. Dwinell, John T. Stetson, Horace T. Rockwell; Treasurer, Andrew J. Lloyd; Secretary, Richard O. Harding; Librarian, John Fottler, Jr. Executive Committee: Frederick R. Shattuck, Charles G. Gibson, John N. Roberts, M. A. Morris, C. J. H. Woodbury, W. G. Kendall, Heber Bishop, W. F. Keith, William C. Thairlwall, Rollin Jones, Wm. B. Smart, Henry H. Kimball. Membership Committee: Edward T. Baker, Walter C. Prescott, Arthur W. Robinson. Fund Committee: Benjamin C. Clark, W. A. Power, Edward Brooks.

Messrs. Henry J. Thayer and Benj. C. Clark escorted the newly-elected president to the chair. On taking the chair Hon. Geo. W. Wiggin sincerely thanked the members for the honor given him, and said he knew full well that the duties of the office were no light task. "It will be no light task," said he, "to fill the place of my predecessor, but with the combined efforts of the Association I will do my best to further your interests, and I know that with your assistance success in protecting the fish and game of this commonwealth must ultimately come."

On motion by Mr. John Fottler, Jr., the sum of $400 per year for two years was appropriated from funds in the treasury for the use of the committee on game importation. Mr. Edw. E. Hardy, treasurer of the committee, solicited contributions from members and all sportsmen individually to aid in carrying forward the good work of restocking the State. Sums of from one dollar upward will be thankfully received in the name of the Association and duly acknowledged. Donations may be addressed Edward E. Hardy, Boston, Mass.

Mr. Geo. H. Richards, Jr., spoke of the illegal dogging of deer on Cape Cod, and hoped that we could get absolute protection and enforcement of the laws protecting Massachusetts game. Mr. Richards subscribed $25 to a fund toward its protection.

Mr. Arthur W. Robinson said, "During the last few years we have added a large number of members to this Association. To them our retiring president has been a fixture; we have never had a more efficient officer than Edward A. Samuels. He is an ardent sportsman and this Association has been his hobby. The results are highly gratifying; our membership has increased three-fold under his administration. For several years we have re-elected the presiding officer, but Mr. Samuels positively declined to serve again and we could not refuse to grant him the rest he has earned so well. We have, however, found a worthy successor in the person of Hon. George W. Wiggin." Mr. Robinson then presented the following resolution:

Whereas, This Association during the past six years has enjoyed a season of unwonted prosperity, its membership having increased from 125 to over 500, its treasury having been replenished and the work of the Association having been broadened beyond what the most sanguine among us would have dared to hope for, and

Whereas, This prosperity and success have been largely due to the earnest, faithful and intelligent efforts of our president, Mr. Edward A. Samuels, now, therefore, be it

Resolved, That this Association extends to Mr. Samuels, in his retirement from the office which he has so ably filled, its most hearty appreciation and indorsement of his management of its affairs.

Mr. Edw. E. Hardy, in seconding the resolution, which was unanimously carried, said he knew he expressed the sentiments of every member of the Association, old and new.

On motion by Mr. Benj. C. Clark a vote of thanks was tendered to the retiring president, Mr. Edw. A. Samuels.

Mr. Samuels in reply thanked the members for their expression of good feeling and the manner in which they had supported his administration, and for the able manner in which he had been assisted by the former secretaries, Messrs. Thayer and Robinson, and was glad to have the expression of good will from past Secretary Arthur W. Robinson. A vote of thanks was extended to the retiring treasurer, Fred. R. Shattuck, for the faithful manner in which he had fulfilled the duties of his office.

The following telegram was received just after the meeting:

KALAMAZOO, Mich., Jan. 13, 1892.—We, the members of the Southern Michigan Fish and Game Protection Association, in annual convention assembled at the American House, send greetings to our Bay State brothers.—H. GALE ADAMS, Sec'y.

RICHARD O. HARDING, Sec'y.

SEAL IN JAMAICA BAY.—Brooklyn, Jan. 15.—Mr. Adam Baizer, the proprietor of the boat house on Hammel's Dock, Jamaica Bay, Rockaway Beach, shot a seal in the bay yesterday which measured over 3ft. 6in. in length and weighed between 50 and 75lbs.—J. F. M.

"THE SPORTING GOODS DEALER."—Commencing with the present year, the *Sporting Goods Dealer* will appear each month, handsomely illustrated, and with an increased number of pages. It will continue to be devoted exclusively to the trade.

MASSACHUSETTS PICKEREL.—The first pickerel of the season were taken through the ice at Chebacco Pond, Essex, Mass., on Jan. 10, by J. B. Kimball. The ice was 4in. thick.

The Man Target.

TWO or three men went out one evening purposely to hunt; when they were in the spots of savannahs, they separated to find their game, and at last it so happened that one of them fired at a deer and killed it, and while he was skinning it he was shot stark dead by one of his consorts, who fired at him mistaking him for a deer. The poor man was so sorry for so sad a mischance, and for fear of the dead man's friends, durst never go back again to Jamaica.—*Dampier's Account of Tobacco Island in West Indies* (1676).

1792—1892—1950.

THE WHEATLANDS, Md., Jan. 10.—*Editor Forest and Stream:* While reading your editorial entitled "Our Boyhood Number" I was struck with your query about the opinion of the reader of the FOREST AND STREAM for 1950 as to the breechloader of 1892, and deeming it apropos of the subject, I looked up an article on the "Introduction and Improvement of Firearms," in the *Sporting Magazine* for 1792, edited in London, a copy of which I have. The article commences: "A very elegant modern writer, who has treated upon shooting, has observed that it would be a subject of much curious research, and not without its use, to trace the progress of invention in the arms of the class employed throughout Europe, and to mark their gradual improvement, from the spear to the cross-bow, from the clumsy match lock to the present elegant fowling piece."

Then after dilating on the advantage of the cross-bow as being noiseless, goes on to say: "Still the cross-bow was continued long after the introduction of the arquebus, and not entirely dropped till toward the end of the sixteenth century, when the arquebus was first brought to the perfection of enabling the sportsman to shoot flying. But such was the length of time taken to improve the instrument, both in its form and use, owing to its advocates and enemies, that it was not without the consummation of argument in Nicolas Spadoni, a grave Spaniard, the match lock was finally proscribed, and the decided superiority awarded to the spring lock and flint. They must have been the most awkward kind of locks imaginable if some people could reasonably plead for the quickness of discharge of the match lock in preference to them. But such has been the improvement of the spring lock that we now see them made use of in the artillery. And in respect to the formation of the lock, and of small arms generally, the genius of English gun-makers has brought them to such a degree of perfection that in theory only can further improvement be hoped for."

Another article in the same number on loading directs that the gun be tried with a "pipe and a half of powder to a pipe of shot."

Will our guns have advanced as much in 1950 as they have from 1792 to 1892? The claim for shooting flying too is an early one, and you will note that there were "friends" and "enemies" of the arquebus, just as there were of the breechloader in its first appearance.

SINK-BOAT.

ABOUT BIG BAGS OF GAME.

PORTLAND, Oregon.—*Editor Forest and Stream:* In your issue of Dec. 31 a gentleman signed "Frank Lawrence Donohue" speaks of three shoots enjoyed by the writer and a friend as if they had done wrong. Perhaps we have, but if Mr. Donohue will come to Portland, Oregon, and come prepared for shooting, I will ask him to go to our preserve for a day's sport; and, as the saying goes, "it is dollars to doughnuts" that he will shoot as long as the daylight lasts. Why? First, we do not own our lakes, but pay an exorbitant price for the privilege of shooting each year on these lakes; second, nine-tenths of the owners are market-hunters and kill birds every day in the week, and get all they can, too. Now, what shall we do? Go out and get say one dozen and then go home? Do the people who are kicking at large strings of birds recognize the fact that the hunters of Portland are obliged to go from six to thirty miles on a steamboat to get to their respective sporting grounds, and if they are obliged to stop shooting on any given number of birds the interest in duck shooting will soon become a thing of the past. Evidently Mr. Donohue does not fully comprehend the situation. If the birds will come in the early fall and stay till the season is over, and every sportsman goes out every day and kills 50 birds per man, they will surely reduce the supply. But take the situation as it really is. I have been an ardent hunter for five years, and have never baged more than 20 birds in any one day before this season. There are about 300 sportsmen in and about Portland, and I think I am safe in saying that not one in 50 of these have bagged 50 birds in any one day this season, and that not one in 20 have baged half that number. We do not shoot every day, as Mr. Donohue would lead people to think, but go once a week, and on very rare occasions twice, as in the instance he mentions. I think if he will look into the matter closely, he will find other and more material causes for the alleged great reduction in the game supply. However, my invitation to him stands good for the rest of this season, ending April 1.

SAND HILL.

AN IDAHO FISH AND GAME COUNTRY.

IN CAMP, Pend d'Oreille Lake, Kootenai County, Idaho, Dec. 31, 1891.—To Priest Lake (Kootenai county, Idaho) by canoe from Sand Point (station N. P. R. R.) down Pend d'Oreille River, twenty-three miles thence up Priest River, through very swift water, too swift to row or paddle, to Kanisku Lake, sixty-five miles, thence thirty miles up to Priest Lake.

I found unsurpassed trout fishing on the way and in both lakes; mule deer numerous, with a sprinkling of white tails in the bottoms; black bear and panther both in such number as to afford good sport with hounds that will run them; pheasants very plentiful in the bottoms and quite a few grouse on the table lands. Several caribou were seen and signs around the alder bushes were fresh and plentiful. No boats can be rented, no ranches for a distance of about 105 miles, no settlement, but two mining claims under development.

Kanisku Lake can be reached over a rough pack trail from Sand Point, Idaho, distance about forty miles. Address of packer, H. Tweedy, Rathdrum, Kootenai county, Idaho (party recommended but not known to writer). Cost of packing from railway station to lake seventy-five cents per head per each pack and saddle animal per day, carrying capacity from 200 to 250 pounds per animal, time about fifteen miles per day, time to reach station and to return there included in cost. Packer's wages $3 per day found. Provisions can be purchased cheap at Sand Point, Idaho (nearest station N. P. R. R.). Parties intending an outing into the above locality either during a future fishing or large game hunting season, and desiring further information, may address through FOREST AND STREAM,

MUX.

["Pheasants" we presume, are ruffed grouse, and "grouse," dusky grouse.]

A THREE YEARS' CLOSE SEASON.—Rochester, Jan. 18.—A meeting of the directors of the Monroe Sportsman's Association was held this P. M. The features of the meeting were a discussion of the game bill now before the Supervisors, which provides for a close season for three years on all game birds, and after that period for an open season of only fifteen days—from Dec. 15 to Jan. 1 of each year, and providing a fine of $25 for each violation. The directors voted to approve the close season for three years excepting on woodcock, but voted to oppose the short open season, for the reason that all game shooting is practically over at that time in this county except rabbits. It was also voted to urge the passage of a law shortening the rabbit season one month, making the open season end Jan. 1. Splendid reports were made of quail put out last spring, and it was decided to repeat the act next spring, as it is no longer an experiment but a decided success. The annual meeting will be held in the Chamber of Commerce Wednesday, Feb. 3, at 3 P. M., at which time reports will be made and interesting papers read on subjects of interest; an attempt will also be made to raise a generous fund for the propagation and protection of game and fish. A general and earnest invitation is extented to all sportsmen and interested persons, especially the farmers and land owners, to be present and hear the results of the past year and the propositions for the future.—O. S. B.

A TRIP FOR CARIBOU.—Mr. Wm. W. Hart, of this city, recently returned from a successful hunting trip to Maine. His excursion was in part a business journey for the purpose of buying fur, but he succeeded in mingling pleasure with his business, and brought back with him some fine caribou heads and hides, which he now has at his store on Jacob street. Mr. Hart reports that the bull caribou killed in December were in good order, having already begun to lay on fat after the rutting season.

Camp-Fire Flickerings.

"That reminds me."

BLONDIE is an active member of our gun club, the owner of a good gun and a "valuable" red Irish setter. Blondie paid $10 for the pup and since has paid about $23 for chickens surreptitiously killed, and that is why he says he's a valuable dog. A short time ago Blondie, with Pedro (who ever before heard of a red Irishman with a Spanish name?), went grouse hunting. Soon after entering the woods Pedro made one of his half-creeping, barnyard-game points and up went a bird; Blondie fired and as the smoke lifted he saw the bird still on the wing. He quickly gave it the second barrel and saw it drop. When he went to pick it up he found two dead birds; he had made a good double without knowing it. Blondie is no great shucks at dog training, but he is death to birds.

H.

PENNSYLVANIA.

The District of Columbia Chapter of the Sons of the American Revolution celebrated the anniversary of the battle of Cowpens last Saturday by means of a banquet in Washington. It was to be expected that among the distinguished guests would be some famous fishermen, and that their side talks would occasionally take on the nature of swapping fish yarns. President A. W. Greely gave expression to his mixed feelings, produced by sitting between the Governor of North Carolina and the Governor of South Carolina, with the usual questions passing; but the ex-Governor of North Carolina, now Senator Z. B. Vance, found time to trade stories with Hon. John Goode, of Virginia, and one of his gems related to a wonderful patent fish-eating machine. The invention, according to Senator Vance, was a very simple affair and yet remarkably effective—almost as successful as fish bones. It consisted merely of a crank and hopper. The fish-eater had only to open his mouth in front of the hopper and turn the crank, whereupon the flesh would drop into his mouth while the bones flew off to the left into the yard. Everything acted like a charm, and the inventor had reason to dream golden dreams until one unfortunate day a left-handed man tried the machine, to see how it worked. It worked as a matter of course, but not in the usual way, for the bones flew straight into the man's belly and the fish caromed on the back yard fence, where the patent machine quickly followed.

TROUTING IN THE CASCADES.—VI.

THE MOLALLA COUNTRY.

"Full in her dreamy light, the moon presides,
Shrined in a halo, mellowing as she rides;
And far around, the forest and the stream
Bathe in the beauty of her emerald beam:
The lulled winds, too, are sleeping in their caves."

ANTICIPATION made me restless. The very stillness of the night was a strain upon my nerves; and sleep was out of the question. I closed my eyes and at once commenced to reason about the relation of the brain to the nerve of sight and the influence of the nervous fluid over the body and its members. I opened my eyes and at once fell to forming fantastic pictures out of the shadows that fell upon my tent. The leaves and twigs, painted by the moon upon the canvas overhead, formed the ground work for perfectly kaleidoscopic exhibition of beautiful and symetrical figures to my imaginative brain. Then I commenced to tally for Billy while he snored in the other tent. It does beat all what an ass insomnia can make of a man.

Gradually my thoughts wandered off into the mountains. I listened to the midnight melodies of nature in her own wild solitudes where the iconoclastic hand of man had never been felt. I saw the sheeted ghosts of creatures that had wandered there in bygone ages. I heard the brave's war cry and the dusky mother's lullaby of tribes now gone forever. I listened to the lamentations of the last of the Molallas and lamented with him. Gradually my eye-lids fell in sleep, but my brain continued to evolve strange sights and sounds. Billy's snoring became the grinding roar of an avalanche, which I could not evade; and the war cries and lamentations became the screams of cougars and the death gurgles of their prey.

I stood by the sparkling waters of Canyon Creek; my flies were dancing in the swirl and a beautiful trout seized the royal and began to play. Then another trout came, and another and still others until a hundred trout were clinging to my line, and when I tried to land they dragged me into a deep, dark pool where an alligator seized me and began to crunch my leg and roar horribly. I awoke with a start to find that the alligator was only a Molalla flea making a square meal off my right leg, while the roaring was only Billy's alarm clock on a strike. One good point about Billy is that he is as prompt and precise as an old maid, and as punctual as a set of cog-wheels in matters of little importance. Nobody but Billy would ever think to take an alarm clock into the mountains.

Leaving my wife to enjoy her bed of browse, I went over to Billy's tent and ate a hearty breakfast. The fried "mountain beef" was a sweet luxury, and I slipped a couple of slices into my ditty-bag for lunch. Taking my eight feet four inches lance-wood, I started out on the deer trail, with no definite idea of where it would take me, depending on luck and a little judgment to reach the appointed rendezvous.

The solitude of such a place is inspiring. It sets one to thinking of nature. One's own thoughts are entertaining enough. Blossoms and bright leaves bespangled with dew; birds warbling their morning devotions; rabbits limping home from their nocturnal escapades; wild pigeons preening themselves in the tops of the tall trees; belated owls winking at you from shadowy coverts: these and a myriad other pleasing and entertaining things teach us that these solitudes are not for man's pleasure and diversion alone, but that other and purer life does and will enjoy them now and throughout time. Presently Mike, who was trotting ahead, flushed a big covey of young grouse, which took to the nearest limbs and stared at me as I walked past. No less than three such coveys were started by the dog before I came to the little clearing mentioned by Frank as being the spot where he would likely meet me.

There on a log he sat patiently waiting for me. "I thought I would have to wait for you, Frank," said I, as I came up to him. "Oh, no," he replied, "I couldn't sleep much last night thinking of how surprised the Canyon creekers would be with these fancy bugs; we'll have great sport with them to-day."

"So it was flies kept you awake, was it, Frank; maybe the butterfly down at Hall's had something to do with it, my boy," said I, laughingly.

Frank's ears reddened a little; his face was too sunbrowned for blushes to shine through; and, turning quickly, he took a dim trail that led up and over the mountain. I had long prided myself on my "gait," but I wasn't "in it" alongside the gentleman from Canyon Creek. By the time we had reached the crest of the ridge I was pretty well blowed, and requested him to take it easy, as we had plenty of time. The flies had loaned him a pair of wings, I guess. At any rate, if any body thinks that Mr. Frank Robinson is not a walker, let them follow him over the cut-off between Milk and Canyon creeks.

Just over the ridge Frank stopped suddenly and called my attention to the carcass of a small deer that had evidently been killed and partly devoured by cougars or wolves. "Them varmints always gets the best meat," he remarked, and took advantage of the circumstance to add apologetically, "You can't much blame a feller for gittin' a little hisself once in a while, when them cussed pant'ers don't much mor'n kill and suck the blood." I remarked that it was strange that in all my fishing excursions I had never run across a live cougar in his native wilds. "Nothin' strange about it," said Frank, "They are nothin but a great big cat, and they hev all the cat's ways and cunnin'. They hear you comin' and see you afore you see them, and lie low until you pass. You mout go within six feet of them a hundred times and never know that there was a cougar in the kentry. After you pass them they raise up and watch you, and then come out in the trail and sniff your track, and probably foller you for a while, jist to size you up and see what kind of critter ye are. Without a regular bar dog that smells 'em and trees 'em you will probably never see a wild cougar. Your yaller dog ther is no good for cougars. There's just enough dog about him to skeer the cougars a little, and they skin out as soon as they see or smell him. If he finds their track he will smell around, of course, but be aint the kind of a dog to foller and tree 'em. No," he continued, "there aint no danger from cougars, unless it might be in the winter time, when the game all comes down out of the mountains and he gits nearly starved to death; but he ginerally follers the game wherever it goes. Of course a she with her kits is bad, but no meaner nor a bar or lynx; anything will fight for its young, even to a bird."

But here was Canyon Creek. Its roar had been audible ever since we crossed the divide. I was not in the least disappointed; the country was as rugged, the scenery as superb as I had imagined. Frank had his flies on the water almost before I was aware that we had reached the creek. No jointed rod with its guides and reel bothered him. His was strictly a primitive tackle all except the new leader with its flies, which looked like a posey girl at a pic-nic, as his whip was made up entirely of royal coachmen. This certainly evinced his estimation of the "bugs with white wings and a red streak around the body." The creek as a matter of course was rather more brushy than Milk Creek, but still, by the exercise of a little care, we had no trouble casting.

Many anglers entertain the opinion that the simple act of clearing away the timber and letting the sun in drives the trout out of the creek. My observation and experience lead me to the conclusion that such a result follows, not so much from letting the sun in as from depriving

the fish of much of their natural food that breeds and falls into the stream from the overhanging leaves and branches.

We did have great sport that day. The weather was pleasant and all nature seemed fresh, vigorous and animated. Even at mid-day the fish manifested none of that dullness and languor so observable ordinarily. But this was not a large stream, and, besides, it was walled in by mountains and overhung with trees so that the trout were in eternal shade and had little knowledge of the weather outside. And the quality of the fish attested the fact that they did live in cold, shaded spring water. Their spots were like beads, their fins were red as blood and the fish itself seemed almost as crisp and hard as glass.

While Frank was assuredly a novice in fly-casting, his knowledge of the creek and the country, added to his hardy, backwoods training, gave him a little advantage over me; besides, not so much care was required in protecting his tackle. To fish from our starting point to camp carefully, following down Canyon Creek to its junction with Milk Creek and thence to camp, would have required three days instead of one; so we cut and covered a good deal, sometimes jumping a quarter of a mile at a stretch where appearances indicated rough fishing. By noon we were at the rapids below the mouth of Canyon Creek, and lunched on mountain beef, with which we both were pretty well supplied. After lounging around on the mossy bank for an hour or so, smoking and exchanging city news for mountain lore, we proceeded on our way. We passed several pretty cascades and beautiful pools, worthy of more attention than we could possibly give to them. Really trout were no object, so I treated the trip simply as a tour of investigation.

That disposition of mine to investigate the secrets of the mountains and to go in search of new and unknown trout streams has got me into lots of trouble, of which I may at some future time give the readers of FOREST AND STREAM a few samples. One stretch of this stream impressed me with its novelty. For nearly a mile the stream pitched in an apparently unbroken sheet resembling wavy glass. On closer examination I found that this apparently smooth slab was full of holes, ranging in size from that of a keg to a hogshead and much the same shape, and in every hole a trout had found a harbor of refuge. It proved to be not the easiest of fishing, for the trout, after rising to the fly, would again sink to the bottom, and it was a difficult matter to get them out. Most of these holes had a small boulder at the bottom, which, I take it, accounted for the freak. The combined action of the boulder and water had ground out a deep bed for the harder boulder, which itself had lost much of its substance in the operation. Much care had to be exercised to avod these pitfalls, as I learned by experience.

S. H. GREENE.

PORTLAND, Oregon.

LLEGAL FISHING IN THE ALLEGHANIES

IN the Alleghany Mountains, in Pennsylvania, the laws relating to fish and fishing are often violated, sometimes openly and above board. On Big Pine, Little Pine, Lycoming and Loyalsock creeks it is a certain thing to find, when the season opens, that a half-score or more fishers have been on the streams, perhaps some of them weeks before the stipulated time. To the lover of the sport, the law-observing, loyal citizen and honest fisherman, who sees early on the opening morning the footprints in the sand, with other unmistakable evidences of the poachers, this infraction of the law, together with the selfish desire to get the first, and all of the best, too, is, to put it as mildly as possible, simply exasperating, and makes the manly fisherman feel as if the very laws make an inequality to him in the distribution of privileges. A few examples made of those who year after year disregard its mandates would teach to all alike the meaning of the law.

This fishing out of season, before as well as after the closing of the same, is, however, not the only way in which the law is violated. In 1888 Mr. S——, a gentleman from Wellsboro, came to English Center, on Little Pine Creek, and used dynamite in that stream and its tributaries. Wherever he could find some large old fellows who were too cautious to be taken by fair means he would put in a cartridge and gather up the big ones. Of course, hundreds of little ones were killed, but those he did not want. He took in this manner over 75 large trout in three or four days' time. His entire catch, taken as a whole, was the best the old fishermen had ever seen taken out of the stream. Other persons set nets, outlines, gill-nets, fish-baskets, use snares, and even, where it can be done, use lime.

In 1889 the sheriff of the county made a raid on all baskets and destroyed them or had them destroyed, and warned the offenders that they would be dealt with according to law the next time. This had a very salutary effect and nearly broke up this kind of fishing. Yet, once in awhile a basket which had gotten in its work the previous fall will be found in the streams in some out-of-the-way place. A little more precaution and diligence on the part of the proper officials would enforce the provisions of the law.

All along the Susquehanna illegal fishing is carried on and some men make it a summer's business. At Williamsport, Montoursville, Jersey Shore, Muncy, Lock Haven, etc., many nets and outlines are set. There is also another lot of poachers (they cannot be called anything else) who get in their work near the head of the streams and tributaries, while the fish are spawning. These fellows, when the water is low and clear—and it always is so—provided with a pole and a No. 26 copper wire formed into a running noose, snare out all the large ones they can see. A trout, like the wild animals, is scared by any quick motion, but will lie quite still unless such a motion is made. As they lie suspended in the water it is a very easy matter to slip a noose over them. One fellow informed me "that he never did much fishing in the spring, but would wait till the water was clear and low in the fall. Then, said he, if they do not come out from under the rocks I can easily drive them out with a pole, and two or three turns around the pool disheartens and tires them so that they settle down quietly in one corner, and then they are my fish." He added, "I have caught more than 20 lbs. in an hour more than once." This fishing has been carried on for some years on the Texas Fork of Little Pine Creek and to some extent on the Loyalsock.

M. E. J.

CHICAGO AND THE WEST.

[By a Staff Correspondent.]

CHICAGO, Ill., Jan. 13.—The regular annual meeting of the Fox River and Kankakee River Fish and Game Protective associations were held this afternoon at the Sherman House, this city. The call was set for 2 P. M., and unusual interest attached to the occasion from the fact of the general understanding that there would come up for discussion in joint session the question of the organization of a State league of the fishing clubs, for the purpose of carrying out practical protection on a larger scale. The advisability of such a measure was first discussed in the columns of FOREST AND STREAM. The idea was first conceived by Mr. Geo. E. Cole.

For many reasons the work of a State organization would be of special interest and benefit to the lower part of the State. The greatest amount of lawlessness is there. The upper part of the State has its work of protection practically accomplished. The main fight is along the lower Illinois River country now. It should be the clubs of the lower country which should do the yeoman service in that fight now, for Chicago will not, although she will help. Realizing all these facts, Dr. Bartlett, of the State Fish Commission, bent all his energies to the work of securing a good attendance at the preliminary meeting this afternoon. He wrote letters to clubs all through the central and southern part of the State. The responses and promises were many. On the wole, the result of the promises were not wholly unsatisfactory, though the usual discrepancies between the results and the promises were easily apparent.

President Cole called the Fox River Association to order. The methods of this society are nothing if not practical. No talk was wasted. The meeting was over in twenty minutes. The secretary, Mr. John Wilkinson, read the minutes of the last meeting of the Association and of the board of directors, detailing briefly also the work of the year, notably the conception and carrying out of the only successful piece of protective legislation of the year, the law prohibiting winter fishing. The necessity for this measure was first shown in FOREST AND STREAM, which also exclusively detailed at the time the account of the steps taken in its passage. In his remarks later the president highly complimented Hon. Henry L. Hertz for his work on this measure at Springfield, also attorney Knight, who drafted the bill, and also Senator Knott, Representative Will and others who fought nobly for it.

The annual dues of the Fox River Association were placed at $2 instead of $1 for the ensuing year.

On motion, the old Board of Directors was continued in office without change. These are Messrs. Henry L. Hertz, Clarence A. Knight, John Stephens, Charles F. Hills, Geo. E. Cole, John Wilkinson, L. M. Hamburger, Geo. R. Davis, O. J. Weidner and James Gardiner.

There is every possibility that at their first meeting the board will continue the present incumbents in office, Mr. Cole for president and Mr. Wilkinson for secretary.

The R. R. Committee on reduced fares for anglers reported that they could do nothing.

The secretary's financial statement shows the following annual totals from the first year of the Fox River Association:

Total Receipts.

Annual Dues, 1888	$209 00
1889	78 00
1890	57 60
1891	22 00
Contributions, 1890	229 70
" 1891	22 00
Total Life Memberships	660 00
Total	$1,277 70

Total Disbursements.

1888	$174 60	
1889	324 05	
1890	603 19	
1891	122 15	
		$1,223 99
Balance on hand		$53 71

Mr. Cole, as president of the Fox River Association, made his remarks brief in the summary. He said, "Our work on the Fox River is practically done. We have finished what we started to do, and have accomplished in detail all of our original purpose. To-day the fishways are all in on the Fox River. Destructive winter fishing on the lakes is stopped. The law is respected. We have no violations of it to report. Offenses against the fish law are as scarce as chicken stealing, and such an offense is held about as respectable as the latter crime. We will keep up our organization, and hold to all we have gained; but our work is done, and done well. Gentlemen, I congratulate you." Adjournment followed.

THE KANKAKEE ASSOCIATION MEETING.

The Kankakee Association was now at once called to order. Mr. Cole still in the chair as president of the latter body. The system of this society was even more expeditious than that shown above. No disorder and no speeches. It was moved that the order of business be: 1st, the directors' report (a novel feature in such work and a good one); 2d, the financial report of the secretary-treasurer; 3d, the appointment of a committee for the nomination of the board of directors for the ensuing year. This order was adopted.

It would be needless to give the directors' report in full, for the work of the Kankakee Association has been so fully covered in these columns as to render that largely repetition. The report went on to state the inception of the society at the Possum Club meeting last spring, detailed the formal proceeding briefly for that and the meeting of the board of directors, continuing as follows:

The following committees were appointed for the purpose of soliciting subscriptions from the various clubs: Mak-saw-ba Club, R. B. Organ, T. B. Leiter and W. H. Haskell; Cumberland Club, C. D. Gammon, H. D. Nicholls, Geo. T. Farmer and Capt. Sanborn; English Lake Club, Abner Price, A. M. Fuller Chas. E. Deane and T. C. Edwards; Water Valley Club, R. A. Turtle; Tolleston Club, F. A. Howe, O. H. Roche, W. R. Linn and A. G. Schwartz; Diana Club, Henry Ehlers, John Press, Henry Schaller and A. Stafford; North End Gun Club, Chas. Burmeister; Pittsburgh Club, Mr. Kennedy; Koshenock Club, E. P. Arnold; Prairie Club, A. M. Hoffmann and Geo. Hoffmann; Grand Calumet Heights Club, Dr. Harlan, Geo. Marshall and W. L. Pearce.

The above committees seem to have been fortunate in the selection, at least in some instances, for money began to flow into the secretary's office in a highly satisfactory manner. From the secretary's books it is learned that the total receipts have been $472. Deducting from this amount the funds employed by the fishway committee, and used in the various expenses of the secretary's office, as will be specifically set forth in the secretary's report, there remains on hand at the present time the sum of $284.04. Your directors confidently state that there has never been so large an amount raised in so short a time, for the purpose of protective work in this region. It is believed that this surpasses the record of the Fox River Association.

Up to this time the life of the Kankakee Association had been an easy one, and it had swum upon a summer sea of glory. In due course, however, there ensued the usual waning of enthusiasm, and by the time fall came there were many who had apparently forgotten the association and the honor it had conferred by selecting them for the performance of certain duties. Interest seemed fairly well sustained in the lower Kankakee country, and it is very gratifying to state that from Momence and other points there appeared proof that the enterprise was not solely a Chicago one. From the upper country, however, or that occupied by the large sporting clubs whose grounds are in Indiana, the interest seemed to die out considerably after the financial contributions, although it is only justice to state that the latter were large from that source. This portion of the Kankakee was fairly ground for action of the committee on protection. This committee was to have conferred with the proper officials in Indiana, but there is no record to the effect that such conference was ever held, or that serious attempt to that end was ever made.

The Committe on Ways and Means have failed to obey the instructions of the president, and have never obtained a charter for the association. This leaves the society in a loose and indefinite condition, for which there is really no necessity.

The committee on fishways did some work in October personally, and the expenses of this, and the work done earlier in the season by Warden F. L. Buck, at the instance of this committee, have rather exceeded the $100 set apart for the use of this committee. The fishway committee was confronted with perhaps the most pressing need of action of any, it being notorious that the fishways of the Kankakee River were altogether inefficient and illegal.

Here followed the account of the trip made in October by Messrs. Cole and Hough of the fishway committee, showing the status of affairs on the Kankakee. This has already been published so fully by FOREST AND STREAM that its repetition is unnecessary. It will be remembered that the two most serious obstacles to the fish, the Marseilles and upper Wilmington dams, were reported as practically overcome. The fishways on these impassable dams are good. Those on smaller dams are not in quite such good shape, but are not so essential. The directors recommended that the work be resumed in the spring and watched to its conclusion. The report concludes as follows:

Considering that one of the most important aims of the organization was the securing of proper fishways along the stream, your directors feel that it is a matter of congratulation to say that, during the spring of 1892, the run of fish will, provided the water be of average height, be practically unimpeded. The effect of this on the fishing, at all points accessible from Chicago, will unquestionably be most highly beneficial.

This result has been obtained without a single law suit, and at the expenditure of less than $150. We do not believe that this record has been surpassed in the work of any similar society. It is high proof of the usefulness of this organization, and high encouragment for the future in its work. Especially pleasing is it to reflect that in one of its main purposes the association did not consent itself with talk. The success of the work in this item is mainly due to the experience and practical judgment of Mr. Cole.

Taken as a whole, the record of the Kankakee Association during the short period of its existence is of a sort to encourage and stimulate the hearts of all sportsmen. It is believed that no better record has ever been made. Yet the whole method of work has been simple and easy. This fact should also stimulate the members of this Association to greater efforts during the ensuing year. The Board of Directors and all members of committees should consider it not a trouble, but a duty and an honor, and an honorable duty, to serve in the capacities in which they are chosen. They should disprove the old idea, that sportsmen will talk, but not act, in protective matters. The grade of work for the past year has been good, but it might have been better. It is hoped that in this day of advancing sportsmanship the work for the ensuing year may be much better, more conscientious and more thorough.

In the hope that this may be the case, and that the Kankakee Association may add many years of usefulness to its short life of practical work, and that it may go far to show what the influence of the sportsman may be in the land, we beg to subscribe ourselves very respectfully, THE BOARD OF DIRECTORS.

The report was ordered accepted and the directors were thanked. The Secretary, Mr. Mussey, then made his brief financial report with the following showing:

Total Receipts.

Fifteen life memberships at $20	$300 00
Annual dues and donations	172 00
Total	$472 00

Total Disbursements.

Postage	$11 75	
Printing	40 97	
Warden's expenses	105 86	
Fishway Committee's expenses	29 87	
		$187 96
Balance on hand		$284 04

After this very pleasant statement the chair appointed the Committee on Nominations as follows: Messrs. R. B. Organ, R. S. Cox and Geo. J. Maillette, of Crown Point, Ind. These soon reported, recommending for the Board of Directors for the coming year the following gentlemen: Messrs. Abner Price, R. B. Organ, J. P. Card, W. P. Mussey, H. D. Nicholls, Geo. E. Cole, Henry Ehlers, W. M. Durham (of Momence), E. Colby, A. H. Harryman and E. Hough.

The meeting now adjourned. Thus far there had been shown a method which should be noticed and commended by all similar societies. There was nothing but plain, simple, practical, clean-cut action, without a bit of bluster, indecision or delay. Two prettier meetings than the above have never been seen in the history of sportsmanship. Thanks to the system, all the usual eloquence had been cut off. There was no one to dilate on the standard of true sportsmanship, to show the necessity of protective means, to bemoan the difficulty of such work or to triumphantly predict the ultimate success and laurel-crowning of that truly noble being, the True Sportsman. Accordingly, a great deal of time was saved, and something got done.

THE STATE LEAGUE.

On motion of Dr. Bartlett, of the Fish Commission, those present now resolved themselves into a committee of the whole and went into session for the purpose of discussing the advisability of forming a State league for protective purposes. Mr. Geo. Cole was chosen chairman of the meeting, E. Hough secretary.

It was learned that the following associations and clubs were represented: The Fox Lake Association, meaning, perhaps, a dozen different clubs; the Kankakee Association, meaning as many more clubs of the Kankakee country; the Illinois Valley Association, including the main clubs of the Illinois River; Crystal Lake Club, of the Mississippi River country; Forester Hunting and Fishing Club of Channel Lake; Vermilion County Fish and Game Association; Mak-saw-ba Club; Columbia Club of Fox Lake; Wausaukee Club of Wausaukee, Wis.; Fox Lake Fishing Club; Shaubaunee Club of Seneca; Audubon Gun Club and Grand Calumet Heights Gun Club of Chicago.

The following gentlemen were present: Dr. S. P. Bartlett of the State Commission; Capt. Chas. T. Bronson of Pullman; Dr. M. D. Green, Mr. H. L. Watlington and Mr. O. M. Harlan, all of La Salle; Mr. Geo. Kamper of Danville; Mr. N. S. Young of Burlington, Ia. (club

grounds in Illinois): Mr. Geo. I. Maillet of Crown Point, Ind.; Mr. W. G. Reeve of Peru; Messrs. John Wilkinson, R. B. Organ, Joel Kinney, R. S. Cox, J. C. Burket, O. F. Weidener, Jas. Gardiner, Charles Morris, Calvin Smith, W. P. Mussey, Dr. N. Rowe and Dr. Karl Sandberg, all of Chicago.

Dr. Bartlett stated briefly the object of the meeting, and the importance of the work it sought to accomplish. He detailed something of his own struggles in his practically helpless position. To succeed in the fish work of the State he needed help. This State organization would give help such as he had never had. With such a body behind him he could work with the belief in success.

Dr. Bartlett called for Capt. Bronson, warden at Pullman. The latter declined to speak. Dr. Bartlett did so for him, commending his work, notably the arrest of fifteen violators at one haul.

Mr. W. G. Reeve, president of the Illinois Valley Association, described the lawless state of affairs on the Illinois River below La Salle, and the need of a better and more practical working law. The proposed league would work to benefit in these matters.

Mr. Geo. Kamper, warden in Vermilion county, talked at length upon the natural advantages of the Vermilion River as a bass stream, of the lawless and destructive methods long practiced there, of the patient efforts of the few of the faithful and their good prospect of success in the work. He could see how the State league would be a benefit.

Mr. N. S. Young, of Burlington, Iowa, whose club, the Crystal Lake, has grounds in Illinois, spoke heartily in favor of the proposed movement. The Illinois commission had often stocked their waters for the club men. Protection was a necessity. The league would make it practical. He thought organization should be made at once.

Mr. H. L. Watlington, of La Salle, introduced the resolution to organize, moving that the chair appoint a committee of seven, as representatives of the fish clubs of the State, to take the necessary steps for organization into a State league. Seconded by Mr. R. S. Cox.

Dr. Bartlett spoke in favor of the resolution. He said that for one great thing, we needed better laws. An organization like this would be of great value in legislative work. It would show the assembly that there was something to this sportsmen's movement. It would promote intelligent and united action. The late agitation had done good. It was not mere talk to say that the people were waking up. They wanted better protection. He knew personally that many large clubs would take hold and help this organization financially and morally. Help would come in.

Mr. Watlington also spoke, telling first of the bad state of affairs lately the case on the central Illinois River. He had known 3,000lbs. of fish taken in one haul, and shoveled into wagons like corn. His association had taken out 24 nets, Warden Green active in this. They had secured 27 convictions since last spring, and only one defeat, the defendant appealing, but afterward pleading guilty and paying costs, admitting himself in the wrong. They had collected $603.85 in fines since spring of 1891. A great drawback was the contradictory and obscure condition of the fish statutes, particularly the notorious "corporate dam" clause, on which the illegal seiners rested. A great league of the clubs could frame a better and clearer law, one that would hold water, and could have so many men at Springfield that they could get the law passed. We needed better laws, laws granting more practical justice to all. Now was the time to act. We should organize. The league should not be a Chicago affair, and should not be so considered. Chicago should not be asked to do all the work. He bound his own association and the lower clubs of the State in advance. They would work.

Dr. Rowe concurred in all the above, but suggested that the president and secretary be retained, the meeting to adjourn on call of the president, and the committee of seven to report on a constitution and by-laws at the next meeting. He thought that game as well as fish protection ought to be embodied in the purposes of the organization.

It was suggested by the FOREST AND STREAM representative that Dr. Bartlett should be heard from upon the latter point, as it was his scanty appropriation, secured for fish protection only, from which it was proposed to draw much of the financial support of this undertaking.

Mr. N. S. Young agreed that game and fish protection ought to be blended and the statutes of Illinois changed to that effect, though he could not say that the State Association of his State, Iowa, had much of a record to show beyond one of trap-shooting. He thought the game bird ought to go hand in hand with the fish, however, and that it should be so nominated.

Dr. Rowe now moved formally to amend and, the proposed amendment being carried, the resolution for organization was adopted as follows: "That a committee of 7 be appointed by the chair to frame a constitution and by-laws providing for a permanent organization, and present the same at a meeting to be called by the chairman for the purpose of permanently organizing the association."

The chair appointed the following committee: Hon. Henry L. Hertz, of the Fox River Association; E. Hough, of the Kankakee Association; Mr. Geo. Kamper, of the Vermilion County Association; Mr. H. L. Watlington, of the Illinois Valley Association; Mr. N. S. Young, of Crystal Lake Club; Dr. S. P. Bartlett, of the State Fish Commission; Mr. Henry Davis, of Springfield.

Mr. Cole spoke very briefly in his capacity as chairman. In reality, the organization is one of his most cherished plans, and were it not for his recent ill health this would have been a very happy culmination of his wishes and hopes. He said little of that, however, but expressed himself to the effect that the next meeting should probably be called for Springfield and not Chicago. He thought it would be necessary to have a paid secretary to attend to the work of such an organization.

The meeting now adjourned, with the understanding that Mr. Hertz, chairman of the agent committee, is soon to call a meeting for action, and that upon the due expression of readiness upon the part of this committee, Chairman Cole is to call the convention for permanent organization. Thus will be verified another FOREST AND STREAM prediction, this paper being the first and only one to put in agitation the question of this State organization, just as it was the first to print the news of the Fox River Association, the first and only one to mention and further the organization of the successful Kankakee Association, and to print its news in full, the first and only one to get the news of the Illinois Valley Association and allied protective clubs, and the first and only one to propose and help carry through the winter fishing law.

There is little danger that the State League will commit the unfortunate error of trying to unite game and fish protection in this State. That error would cost the league its life. It is an error which has cropped out before, but which has always been properly treated. The fish law of the State is at least a fairly practical one. The game law is not. Moreover, the fish protectionists have done something. The game protectionists have done nothing by comparison, barring President Abner Price's work of last summer. The methods of the fish societies have been simple and direct. Those of the shooting clubs have been complex; moreover, they have failed. The State fish fund is not large enough to cover game protection, and it should not be asked to do so. The fish wardens if made game wardens would gain little and lose much in efficiency. By way of individual selfishness, it may be very likely that the unsuccessful game protection men would gladly lay aside their cases and nestle under the wing of the fish protective work, the only wing in Illinois which has got any feathers on it. Yet it would seem an easy exercise of common sense to see how in this case it is better to let well enough alone. The fish protective men found their own way, cut it out and are walking in it. It is an old idea that they ought to drag the game protective men along with them. This is an old idea. That is why it belongs to the past.

Jan. 15.—As announced would occur, the Chicago Fly-Casting Club met for organization last Monday evening, Jan. 11, at the Sherman House. Present, Messrs. A. H. Harryman, I. Kenyon, O. Von Lengerke, Chas. Antoine, J. M. Clark, G. W. Strehl, W. H. Babcock, G. A. Murell, H. F. Akin and E. Hough. Messrs. Babcock, Murell and Akin were added as charter members. It was formally moved to organize under the name of the Chicago Fly-Casting Club. Mr. Harryman was chosen president; Mr. Kenyon, secretary. Messrs. Clark, Antoine and Hough were appointed a committee on constitution and by-laws. Messrs. Strehl and Babcock a committee to see park commissioners for the purpose of gaining permission to practice in the parks. Each member was instructed to bring one friend with him to the next meeting, which will be on the first Wednesday in February, at a place to be designated by the secretary.

This is the first fly-fishers' organization ever made in Chicago. It was first suggested by FOREST AND STREAM. The little club promises well, and may amount to a great deal. The art of fly-casting has all too few followers in this city, and it is hoped that the new club will protect, keep together and work, and so go on to create a better interest in a pretty form of sport.

Mr. Louis Antoine, of New York, was present at the above meeting, and will be in town a few days with his brother, Mr. Chas. Antoine, of this city.

Mr. T. C. Pearce, deputy of the U. S. Fish Commission, was in the city Wednesday, Jan. 13, with the last car load of fish which will be distributed before next season. Dr. Bartlett intended sending Mr. Pearce up to Lake Villa with some fine bass for distribution in the lakes near there in the Fox Lake system. After this trip the car will probably go to the trout hatchery at Northville, Mich., to work at distributing trout. The U. S. work is now closed in Illinois for this season.

Jan. 16.—State warden F. L. Buck writes me as follows in regard to the manner in which the new Ice law is observed in the Fox Lake districts, once most notorious for winter fishing:

ELGIN, Jan. 15, 1892.—In company with Mr. S. J. Smith I made a trip around the lakes. We only found four places where holes had been cut for fishing, and those on Pistaqua Lake, but the men were warned off by Pitson, who lives right there. We drove all over the lakes, and if you would like to take the trip you spoke of there is no better time than now to make it, as you can get around so much better and get right on the lakes where you want to see what is going on. If you would like to have me go with you I can do so now better than later.

Last Wednesday one of the Dunnell boys killed a large timber wolf on Pistaqua Lake. When Mr. Smith and I drove across the lake we scared him up and he ran across the lake toward Cedar Island. When we got to the house we told Dunnell where he was and they went and killed him. After they shot him the first time he ran down Pistaqua Bay and crawled under the steps of Coroner Hertz's house, and they killed him there. If you should want to go bring your field glass and a rifle, one to see what is going on and the other to get any game we may come across.

F. L. BUCK.

The Ice law seems to have been a success from start to finish. E. HOUGH.

THE TILEFISH.

THE National Museum has issued an extract from its Report for 1888-89 relating to animals recently extinct or threatened with extermination, as represented in the collections of the U. S. National Museum. Mr. F. A. Lucas is the author of this very interesting illustrated paper; he treats of the West Indian seal, the California sea elephant, the walruses, the European bison, the Arctic sea cow, the mamo or Pacific sickle-bill, the California vulture, the dodo and the solitaire, the Labrador duck, the great auk, Pallas' cormorant, the Galapagos and Mascarene tortoises, and the tilefish. Nearly all of these animals are figured, the last in colors.

The tilefish was discovered in 1879 by the late Captain Wm. H. Kirby of Gloucester, Mass., while fishing for cod about 80 miles south by east of Noman's Land. Late in the same year the fish was described by Drs. Goode and Bean. The tilefish, on account of its large size, great beauty, abundance, edible qualities and activity in taking the hook, soon came to the notice of people in Boston, New York and other eastern cities. The newspapers wrote it up, FOREST AND STREAM illustrated it, epicures passed favorable judgment upon its flesh: it was supposed that a new and highly important fish had been permanently added to our store. The Fish Commission steamer Fish Hawk on one occasion took 73 tilefish, weighing 541lbs., and presenting masses of lemon yellow, brown, black, and white such as may be seldom equalled on a vessel's deck.

The tilefish is one of the most remarkable among fishes in having a large soft (or adipose) fin on the top of its head behind the eyes. Mr. Lucas tells the story of its sudden and total disappearance early in 1882 as detailed in the "History of the Tilefish" by Capt. J. W. Collins. Vessels arriving at Philadelphia, New York and Boston in the month of March and April reported having passed large numbers of dead fish covering a water area of many square miles. The Navarino sailed "for no less than 150 miles through waters dotted as far as the eye could reach with dying fishes;" and most of these victims were tilefish. The explanation of this wholesale destruction of life as furnished by Prof. Verrill, is connected with a sudden lowering of the temperature of the belt of water inhabited by the fish by encroachment upon it of the Arctic current on the one hand and the cold sea depths on the other. Since the fatality noted the tilefish has not once been taken in its former haunts, although systematic and diligent search was made for it; neither has the first appeared elsewhere as far as we know.

The information contained in the article of Mr. Lucas cannot fail to prove interesting to all lovers of nature.

THE SIX-INCH TROUT LAW.

Editor Forest and Stream:

I read carefully and with much interest the paper by Gen. W. Y. W. Ripley in the issue of Dec. 10, also your editorial calling attention to and inviting expressions of opinion upon it.

Gen. Ripley's expressed convictions strike me as forceful argument and merit the interest and attention of every lover of fishing.

I think he voices the sentiments of the many in advocating a shorter open season for all fish and game, and limiting the size of fish so that it may be insured one chance to reproduce its kind.

I heartily indorse the prescribed remedies. I think it would be an advantage to have a uniform open season on fish and game in the different States.

I live in the grand old Bay State snug to the New Hampshire line: in the vicinity are a number of brooks, none very large, yet which have supported large trout in bygone days, but now, alas! these streams are in a sadly depleted condition, occasionally a good one is hooked, but they are few and far between.

A few years ago an effort was made to stock up the brooks on the New Hampshire side, which resulted in the placing of a few thousand fry in their waters; no special protection was given them, however, and at the present time no trace of them can be found. Whether they have been destroyed by bag-fishers and pot-hunters, or followed the streams to ponds is a question.

It is evident that the pot-hunter is getting in his work in season and out, by rumors which have come to my hearing.

I would like to see uniform open seasons. I think it would be better in more respects than one; for instance, our open season for trout fishing begins April 1; in New Hampshire, May 1; it is an easy matter for Massachusetts anglers to unconsciously (?) overstep the boundary and fish protected water, but not protected trout—in this vicinity it is invariably the case. I believe legal restraint the only means of preservation, but it is not always applied unless by interested parties or paid wardens. I would like to see an effort made to stock our small streams, enforce protective laws and restore the oldtime pleasure of getting a basket of trout that would become a true sportsman and put to shame the nefarious persistence of the pot-hunter. I would loudly second such a movement and add materially to its support.

NED HARCOURT.

SALISBURY, Mass.

PULP MILLS VS. FISH.

AN Appleton, Wis., correspondent has informed us of the reported destruction of fish in the lower Fox River by acid refuse from pulp mills located at Appleton and Kaukauna. It is stated that vast numbers were destroyed last month in this way. Warden Fernandez was asked to prosecute the cases, but learned from Assistant Attorney-General Clancy that the State is powerless to prevent the pollution of the river by depositing acid in the lower Fox and the fish cannot be protected from such destruction. Our correspondent comments as follows on the above report: "If the substance of the statement is true, what need of enacting laws for the preservation of fish and game? Many men have in the past, as well as now, violated the law by seining fish in the lower Fox River; but if the State can not prevent wholesale destruction of fish by the 'acid process,' can it prevent their destruction by any other means? I am no lawyer and may not see these things in their proper light, but to a plain, every-day understanding it looks like rank discrimination in favor of the money power. If the State cannot enact laws that will apply to the owner of a paper mill, by what process of reasoning can the seining of fish be made illegal? Surely the latter process is the more beneficial, as the fish are used for food."

TROUT IN CLEARFIELD COUNTY, PA.—Houtzdale, Pa.—We have no ponds for the culture of trout, but we have seven miles of one of the finest streams in the State, situated five miles from Houtzdale, Pa., and known as Mountain Branch. We have a very nice club house and keep a man there during the season, to do the cooking and watch the stream. No fishing has been done there for the past two years to speak of. No member of the club is allowed to take fish home; all that are caught must be cooked and eaten at the house. We try every season to get a few cans of trout and stock all the streams about us. We put in 1200 California trout two years ago; some were caught last season measuring one foot in length. Two of our streams are very brushy and it is almost impossible for any one to get near them; we deposit all our fry in these, as we know they will not be disturbed. Near the club house are three very large springs with the water coming up through white sand and pebbles. In this very cold water we can keep our supplies any length of time without spoiling. A good many bear and deer are found in the vicinity; but no bear and only two deer were killed there this season; last season we killed three bear and six deer. During this season the hunting has been poor because the leaves were so thick and dry, causing too much noise for the chase. We do not intend to fish our streams next spring, and we believe in another year we will have worlds of trout.—G. W. D.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will ma free on application a descriptive circular of Mr. Grinnell's boo "Pawnee Hero Stories and Folk-tales," giving a table of conten and specimen Illustrations from the volume.—*Adv.*

THE VELVET TRAIN of the Monon Route between Chicago and Cincinnati offers the best and most luxurious service obtainable between those points.—*Adv.*

Fishculture.

A MONTANA FISH HATCHERY.

WE have previously referred to the explorations made for Commissioner McDonald last summer in the Yellowstone National Park and vicinity by Prof. B. W. Evermann. We learn that the report upon this investigation, which is a very interesting document, will soon be transmitted to Congress. The Commissioner, in a recent letter to Senator Power, expressed his preference for a site near the National Park, and mentioned several very available sites for a hatchery, among them Deer Lodge, on the Cottonwood; Child's Ranch, near Helena; Missoula, on the Rattlesnake; Bottler's Springs, between Bozeman and Cinnabar, and Davies Spring, four miles from Bozeman. Horsethief Springs would furnish an ideal site if it were accessible by rail. Bottler's Springs and Davies Spring are available localities.

POLITICS AND FISH HATCHING.—"Personally my relations with Mr. Blackford have been friendly. He was a member of the State Commission seven years while I was Governor. He was a hold over and evinced a desire to retain the office, which is an honorary one. One or two years after I became Governor charges were made against him. I believe it was charged that he used his position as Commissioner for the purpose of benefiting his business as a fish dealer. Other charges were made, which I investigated. While there was perhaps some truth in a few of them, still I did not think enough had been disclosed to warrant his removal. He wanted to hang on to the office. My only reason for removing Mr. Blackford was because of his support of Mr. Fassett as a candidate for Governor against Mr. Flower. I did not consider the other charges made against him. I reiterate that my sole reason for removing him was because he was conspicuous in his support of Mr. Fassett, the Republican candidate for Governor. I do not believe that mugwumpery of his kind should be encouraged".—*Ex-Gov. David B. Hill to Brooklyn Eagle Correspondent, Jan. 4.*

NEW YORK FISH COMMISSION.—Messrs. Huntington, Joline and Hackney met at Albany Jan. 12 and reorganized the Commission by electing Mr. Huntington as president and Mr. Hackney as oyster commissioner in the place of Mr. Eugene Blackford. The supervision of hatcheries at Little Clear Pond and the Fulton Lakes was assigned to Mr. Hackney.

THE FISH COMMISSION SCHOONER GRAMPUS will be repaired and refitted at Essex, Mass., by Arthur D. Story. The changes will include new sails and parts of the rigging, new water tanks and general repairs to the hull. The vessel is already swift, but after the contemplated changes it is expected that her speed will be increased by at least a half knot.

RE THE NAME PSOVOÏ VS. BARZOÏ.

Editor Forest and Stream:

You will excuse my necessarily not immediate answer, given the distance between Merv and New York, to T. Colin's letter in your issue of Nov. 12.

It is very kind of him to strike from the very beginning the "authority" keynote, as it is the only means of making people believe in the soundness of his assertions, for his "long residence in Russia" has not done much toward improving his knowledge of Russian etymology in general, and Russian doggy language in particular. I will humbly risk a few lines to the presentation of facts as they are, and stubborn things they are. I had to make just the same remark on "E. G.'s" most misleading contributions *re* the Russian coursing hound in the *Shooting Times*, and you will remember that he based his information on his residence in some part of Russia and referred to some queer-sounding titled official of German make-up as the authority on the subject.

T. Colin asserts that the "name barzoï is not applied to any coursing dog." It will not harm him to learn that the word "borzyï," "barzóï," is an adjective, and its literal meaning is fleet, swift; in ancient legends and songs it is equally applied both to horses and dogs; there is even an adverb "bárzo" (out of use in modern Russian), meaning swiftly. There exists a substantive "bózzofrissetz," quick writer, originating from the days when the printing press was not yet invented and when quick writers were held in high esteem; in modern Russian this word is used in a derisive sense. Nowadays, as I have stated already, the adjective "barzoï" is used to design any coursing hound of any breed. It is exactly the same case as with the Persian word "tazyi," fleet, swift, which in modern Persian parlance, though used as an adjective applied to horses, more generally designs, in the sense of a substantive, the oriental coursing hound. So much for the etymology of the term "barzoï." I presume it is sufficiently clear from the above that this term has had a general sense and that at present it is a generic adjective; I presume, too, that the above demonstrates conclusively that T. Colin had no sound foundation whatever to style this term an "old and established name" for the Russian coursing breed. The term "barzovatyï"—greyhoundlike—is not seldom used to design a greyhound-like build of body—as a defect—in pointers, setters, trailing hounds and—sometimes (seldom)—horses.

T. Colin asserts again that the term "Psovoi" is too vague, as it may apply to any dog. No, T. Colin, it is not. It is a term officially adopted by the leading Imperial Russian society for the protection of sports to design the breed recently introduced in America. If T. Colin has not forgotten Russian let him read in the November issue for 1891 of *Pirioda and Okhota*, the leading Russian periodical for sport, the official account of the autumn coursing meeting at Moscow, and he will see that the coursing breeds entered for competition are designated therein as "Psovoi" and "English" (the greyhound); let him read in the January issue for 1891 of *Journal Okhoty*, a periodical, edited by the authority of the Grimes lot, Mr. A. Korsh, a protocol of the meeting of coursing men in Moscow, signed by this very same A. Korsh, secretary of this meeting, wherein the breed to which belong Krilutt, Zlooeem, Pagooba and other dogs imported in America, is designated as "Psovoi." Possibly this may make him change his opinion as to the "vagueness" of the term aforesaid. I hope the readers of FOREST AND STREAM will see from the above that when I proposed to change the erroneously adopted term "Barzoi" for the right one, "Psovoi," it was only in a desire to establish unity of terminology for this breed throughout the kennel world. A pointer is called a pointer in America, England and Russia; a setter is a setter anywhere: so it is but right that a "Psovoi" dog, a breed essentially Russian, should be a "Psovoi" in America too, and there is no reason why this name should be changed for any other one, or still worse the perfectly vague term "barzoi" adopted instead, though this latter term might suit the ends of the "sharp business" people whom I have already once alluded to.

T. Colin says again, that "the 'barzois' themselves are distinguished as 'goostopsovoi,' or thick-coated, and 'chistopsovoi,' or smooth coated, so it is evident that the shorter word, 'Psovoi,' alone cannot be used to designate them." Well, that is an inference that sounds seemingly logical, but is drawn freely from T. Colin's own brain, and that, I am afraid, hardly gives a reliable source of sound information on the subject.

In Russian parlance. "T. Colin has heard the bell, but where it is he cannot tell." "Barzois," as a generic name for coursing dogs, are distinguished not only as "Goostopsovoi" and "Chistopsovoi" (by the way, both these terms are obsolete, the "Goostopsovoi" being practically extinct, and the "Chistopsovoi, not a breed in itself, but a cross between the "Goostopsovoi" and any smooth-coated breed, never having been a particular favorite with our coursing men and almost extinct at present), but as well as "Khort" (greyhound), "Crimean," "Gorski" (Caucasian), "Kurdine," Tazyï" (the Asiatic coursing dog), etc. Now, the "Goostopsovoi" breed being practically extinct (whatever Mr. Kareïeff and others may assert to the contrary), the coursing men of the Imperial society resolved to adopt for the Russian coursing breed, as it exists, the name of "Psovoi," and got up a standard of points accordingly. This was decreed some ten or twelve years ago, and that is the reason why in every Russian periodical the Russian coursing breed is termed "Psovoi," as I have demonstrated in the beginning of the present letter. If any of your readers want to know the etymological reasons of this terminology, I am at their disposition; but to launch again in a discussion of this kind as I have done *re* the term "barzois," would be really rather too hard on people. So you see that T. Colin's reasoning on "shorts" and "longs" of the "Psovoi" question is one solely and purely drawn from his own brain, and I suppose you Americans mean business, and what you want is real reliable information to the point, and not the kind of goods dished up by T. Colin and consorts. Speaking of information, I think the person who has signed "Kathleen Newcastle" a letter in the *Stock-Keeper* of Oct. 30, 1891, has about the soundest ideas on the breed that have yet appeared in English and American sporting periodicals.

LIEUT. G. TARNOOSKI.

18 9/12 91, FORT MERV, Transcaspian Province, Russia.
XII.

Editor Forest and Stream:

In your issue of Dec. 30, under the title of "Psovoi," appears a mass of falsehoods, taken from some letters written by some unknown "authority" in Russia, that in justice to all parties I am compelled to correct.

Now, I presume the author is the same self-constituted authority who proposed changing the name of the Borzoi (pronounced Barzoi, the first o having the sound of a, as in father) to Psovoi, which is against the common and well-established usage, and betrays his great ignorance of his native language.

Borzoi, as a general adjective, means fleet or speedy, and in Russia is specially applied to this one breed of dogs, thus describing them. Now, pioss (spelled pess) means dogs, generally speaking, and its adjective is psovoi—that is in connection with a noun, something relating to a dog. In this way, for an example: Gustopsovoy, which means a thick or rough-coated dog. All this has been stated before often enough and is pretty well known, and why, therefore, does this vagary come up again of calling a breed of dogs Psovoi, which word only means doggy or currish? Such a name does not specialize any breed, besides being extremely ridiculous, and certainly has none of the descriptiveness of the rightful and acknowledged name Borzoi. This same person, without any knowledge of what he is writing about, claims that the dogs Mr. Hacke recently imported were not purchased from the Grand Duke George Michaelovitch, of St. Petersburg, Russia, and that they did not comprise his hunting kennel of Borzois.

I am surprised, Mr. Editor, that you would publish such an imputation as is implied in his letter upon the reputation and character of persons with whom you are not even acquainted, without first verifying the truthfulness of them. It surely is not in keeping with the high character for fairness and veracity that your paper has always justly been accredited with.

If you had seen the official documents sworn to before Mr. H. G. Mackie, the British Pro-Consul, and Mr. J. M. Crawford, U. S Consul-General, which I have in my possession, you would not have published this imputation. I shall not enter into the details of the purchase nor the reasons of the Grand Duke selling his kennels at this time, but shall send you such a mass of affidavits for publication that will settle the matter beyond any controversy.

As to the writer of the letter "being in touch with the Russian kennel" world and having never heard of Mr. A. J. Rousseau, is absurd. Mr. Rousseau, besides being the general manager of Spratts Patent, Russia, a company that is chartered for $2,000,000, and who supply the whole Russian army with biscuits and crackers besides making dog biscuits, has been judging dogs at the Russian dog shows for years, even to the last show in St. Petersburg, during 1891, where he judged twelve classes. Yet that well-informed, truthful man, in "touch with the Russian kennel" world, never heard of him. J. B. GRIMES.

PUG BITCH FRISK.—Philadelphia, Pa.—*Editor Forest and Stream:* In your show report of the Gloversville show you have my pug Frisk as having won first prize in puppy class, whereas she won first in open bitch class. As she is 5 years old I could not easily pass her off as a puppy, and again there was no puppy class provided in the premium list. Will you kindly make this correction in your next issue to avoid giving me trouble in the future.—JACOB BROMBACH, Proprietor Diamond Kennels.

Pointers are in Demand.

Mr. Sam. Berry, of 132 Bridge street, Brooklyn, ran a 4-line advertisement of Pointers, in the "Forest and Stream," three times, and got 75 answers. The advertisement went in two other times with wrong address (our fault), and presumably another 75 answers went astray. Mr. Berry did not sell 75 Pointers, but he sold all he had. The market is evidently good; and the surest way to reach it is through our advertising columns. Have you Pointers to sell?

NOTES AND NOTIONS.

A SINGULAR illustration of the diseased state of mind that grows up in connection with canine matters is shown in the recent letter of Mr. Tracy on the "Antonio—Maid of Kent" matter, in Mr. Tracy's solemn production as part of his case, of the statement that the handler of one dog knew where birds were located, and but for his inability to handle his dog, he would have directed his dog to this spot. Now when the only use of field dogs is to show the hunter where the game is, the reversal of the respective functions of the two is most amusing, and a continuation of this train of reasoning would result in a race of field dogs whose merit would be the comprehension of the handler's instructions as to location of birds.

* * *

Mr. L. P. C. Astley is quoted in the Christmas number of the *Fanciers' Journal* to the effect that "character" is impossible of definition in its application to dogs. Sometime since I came across the following definition, which seems to me, very clear and comprehensive: "Character is the possession of the marked features of a breed to a high degree and in harmonious proportions"—which might be improved by the qualification, "or if there is a departure from any marked characteristic of the breed, this departure must not affect the general harmony of the animal's proportions." Examples to which this definition applies well, may be found in the greyhound Memnon, the collie Roslyn Dolly, the fox-terrier Richmond Olive and the mastiff Caution's Own Daughter, either looks thoroughly "the * * * all over," the qualification I append to original definition covering the lack of size in the mastiff named.

* * *

In a Western paper appears an article charging that certain judges were in bad form in judging dogs they had either bred or sold, and to this, an editorial comment is appended, saying, among other things, that the judge who would decline to judge dogs on such grounds would be writing himself down a moral coward! This astonishing declaration strikingly illustrates the deformity of mind many dog men exhibit. I by no means say that a judge is censurable for judging dogs he has had an interest in; in these days of rapid and frequent dog ownership, such a principle would seriously cut down our list of judges; but when our jurisprudence has established it, that a judge of our courts ought not to sit as judge on a case that he is or has been interested in, even if only as previous counsel, the statement that our law judges constitute themselves moral cowards every day is both astounding and silly, "not the less astounding for being silly, nor the less silly for being astounding" (vide "Major Brandrum"). I presume that the weight of the London *Field* as an authority of "sportsmanship" will not be denied anywhere, and while I think it sets the mark a little too high as regards the propriety of judges passing on dogs that they have had interests in, still the moral soundness of its views cannot be disputed, whether the staff of that paper be "moral cowards" or not.

* * *

The suggestion by "The Onlooker" that plain facts would form an appropriate finis to the pyrotechnics of the Lord Clover matter, has certainly received due attention. May the writer congratulate the parties to this encounter for having done, at the last, what I trust they will pardon my saying would have best been done at first? for I take it for granted that no one now has any doubts as to which side of the dispute was in the right. THE ONLOOKER.

PHILADELPHIA KENNEL CLUB MEETING.

Editor Forest and Stream:

The annual meeting of the Philadelphia Kennel Club was held Jan. 6, and the following officers were elected for the ensuing year: President, Francis S. Brown; Vice-President, Col. B. Ridgway; Secretary, Francis G. Taylor; Treasurer, S. Murray Mitchell.

After the election of the board of trustees and the officers named, the question was brought before the club whether or not a bench show should be held. In view of the financial loss sustained by the members from previous shows it was deemed inadvisable to hold one this year.

The difficulty encountered was not in the obtaining of a sufficient number of entries to insure the success of the show, but rather from the lack of opportunity of those interested to devote the time necessary to its management. There did not seem to be a sufficient number of people interested in the show to warrant the holding of one.

The subject of field trials was next taken up. It was proposed that the Philadelphia Kennel Club throw open its trials to the world, it being the desire of the members of the club that its field trials be a credit to its organization and compare favorably with the other trials in the estimation of the sportsmen of this country.

The proposal awoke the liveliest interest even in the non-sporting or bench-show members, and it was unanimously decided to throw the field trials open to the world, making such special inducements to the members as to secure their presence at the trials, and thereby retain that good fellowship which has always made their meetings so attractive in the past.

It was decided that two open stakes should be given, viz., an All-Age and a Derby, with generous purses and such inducements as will induce the owners and handlers to enter their dogs in the field trials of the Philadelphia Kennel Club, and the assurance of a jolly good time such as is not to be had at any other trials held in this country. There have been received the most encouraging expressions of approval and support from many of the most influential owners and handlers in the country; and the financial support guaranteed by the members of the club is amply sufficient to insure the success of the undertaking.

We make our start with lots of friends and, we trust, no enemies, and to the owners and handlers who are not acquainted with the club, we make an earnest appeal likewise for support, assuring them that the trials, in quality, will be second to none, with the certainty of a jolly good time in addition.

The money value of the purses and more specific information and details will be announced later on.

FRANCIS G. TAYLOR, Secretary.

IRISH SETTER CLUB MEETING.—Philadelphia, Pa.—*Editor Forest and Stream:* The Irish Setter Club will hold its annual meeting in New York on Wednesday, Feb. 24, at 3 o'clock P. M., on the second day of the Westminster Kennel Club's show, in the show building. Election of officers, appointment of committees, and other matters of interest will require attention. The treasurer also begs to announce that the following additional contributions to the field trial fund were received after his last statement: $25 from Dr. Rowe and $25 from the Seminole Kennels.—G. G. DAVIS, Sec'y and Treas.

BULL TERRIER WHITE WONDER AGAIN.—Boston, Mass.—*Editor Forest and Stream:* Some time ago a man in Canada wrote to your paper and had published in the same an article stating that he had bought the bull-terrier White Wonder (A.K.C.S.B. 17,028) from me, etc. I wish to say the article is false, as White Wonder is still in my possession and has never been out of it since I imported him from England two years ago. It looks to me very much like an advertising scheme, and if so, it is a small way for a man to advertise.—H. H. HARRIS.

KENNEL FOR A SINGLE DOG.

Editor Forest and Stream:

What shall I do with my pointer dog? He was a year old on Christmas Day, was a present to me in August last, and is of gilt-edge breeding. When I got him I immediately ordered from FOREST AND STREAM "Training vs. Breaking," by Hammond, and worked him all fall according to that code. I am very proud of my success, or else have gotten an exceptionally smart dog. I have not missed an opportunity to take him out in company with all the well bred and well broken setters and pointers that came in my way and money would not exchange him for all the dogs I've seen (thanks to Hammond); but now that the season is over I am all at sea as to what to do with him and best to care for him during the winter. Hammond says to have a dog house and yard broken and always keep your dog in his yard, only when out for exercise, but there he stops, does not say how large the yard should be nor how best to inclose same, nor does he say how the house should be built, nor what size for a single dog. Our winter weather is winter and no fooling either, anywhere from ten to eighteen below zero for the major part of December, January and February, while our summers are just as much on the other extreme, being for weeks at a time, during June, July and August, ninety and more in the shade. I put in the most of last Sunday (after meetin') looking over back numbers of FOREST AND STREAM, but failed to find any cuts of a dog house or any hints in regard to same. I found some for kennels that would house a dozen dogs, but they do not fill the bill, so you see I am still on the fence. I do not want him in the house nor in the barn, as he would spoil the hay for horses' use, nor do I want him to run at large, and think it cruel to keep a dog tied. Now if you or any of your many correspondents can and will give me any pointers on the above they will be very thankfully received. WM. H. ATLEE

FORT MADISON, Ia.

DOG DOSING.

Editor Forest and Stream:

I do not propose to set up as a rival of "Ashmont," but there is one piece of dog doctoring that is overlooked, and in many cases might work great things. Did you ever see a dog "gone all wrong"? Feed him, groom him, exercise him and doctor him your best, and go wrong and wronger he will in spite of you. Nothing seems to agree with him, and you might as well undertake to put flesh on a telegraph pole. Of course the average dogman says, "His blood is all wrong"—there must be something to blame the condition on, and the poor blood is made to suffer for everything. Now, I was "all wrong" myself once, and the old-fashioned country doctor in whose hands I happened to be said that I needed a general stirring up. He had some pet name for it, I do not remember what; but anyhow, that was the nub of it—I needed a general overhauling to get a fresh start, and he said calomel was the thing for that. Now, I don't like dosing, particularly with such strong stuff as calomel, but as I had consulted the doctor, I reasoned that it would be insulting him not to do as he bid me; so I got my dose. Well, it certainly did kick up a revolution, but the result was that I started on the up grade and have never been that way since.

Now, about a year since, my good friend, Mr. Bunn, of Peoria, Ill., was worried about his recently-imported mastiff Ormonde, who was "all wrong," would not thrive, and a less sensible man than Mr. Bunn would have concluded "his blood was all wrong" and wanted some fixing up. I suggested to Mr. Bunn to consult with his physician whether calomel would not be useful, and the doctor decided that it certainly would not hurt the dog and was worth trying; so Ormonde got his dose, and the ultimate result was his present vigorous, healthy condition, not fatness, but hardness, just what a stud dog should show.

Now if some lunatic goes off half cock at this suggestion of mine, puts a lot of calomel into his dog, and the dog dies, all I can say is that it is a pity that the owner didn't take the dose himself, it might have helped his gall; but I do say, that if your dog is "out of sorts" you ask your family physician about it, and whether it seems a case where calomel might do good, and follow his advice. W. WADE.

HULTON, Pa., Dec. 18.

POINTS AND FLUSHES.

[From a Staff Correspondent.]

CHICAGO, Ill., Jan. 16.—There is not much kennel news about Chicago or vicinity this week. The Mascoutah Kennel Club's forthcoming bench show is most promising, the entries at this time being far in excess of those last year at the same length of time prior to the closing of the entries. Valuable cash special prizes are being added where encouragement is needed. This week the club offers a kennel prize of $15 for best four bull-terriers and best four dachshunde respectively, and $15 for the best brace of English setters under 12 months.

The bench show features of the World's Fair have nothing new, and probably will not have much that will be of interest during several months in the future; it being too early yet for other than preparatory arrangements to be considered.

From several letters received, I find that there is a great deal of interest in field trial rules, and that there is a desire to have them more fully elaborated and improved. My opinion is that the rules now in force and which are nearly uniformly alike, as adopted by all the prominent clubs in this country, are about as near perfect as they will be for a number of years to come.

Great improvements have been made in the rules in the last two years. A great advance was made when the scale of points was abolished. There never was a more plausible fallacy, nor one which survived longer in field trial competitions, than the theory of a score card, based on a scale of points, and its accuracy and value in practice. It required a number of years in actual practice and a great deal of writing to demonstrate the simple fact that it was an impossibility to present such complex qualities as the degree of excellence of a dog's nose, his speed, style, range, obedience, disposition, pointing, backing, etc., in a column of figures.

After the score card was abolished in practice, the fallacy of a scale of points was still retained. The scale of points was quite as absurd as the score card, since it is an impossibility to represent the values or relative values of a dog's qualities in figure.

The tendency, up to within a year ago, was to multiply rules. The great trouble has been that there were and are too many rules. The present rules could be cut down about one-half without injury and with positive benefit.

But this is digressing from what I started to write, namely about some fallacies which still exist and are quoted as field trial axioms. In a copy of the National American Kennel Club's Rules of 1879, a copy of which I have, and which for crudeness and obscurity of ideas, bad construction and ignorance of the true principles of a competition, are a lasting monument to the compilers, who were the authorities of that day, I find the following sentence under the somewhat irrelevant heading of Pointing:

"The dogs are to be hunted in all respects as in an ordinary day's shooting."

As new associations came into existence and adopted rules, they never failed to adopt that rule as one of the fundamental qualities of a field trial competition. Writers deeply learned in theory and exhaustive in argument, always had that phrase as a measurement of the correctness of any part of a competition. It was demonstrated in field trial work that "an ordinary day's shooting" was difficult to follow and was often ignored, but such was considered a departure from the true theory.

It is only a few days ago that I saw this same grave reference to "an ordinary day's shooting" in respect to the true lines of conducting a field trial. An ordinary day's shooting in the sense in which it is applied, or a day's shooting in any other sense, is no condition or part of a condition under which to run a properly conducted field trial.

In a day's shooting the hunter goes forth to kill birds, the efforts of the dog being a secondary consideration, and are of no value except as a means to attain an object, namely, to furnish the hunter with opportunities to shoot at birds.

In the field trials the qualities of the dogs are of first importance in the competition. The aim is, or should be, to display the natural capabilities of the dogs to the highest advantage. The purpose is not to go out for a day's shooting nor to handle a dog as in a day's shooting. With the purpose of showing the dog's native capabilities in the freest possible manner, which is entirely outside of the purpose of an ordinary day's shooting, there is a new element introduced, that is, a competition. Two handlers and two dogs, all striving to attain a certain end, are unknown elements in an ordinary day's shooting, and ones which can not be reconciled to it. With the purposes of field trial competition so distinct from the purposes of an ordinary day's shooting, and the manner of conducting a competition so wholly unlike that of actual shooting, it is strange that this fallacy has such a wide hold and such profound believers.

It should be entirely eliminated from field trial consideration. This, entirely aside from the considerations that there is nothing in common in the details of the actual competitions mentioned hereafter, is one of the natural laws which governs all competitions. For instance, in horse races, the horses have the lightest of riders and the best of carefully prepared courses for them to show their natural capabilities; or there are the lightest of harnesses and wagons or sulkies, so that the horse's movements are unhampered either by weight or harness. Yet it would be no more absurd to require that the horse race should be conducted as in an ordinary day's driving, than it is to apply a similar restriction to the dog race. Nor does this imply the entire absence of training as some seem to think. On the contrary it requires the most expert and finished training if done in a proper manner. The training is indispensable if the dog's qualities are exhibited in their highest form.

It is true that there is room to improve field trial rules, but, in my opinion, not so much by adding new rules as by eliminating some old rules and fallacies. All the improvements were not met by any difficulties in the way of being accepted and adopted, but there has always been a disinclination to cast out any feature, however fallacious, if it has the sanction of long usage. B. WATERS.

CHOREA IN DOGS.

BY DR. W. MOLE, M.R.C.V.S.

THIS is no doubt the most troublesome disease that the dog is affected with, and like the same disease in children, does not readily yield itself to treatment; indeed many cases take on a chronic character and seem to persist in spite of all treatment.

It is a general affection of the nervous system, and is found mostly to supervene an attack of distemper, although many cases have come under my notice after a severe attack of catarrh or common cold. It may be general or local, and if allowed to progress without treatment generally terminates in the general form, when death takes place. One limb may be affected, one side or both, fore and both hind; sometimes the muscles of the lower jaw and throat. When the neck and throat are affected the muscular movements are extremely violent and incessant; the head is jerked up and down or from side to side, as though he would shake his head off. There is little or no sleep, and if the patient does sleep it affords no permanet relief, various parts of the body become bruised and abraided, sores forming which are difficult to heal.

In one particluar case the symptoms could scarcely be distinguished from true mania, the dog would bite and tear all woodwork within reach, and seem to delight in throwing himself about to my horror until death put an end to his sufferings. Just prior to his death he became quiet and died apparently in a comatose state. In some cases one foreleg or one hindleg is alone affected, in others both fore and both hind may suffer, while again the lower jaw and muscles of the ear are attacked.

The chief constitutional symptoms are generally those of extreme debility and lack of nutrition. The duration of an attack of chorea is uncertain, but from 10 to 12 weeks seems to be the average period and there are many cases that make no attempt at improvement until four months elapse. I have often noticed that improvement seems to be very rapid when first undergoing treatment and every change of weather seems to affect the animal. This has led me to believe that the disease is of a rheumatic type.

ANATOMICAL AND PATHOLOGICAL CHARACTER.

It has been a matter of dispute among veterinary surgeons who have given any attention to the subject whether chorea has its seat in the brain or spinal cord, and the result of numerous investigation seems to favor that the spinal cord is the seat of the disease, and for the following reasons I am of that opinion:

1. That persistent spasm is characteristic of spinal irritation.

2. Some degree of control of the movements is still maintained by an effort of will or voluntary motion.

3. The increased movements as the result of excitement or fear.

4. Their cessation during sleep or enforced quietude.

The most important thing to consider next to the question of its seat is that of its close connection with rheumatism. We have no means of estimating the amount of pain that is present, and can only look to the general results of rheumatism and so be enabled to trace a very close connection between the two diseases.

Irish setters are notoriously delicate, nervous organizations and I have been able to establish clearly the result of cold winds and wet, damp atmospheric conditions, to an increased exhibition of the symptoms, for whenever the dog experienced the least change of weather from a dry state to a damp one the spasms were more acute and persistent. As soon as the weather cleared he recovered his good spirits and progressed toward recovery. From a record of a great number of cases I cannot doubt but that rheumatism and chorea stand in some close affinity to each other and that under favorable circumstances most cases recover if sufficient time is allowed, even without the employment of drugs, and for this reason it may be described as a functional disease due to nervous derangement.

Treatment: From what has been said above, should my ideas and observations be correct, treatment must essentially be directed toward supporting the system and determining the flow of blood toward the brain and spinal cord.

In acute cases brought before the surgeon a smart and energetic blister on the head and poll will very often cut short and cure the disease at once and will as often fail. A seton through the poll will prove beneficial if it is not kept in too long to deplete the animal. A pill containing five grains of assafœtida thrice a day may be given with benefit in these stages. Iron salts and cod liver oil may be given as a nutrient tonic. Arsenic and iron will prove in most cases beneficial.

Chorea is chiefly and emphatically the result of neglect in the treatment of distemper, and very few cases have come under my notice that have not arisen from a very slight attack of distemper when the dog recovered, as their owners always say, of itself. Therefore, good nursing and the best of attention to this specific complaint must always be the first factor in prevention. For my part, I believe that both the duration and severity of the disease may be controlled by the judicious administration of drugs, with due attention to the diet and warm housing of the animal. In connection with food I can specially recommend Spratts Patent cod liver oil biscuits as being the best food for the prevention of this complaint.

In bringing these remarks to a close, there is one matter to which I wish to particularly draw the attention of the owners of valuable dogs. Do not delay a single moment in commencing the treatment to build up the system, by a due administration of nervine tonics, after distemper, and the best combination that I have had good results from is by the administration of quinine and iron combined with some laxative. There is always a great difficulty in giving the proper dose to varying sizes of animals, such as the dog kind, and some little judgment must be exercised. As a general rule, that may be safely followed within certain limits, a 5gr. pill to a 10lb. dog; 10gr. pill to a dog up to 80lbs., is perhaps as good a guide as can be given without inspection of the animal. Age, breed, condition, etc., ought always to be considered, as bulldogs and St. Bernards are large dogs but of very poor constitution under disease.

DOG CHAT.

THE Binghamton premium list arrived late, and we find that in lieu of regular prizes the pooling system is adopted. The entry fee is $1.50 and all fees will be pooled and fifty per cent. thereof be divided by number of first prizes and awarded for first prize. Second prize shall be one-half of first prize and third prize vhc. In view of the fact that the show is held under A. K. C. rules we draw the attention of that club to the fact that there is no classification of dogs stated in the schedule, which is altogether too happy-go-lucky a style for a show held under these rules.

Mr. Chapman, of the Glenrose Kennels, now that he is relieved from the anxiety and troubles connected with the position of secretary to the N. B. C., will have more time to devote to his beagle kennel, and has just issued some neat stud cards and a price list for 1892, containing what seem to be veritable bargains for any one who wants one of those merry little hounds. By the way we, and all the beagle men with whom we have come in contact, are exceedingly pleased that this gentleman has just been elected President of the National Beagle Club. As the club's first secretary he has devoted both time and money to its advancement and it is not saying too much when we remark that had it not been for Mr. Chapman the club would not have held the high position among specialty clubs it does at the present day. A word of praise must also be given to Mr. Brooking the retiring president, who has also done so much for the club

So many dogs have lately been poisoned around Boston that Mr. Geo. T. Angell, who is so active as President of the Massachusetts S.P.C.A. in redressing the wrongs and abuses to which animals are subject, has now offered twenty-five dollars reward for evidence that will enable the society to convict any person in Boston and its vicinity of violating the laws of Massachusetts by poisoning dogs.

Mr. Booth, manager for Col. Ruppert's Duchess Kennels, called upon us the other day with the news that the Colonel has just purchased Lady Gladwin from Mr. Booth's brother, of Hull, England. This bitch is a litter sister of Kingston Regent, who has done considerable winning lately, and Marquis of Ripon, and is said to be a capital specimen. Judging from her photograph she looks as if she would do well in this country; has lots of bone, size and a very taking head, and stands 32in. high. Col. Ruppert is evidently giving proper attention to the most important part of a kennel in thus securing a number of high class bitches.

"I am not versed in dog lore," says a writer in the London *Spectator*, "and it may be that my love for the animal makes me an ill judge of the importance of the following story; but a friend vouches for its truth, and to my mind it has its importance, not from its display of jealousy, but from the dog's deliberate acceptance of the undoubtedly changed condition, and the clearly metaphysical character of his motive. The story is this: A young man had owned for some years a dog who was his constant companion. Recently the young man married, and moved with his bride and his dog into a house on the opposite side of the street from his father's house, his own former home. The dog was not happy, for the time and attentions that had formerly been his were now given to the young wife. In many ways he showed his unhappiness and displeasure, in spite of the fact that the master tried to reconcile him and the bride to win him. One day when the master came home his wife sat on his knee while Jack was lying by the fire. He rose from his place, came over to the couple, and expressed his disapproval. 'Why, Jack,' said the master, 'this is all right, she's a good girl,' and as he spoke he patted her arm. Jack looked up at him, turned around and left the room. In a moment they heard a noise, and going into the hall they found Jack dragging his bed down stairs. When he reached the front door he whined to be let out, and when the door was opened he dragged his bed down the steps across the street to his old home, where he scratched for admittance. Since then he has never been back to his master, refusing all overtures."

The supplement to the English *Stock-Keeper* giving an account of the Queen's kennels at Windsor is an enterprising achievement in journalism. When we say that Mr. Krehl himself tells the story and the noted animal photographer, Gambier Bolton, "touches the button" the result is easily imagined. That the dogs are superbly housed goes without saying, and lucky is the dog that basks in the royal favor. Among the dogs we notice that one of the pugs is sired by Penrice, that smart little pug belonging to Howard Bros., of Columbus, O.

In describing the kennels, Mr. Krehl says: "Over the entrance to the kennels, carved in the stone, is the date 1841. The pretty cottage stands close to the road, and behind it extends the range of kennels, wherein are housed some five-and-fifty dogs. Every part of the building is so bright and fresh that a visitor would be inclined to think it was newly erected. Along the front of the principal kennels is a tiled portico, and this covered pathway is called the 'Queen's verandah," for Her Majesty pleases to walk here very frequently to inspect her kennels, inquiring minutely into everything affecting the health and comfort of the inmates, and giving each animal a caressing pat and kindly word of recognition. This range is divided off into spacious fore-yards and roomy sleeping quarters, the former measuring 10ft. by 12ft., and the latter 10ft. by 10ft. A wall 3ft. high runs along the front of the kennels, the wall being surmounted by a railing. Entrance doors are also boarded up to the same height, consequently the small dogs cannot look out; the collies of course can do so by standing on their hind legs. The yards are paved with red and blue tiles, and are supplied with self-filling water troughs. The sleeping compartments are ventilated by two large, barred windows, and in warm weather the massive iron doors are left wide open; when they are closed the dogs can run in and out through a

small opening in the right-hand-side corner of the wall. In the bed chambers, which are paved with white bricks, there are sleeping benches covered with straw, and hot-water pipes run through the length of the building. From some of the kennels the occupants have an outlet into yards on the other side, so that they can lie in one or the other, according to the heat and position of the sun; across the verandah and facing the kennels are two large grass plots called courts, where dogs are turned out for a scamper. Mr. Brown (the kennel manager) told us that one is known as the 'Collie Court' and the other the 'Umbrella Court,' which rather strange title explains itself to any one who has seen the place. In the middle is a large bath, which is probably fed by a spring; the sides and bottom are stone-lined, and it slopes down from the level of the earth, so that the dogs can walk into it and swim through. At the far end where the animals emerge is a large umbrella-shaped wooden fixture, under which the dogs can recline in the cool shade. The spacious court in front of the 'Apron Piece' is an open grass plot, railed in on all sides. The 'Apron Piece' is a rustic erection forming a covered seat where Her Majesty, having driven down in her pony chaise and inspected the kennels, will often rest while all her favorites are let loose in the court, and can romp about before her, but are prevented from jumping up at their royal mistress by the railing which protects the seat." The writer also adds: "We remarked the absence of sawdust in all the kennels, and Hill told us that he never uses it. This fact speaks worlds for the amount of labor and constant attention bestowed on these kennels, which were as clean and sweet as the deck of a man-of-war. The swilling down is done with a disinfectant added to the water." Among the dogs in the kennels are Pomeranians, collies, fox-terriers, dachshunde and pugs, and many of them have been bred by English breeders whose names are familiar to us all. The word "swilling" is a term used in England, signifying "flushing" or "washing out."

Among the additional specials and items of interest connected with the W. K. C. show, Mr. Mortimer tells us that the Old English Mastiff Club offers a second challenge cup for the best mastiff opposite in sex to that winning the forty guinea cup, same conditions to govern. The German Mastiff or Great Dane Club offers its challenge trophy for the best German mastiff or Great Dane owned by a member of the club, to be judged by the club standard. Mr. John E. Thayer, Lancaster, Mass., offers $100 cash for the best fox-terrier born in 1891, sired by either of his stud dogs, namely, Pitcher, Raby Mixer, Russley Joker, Suffolk Risk, Reckoner and Hillside Regent. Mr. A. W. Smith, Buffalo, N Y., offers $5 for the best black and tan terrier bred in America. Class 62 in premium list, which reads for the best English setter that has been placed in a public field trial in America, also includes Canada. All express companies will return dogs free from show on which their regular rates have been prepaid one way. Arrangements are being made with the Trunk Line Association and all other railways by which a reasonable number of dogs may be carried free of charge when accompanied by owners or caretakers.

New England clubs that pertain to sport must round everything off with a dinner. The Kennel Club gives quite a pretentious dinner the first day of the show, the National Beagle Club has had its "banquet" and the New England Field Trial Club is no exception, for on Jan. 20, when they hold their annual meeting, they intend to celebrate it with a dinner at the Hotel Thorndike, Boston. The club has a surplus in the treasury, but they are not going to "eat" it; this must be put to more legitimate uses in preparation for the trials next fall: purchase of quail, leasing grounds and providing for its due protection. To this end the tickets for the feast were put on sale and cost $1 25.

Though we do not believe all that is claimed for the "Boston terrier" by its admirers, one cannot help admiring the persistent push of the fanciers of this sort of dog in bringing it into a more extended notice. Liberal prizes are given at the Chicago show for them and Mr. Newman will journey out to the Windy City expressly to judge them, and if any one can be expected to pick out the right ones in such a mixed class, he is the man.

The *Fanciers' Gazette*, in its American Notes, Dec. 25, manages to get about as many mistakes together as is possible in the half-column resumé of recent American happenings, principally about the Gallup case. Among other things we are told that each club showing under A. K. C. rules must "give a legal bond to the American Kennel Club guaranteeing due payment of all prizes, etc., within a specified time."

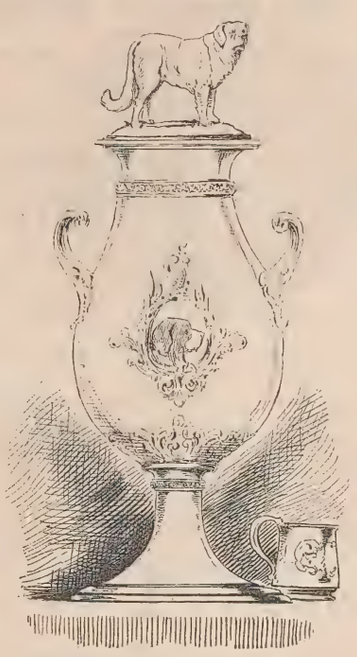
It is not unlikely that the "Irish Ambassador" will be seen in this country 'ere another moon has waned. Of course he will have some terriers in his kit.

Our esteemed Philadelphia contemporary says: "The New York *Herald* has been furnished with exclusive information regarding the premium list of the Westminster Kennel Club's forthcoming show. We suppose one of the clerks gave out this news without Mr. Mortimer's knowledge." It should not have required any great powers of perception to have made a better guess than that.

What has become of the projected New Jersey Kennel Club show? Surely some marplot has not been hunting up the old blue laws of Jersey and found that dog shows on Sunday must not be held.

It does not look as if the Irish setter will want for active admirers, though there is no breed that has experienced so much "shifting" as this has during the past year. Now, a new deal has been consummated and it looks as if Dr. Jarvis had pocketed his $1,000 after all. This is the price that Mr. F. C. Fowler offered him for Duke Elcho and Edna H. during the late trials. The doctor did not feel tempted just then but has since reconsidered, and now these dogs, already known both in the field and on the bench, will, under B. F. Lewis's skillful handling, travel through the circuit this spring, and with the dogs purchased from Mr. Washington this team will no doubt pick up some of the plums.

Dr. Cryer makes a very good suggestion in another journal about the judging ring for toy dogs. There is little doubt but that the soiled condition of the ring by the time these classes are usually judged interferes considerably with the showing of a dainty pug or toy. Either have a small bare floor inclosure reserved for these dogs to be judged in or have the sawdust swept to the corners in the regular rings.



There is little doubt but that the Philadelphia Kennel Club by throwing their stakes open to all comers will gain for themselves the suffrage of the field trial men. The field trial element in the club are thorough going sportsmen, and under proper conditions they are apt to throw a glamor of good fellowship round their trials that is absent from any other trials. Next fall they will have better grounds and of course cater to the "professionals" in an acceptable manner.

Business.

MELROSE, Mass., Jan. 16.—*Editor Forest and Stream:* Please kill all of my ads. and send bill. I am suffering from a deluge of letters and can't find time to answer them all. My mail will average 25 letters per day and has for several weeks, so I think you will agree with me that it is time to call a halt until I catch up. I see the FOREST AND STREAM is still advancing, and think it twice the paper it was two years ago.—F. W. CHAPMAN.

Many exhibitors will be sorry to hear that their projected bench show has fallen to the ground. The reasons for this are given in Mr. Taylor's letter in another column. We regret the circumstance more from the fact that there are many exhibitors who would like to see some shows given outside of the A. K. C. The men who wish to rush their dogs into the challenge class are not in the majority, and a few wins that did not count, but won at shows given by clubs of standing like the P. K. C. would be just as acceptable, and they could have counted upon a good entry. Some exhibitors are apt to think rather hardly of a club that does not fall in line and give a show willy-nilly, but they seem to forget that there are certain hard, cold facts to be met in the shape of bills that are as a rule liquidated by a few members who, however they may wish to see kennel interests advanced, object after a while to putting their hands in their pockets to pay for somebody else's fun, when these "somebodies" hardly give them a second thought after they have secured their prize money. We must remember that the clubs who give shows do as much if not more for breeding interests than owners of dogs, and too little thought is given to the men who risk their dollars and devote valuable time to organizing and giving a dog show.

We publish this week a picture of the Westminster Challenge Cup, which we have already casually alluded to in these columns as having been subscribed for by Mr. W. C. Reick, Col. Jacob Ruppert, Jr., and the Westminster Kennel Club. It is to be competed for by dogs sired and bred in America on or after March, 1890. It will be competed for annually at the New York show and will remain the property of the Westminster Kennel Club until won by the same owner three times, when it will become the property of the latter. This is a wise restriction, and outside of its intrinsic value as a trophy, it should be an incentive to St. Bernard breeders to persevere in the efforts to breed noteworthy dogs and will exclude those who by a large bank account are enabled to import the best from the other side and so scoop in valuable prizes simply aided by the weight of the dollars. The cup is Truscan-shaped, with renaissance ornamentation. It weighs nearly two hundred ounces of sterling silver and stands nearly three feet high. The figure of the dog on the top is Scottish Prince, and the figures on the sides are models of Princess Florence and Prince Regent. Its total cost is $500 and was made and designed by Bartens & Rice, of John street, New York, and is certainly about the handsomest trophy that has yet been competed for in any breed.

THE WESTMINSTER CHALLENGE CUP.

Mr. James Black has just met with a reverse that all breeders, at one time or another, must expect to experience. His greyhound Prince Albert was choked to death last Wednesday. It seems he, in his eagerness to gobble up as much or more of his share of food as the others, he bolted a "grizzled" bone which lodged in his throat, and though his owner heard him coughing in his kennel he paid little attention, but finally thinking something was the matter went to him and found the dog in his last struggles. Prince Albert was one of the best bred greyhounds in the country. He was by McPherson out of Brighton Lady, running back to Bab at the Bowster, Contango, Cardinal York, etc. He has left, however, several good puppies behind him, two of which, out of his bitch Grace Briant, Mr. Black expects to catch the judge's eye with at the W. K. C. show. Prince Albert was half brother to Hershel and the Greater Scot, who divided the Waterloo Cup in 1887.

Another celebrated greyhound, and from the way she ran at the Eastern Coursing Club's second meeting, one of the cleverest greyhounds in the country, Mr. Belmont's Minnie Staton, has joined the majority. This bitch's death is quite a loss to the coursing fraternity, as those who saw her run at Hicksville, L. I., and Great Bend, Kas., were impressed with the fact at once that she was a good one. She was by Pinkerton out of Lady Madeleine and was imported December, 1889.

In reviewing the past year *Stock-Keeper* (Eng.) takes occasion to remark upon the standing of the different breeds, their progress or reverse during 1891. From this we learn that mastiffs and Newfoundlands are at a standstill, and but for the support of two breeders of mastiffs the outlook for that breed would be black indeed. Beagle quality is well maintained, although not so many are shown as in former years. In great Danes the importation of the noted dog Hannibal is the only noteworthy event. Greyhounds are not considered in this connection, as they are not much of a factor in English shows. The "Psovois" remain in *statu quo*, having got into a few hands, and until more equally distributed cannot hope to become as popular as they deserve to be. Deerhound classes, we are told, were better filled than they have been for many years. Regarding collies—"it may fairly be said of them that as their numbers extend so does the enthusiasm with which their friends regard their increase." Dachshunde and Bassets hold their ground. In sporting dogs—pointers and setters—though there has been no improvement, there has been no falling off in quality, and the old exhibitors and breeders still win most of the prizes. Dalmatians are holding their ground splendidly. There has been no perceptible change in the direction of the bulldogs, the classes have been well filled upon the whole. Some old favorites may, however, be expected to take a back seat during the forthcoming twelve months, for such young dogs as Guido and Outsider are bound to do better in the future than in the past; and the advent of one or two puppies of great excellence is already heralded. In bull-terriers, the *début* of the year has been that of Messrs. Lea's Greenhill Empress (this bitch may find a home in America shortly), whose appearance was warmly welcomed by the fancy, she being a decided return to the old-fashioned type.

Remarks on fox-terriers show that nothing has been produced capable of beating the 1890 champions during the past year. The general improvement of the breed is, however, strongly marked. In Irish terriers no good crack has come out, and the breeders are mainly troubled as to the position and carriage of the ear, which is now being discussed in print. Scottish terriers, Bedlingtons and Airedales are said to be neither better nor worse, but Dandie Dinmonts do not seem to increase in popularity. Skyes, however, showed an improvement in quality at many of the shows in 1891. Black and tan terriers are by no means in a forward state, and Morning Star is still *facile princeps* in the English terrier ranks. Welsh terriers are steadily coming to the front. Toy dogs are to be congratulated upon the result of the season's efforts, and the recent purchase of a pug for $550 has given a fillip to this once popular breed. Black pugs, thanks to Miss Mortival, are becoming familiar objects at English shows. With the exception of ruby spaniels, the beautiful Kohinoor being considered worthy of being mentioned as a probable toy spaniel of the century, the other classes of toy spaniels have not improved. Italian greyhounds are still well represented. Though Mrs. Foster is still the monopolizer of most of the Yorkshire terrier classes, she has brought out nothing to beat her old champions. Mr. Alfred George's smooth toy Perfection is well named, and has been welcomed by the fanciers of this difficult breed. In conclusion, not unlike our American experiences, the year has been marked by periods of disaster and disappointment, but still breeders have good material to work upon, and the outlook will perhaps be brighter when 1892 has stepped down and out.

Mr. J. P. Willey has recently purchased the black and white cocker spaniel Othello from Mr. C. A. McHaffie, Cornwall, Ont., for $100 and a champion Obo II. pup.

There seems to be a run on white dogs just now; first we hear of a white Scottish terrier and now Mr. H. Parker Thomas, of Belleville, Ont., has an all-white cocker spaniel of good formation.

From the *Canadian Kennel Gazette*, which generally has some news-nibs though it is a monthly publication, we learn that Mr. C. H. Smith, of St. Stephen, N. B., is importing two good Skye terriers. One is a bitch sired by champion Old Burgundy and the other is said to be one of the best in England; no names are given, however. They will be bred to a good dog, probably Port, before coming over.

We do not think enough notice has been taken of the recent rule of the A. K. C., that no puppies under six months old shall be shown henceforth at shows under their jurisdiction. This is a great step forward and we suppose as much as we can expect for some time. That hateful sight, a bitch suckling a litter of puppies, and a cage full of gamboling two-months-old St. Bernards or fox-terriers plastering the sides of the kennel and themselves with the accumulation of a day's filth, will now, we are glad to say, be but unpleasant memories of the past, and the general health of our show dogs will benefit thereby. Small breeders who depend on large shows to sell their young pups at their most fascinating age will suffer no doubt, but in legislating, the greatest good to the greatest number must be the first and only thought. We as well as others have fought against this puppy showing evil for several years and the drip, drip on the stone of common sense has at last had effect.

The English Setter Club held a meeting at Mr. Fiske's office, 102 Chambers street, New York city, Jan. 12. Among other things decided it was resolved that in future competition for club specials shall be confined to the members. The club is getting out a superb medal. The die alone will cost $500 and one side will be finished so that it can be exhibited at New York, and the other side will be shown by a photograph. It is expected to have the medals ready by March. Gold medals will be given by the club at the World's Fair show.

The Advisory Committee of the A. K. C. met on Monday last in the rooms of the club and a good deal of important business was transacted at the meeting. Though we cannot learn all that transpired, as it must be published simultaneously in the kennel papers, we understand, not from Mr. Vredenburgh, that Mr. John Hawkes' disqualification has been removed and that the Rockford show will probably resign from the A. K. C. The cloud over the pug Cashier has cleared away and he will be seen at Chicago, and so will Mr. Hawkes' two collies. We also learn that Dr. C. M. Nelles has been disqualified for some dog transaction that occurred some time since.

Owing to the crowded state of our columns a number of queries under "Kennel Answers" have been answered by mail.

Mr. Hacke, of Pittsburgh, Pa., in order to demonstrate the superiority of the "Borzois" over all other dogs as wolf killers, is willing to match his kennel of this breed against any other kennel of dogs, breed not restricted, in a wolf coursing contest on the open prairie on found wolves, dogs to be slipped as judges may order. The contest shall be for a cup, value $100, and a stake, each contestant to deposit $100 for expense of cup and the judges. Three judges to decide the contest on speed, courage and killing. The challenge is open for thirty days from Jan. 15.

The spaniel club specials at the N. Y. show will in value amount to about $700, and many of them are given by individual members of the club. The Murray Hill Hotel gives $20 for the best brace of field spaniels. The annual meeting of the club will be held during the W. K. C. show, and will be followed by a dinner at the Murray Hill Hotel.

Those who know the standing among field trial men, both owners and handlers, that Mr. Bernard Waters has, will

Business.

PHILADELPHIA, Pa.—*Editor Forest and Stream:* I am going to ship two Chesapeake Bay dogs to San Francisco on Monday through your valuable paper. I consider your paper the best of all advertising mediums.—J. HOPE.

Business.

OFFICE OF E. B. GOLDSMITH, Custom House and Forwarding Agent, 58 Wall street, New York, Jan. 6.—*Editor Forest and Stream:* I think the enterprise which you display in enlarging your paper to 32 pages will meet with a deserved reward in greatly enlarging your circulation. The FOREST AND STREAM is the only journal that ever brought me any business, although I have advertised in several other journals of like character.

E. B. GOLDSMITH.

appreciate the enterprise which the FOREST AND STREAM displays in securing his services to represent this paper, more particularly in that branch of sport. Mr. Waters's reports of field work are always read with interest by sportsmen, because they know that his long acquaintance with field trials has given him perhaps a greater insight into the intricacies of field trial work than any other man in the country, and what is more to the point, he has the courage of his convictions and does not hesitate to state them when necessary. Mr. Waters will represent the FOREST AND STREAM at the coming Southern field trials.

The Gordon Setter Club of America at its last meeting appropriated $40 in cash for the coming Westminster Kennel Club dog show at Madison Square Garden in this city; $5 to the dog and bitch winning first, second, third and fourth in open classes. This, with the $225 cash prizes offered by the Westminster Kennel Club, makes $295 in cash, beside the *Herald* bronze medal for the best Gordon setter in the show, to be competed for by any Gordon setter. Besides, there is the American Field silver vase for the best Gordon setter, value $100, to be won three times (not necessarily in succession) by a member of the Gordon Setter Club, dog to have been the property of the winner for six months prior to closing of entries. Other specials are promised. The annual meeting of the Gordon Setter Club will be held at the Madison Square Garden on Thursday evening, Feb. 25, 1892, at 7:30 o'clock (third night of the show), for the election of officers and members, and the transaction of such other business as may come up. Members are requested to send their annual dues to the secretary, L. A. Van Zandt, Yonkers, N. Y.

Among the new kennel advertisements we notice that Geo. W. Glazier has bloodhound pups for sale; J. Gordon, mastiff pups; Mount Royal Kennels, English setters; Chas. H. Carr, fox-terrier bitch; B. S. Dering, deerhound bitch Nora; F. E. Atkins, pointer dog pup; J. W. Wood, two English setter dogs; L. A. Parkhurst, five pointers; J. Hope, several breeds. At stud, Elcho Kennels offers the Irish setter Blue Rock, and J. H. and J. A Hunter the pointer Black Wonder. We also draw attention to the notice of the Westminster Kennel Club's show, the "Dog Fanciers' Directory and Medical Guide," and B. Waters' book on "Dog Training and Kennel Management."

SALE OF DUKE ELCHO AND EDNA H.—Claremont, N. H.—*Editor Forest and Stream:* I have sold to Mr. F. L. Fowler the Irish setters Duke Elcho and Edna H., and expect that he will be successful with them on the bench and in the field. The former is by Elcho, Jr.—Maid, and full brother to Elcho Maid, winner of third in Irish Setter Derby. He competed in the All-Age Stakes and received favorable mention for his work. Edna H. is by Elcho, Jr.—Romaine, and won third in All-Age Stakes, Irish Setter Trials. She is also a show winner, having won first in open classes at Chicago and Cleveland, 1891.—WM. JARVIS. [Mr. Fowler has also purchased from Mr. W. L. Washington the Irish setters Ileen, Rose Boroimhe and Kildare Doris.]

BINGHAMTON DOG SHOW.—Binghamton, N. Y., Jan. 19.—This show opened to-day in bad weather. There are only about seventy-five dogs benched and nothing ready. No superintendent. Mr. T. J. Farley appointed. Mr. Kreuder and all the boys are helping, and all is going right now. Judging will start in the morning.—J. OTIS FELLOWS.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Prince Arthur. By Mrs. Pauline W. Link, New York, for black and white greyhound dog, whelped May 3, 1891, by Prince Albert (Macpherson—Brighton Lady) out of Cheerful Girl.

Charming May. By Mrs. Madge Baron, Brooklyn, N. Y., for blue greyhound bitch, whelped May 28, 1891, by Prince Albert (Macpherson—Brighton Lady) out of Grace Briant (Aberbriant—Grace Ridley).

National Beagle Kennels. By W. A. Small, Waltham, Mass., for his kennels of beagles.

BRED.

☞ **Prepared Blanks sent free on application.**

Modjeska—Philos IX. H. W. Huntington's (Brooklyn, N. Y.) Russian wolfhound bitch Modjeska (Krilutt—Elsie) to A. W. Purbeck's Philos IX (Ivan—Czarmia), Dec. 29.

Grouse—Dick Swiveller. Thos. Igoe's Irish setter bitch Grouse to W. L. Washington's champion Dick Swiveller, Dec. 18.

Fanny—Dick Swiveller. F. G. Heinz's Irish setter bitch Fanny to W. L. Washington's champion Dick Swiveller, Dec. 16.

Ileene—Dick Swiveller. F. C. Fowler's (Moodus, Conn.) Irish setter bitch Ileene (Ponto—Drenagh) to W. L. Washington's champion Dick Swiveller, Dec. 8.

Hazel Tearaway—Dick Swiveller. A. Krebs's Irish setter bitch Hazel Tearaway to W. L. Washington's champion Dick Swivelier, Dec. 19.

Snowball—Norwegian. D. N. Heizer's greyhound bitch Snowball to American Coursing Kennels' Norwegian (Jester—Bit of Fashion), Dec. 21.

Black Bess—Lord McPherson. A. C. Jordan's greyhound bitch Black Bess to American Coursing Kennels' Lord McPherson (Trales—Dick's Darling), Dec. 12.

Dolly Dollar—Prince Albert. Jas. Black's (Sheepshead Bay, N. Y.) greyhound bitch Dolly Dollar (Pinkerton—Mrs. Goldfield) to his Prince Albert (Macpherson—Brighton Lady), Jan. 4.

Gwynnie—Soudan. R. H. Alberts, Jr.'s (Hoboken, N. J.) English setter bitch Gwynnie (Belthus—Wonna Gladstone) to L. L. Ingram's Soudan (Druid—Ruby), Dec. 3.

Rural Neva—Belthus. R. H. Alberts, Jr.'s (Hoboken, N. J.) English setter bitch Rural Neva (Pride of Dixie—Fairy Belle) to his Belthus (champion Rock—Cockerton's Meg), Dec. 18.

Juno—Spot Dash. McHenry Robinson's (Dorchester, Mass.) pointer bitch Juno (Tempest—Naso's Belle) to Fleet View & Reading Kennels' Spot Dash.

Ossining's Flash—Spot Dash. A. L. Brackett's (Brookline, Mass.) pointer birch O-sining's Flash (Ossining—Graphic's Lady) to Fleet View & Reading Kennels' Spot Dash.

Bess—Spot Dash. G. W. Lovell's (Middleboro, Mass.) pointer bitch Bess (champion Beaufort—Portland Lily) to Fleet View & Reading Kennels' Spot Dash.

Beauty—Spot Dash. O. G. Stoddard's (Lynn, Mass.) pointer bitch Beauty (Bonnie—Bess) to Fleet View & Reading Kennels' Spot Dash.

Nadjy of Naso—Spot Dash. G. H. Holtham's (Bangor, Me.) pointer bitch Nadjy of Naso (Nick of Naso—Temptation) to Fleet View & Reading Kennels' Spot Dash.

Beezy—Spot Dash. Fleet View & Reading Kennels' (Reading, Mass.) pointer bitch Beezy (Graphic—Say) to their Spot Dash.

Say—Spot Dash. Fleet View & Reading Kennels' (Reading, Mass.) pointer bitch Say (imported Bang—Belle Rita) to their Spot Dash.

——*Leslie.* W. B. McCloud's pointer bitch —— to G. H. Bargen's Leslie (Spot Dash—Belle Randolph), Jan. 4.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Clara. American Coursing Kennels' (Great Bend, Kan.) greyhound bitch Clara (Greentick—Enone), Dec. 25, six (three dogs), by their Norwegian (Jester—Bit of Fashion).

Queen Lucifer. F. B. Farnsworth's (Washington, D. C.) English setter bitch Queen Lucifer, Jan. 1, nine (five dogs), by his Count Roy; two since dead.

Hunter's Nellie Bly. J. H. Hunter's (Washington, D. C.) English setter bitch Hunter's Nellie Bly (Ben Hill—Daisy Hunter), Jan. 12, eight (four dogs), by F. R. Hitchcock's Roi d'Or (Roderigo—Bo Beep).

SALES.

☞ **Prepared Blanks sent free on application.**

Rod. Liver and white pointer dog, whelped July 23, 1891, by Lord Graphic out of Winning Ways, by Matern Pointer and Setter Kennels, Sandusky, O., to L. B. Morgan, Clinton, La.

Iecompte. Liver and white pointer dog, whelped July 23, 1891, by Lord Graphic out of Winning Ways, by Matern Pointer and Setter Kennels, Sandusky, O., to R. A. Gayle, Clinton, La.

Rose Boroimhe. Red Irish setter bitch, whelped June 20, 1889, by Brian Boroimhe, Jr. out of Biddy, by W. L. Washington, Pittsburgh, Pa., to F. C. Fowler, Moodus, Conn., and a litter of puppies by champion Elcho, Jr. out of Rose Boroimhe to same party.

Kildare Doris. Red Irish setter bitch, whelped June 1890, by champion Elcho, Jr. out of champion Ruby Glenmore, by W. L. Washington, Pittsburgh, Pa., to F. C. Fowler, Moodus, Conn.

Ileene. Red Irish setter bitch, whelped July 15, 1889, by champion Ponto out of champion Drenagh, by W. L. Washington, Pittsburgh, Pa., to F. C. Fowler, Moodus, Conn.

Blue. Blue greyhound dog, whelped May 2, 1891, by Ring out of Jessamine, by American Coursing Kennels, Great Bend, Kan., to C. E. Coffman, Sullivan, Ind.

Toney. Brindle and white greyhound bitch, whelped March 20, 1891, by Roy out of Clara, by American Coursing Kennels, Great Bend, Kan., to C. E. Coffman, Sullivan, Ind.

Lights o' London. White and black greyhound dog, whelped May 7, 1890, by Trales out of Dick's Darling, by American Coursing Kennels, Great Bend, Kan., to F. B. Cogue, Huron, S. D.

Little Thought Of. Brindle greyhound bitch, whelped Sept. 24, 1888, by Trales out of Dick's Darling, by American Coursing Kennels, Great Bend, Kan., to G. H. McDougall, Butte City, Mont.

Lightfoot. White and black greyhound dog, whelped May 7, 1890, by Trales out of Dick's Darling, by American Coursing Kennels, Great Bend, Kan., to J. R. Smith, Mitchell, S. D.

Lord Graphic—Winning Ways whelps. Liver and white pointers, whelped July 23, 1891, by Matern Pointer and Setter Kennels, Sandusky, O., a bitch to B. F. Rice, Newton Falls, O.; a dog each to Dr. J. S. Tinaberry, Bloomsburg, N. J.; Dr. Wm. A. Campbell, Ann Arbor, Mich.; Chas. Teall, Ottumwa, Ia., and a lemon and white bitch to Dr. Harry Parker, Cleveland, O.

"Vogel is Getting Old."

LOUIS VOGEL, of the Zettler and Miller Rifle clubs, has not lost his holding power, although he says his years are bearing very heavily upon him, and his eyesight is "not as good as it used to

once was!" Below will be found a full-size fac-simile of a target shot by "The Bird" on the Miller range, Hoboken, on Dec. 30, 1891. The score foots up a total of 247 out of a possible 250 points, for 10 shots. There are eight 25s, one 24 and one 23.

Albany Against Troy.

ALBANY, N. Y., Jan. 14.—The return match between the Albany and Troy rifle teams was shot this afternoon. One interesting feature was the shooting of Mr. Gemmell, of Troy, he making a score of 84 on the American standard target, which we consider a fine score in a team match; otherwise the Troy boys were not in it. Following are the scores:

Albany Team.

Col Wm Fitch	5	3	8	6	8	7	6	6	6	7—62
Maj Chas Gaus	4	8	10	5	9	6	5	5	5	9—66
B C Andrews	4	5	4	6	7	5	10	7	9	5—62
Wm T Mayer	8	8	8	9	9	8	4	7	7	6—74
Wm C Gomph	8	7	8	7	8	9	10	8	6	5—76
J B Taylor	7	4	9	7	6	9	10	9	8	9—78
George Zutner	8	9	8	7	6	9	8	6	6	4—71—489

Troy Team.

Gemmell	5	8	9	10	9	9	10	9	9	6—84
Wolf	7	6	5	7	9	8	7	7	8	9—75
Dedrick	8	6	5	3	2	8	7	8	5	6—61
Fischer	9	5	9	5	8	5	7	6	5	5—64
Turner	3	5	4	4	7	7	7	5	9	9—57
Dexter	8	9	6	8	5	5	4	5	6	8—54
Betts	10	8	8	4	5	10	6	10	7	3—71—464

Turtle Bay Scores.

NEW YORK Jan. 13.—The following are the scores made in the weekly prize-shoot handicap of the Turtle Bay Rifle Club to date, best three scores to count, 25-ring target:

Geo E Jantzer	246	246	247—729
Otto G Fuchs	241	243	244—728
C H Plate	256	236	242—714
H W Tamm	232	237	242—711
A Frank	231	224	238—703
H Lingelbach	224	230	232—686

W Lubeck 224 227 227—678
C Nulandherm 207 214 219—630
W Glaccum 224 231—455
R J Draddy 221 228—449
F Fredericks 219 226—445
H W Steffan 227—227

H. W. FREDERICKS, Sec'y.

The regular weekly shoot of Turtle Bay Rifle Club, held at their quarters, 146 E. 42d street, New York:

G Jentzer	243	243	239
O G Fuchs	240	236	234
H Steffan	226	231	240
H Tamm	230	227	231

C H Plate 236 227 227
C Heuesler 229 211 217
W Lubeck 223 222 210
T Fitzpatrick 179 202 192

Garden City Rifle Team.

THE Garden City Rifle Team met for their weekly contest Tuesday evening, Jan. 12, at George McCune's shooting gallery, 146 South Halsted street, Chicago. Conditions were 25yds., 25 shots each, open sights, free off-hand position, Massachusetts paper targets, possible 300 points. Scores as follows:

W J Gibbs	265	C A Hankle	260
W J Myers	265	Jos Horn	258
H S Busby	265	T Ford	255

R Taylor 252
H A Parker 250

In shoot off of tie Gibbs won by three points with Myers second.

N. Y. Pistol Club.

THE following scores were made by the members of the New York Revolver and Pistol Club at their last weekly shoot, held at their ranges, 12 St. Marks place, on the 16th inst, six shots on Standard American target, distance 20yds. S. & W. revolvers:

A Stein, 44cal	54	F Hecking, 38cal	53
B Walther, 44cal	52	G L Hoffman, 38cal	52
H Oehl, 44cal	51	G E Jantzer, 38 cal	52
W Koch, 44cal	50		

The club has shooting each Saturday evening at its rooms.

New Jersey Rifle Shooting.

[Specially Reported for Forest and Stream.]

EXCELSIOR RIFLE CLUB.—Jersey City, Tuesday, Jan. 12.—Capt. L. P. Hansen. The following scores were made in the medal competition, 10 shots off-hand, 25-ring target, possible 250:

W Weber	25	25	25	25	25	24	23	23	23	—243
W Channing	25	25	25	25	24	24	24	23	23	22—240
F Kittridge	25	25	25	24	24	24	24	23	23	22—239
L P Hansen	25	25	25	24	24	24	23	23	23	22 238
W J Hennessy	25	25	24	24	24	24	24	23	23	21—236
Wm Robidoux	25	25	25	24	24	23	23	23	21	21—234
C L Penney	25	25	25	24	24	23	23	22	21	21—233
C Bauchle	25	25	25	24	24	23	23	22	22	21—233
J Hughes	25	25	24	24	24	23	23	23	22	22—232
Thos Hughes	25	25	25	24	23	23	22	22	21	20—230
C Boag	25	25	24	24	24	23	22	22	22	10—230

The winners in their respective classes were: First, William Weber, 243; second, C. Bauchle, 233; third, Colin Boag, 230. The scores made above give the club an average of a trifle over 235 for the eleven men. If they keep up this shooting streak it ought to bring them well up in the tournament.

MILLER RIFLE CLUB, Hoboken.—Capt. Richard W. Dewey. Wednesday evening, Jan. 13. The following scores were made in the shoot for weekly class medals. Ten shots, off-hand, 25-ring target, possible 250:

First Class.

D Miller	25	25	25	24	24	24	23	23	23	22—238
L Sohl	25	25	24	24	23	23	23	23	22	22—234
G Schlicht	25	25	25	24	24	24	23	22	22	22—236
A Meyns	25	25	25	24	24	23	22	22	22	21—235
H D Hencken	25	25	24	24	24	23	22	22	21	21—231
F Liell	25	25	25	25	24	23	22	22	22	22—235
Capt Dewey	25	25	24	24	23	23	22	21	20	20—227

First Class medal was won by Dave Miller with a score of 238.

Second Class.

J Carragher	25	25	25	24	24	22	20	20	20	20—225
J H Kruse	25	25	24	24	24	24	23	23	21	20—233
R Zoch	25	25	24	24	23	23	22	20	20	17—223
F Landolt	25	24	23	22	22	22	21	21	21	18 18—215

Second Class medal was won by J. H. Kruse with a score of 233.

Third Class.

H Seltenreich	25	25	24	24	23	22	22	20	20	14—219
A Stadler	25	24	23	23	22	22	21	20	20	18—218
H F Meyer	25	24	23	23	20	20	20	18	16	14 - 203
F Dunsteadt	25	24	23	22	20	19	19	18	18	14—202
F Kammel	24	23	22	22	21	21	20	18	16	13—202

Third Class medal was won by H. Seltenreich with a score of 216.

The Greenville Rifle Club elected these officers for 1892: Pres., H. W. Gotthardt; Capt., W. H. Robidoux; Sec'y, W. C. Collins; Treas., C. Scheelein; Sergt.-at-Arms, J. J. Hill. Treasurer Scheelein reported the club to be in a sound financial condition. A merry social session followed, during which speeches were made by President Gotthardt and Captain Robidoux.

PALISADE RIFLE CLUB, Capt. John Reinhardt, Jersey City Heights, Thursday, Jan. 14, 10 shots off-hand, American 25-ring target, possible 250:

A Malz	25	25	25	24	24	23	22	21	21	20—230
G W Graf	25	25	24	24	23	23	22	21	21	21—229
Capt Reinhardt	25	25	25	24	23	22	21	21	21	21—228
G L Graf	25	25	24	24	23	22	22	22	19	19—225
G A Finger	25	25	24	23	23	22	22	21	20	20—225
J Kehrwald	25	24	24	23	23	23	22	21	20	20—225
Chas Buck	25	24	23	22	22	21	20	20	19	19—215
A Rossy	25	23	22	22	21	21	20	20	20	20—214
J Johnston	25	25	24	23	22	21	20	18	18	14—210
H Rosenthal	25	24	23	22	22	20	19	18	17	14—204
W Harding	25	24	23	20	20	20	18	17	17	17—201
F Pilger	24	24	23	22	22	21	16	16	16	16—200

As can be seen the weekly shooting night has been changed from Tuesdays to Thursdays. A social session followed, during which speeches were made by Capt. Reinhardt, Adolph Malz and Secretary Finger. Songs were rendered by Adolph Malz and Adolphus Rossy. H. Rosenthal recited a non-touching piece of poetry "Mother's Billy Goat." To say that he made a hit would be putting it mild. The assemblage broke up late.

NOTES.

Secretary Bird is what his fellow members of the Hudson Rifle Club call a "cold water man." He has fine oratorical powers, and before he gets through his hearers are nearly driven to temperance. W. Boddy is one of his converts. Recently while returning from Newark after shooting a tournament match, they were nearly desperate for a drink of some sort. Adolph Malz, he with the entrancing story regarding "Kase," was in favor of heading a committee to notify the conductor to stop the train. The idea was sat upon however and was invited to jump off. Secretary Bird now reviewed the situation and decided that this was an elegant chance to exhort his hearers to become followers in the cause of temperance. He was at last prevailed upon to give up a bottle of what he thought was ginger ale which he carried with him, to slake the thirst of the thirsty crowd. He was surprised at the way Capt. H. Rosenthal downed the ginger ale, he seeming to be delighted with it. Boddy, Braun, Malz and Rebhan followed suit. At last it came to the club's temperance orator, all the latter needed was one swallow, when he discovered that he had brought forth the wrong bottle. He had given the bottle containing old rye to his club mates by mistake. There will be no more temperance lectures hereafter.

Greenville Rifle Club at its last meeting presented the following gentlemen with the customary class medals, as they had won the prizes the most times in their respective classes: First class, W. Robidoux, with an average of 237; second class, C. Scheelein, who averaged 229; third class, F. Collier, with an average of 218, and fourth class J. Hill, who averaged 214. It was decided to have two medals in every class, to go to the men making the highest and second highest scores in the respective classes. The winners at the last shoot were: First class, C. Boag, 236; W. Robidoux, 235; second class, J. Chavant, 242; Gotthardt, 234; third class, J. Purkess, 236; J. Hill, 227.

"Jerry" Steuber and Capt. Jefsen of the Jefsen Rifle Club are capital entertainers. At this sort of thing they can't be beat.

It is said that arrangements have been made for a 50-shot match between Frank Kammel and Fred Dunsteadt, both of the Millers, and that the winner will be challenged by H. Fred Meyer. The latter knows he'll have to shoot to win in case the match is made. A match between the trio of rifle shots would determine who the superior is among them, as they all claim the championship of the fourth class.

The Friday Night Club, of Hoboken, did not enter, as they say they are only a social and not a rifle club, and their members would not care to travel around, anyway. This will no doubt cause surprise, as the club could produce a fine five-men team.

The Herman Rifle Club, Capt. Herman Newmann, of J. C. Heights, are fixing up their range in fine style. But of its being rather out of the way, they would have double the membership they now possess.

The Palisade Rifle Club is jubilant over having reached the 1,100 mark in the Forest and Stream tournament shoot, they making 1,103 against the Essex Amateurs, last Monday evening. But for Finger they would have reached considerable over it, he making 193. His shots with one exception were all low, the gun is sighted wrong for him. But it seems that he should have held it higher when he had these 18 "lows" bunched. The next time this happens Gus, you'll go home a'one.

A surprise in the above match was the shooting of Rosenthal of the Palisades he making 230. His highest previous score being 215.

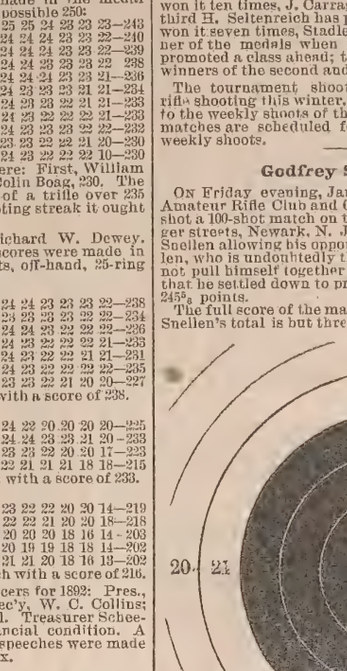
The newly organized Schuetzen Club "Hansa" of Hoboken are now putting up fine scores. The members are under the careful tuition of L. Schmidt and L. Wangersheim.

Shad Russell of the Standard Rifle Club is, to use the words of Capt. Henry L. Hansen of the Hudsons, a cuckoo. Anything from singing a song to dancing the hornpipe is in Shad's line. His specialty is a song and dance entitled "Does she expect me to-night?" He does this with much fervor, as the song is so touching and original.

The Union Rifle Club of Hoboken has disbanded. Its headquarters were at 223 First street. There is some effort now being made to rejuvenate the Standards, who withdrew from the FOREST AND STREAM tournament without shooting a single match.

Charlie Judson, of the Miller Rifle Club, is trying hard to win the FOREST AND STREAM average medal. His two best scores now are 241 and 242. Godfrey Snellen, of the Essex Amateurs, however, is a point ahead of him, having a 241 and 243. The latter is confident, he says, of making an average of 244 for the medal.

Godfrey Snellen said last Monday evening that it was true that he and John Coppersmith were ready to meet any two gallery shots in New York city. This is a good opportunity for Michael Dorrler and Louis Flach, as the latter would make them hustle.



The battle for the weekly class medal still rages at the weekly shoots of the Miller Rifle Club, Hoboken, every Wednesday evening. Dave Miller leads in the first with five wins, Tom Fitzsimmons two, and Charlie Judson, Louis Vogel, George Schlicht and Louis Sohl about one or two each. In the second J. H. Kruse has won it ten times, J. Carragher three and G. C. Yarick one. In the third H. Seltenreich has passed A. Stadler for the lead, he having won it seven times, Stadler six and H. Katenkamp one. The winner of the medals when the twenty-six weeks are ended will be promoted a class ahead; this rule, however, pertains only to the winners of the second and third class medals.

The tournament shoot is attracting unusual attention to rifle shooting this winter. It has virtually put an end for a while to the weekly shoots of the Hudson Rifle Club, as about all these matches are scheduled for Monday, the night they hold their weekly shoots. JAY H. KAY.

Godfrey Snellen's Fine Work.

ON Friday evening, January 15, Godfrey Snellen of the Essex Amateur Rifle Club and Gustav Widman of the Our Own Club, shot a 100-shot match on the Essex Ranges, corner Bank and Rutger streets, Newark, N. J. The Zettler 25-ring target was used, Snellen allowing his opponent fifty points on the 100 shots. Snellen, who is undoubtedly the finest gallery shot in New Jersey, did not pull himself together until after his fourth string, but after that he settled down to pretty work, his last six strings averaging 245⅝ points.

The full score of the match is given below, it being shown that Snellen's total is but three points below the world's record made

by Mr. Dorrler a couple of years ago in a 100-shot match on the Our Own Ranges in Newark. Mr. Snellen intends to make an attempt in a short time to beat Mr. Dorrler's record.

Apended is given a full size fac-simile of his ninth target, showing a total 249 out of a possible 250 points, his seventh shot being a 24. The entire string of 100 shots were in the black.

Newark Rifle Notes.

THE gallery shooters of this section are fairly active just now, with the work entailed by the FOREST AND STREAM tournament and the numerous private contests between teams and individuals. It is to be deplored, by the way, that more of the local clubs did not enter the tournament above mentioned, but they probably had good reasons for not doing so. It was thought that the North Wards, Warrens and Independents would surely enter, but they failed to do so.

Our Newark riflemen are smiling quietly at the assurance of the Jersey City papers in asserting that first place lies between the Millers and Excelsiors. Our boys are of the opinion that both the Essex Amateur and Our Own teams will be "in at the finish."

On Thursday evening, Jan. 14, J. Bander and C. Halsey of the Our Own club shot a match against D. Erskine and J. Phillips of the North Wards, the contest taking place on the latter's range. The conditions were 50 shots per man on the Zettler 25-ring target, distance 75 ft. The scores follow:

Our Own Team.

The return match will be shot on the Our Own range on Jan. 28, when it is hoped that the scores all around will be better.

During the recent match in Jersey City between the Excelsiors and the Our Owns, of this city, some of the latter's members were obliged to shoot with a strange rifle, owing to the fact that the member who was deputized to carry the club rifles picked up one which had not been used for months, instead of taking along the one with which said members had been shooting for weeks.

The Puritan and Warren Rifle clubs shot a match on the latter's range on Jan. 13, the 12 ring target being used. The result was a victory for the Puritans by a score of 1,036 to their opponent's 1,012. Hanselman made 116 and Carpenter 114 for the Puritans, the Warren's high score being 108 by T. Nunley. The return match will take place on the Puritan's range on Jan. 27.

The following is the complete list of officers elected by the Our Own Club at its annual meeting: President, Andrew Mihlon; Vice-President, J. M. Kiefer; Recording Secretary, Albert Wolfe; Financial Secretary; Jas. Donat; Captain, John Bauder; Statistical Officer, C. H. Townsend; Executive Committee—F. A. Freiensehner, chairman; H. D. Uhl, Gus Goerk, W. H. Watts, Gus Widman; Finance Committe—Chas. Miller, chairman; Wm. Kroeplin, Ferd. Freiensehner; Shooting Committee, W. H. Watts, chairman; Bowling Committee, J. M. Kiefer, chairman; Athletic Committee, F. W. Fetting; Entertainment Committee, H. D. Uhl, chairman. The chairman of each of the committees has the privilege of appointing two assistants, and each committee has full charge of its own department, subject to the instructions of the executive committee. Under the new by-laws just adopted, the captain, who has a general supervision over all reports, is *ex-officio* a member of the several committees. Y. RATILIM.

The Miller Rifle Club Victorious.

THE second of a series of best two out of three 10-men team matches between the Miller Rifle Club, Hoboken, and the Manhattan Shooting Club, of Harlem, took place at the Miller Club's headquarters, 89 Hudson street, Hoboken, Wednesday evening, Jan. 13. The Millers had previously won the first match by a score of 2,356 to 2,225, winning by 131 points. The second match was a repetition of the first, the Millers winning in a canter by 183 points. The scores of the deciding match were: Millers, 2,334; Manhattans, 2,151. Dave Miller led the contestants, he making the high score of 244. Wm. Lappe led his team in with the score of 235. The prize is an excellent piece of silverware, an urn. Refreshments were served to all present after the match. Captains Wellbrock and Dewey made speeches. Below will be found the scores made:

Miller Rifle Club, Capt. Dewey.

The Shooting Eye.

"WHAT remarkable blue eyes you have!" The remark was addressed by a writer to an ex-officer in the regular army, whose life has contained more than an ordinary share of adventures and vicissitudes. "That is what they call in England the 'Wimbledon eye,'" was the reply, "because it is meant to shoot with. Scientific men will tell you that there is no such eye for marksmanship as the blue one of the color which has excited your attention. Black eyes and brown eyes aren't in it with the blue, any way, when it comes to shooting or fighting. That is why the Northern people have always wiped the Southern races out when it came to war."—*Washington Star.*

The Excelsiors.

SCORES made by Excelsior Rifle Club at their weekly shoot, Tuesday, Jan. 12, 25-ring target, distance 75ft.:

W Webber	243	W Robidoux	234

Trap Shooting.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Jan. 21.—Willimantic Rod and Gun Club, all-day's tournament, at artificial targets, Willimantic, Conn.

Jan. 21.—Essex Gun Club, monthly shoot, at live birds, for club members only, at Marion, N. J.

Jan. 23.—John Erb's Old Stone House grounds, Newark, N. J., match and sweepstake shooting, at live pigeons.

Jan. 23.—South Side Gun Club, weekly shoot at artificials, Newark, N. J.

Jan. 23.—Amateur Gun Club, weekly shoot at artificials, Newark, N. J.

Jan. 23.—Sewaren Land and Water Club, team and individual contests at artificials, at Sewaren, N. J.

Jan. 23.—Union Gun Club vs. Boiling Springs Gun Club, team match at artificial targets, on Union grounds, Springfield, N. J.

Jan. 26-28.—Hamilton Gun Club, grand live pigeon and artificial bird tournament; $1,100 guaranteed. A. Smyth, Sec'y-Treas., Hamilton, Ontario, Canada.

Jan. 28.—Atlantic Rod and Gun Club, team of two match, 50 birds per man for $100 a team, West End, Coney Island.

Jan. 28.—Atlantic Rod and Gun Club, semi-monthly shoot, at West End, Coney Island.

Jan. 28.—Fred. Lumbreyer vs. Frank Class, first of a series of 100-bird matches, at Marion, N. J.

Jan. 28.—Jersey City Heights Gun Club grounds, open sweepstake shooting at live pigeons, beginning at 10 A. M., Marion, N. J.

Jan. 29-30.—Boiling Springs Gun Club, two days' tournament at artificials, Rutherford, N. J.

Jan. 30.—Brunswick Gun Club, monthly shoot, New Brunswick, N. J.

Jan. 31.—John Erb's ground, match at 25 live birds, $20 entry, open to all, begin at 1 P. M., Newark, N. J.

Feb. 9-11.—Reading Shooting Association's tournament, Reading, Pa.

Feb. 10-12.—Forester Gun Club's tournament, Davenport, Ia.

Feb. 25-28.—Louisiana Gun Club's tournament, New Orleans, La.

Feb. —.—Sorocco Gun Club's tournament, Sorocco, N. M.

April 19-21.—Elk Park Shooting Tournament, two days at artificials, third day at live birds, Royersford, Pa. Address H. E. Buckwalter, Royersford, Pa., or Harry Thurman, Germantown, Pa.

April —.—Ridgewood Gun Club tournament, at Ridgewood, N. J.

May 10-12.—The Ohio trap-shooters' annual tournament, Columbus, O.

May —.—Capital City Gun Club's tournament, Washington, D.C.

May 17-20.—Annual tournament of Kansas City State Sportsmen's Association, at Council Grove. G. W. Cleek, Sec'y.

May 27.—Fifteenth annual tournament of the Missouri State Fish and Game Protective Association, Kansas City, Mo. W. V. Reiger, Sec'y.

June 6-11.—Eighteenth annual tournament of Illinois State Sportsmen's Association, at Chicago. W. L. Shepherd, Sec'y.

June 13-18.—New York State Association's Thirty-fourth Annual Convention, at Syracuse, N. Y. Chas. H. Mowry, Sec'y.

Aug. 9-12.—Pennsylvania State Sportsmen's Association's annual tournament, Reading, Pa. Walter D. Eller, Sec'y.

Manufacturers' and Dealers' Association tournaments;

Baltimore, Md. Second week in March.

Staunton, Va.—Second week in April.

Savannah, Ga.—First week in May.

Pittsburgh, Pa.—Second week in May.

Brooklyn, N. Y.—Second week in June.

Watertown, N. Y.—Fourth week in June.

DRIVERS AND TWISTERS.

THE members of the progressive Boiling Springs Fish and Gun Club have been expending considerable money and time in improving their handsome grounds at Rutherford, N. J., and everything is now in prime form for the host of shooters who will visit them on Jan. 29 and 30, when their annual tournament will be held. All shooting will be at artificial targets and the programme will be so arranged as to suit all shooters. Mr. Outwater, one of the most energetic of the club shooters, dropped into the writer's sanctum a few days ago and in the course of a pleasant conversation informed me that the club would hereafter use the five-trap system altogether, as the use of ten traps grows tiresome, compelling the shooters, unless the attendance be very large indeed, to remain in front of the traps almost constantly. He also said that in a short time the grounds would all be filled in and that as soon as this was accomplished the club would hold a three-days' tournament, devoting the third day to contests at live pigeons.

* * *

A diamond badge, emblematic of the first class championship of the Coney Island Rod and Gun Club, will hereafter adorn the manly breast of Adam Eppig, he having won it for the third consecutive time at last Wednesday's shoot. In the December shoot he killed 24 straight to win against his opponent's 23, but last Wednesday 13 straight made him a winner.

* * *

The Acme Gun Club will hereafter shoot on the second Tuesday in each month at live birds and artificial targets, and at the end of the season prizes will be awarded for the best averages in each style of shooting. The officers for 1892 are as follows: President, C. Dathloff; Vice-President, H. Menkel; Secretary, T. Short; Treasurer, F. Monk.

* * *

The Linden Grove Gun Club, which now holds a front rank among Long Island clubs, will shoot at Louis Miller's Dexter Park, Long Island, on Friday. This club has recently elected the following officers for the current year: President, W. Cunningham; Vice-President, W. Vollmer; Secretary and Treasurer, H. E. Wieman.

* * *

Al. Heritage, of Jersey City, who is perhaps better known by his sobriquet of "Old South Paw," informs me that he will some time during the coming spring, run a four days' tournament on the grounds of the Jersey City Heights Gun Club, at Marion. The first two days' shooting will be at artificial targets and the last two days at live pigeons. A big event will be given in the shape of a $25 sweepstake at 25 live birds per man. Mr. Heritage is nothing if not original, and he says that among the special features of his tournament will be the awarding of a $10 gold piece to the shooter who is decided to show the best position at the score, and the awarding of a similar piece of metal to the shooter who uses the poorest gun. The tournament will be run on the most modern lines, the shooting at artificials being done under the rapid system. A big restaurant tent will be pitched and the shooting house reserved for shooters alone.

* * *

Team shooting is deservedly growing in popularity, giving as it does such an excellent opportunity to the members of the contesting clubs to become well acquainted with one another, and that under conditions which are more favorable than are incidental to the average tournament. The clubs of New Jersey seem to be ahead of other sections in regard to the number of team matches, and all of them are ready at a few days' notice to turn out for a contest. On Saturday one of these sociable events will take place at Springfield, N. J., when teams from the Union Gun Club, of that place, and the Boiling Springs Fish and Gun Club, of Rutherford, will try conclusions for friendship only. The teams will comprise 12 men each, and each man will shoot at 25 artificial targets, under the 5-trap rapid-firing system. The Rutherford boys will leave for Springfield on the D. L. & W. train, which starts from New York at 10:10 A. M. Beside the team contest there will be sweepstake shooting all day for all who desire to keep their guns warm.

* * *

One of the most pleasing pieces of news that has come to my ears for some time is in effect that the United States Cartridge Company had signed, sealed and settled an agreement by which Thomas H. Keller, the popular "Tee Kay" of the sporting press and a dozen or more gun clubs, becomes their general traveling man, his field being "the United States." "Tee Kay" is a hustler from way back, and the company is to be congratulated upon securing him to work in its interest. His ability as a salesman is perhaps best told by the simple statement that for fifteen years he was retained by one firm. Tom says it required somewhat of a struggle on his part to cut loose from his present business, but the prospect offered was so bright that he could not resist. He will enter upon his new duties on Feb. 1, and of his many friends none will extend to him any more hearty wishes for "Glück" than the writer.

* * *

It appears after all as though Frank Class were not as much to blame for the recent fiasco at Marion as some were anxious to believe. I am informed on reliable authority that on Jan. 12 Mr. Class sent word to Mr. Lumbreyer that it would be impossible for him to be on hand to shoot the match. This word, however, failed to reach Mr. Lumbreyer in time to prevent his going to Marion. But those who were fooled on the above date are likely now to have three chances to get even, as the appended letter shows:

NEW YORK, Jan. 14.—*Editor Forest and Stream:* I have made three matches with Frank Class, Mr. Piper, his backer, was here yesterday and put up a hundred dollars forfeit in L. Westervelt's hands. The first match is to take place at Marion, N. J., on Thursday, Jan. 28, at 2 P. M. These matches are at 100 live birds per man, Hurlingham rules to govern. In regard to the first match I will bet Mr. Class $250 on the outside that I will defeat him. Each of the matches is for $250 a side. * * * I think I can make him shoot better than he ever did, as I am getting myself right down to business form for these matches.—FRED. LUMBREYER.

Judging from the above, which has a business ring all through, some shooting for blood may be looked for when these two men meet. Class, during the time that he kept himself in steady practice, was a fine shot, using a remarkably quick and accurate second when called for. For a year, however, he was practically on the shelf, doing little, if any, trap work. In fact, it was only about two months ago that he decided to resume shooting. Hence his public form is an unknown quantity. Lumbreyer, on the other hand, whom I always considered a good man with the smooth-bore, has been keeping himself in constant practice during all these months and has kept steadily improving in his work. Whether at match or sweepstake shooting, as a part of a team or an individual, he is a dangerous man to be pitted against. Based on public form, I think Lumbreyer should be at least 3 per cent. better than his opponent at this time.

* * *

The Crescent Gun Club has decided to enter "the swim," and hereafter its contests will be under modified Hurlingham rules, instead of Long Island rules, as formerly. The main prize during the season of 1892 will be a fine grade Parker hammerless gun. At a recent meeting of this club, Walter Gilman was seated in the president's chair for his third consecutive term. J. Rathjen was elected vice-president; L. Honkins, secretary and treasurer, and J. Vagts, captain. Four new names were added to the roll.

* * *

The members of the Atlantic Rod and Gun Club have not been able to satisfy themselves with one shoot a month, and hereafter will have two shooting days at live pigeons. The next shoot will take place on January 28.

* * *

Louis Miller, the energetic proprietor of Dexter Park, is trying to negotiate a deal with B. Koeing, proprietor of Woodlawn Park, providing for a trophy to be offered jointly by them for a series of three matches between teams from the Emerald and Unknown Gun Clubs. The former is supposed to be the Champion Club of Dexter Park, while the latter is cock of the walk at Woodlawn Park.

* * *

An interesting team match will take place at Dexter Park the latter part of this month, the teams being Messrs. Still and Hartye against Messrs. M. Hayden and Wilkler. The conditions will be twenty-five live birds per man, for a stake of $100 a team. The men will stand at 25 and 27 yards.

* * *

The incorporation of the W. Fred Quimby Company, with a capital of $160,000, marks a very important change in the sporting goods trade. The company is incorporated under the laws of New Jersey, $75,000 of the stock being paid up and the remaining $25,000 to be put in when necessary. W. Fred Quimby is president and Edward R. Dimick treasurer of the new company, which will carry on the business of manufacturing and selling sporting and street shoes, leather and canvas sporting goods, and ammunition, besides which the company will push the sale of Smith guns and bluerock targets.

The past history of the firm of W. F. Quimby & Co., which gives way to the new company, is an interesting one. The business was first established by Thomson & Son, in 1872, their business being the manufacture of the famous Thomson hunting boots and shoes. The business progressed favorably until in 1878 Charles H. Yerrington became a member of the firm. In 1882 Mr. Yerrington became the sole proprietor of the business, and the following year W. Fred Quimby purchased a half interest, the firm name being Yerrington & Quimby. Later on Mr. Yerrington, owing to failing health, retired from the firm, and from that time until 1889 Mr. Quimby was alone in the management of the business, which kept up a steady growth. In this year Edward R. Dimick associated himself with the business, the firm becoming W. Fred Quimby & Co. Mr. Dimick looked after the financial part of the business, while Mr. Quimby attended to the "hustling" for trade, his efforts in this line being very successful. These two gentlemen will have charge of the business of the new company.

A few years ago all the manufacturing of the old firm was done in a 10x25 shop in the rear of the office at 301 Broadway, two men and one boy comprising the working force. Now the company has a three-story factory 100x25ft., on the corner of Mulberry and Camp streets, Newark, N. J., with ninety people on the pay roll. First-class men drawing high salaries are in charge of the several departments, and the aim of the company will be to turn out a high grade of work. The boot and shoe department is in charge of John McNeill and Thos. Guthrie; the gun case work is looked after by John Haskell, while manufacture of sportsmen's leather and canvas clothing is supervised by Richard Hill. Messrs. Guthrie and Hill were with the original firm of Thomson & Son. Some idea of the extent of the business assumed by the new company may be inferred from the fact that during 1891 Quimby & Co. disposed of 3,500,000 bluerock targets.

* * *

FOREST AND STREAM acknowledges the receipt of a pair of well executed bromide reproductions of photographs showing E. D. Fulford and J. L. Brewer in position at the trap during their great match at Woodlawn Park, Long Island, Fulford being in position to call "pull" and Brewer in the act of firing. The pictures are 10x12 and are mounted on a 14x16 card, making a convenient size for framing. They will make a handsome ornament for a sportman's "den" or any other place. The enlargements are the work of A. C. Wilmerding of this city, and from photographs taken by himself.

* * *

The following account of a match away back in March, 1876, at Marengo, Iowa, has been sent to this office, and thinking that the conditions may be considered unique it is given in full:

L. A. Clearman vs. C. M. Barnes, twelve pairs of pigeons each, from two plunge traps set 40yds. apart, the shooter to stand midway between the traps, both traps to be sprung at the same time, 1¼oz. shot, 100yds. boundary, for a $100 purse and the championship of Iowa county.

SCORE.

Barnes	10 10 10 11 11 11 11 01 11 11 11 10 11—20
Clearman	11 10 00 10 01 11 11 10 11 10 10 11 11—17

A Simmons was referee and E. Dormart scorer. The birds were strong flyers; the ground was covered by several inches of snow and the bright sun shining on this made it difficult to see white birds clearly.

* * *

Fred. Van Dyke, the 90 per cent. manager of Von Lengerke & Detmold's Newark store, has recovered from his recent attack of La Grippe and has again settled down to business.

* * *

In a private letter H. A. Penrose states that the trap-shooting season at New London, Conn., will open on Friday, 22nd inst., and that Conn. expects to have a strong League or State Association this year. In regard to the coming tournament of the Inter-State Manufacturers' and Dealers' Association, Mr. Penrose says the progamme for the Baltimore shoot, to be held the second week in March, will be out in a short time. It will be one of the most attractive programmes ever gotten up. He is also working up the details for the Staunton, Va., shoot which occurs the second week in April. No time nor expense will be spared to make these the best shoots that have ever been held.

* * *

In response to numerous requests FOREST AND STREAM will in future make a special feature of publishing illustrated sketches of the various gun clubs throughout the country. The next issue will contain a splendid half-tone cut showing the members and club house of the Active Gun Club, of Newark, N. J. Any gun club wishing to have a sketch of its career published is requested to send us the points along with a group picture of the club members.

* * *

The Elk Park Gun Club of Royersford, Pa., announces a big tournament for April 19, 20 and 21, the first two days at artificials and the third day at live birds. H. E. Buckwalter, Royersford, Pa., or Harry Thurman, Germantown, Pa., will supply programmes to all who request them.

Canadian Trap Events.

TORONTO, Jan. 10.—At the Charles Stark Company's grounds to-day a match took place between C. Ayre and D. Blea, on one side, and W. Hulme and G. Rennardson, on the other, for a purse of $20, at 25 sparrows a man, Owl Gun Club rules governing. The following are the scores:

C Ayre	19	W Hulme	21
D Blea	18—37	G Rennardson	18—39

AURORA, Ont., Jan. 11.—The result of the second contest of the Dominion Off-Hand Rifle Association trophy is as undernoted:

A Graham	90	J W Crossley	80
A H Canning	84	D Eade	79
A Neilly	81	J C Steele	75
		E Braund	71
		R Neilly	68

The executive decided to accept entries until the time shooting begins. The next match will be at Midland Feb. 10.

AT a recent meeting the Cornwall Gun Club was organized, and following officers were elected: President, J. L. Weller; Vice-President, H. S. Greenwood; Secretary, J. Galbraith; Treasurer, L. E. Bailey; Captain, J. Galbraith.

THE Toronto Shooting and Game Protective Association held a handicap sparrow shoot on Saturday, with results as below, the prizes being three silver cups presented by the club. 20 birds per man, 18yds. rise:

Fulford	10102011001110110111—13	Cassels	20112012011111100001—13
Gooch	11111121001111001111—16	Harvey	10011010100101001200—9
Caldwell	01300101110111101110—13	Griffith	00100112110121100220—7
Forman	01101111111011010110—12	Charles	01111101110111100111—15
Robertson	10012101000211000220—10	McDowal	11110111100101111111—16

Ties at 6 won by F. H. Gooch.

Jan. 12.—The members of the Victoria Gun Club held their second annual dinner at the Boswell house this evening. The chair was occupied by the president, Mr. G. Evans, and the vice by Mr. H. Haines, vice-president. After justice had been done to the good things provided, toast, song and sentiment were the order of the evening.

Shooting in Ohio.

CLEVELAND, Ohio, Jan. 14.—The regular shoot of the Cleveland Gun Club was held this afternoon. Redwing won the class A badge and Watts the class B badge. Thirty birds were shot at and the result was up to the average. The following are the scores:

Redwing	11111 11111 11111 01111 11101 11011—27
Sterling	11111 11010 01111 11111 11001 10000—21
Holt	11101 11111 01111 11111 01110 11011—24
L O Jones	10001 11011 00001 10110 11110 11000—17
Corsell	11101 10101 01011 10101 11000 01111—19
Alberts	00011 01011 01000 10000 11101 01001—13
Wilson	00111 00101 11110 10000 11101 01011—17
Watts	11111 10111 01011 01110 10101 11011—22
Ward	01001 11111 11011 11011 00111 11110—22
Tamblyn	00111 11111 11001 11101 11111 11111—26
Johns	10000 01110 10010 00001 00111 00001—11

With a Small-Bore.

TOWANDA, Pa., Jan. 11.—One more point for the small-bore. Some more good shooting with a little gun took place this afternoon between Snider and Richardson; the gun used was .44cal., 24in. barrels, weight 3¼lbs. They shot at the usual distance, and appended is the score. Clay birds, six singles:

Snider	11111—5	11111—5	10 00 10 11—4
Richardson	11101—5	11111—5	11 11 11 10—7

A. V. R.

J. L. Brewer Talks Business.

CLAYTON, N. J., Jan. 18.—*Editor Forest and Stream:* Allow me to call your attention to a mistake which appeared in your issue of Dec. 17. I have no doubt that Mr. Henry C. Squires, of New York, can supply his customers with a very good hand-loaded cartridge; I remember very well of giving Mr. Squires a secret (about a year ago) of loading Schultze powder and all other nitro compounds, which has evidently made a great business for him. The fact of Mr. Fulford using Squires' hand-loaded shells in his matches with me the 12th, 13th and 14th of November demonstrates a superiority over all other ready loaded cartridges by his killing so many birds regardless as to quality, which is open to criticism. If, in the opinion of the people, the birds were a bad lot, I should be sorry to change the idea.

Mr. Fulford is a gentleman and has proven to the world that he is beyond all doubt a remarkable man with the shotgun, and why he should withdraw from the profession at so early a date is something I do not understand. Why not stand up and fight as I have for fifteen years in defence of our own native land? I am proud to say that I have captured the honors from the two great sporting countries of the world, namely, England and Australia in 1888 after some excellent shooting, and all that was possible for a man to contend with to cause a defeat. I won the World's Championship, donated by the London *Sportsman*, which has been in circulation over one hundred years. In February I defeated Mr. Louis Clark, of Melbourne, Australia, for the Championship of the Colonies.

I have never been asked to defend either of my honors in any country. I therefore call your attention to Mr. Squires' advertisement in your issue of Dec. 17 in its most conspicuous place. There was nothing ever said about a championship match between Mr. Fulford and myself, or anyone with whom I have ever shot, in this or any other country, since I obtained the great object, which is no doubt an eyesore to a great many.

Now it is a certain thing in my opinion, that I am not improving any in shooting. I desire to ask the pigeon shooters of the world one favor, of granting me the privilege of demonstrating to the world, that I am the *Champion*, or to produce a man to take my honors from me. If such a match can be arranged, I claim the right to furnish the birds (which must be first-class), also ground for said match to take place. I ask no favors nor do I care to know my opponent until I meet him at the score. I am authorized by my backer to make a match for from $1,000 to $10,000 a side, from 100 to 500 birds per man including the World's Championship which I now hold; and it affords me pleasure to think that there is not a man in the world who can take it from me.

Should this challenge be accepted by any one, the match will be shot under the London Gun Club rules, which are evidently the fairest rules used to govern trap-shooting to-day. A few days' notice and I will furnish you with the necessary amount to bind such a match, or full amount if so required.

CAPT. JOHN L. BREWER.
Champion Wing Shot of the World.

Fulford Will Shoot Chicago.

HARRISBURG, Pa., Jan. 18.—*Editor Forest and Stream:* I notice each week, both in yours and other shooting papers, communications from Chicago stating they are very anxious to pit their man Kleinman against Fulford, and that "Billy Mussey's" safe has $1,000 in it waiting to be covered to make a match. Now all such talk may "go" in Chicago, but it don't East; and, although Fulford has practically given up shooting matches, your Chicago friends must not crowd him too hard or he may be led to reconsider his resolve. If they really want to make the match let them deposit $500 as a forfeit in the office of FOREST AND STREAM, or with any reputable person or paper, and I will guarantee that it will be covered under the following conditions: Fulford must be allowed to name the dates, as his business is such that he can get away only at certain times, and, as the matches are to be shot at Chicago, this would not be asking too great a concession from them, and four to five days would be as long a time as he could devote to the trip. To shoot three matches at 100 birds each on three successive days (weather permitting) with Mr. Kleinman or any other man from Chicago. The stakes to be not less than $500 on each match ($1,000 preferred) or three matches for $1,500 to $5,000; the winner of two out of the three to take the pot. American Association rules, or possibly no objections to their own Illinois rules. No objections to Mr. Watson furnishing the birds, and the faster the better for Mr. Kleinman, as no doubt Fulford can kill 100 "duffers" straight, as he has done it before and might do it again. Now, if the above is acceptable to your Chicago friends, let them make their deposit, and I think it will be covered before it gets very cold, and think minor details will cause very little trouble.

C. E. H. BRELSFORD.

Trap Communication.

WILLIAMSPORT, Pa., Jan. 18.—*Editor Forest and Stream:* You will remember I found fault with my new Greener gun before and after the match with Capt. Brewer at Woodlawn. I had grave reason to. I could not hit a barn and get in it, and I could throw a cat through the pattern of the left barrel at 50yds. It was cast off much more than my old gun. I did not notice that until after the match, as I only got the gun a few days before the shoot. I wish to say, in due respect to Mr. Greener, that I got a better gun than I expected. After experimenting no less than 500 times in every conceivable way I found the load that it will shoot and I believe to-day I have the best gun in America, and I don't see how a pigeon can get away and live inside of 50yds.

E. D. FULFORD.

Dean Wins the Challenge Cup.

THOSE who visited the grounds of the Maplewood Gun Club, just above Orange, N. J., on Saturday, to try their hands at smashing bluerocks, suffered considerable inconvenience from the cold and were also bothered by the strong wind which gyrated the light targets in all directions except where they were wanted. The opening contest was a match for the club's challenge cup, to become the owner of which a member must win six contests at fifty bluerocks each. The principals were C. C. Dean, one of the club's youngest and most expert marksmen, who won the first contest for the cup on New Year's Day, and A. A. Sickley, a veteran at trap shooting. The result is given below in detail, the shooting being from unknown angles:

A. A. Sickley	01110010001101010111001111000111011010010100	1000—25	
Chas. C. Dean	11101011110001111111111010111011111111111100110	—38	

Despite the unfavorable weather conditions the members were full of shoot and the rest of the afternoon was filled in with the following events. The conditions in each were ten bluerocks per man, fifty cents entry, three moneys, all ties being divided.

Event No. 1:

J. Warren Smith	1111111111—10	Will Drake	1110011111—8
J. W. Van Idestine	1101111011—8	A. Parry	1011101010—6
C. C. Dean	1110111101—8	L. Dean	1111111110—9

Event No. 2:

J. Warren Smith	1111001111—8	Will Drake	0111011101—7
J. W. Van Idestine	1011111000—5	A. Parry	0111001111—7
C. C. Dean	1100010111—6	L. Dean	0111111110—8

Event No. 3:

Smith	1111111110—10	Parry	0010011011—5
Van Idestine	1101001111—7	L. Dean	1111110110—8
C. Dean	1111111110—9	Sickley	1111101110—8
Drake	0111110111—8		

Event No. 4:

Smith	1110100111—7	C. Dean	1010111111—8
Van Idestine	1011101111—8	Sickley	1111101111—9

Murphy Beats Brown.

THE shooting grounds connected with Larchmont Manor were the scene of an interesting live bird match on Friday, Jan. 15, the contestants being Edgar Murphy and Wm. Brown. The conditions of the match were rather peculiar. Murphy shot at 30 and Brown at 27yds., this of itself being a generous allowance to the latter. Beside this, however, Murphy agreed to give Brown 10 misses, i. e., the latter was to be credited with a dead bird on each of his first 10 misses. The day was a miserable one for this or any other kind of outdoor sport, the fine snow continually blowing into the faces and eyes of the shooters. The birds, under favorable conditions would have been hard flyers, but under the conditions above mentioned they could not even be called fair. The match resulted in an easy victory for Murphy, who shot his opponent out on the eighty-fifth round. The scores follow:

Murphy	22210220221212222212220—2222212220220221110122222220222222202222220112212212222020212	—71
Brown	12200220230102112221011C0010001100120112101210121010201102030210120301201060101	—52

Murphy lost 9 and Brown 14 birds dead out of bounds.

North Side Gun Club.

TUESDAY, the 12th, was the date for the regular club shoot of the lively North Side Gun Club, on the North Side Driving Park, at Maspeth, Long Island, and a goodly number of members were on hand to battle for the badges, although the weather was anything but good. The regular club event was at seven birds per man, for the class medals, those shooting at 27 to 30yds. being in A Class and all others in B class. The results:

	Class A. Ties.		Ties.
C Myer (28)	1101110—5 212	E Barber (30)	0011211—5 220
M Manning (30)	2101110—5 222	E Blancke (27)	2000100—2
	Class B.		
J Lanke (23)	0112111—6	J Hacke (25)	1100120—4
J Grace (24)	2101021—5	A Kramer (25)	1020000—2
J Turnam (25)	2221002—5		

Lanke won the class B medal. The tie between Meyer and Manning for the class A medal was decided by the scores in a miss and out sweepstake, $1 entry, Myer winning the medal and the pot on two kills; Manning missed his second bird, as did J. Lyon; Menke and Turnan each lost their first birds.

The Big Four Gun Club.

BURLINGTON, Iowa, Jan. 13.—The tournament of the Big Four Gun Club commenced this morning under very unfavorable conditions. The weather was terribly cold and the ground covered with six inches of snow, this making the shooting very hard. The tournament was held on a sand bar of the Mississippi River, where the wind had a clear sweep. Many shooters lacked courage to face the wind before the traps, but to-night these say "Wait until to-morrow and we will show you 'chaffers' what we can do." Among the shooters present are W. A. J. Windsor, of St. Paul, Minn.; A. and M. Cook and H. B. Castor, of Huron, Iowa; G. Douglass, of Briggsville, Ill.; Geo. Deterline, of Keithburg, Ill.; J. Minard, of Pleasant Grove, Iowa, and C Lynch, of Kingston, Iowa. During the day a match was made and a forfeit posted for a race at 50 single targets each between Chas. Lynch and H. Guenther, the match to be shot at Ebener's Park, Burlington, on Feb. 3. The men are evenly matched and considerable cash has been wagered on the result: Below will be found the scores of to-day's events in detail:

Ten single targets, entry $2:

Runge	1001111111—8	Budd	1111111111—10
Deterline	1101101101—7	Windsor	1011111111—9

C. W. BUDD.

The Original Dean Richmond Cup.

THE time is rapid. Progress gallops to-day in every line of action, and change follows change so swiftly that events blur in the eye. Once past, forgotten, and on to the next; that is the order of this quarter century. This is as true in sportsmanship as in anything else. Change and growth in sportsmanship have been more rapid than we realize. Attainment after attainment has flirted by, blurring, and we have forgotten them all. We can not tell how fast and how far we have gone, unless once in a while we shall stop and gaze determinedly back at some landmark whose status cannot be mistaken.

Such a landmark is that historic and admirable trophy of the trap, the original Dean Richmond Cup, a proper pictorial representation of which would adorn any columns. FOREST AND STREAM seems to be the only one of the papers able to point out

THE ORIGINAL DEAN RICHMOND TROPHY.

this landmark in the history of trap-shooting. From that landmark to the present is a long way. It is all the way from the muzzleloading gun to the present superb arms. It is all the way from abundance of wild pigeons to an absolute absence of them, and from the old plunge traps to the present electric-pull ground traps and their elaborate accessories. It is apparently a century of human change from then till now, but measure it by actual years and it foots but scant two decades.

The Dean Richmond cup is not well known to-day, but it is well known of. Many trap-shooters have heard of it who do not know what it was or where it is, or what has been its history. We should attach the most prominence to it and make it our landmark, not because of its magnificence or intrinsic worth, and not because it came early in the day of trophy offering, but because it marked, closely enough for historical reference, the date when trap-shooting as a sport began to pass decisively and unmistakably from brutality into gentlemanliness, and to find its patronage among worthy men and not unworthy ones. Beyond that, and aside from that, the mere history of the great trophy is entertaining matter.

The original Dean Richmond Cup is in Chicago to-day, and will probably always remain there. It is in the hands and is the personal property of a gentleman eminently fit to be its owner—none less than Col. Chas. E. Felton, to whom clings closely the happily bestowed title of the "Chevalier Bayard of Chicago sportsmen." It is not probable that Col. Felton will ever allow it to go from his family.

It was last June when I learned that Col. Felton was in possession of this old trophy, and at once I importuned him for a photograph and a history. He informed me that it became his property by purchase when his old gun club, the Foresters, of Buffalo, N. Y., disbanded. He further advised me that, to obtain an exact history of the cup and its conditions I would do well to write to Mr. Robert Newell, of Buffalo, who shot in the early competitions for the cup. Col. Felton had the further kindness to bring down the great cup, in its original case, for photographing for illustrative use in FOREST AND STREAM. Four prints were made, and so far as known these are the only ones extant showing the cup as it was and is.

Mr. Newell was duly written, and so soon as lay in his power replied, his answer being but recently received. I beg to give it verbatim:

"BUFFALO, Sept. 1—The information you desired of me some time ago has just come into my possession, I having obtained it from Mr. John B. Sage, secretary of the New York State Sportsmen's Association. I could not reply sooner as I did not have the records, therefore you will pardon what might seem to you as unnecessary delay.

The Richmond Trophy was given by Mr. Henry A. Richmond, in commemoration of his father, the Hon. Dean Richmond, and was shot for by teams of 3 resident members of clubs in good standing and members of the New York State Sportsmen's Association, the conditions being $50 entrance, 20 single birds, 21yds. rise and 80yds. boundary, the club winning the cup three times to be the owner.

The first contest took place at Batavia, N. Y., in 1873, under the auspices of the Dean Richmond Club of that city.

In these various shoots every contestant was given a number before the shooting commenced, and the referee then placed as many duplicate numbers in a box as there were contestants. Upon drawing a number from the box the shooter represented by it would step to the score and shoot at a bird. This method took a good deal of time and made it very tedious for the contestants, but there is no fairer way conceivable.

The birds were always the best selected wild pigeons, and as the scores will show no very brilliant shooting was made, my own average in the five contests 88 out of 100, being the best.

The Forester Club won in the first two years, then the Central City Club, of Syracuse, two years; the Forester Club winning the third time at Syracuse it became their property.

When the Forester Club went out of existence all its effects were sold, Colonel Felton becoming the owner of the cup by purchase.

I inclose you the score given me by Secretary Sage.

Yours truly, R. NEWELL."

"P. S.—The entrance fees for the original cup were placed in a fund, the proceeds of which ($1,350) were put into a second Richmond cup, which is perpetual, the winning club holding the cup in trust for one year, and also getting the amount of entrance money. This cup is contested for yearly. The Forester Club won it also the first year, but the club disbanding soon after none of its members attend the conventions.—R. N."

The following are the interesting scores kindly furnished by Mr. Newell and Mr. Sage:

ORIGINAL DEAN RICHMOND CUP SCORES.

1873, Batavia.

Forester Club, Buffalo.		Phœnix S. C., Seneca Falls.	
Newell	20	Silsby	18
Hambleton	17	Burroughs	15
Smith	15—52	Compson	10—43
Monroe Co. S. C., Rochester.		Dean Richmond S. C., Batavia.	
Weigbell	19	Fowler	14
Brown	15	Tompkins	13
Hooker	14—48	Wakeman	15—42

1874, Oswego.

Forester, Buffalo.		Niagara Falls, Niagara Falls.	
Newell	16	Murray	12
Hambleton	16	Witmer	17
Smith	15—50	Fulton	12—44
Central City, Syracuse.		Monroe Co. S. C., Rochester.	
Hudson	16	Lucas	14
Harmon	17	Brown	16
Watkey	14—47	Smith	11—41
Dean Richmond, Batavia.		Audubon S. C., Rochester.	
Tompkins	19	Lamberton	14
Waterman	16	Babcock	11
Lusk	11—46	Mone	13—38

1875, Watertown.

Central City, Syracuse.		Forester Club, Buffalo.	
Hudson	16	Newell	16
Harmon	16	Smith	14
Soule	14—46	Hambleton	12—42
Phœnix S. C., Seneca Falls.		Monroe Co., Rochester.	
Silsby	17	Ely	15
Hoag	13	Hooker	14
Compson	13—43	Walzer	11—40
Onondaga Co. Syracuse.		Genesee S. C., Irondequoit.	
Lodder	16	Brown	13
Finch	13	Crittenden	13
Barnum	13—42	Babcock	13—39
Audubon, Buffalo.			
Vine	17	Franklin	6—37
Higham	14		

1876, Geneseo.

Central City, Syracuse.		Genesee, Irondequoit.	
Hudson	16	Crouch	16
Soule	20	Walzer	17
Manning	20—56	Crittenden	17—50
Forester, Buffalo.		Phœnix, Seneca Falls.	
Newell	18	Silsby	16
Drake	17	Chamberlain	15
Van Vleck	15—50	Lamond	18—49
Monroe Co., Rochester.		Audubon, Buffalo.	
Evershed	18	Fischer	17
Ely	18	Vine	16
Chaffey	14—50	Rafferty	15—48

1877, Syracuse.

Forester, Buffalo.		Monroe Co., Rochester.	
Newell	18	Crouch	18
Jones	20	Stielser	18
Pierce	14—52	Brown	11—47
Central City, Syracuse.		Jefferson Co., Watertown.*	
Hudson	17	Flower	5
Soule	15	Trowbridge	6
Michels	19—51	Sargent	6

*Shot at ten each and withdrew.

Such is the history of the cup. It will be noticed that Mr. Newell shot in every contest for the cup, from first to last, and aided more than any other man to make it the property of his club. When that club disbanded, it seemed a shame to see so fine a trophy go into oblivion. Col. Felton rescued it from that, but we may doubt whether he fully knew then how interesting this prize would become in later years.

The old cup is a magnificent piece of silver work, nearly 18in. high. It cost $500, and is solid silver. Its artisanship is admirable, but it was no artisan but an artist whose eye conceived its design. The chief trophies of this busy day of multiplied trophies do not offer a form so simple, elegant and graceful, and we must fairly go to the past for a model in richness blended with purity of taste.

The first contest for this memorable trophy occurred less than twenty years ago, but it will be observed curiously that the artist who brought into life the giver's generous design had in his mind no arm but the muzzleloading piece. This fact gives a quaint and interesting flavor to the whole to-day.

Mr. Newell does not tell us what part the muzzleloading gun actually had in these contests. If he, and others who shot or knew shooters in those days, will offer further reminiscences of the old cup, the old style and the old days, the readers of FOREST AND STREAM will be placed under a debt not easy to discharge.

CHICAGO, Ill., Sept. 7. E. HOUGH.

The Portland Championship.

PORTLAND, Ore., Jan. 7—The sportsmen of Oregon have been unusually quiet for the past month. We have had very heavy rains, and all of the lakes, sloughs and rivers are so high that it is almost impossible for birds to get to the bottoms for food. I am glad to say that this has been productive of some good. Already the feeling of unrest has appeared among the shooters, and for the past two or three days a committee of three, consisting of Carrol E. Hughes, H. H. Beal and W. A. Storey, have been scouring the country for live pigeons.

A match has been arranged for the championship wing-shot medal of Portland. This medal is now being made and is to be very pretty. The match will be at 15 live birds per man, and ties will be shot off at 5 birds per man, the winner to own the medal for good.

Now, I wish the papers of this country would take a little interest in the most gentlemanly sport enjoyed by the human race—*i. e.*, shooting. If one were to ask any paper to give an account of a shooting match in this country as elaborate and expensive to them as was that published by FOREST AND STREAM of the Fulford-Brewer contest, he would want one of two things in hand, a bag of gold or a good revolver for self-protection. If we get an eight or ten-line article two or three times a year we are very fortunate.

Another match has been arranged, also on live birds, between Carrol E. Hughes and W. A. Story, for a purse of $25 apiece, at 25 birds per man. Both these matches will be shot in the near future, and I will be glad to send you the result. Ducks are very scarce in the markets, and one dealer told me to-day that he had just received fifty dozen teal from California. SAND HILL.

Union Hill.

THE Union Hill Gun Club elected these officers: President, Charles Woolmington; Vice-President, L. Westervelt; Treasurer, Herman Lange; Secretary, John Weber; Captain, John Mehl. The club contested for prizes on Saturday, Jan. 9. The scores made and the winners were, the conditions being 10 birds a man: John Collins 9, G. Woolmington 8, J. Woolmington 7, H. Lange 7, L. Westervelt 6, W. Bermes 6, J. Hughes 6, F. Hall 5, J. Mehl 5, F. Dennehey 5, John Waller 4, C. Woolmington 2, P. Sullivan 1. Mr. Collins won the first prize, a game bag; G. Woolmington, second prize, a rocker, and H. Lange third. Mr. P. Sullivan received fourth prize for having made the lowest score. In the evening the club's first reception was held at Ruth's Hall in honor of the first year of its existence. The club is very popular in that section.

CHICAGO TRAPS.

CHICAGO, Ill., Jan. 16.—There has been a vast simmering down in the trap-shooting talk here within the last ten days, or at least a simmering down whose net result of performance compares very badly with the original volume of promise. The gathering of the clans so confidently anticipated and announced has not taken place to any alarming extent. The proposed week of match shooting has elapsed, and not one match, one solitary, single, lonesome little match with an outsider has taken place.

The fault for this does not lie altogether with Chicago, although it is true Chicago is not as anxious to-day to challenge all the universe as she was a couple of weeks ago. Then was the time for the Eastern cracks to take at the flood that flood which ought have led them on to substantial and actual glory—if they could shoot good enough. Now it is too late. It is, therefore, now the right time by all championship canons, for the Eastern men to begin sending in their challenges.

Mr. Fulford announces that he has retired from the shooting world. Oh! no he hasn't. He is just following the old customs of the champion class. They often retire. It is like the farewell habit with the prima donna.

Mr. Brewer, it is announced, has started West. FOREST AND STREAM of last Thursday says he has started West. We have received here a letter, bearing in the corner the card of Elijah D. Fulford, addressed to Capt. J. L. Brewer, in care of Capt. A. C. Anson.

There has been daily expectation of seeing Capt. Brewer stalk solemnly into Chicago, with an Olympian frown upon his brow, and cast a hundred weight of paltry gold upon the floor of Mussey's hall. He hasn't cast her yet, and he hasn't stalked. I think he is walking from New York. If he will remember the expedient of the tramp in the "Hole in the Ground," he can telegraph his name and address without any charge under the telegraph rules. Or maybe Elijah, who stands in with the telegraph people, will help him out. At any rate, something ought to be done. There has been a mysterious disappearance in high life. Capt. John L. Brewer is lost somewhere between New York and Chicago.

It is in this mysterious disappearance that there lies the cause of the ignominious fiasco of the great shooting week in Chicago. As I have stated before, Geo. Kleinman, the man whom it was proposed to back here, has been experimenting with four or five different makes and sorts of guns, and has not yet got one which fits him so that he can shoot in good form. In spite of this, an effort would probably have been made to arrange a match between him and Brewer, had the latter appeared here, although it was decided within the past ten days not to issue any challenge until George got settled into shooting trim.

Had Brewer or Fulford, or both of them, appeared here, there would have been a more general assembling of the Western shooters. They would have come on receipt of wire. But there has been nothing to wire them. Consequently, in the general indecision, everything has fallen through.

As was announced last week, McMurchy, Budd, North, and a few others arrived in good faith, expecting to see some good shooting, and perhaps to do some shooting. Charlie Budd wanted a match in a quiet sort of way, but did not want to crowd any one here on that point, for he has been repeatedly advised that he is the one man whom Chicago doesn't want to shoot. Charlie is a sort of favorite here, and nobody wants his money or wants to lose to him, which latter might be a very probable event.

When Mr. Budd appeared here there was an expression of relief on the part of the Chicago boys. They would not shoot him, but they could and would back him to shoot. If Brewer had appeared here he could have had a match with Charlie easily, if he wanted it. There were just three men, or perhaps four, including Fulford, against whom Chicago would have backed Budd this week, and it did seem probable that some or all of the races would be shot. These men were Jack Brewer, Jim Elliott and Jack Winston, and Fulford, if he appeared.

None of these appeared. Brewer got lost, Fulford "retired," Elliott wrote from Excelsior Springs, Mo., Jan. 12, and said he was sick with the grip, and would not come till he got well, and until he was sure Chicago meant shoot. Winston's backer was on Jan. 12 reported also sick with the grip, and this stopped another man. Meantime, Tom Marshall, of Keithsburg, also is down with the grip. Frank Parmalee, of Omaha, was expected here next Monday, but he is by this time doubtless advised that all dates are off, and will so remain at home.

Under the circumstances there seemed nothing to do but have a little scrub sweepstakes or two out at the park, and to-day a few of the shooters met for that purpose. There were present Messrs. Paul North, of the Cleveland Target Co; H. McMurchy, of the Hunter Arms Co.; C. W. Budd, of Des Moines, Iowa; R. Haywood, of the Haywood Arms Co., Denver, Colo.; R. E. Franklin, of Crescent City, Ill.; and from Chicago Messrs. R. B. Organ, R. O. Heikes, C. Antoine, I. W. Dukes, A. J. Atwater, A. E. Thomas, E. Price, J. E. Price, John Kleinman, G. Lauterbach, Jas. Porter, E. M. Gardner, E. M. Steck, F. A. Place, C. B. Dicks, B. Waters, D. F. Pryde and H. P. Pope, with others. With this attendance a very pleasant little shoot was had, in spite of the peculiarly raw air and the sharp wind which blew from right to left across the traps.

The birds were not exceptionally hard to-day. John Watson did not know until late yesterday that there was to be shooting to-day, and so fed the birds heavily, contrary to the custom on the day before trapping. Some of the birds were fast. The wind helped all of them that started well.

Mr. A. J. Atwater rather carried off the honors of the day, as the scores will show. In spite of the accident to his gun the other day, mentioned elsewhere, and in spite of the fact that he has shot three or four different guns since then, Mr. Atwater has scored 96 of the last 98 birds he has shot at in sweeps. He will do to keep an eye on.

The change of guns seems to work the other way with Andy Thomas. Andy has just purchased a new gun. I do not remember ever to have seen a more evenly distributed pattern than its right barrel shows, though the left is not so regular; yet notwithstanding the undoubted quality of the arm, he can't shoot it yet. Actual success with a gun is a hard thing to formulate. Unquestionably certain guns have quality which cannot be described or duplicated. Lock and stock certainly are as important as the barrel in this question, and the barrel quality is something not represented by the number of shot holes in a piece of paper. When a man has discovered his affinity in a gun, he would better stick to it. They say some guns "shoot out." Col. Felton assures me that no good guns ever shoot out. But all guns are not good guns.

The following are the scores of the day:

Sweep No. 1, 10 live birds, $5, 50, 30 and 20 per cent.:

C W Budd	1210221222—9	Paul North	1212122222—10
R B Wadsworth	1212222222—10	H McMurchy	0112112222— 9
A J Atwater	2122221020— 8	A Thomas	1220222020— 7
R O Heikes	2122122112—10		

Wadsworth, Heikes and North div. first, $10 50; McMurchy and Budd div. second, $6.30; Atwater won third, $4.20.

Sweep No. 2, same conditions:

C W Budd	1212220201—8	Paul North	0111101111—9
R B Wadsworth	1022212222—9	H McMurchy	2121101111—9
A J Atwater	1111120111—9	J E Price	1011122100—7
R O Heikes	1121112021—9		

Ties on first, $10 50, carried forward to next sweep. C. W. Budd won second, $6.30; J. E. Price won third, $4.20.

Sweep No. 3, same conditions:

C W Budd	0112122120— 8	E M Gardner	1011012120—7
R B Wadsworth	2210010w — 4	G Lauterbach	1201212222—9
A J Atwater	1111212221—10	E M Steck	0002222212—7
R O Heikes	2012121212— 9	A E Thomas	2222020202—7
Paul North	2112201021— 8	C Antoine	1011222002—7
H McMurchy	2100110021— 6	R E Franklin	0022122001—6
J E Price	1101202020— 6	F A Place	0200110020—4
I W Dukes	1222112222—10	C B Dicks	1301212021—8

A. J. Atwater and I. W. Dukes div. first, $22, in this sweep. Atwater also won first in the preceding sweep, $10.50, alone; R. O. Heikes and G. Lauterbach div. second, $13.50; C. W. Budd, Paul North and C. B. Dicks div. third, $9.

Sweep No. 4, same conditions:

A J Atwater	1221212121—10	C Storey	2201022111— 8
I W Dukes	0222221222— 9	G Lauterbach	0220011010— 5
C W Budd	1112122221—10	C B Dicks	2122021020— 7
E M Steck	1210121011— 7	J C Price	2110011222— 9
B Haywood	0212111102— 8	R E Franklin	1122122210— 9
E M Gardner	1110211112— 9	F A Place	2021011210— 7

A. J. Atwater and C. W. Budd divided first, $15.

I. W. Dukes, E. M. Gardner and J. E. Price divided second, $9.

B. Hayward and C. Storey divided third, $6.

Miss and out, $1:

A J Atwater	2112	F A Place	2210
C W Budd	2120	I W Dukes	0
E M Steck	220		

Target sweeps, 15 bluerocks, $2:

R O Heikes	001010110111110— 9	E Lauterbach	011010111000001— 7
H McMurchy	011111011101010— 9	C Antoine	001010001111101— 9
C W Budd	111111110101110—12	E M Gardner	111000110110011— 9
P North	011111110111111—13		

Paul North first, C W Budd second,

Mr. McMurchy left on an early train, to start East this evening. He has been away from the factory a little over a week, and has visited only two points, St. Louis and Chicago. As proof of the hold which American guns have on the shooting public, I may state that within seven days after leaving Fulton Mr. McMurchy sold, in those two cities, guns to the amount of $63 000. This statement was not made for publication, yet I believe the above figures break the record for one week's work by one man in the gun trade.

Mr. North will remain here till Monday, completing trade arrangements for the bluerock. There may be a little shooting on Monday, though that is doubtful.

Mr. Budd left to-night for his home in Des Moines, concluding that the chances for a match here were not good at present. Charlie will continue to shoot an L. C. Smith gun, American wood powder, and the Chamberlin Cartridge Co.'s load of that powder.

Mr. Budd gave me, just before he took his train, a bit of shooting news which I imagine will be pretty near exclusive for this paper. He told me that in February he was going East to shoot a race with Jack Brewer, if the latter could be induced to shoot. "I will take just exactly $250 with me to put up," said Charlie, "and I won't shoot for any more. That's a plenty, and this talk about $5,000 a side is nonsense. I've beaten Jack once, the only time I ever shot him, and I think I can beat him again."

Chicago would be very much pleased to see this match shot here. Can it not be arranged in some manner? E. HOUGH.

The Newark Gun Club.

THURSDAY, Jan. 14, was anything but a nice day for traveling or trap-shooting. Wet and mushy underfoot, with banks of heavy clouds fleeting to and fro overhead, it was not politic to venture out of doors without a rubber outfit and umbrella. Still the members of the Newark Gun Club would not allow any little trifle such as bad weather to deter them from enjoying their monthly outing at John Erb's Old Stone House grounds, although in this instance it did cause a material decrease in the attendance. It was about 1:30 P.M. when Mr. DuBray, the well-known Southern States representative of the Parker Gun Company, Samuel Castle, the old Newark veteran, M. F. Lindsley, of American wood powder glory, Ed. Collins, W. Fred Quimby's expert loader, and the FOREST AND STREAM representative jumped off a Bloomfield car and waded through the mud to the open door of "the Old Stone House." Immediately after the party meandered down the path to the shooting house and prepared for the business of the day. Everything was dank and nasty about the field, the combination formed of rain and melted snow having formed pools here and there that caused one to imagine himself in almost anything but a winter clime.

The first thing in order, of course, was a "Jersey" sweep, with the usual conditions of 4 birds each, $3 entry, 2 moneys. The score follows:

Collins	1212—4	DuBray	2222—4
Lindsley	1222—4	Castle	1111—4

It will be seen how great must have been Mr. Castle's temptation as he stepped to the score for his last shot, as all he had to do was to "accidently" shoot too quick or too slow and get second money alone. But Mr. Castle, I am proud to say, proved himself a worthy member of this worthy club by grassing his bird. All that could be done was for each man to fork over an extra dollar which, added to his share of money from the above event, entered him for the next. By this time the party had been augmented by the arrival of another old vet., in the person of C. M. Heeden, and a little later came the genial military trap-shooter Major R. Heber Breintnall. The scores of event No. 2 were as below:

Collins	2211—4	Du Bray	1011—3
Lindsley	2122—4	Castle	0111—3
Hedden	2121—4	Breintnall	2110—3

In this event both moneys were divided, or, more properly speaking, the contestants again made up the difference between their winnings from No. 2 and the entrance to No. 3. There was now another accession to the ranks, as Harry Smith, Gus. Freche's dreaded opponent, came on the scene, and was full of shoot as usual. This set-to resulted as below.

Lindsley	2121—4	Smith	1121—4
Du Bray	2111—4	Collins	2011—3
Hedden	1111—4	Castle	1201—3
Breintnall	1111—4		

Again was it the old story of "contributing" enough to enter another sweep. Up to the second sweep the Parker gun man had not been shooting in brilliant form with his first barrel, his gun being altogether too crooked. His second, however was able to stop almost anything. After a few rounds, however, he got himself in form and made some neat kills.

Event No. 4, same conditions as before, resulted as below:

Lindsley	1122—4	Breintnall	2122—4
Du Bray	2111—4	Smith	1101—3
Castle	1111—4	Leddy	0212—3
Hedden	1121—4	Collins	0110—2

Hugh Leddy, of Montclair, came in just in time to try his hand in this event, and after the first miss got mad and killed straight. First and second moneys were div., while Eddy Collins got—left in the cold alone.

Now came the regular monthly club shoot, at ten live birds per man, modified Hurlingham rules to govern, $5 entry, there being eleven entries and three moneys. John Erb and Gus. Freche had reached the seat of war in the interim and were ready for the fun. During the progress of the above mentioned sweeps the birds had been, as a whole, a miserable lot of "duffers," there being a good one occasionally, but as a lot they were poor. The weather, of course, was dead against good flying, but as Mr. Erb said, the lot in question "never knew how to go." The scores of the shoot are appended, Hedden with a 10-gauge gun shooting from the 30yds. mark, and Lindsley, who shot a 12-gauge, keeping him company from choice. All the others stood at 28yds.:

E Collins	1212211111—10	Gus Griffen	1011110112— 8
M F Lindsley	2211121121—10	M G Hollis	2201121101— 8
R H Breintnall	1121121110—10	S Castle	0020111111— 6
C M Hedden	2121112220— 9	H Leddy	1201012010— 6
E S Du Bray	1122121229— 9	J Erb	0212002010— 5
H Smith	1111212120— 9		

The moneys were divided, Castle's fourth and Leddy's fifth birds fell dead within a foot of the fence. The birds for this event were handled by John Erb and were of far better quality than those used in the first few sweeps. The next event was a miss and out, $1 entry. This resulted as follows:

Lindsley	1122	Du Bray	14
Collins	2220	Smith	10
Castle	210		

Miss and out No. 2, $2 entry:

Smith	11212	Castle (re-entry)	2110
Collins	12110	Du Bray	110
Castle	0	Lindsley	0
Lindsley	10		

Miss and out No. 3, $1 entry:

Collins	11111212	Smith	110
Castle	11222120		

This was a hard fought battle in a fast fading light, in fact after the second round it was so dark that one could scarcely see a bird thirty yards away. Eddy Collins proved, however, that his eyesight was as good as of old, the most of his birds being grassed close to the traps.

A Big Shoot at Woodlawn.

WHEN any one club can turn out twenty-five members at a regular club shoot it has no reason to blame its members for lack of enthusiasm. The Coney Island Rod and Gun Club, at its monthly club shoot on Wednesday at Woodlawn Park, Long Island, had the above number present, and not only did every man shoot, but they shot in great form, as is evidenced by the fact that ten men killed their 7 straight, while six others lost but one bird each. The contest was the regular monthly one for the club medal. The day was somewhat cloudy and the birds fair to good. Hugh McLaughlin officiated as referee and J. C. De Fraine was official scorer. The scores follow, the tie for the medal being shot off miss and out and won by J. A. Eppig:

The Woodstock Tournament.

WOODSTOCK, Ont., Jan. 12.—The three-days' tournament of the Woodstock Gun Club commenced this afternoon on the fair grounds. The weather was favorable for good shooting and the attendance was large. Quite a number of prominent shooters were present from a distance. The competition in the two events to-day was keen. The result was as follows:

First event, $100 guarantee, entrance $4.50. 10 live birds, American revised rules; first $40, second $30, third $20, fourth $10:

P Wakefield	2001lw — 3	H Carlton	0111122110— 8
A L Fay	11001w — 3	G W Price	1111011121— 9
Dan Miller	02011w — 3	Gen Grant	1111210111— 9
D Leitch	1111112221—10	J F Thompson	0101lw — 3
J Waper	0111112122— 9	G Margetts	2111100111— 8

Rutherford	1101101101101101—10		

Ties not shot off, money div. between the 13s and 12s.

Second Day, Jan. 13.

The club was favored with delightful weather for the second day. The scores made to-day were larger than those of yesterday, as was also the attendance. First event (postponed from yesterday), 10 singles and 3 doubles, entrance $1.50, 40, 30, 20 and 10 per cent.:

Leitch	01111100011 01 10 00— 9	Wheeler	1101010110 00 10 10— 8
Thomps'n	11111111111 10 10 10—13	Evans	1110111111 01 01 10—12
Emond	1110010110 00 11 01— 9	Wayper	1111111111 11 10 10—14
W Stroud	0001001011 00 00 00— 4	Price	1111111110 11 10 10—13
Overholt	1101111110 10 10 10—11	M'tgom'r	1110001111 10 00 11—10
Brown	1111111111 00 11 00—12	Sutherl'd	0111111111 00 01 11—10
Wakefield	0111101011 01 11 00—12	Berk	0000010000 w
Redpath	1010011111 10 11 11—12		

The regular programme for to-day was then taken up as follows: Fourth event, $100 guaranteed, entrance $1.50, 10 live birds, Toronto Gun Club rules, first $40, second $30, third $20 fourth $10:

Margatte	1111111111—10	Wheeler	000w — 0
Leitch	1111110111— 9	Thompson	0011111111— 9
Harwood	11110110w— 6	J Stroud	1111110111— 9
Redpath	1111101111— 9	Eddy	11010w — 4
Evans	0111111111— 9	Price	1111101111— 9
Stroud	1111111111—10	Montgomery	100w — 2
Emond	1111111111—10	Wayper	1111111111—10
Brown	1111011100— 7	Wakefield	10w — 1
Grant	1111111011— 9	Catton	1111111111160— 8

Fifth event, 25 singles, $40 guaranteed; entrance $2.75, divided 40, 30, 20 and 10 per cent. Rapid firing, class shooting:

Margetts	1111111111111101111111—23
Thompson	0111111111111111011111—22
Emond	1011011100111111111111011—20
Wheeler	1111111011111111111011111—23
Overholt	0101111010110101100111 —16
Wakefield	0010110011101000001000010 —10
Catton	1001110010111110101111101—17
Wayper	1111111110111111111111111—24
Redpath	0101111100001101110000100—14
Evans	0010111010100111110011011—16
Price	1111111111111111111111111—23
Montgomery	1101111011111011111110001—19
Miller	1111111110101110101011010—18
Sutherland	0001111111101110101010960—15

Wayper took first money, Margetts, Price and Wheeler dividing second, Thompson taking third and Emond fourth.

Sixth event; 15 singles, $25 guaranteed, entrance $2, five unknown traps; 1st $5, 2d $5, 3d $5, 4th $5, 5th $5; class shooting.

Emond	101111111001111—12	Leitch	1111111001001111—11
Grant	1100111010100001— 8	Montgomery	1011100111110000— 9
Calton	1110111110001111—12	Eddy	0011001111111110—10
Wheeler	0101010111011001— 8	Wayper	1110010101011110—12
Overholt	0000101101111001— 9	Margetts	0111111111111010—12
Thompson	0111111010101101— 9	Brown	1101011111111011—11
Harwood	1000110000100— 5	Musser	0110010010111001— 7
Evans	0101011011111011	Miller	1000011100011100— 6
Redpath	0111110111001110—10	Wakefield	1100101111010100— 9
Price	0111111001111111—10	Sutherland	0010000000111111— 5

Emond, Calton and Margetts divided first money, and Evans, Leitch and Brown second. The third money was shot off at five singles, Price winning.

Third Day, Jan 14.

To-day closed the Woodstock Gun Club's first annual pigeon and bluerock tournament, and the committee of management are to be congratulated upon the success of their first efforts. They have been favored with delightful weather throughout and the attendance has been large. The only event on to-day's programme was for the championship of Oxford. Entrance fee $3, shooters handicapped from 21 to 30yds., 5 traps, both barrels. First prize, silver cup; second, a sole leather gun case; the cup to be won three times before becoming the property of the shooter.

Rowe	0111011111— 8	Grant	0111110110—6
Andrews	1111100111— 8	Kendall	0011101111—6
Miller	1111111111—10	Thompson	1011101111—8
Harwood	1101101111— 8	Hill	1111100110—7
Williams	1111111111—10	Gurnett	1101011000—5
Fay	0101101111— 7	Smith	0101001110—4
Spracklin	1001011001— 5	Sutherland	1111101001—7
Thompson	1111010010— 6	Harwood	0011010110—5
Martin	0110000101— 4		

Williams won first and Miller second.

The South Side's Weekly.

DOWN on the edge of the Newark meadows below Emmett street station, on the line of the Pennsylvania Railroad, where the members of the South Side Gun Club hold forth every Saturday afternoon, the weather conditions are not always favorable for fine shooting, the wind having a clear space from the grounds to the borders of Newark Bay. Last Saturday was cold, and the good Boreas was not in a pleasant mood, although he felt in a frolicsome one, and played havoc with the bluerock targets, the scores at times also suffering from his antics. The attendance was good as it usually is, and all hands were anxious to shoot and willing to risk having low totals. All the events on the regular programme were at 10 bluerocks per man, $1 entry, eight entries or under, three moneys; over eight entries, four moneys. The events are appended, all ties being divided:

Event No. 1:

Brientnall	1111111010— 8	Osterhout	1110101100— 6
Hobart	1111111111—10	J H Terrill	1101100001— 5
Beam	1111101111— 9	Whitehead	0101011101— 6

Event No. 2:

Samuel Castle, Jr., Can Shoot.

THE expectation of a half-dozen matches being shot on John Eeb's Old Stone House grounds in Newark on Saturday drew quite a party to that popular resort, and as some of the principals failed to appear the majority were disappointed. The match between Gus L. Freche and Chris. Reinhardt, announced to begin at 12 o'clock was declared off, Mr. Freche not being able to be on hand. Samuel Cole and Caleb Wells were also to have shot a match at 25 live birds each, but this also went by default, Wells being on hand with his shootin' iron and the "dust," but Cole's backer failing to appear. The party has something in the way of shooting, however, to compensate them for their disappointments, Samuel Castle, Jr., a son of the old Newark veteran field and trap shot, shooting against Joseph Oschwald, and Albert Whatton of the Roseville Gun Club having a little "go" with Mr. Myers. In the former match the conditions were 15 live birds per man, $10 per man being the stake, loser to pay for the birds, modified Hurlingham rules to govern. Young Castle proved to possess his full share of the family skill by winning with the below score, he standing 30 and Oschwald at 28yds.:

Castle, Jr.....2222201121122201—13 Oschwald.....2o2021102002010— 8

Castle's fourth bird went almost to the fence before it gave up the ghost. His seventh and eleventh birds were very fast and called for a quick first. Oschwald's eighth bird was shot on the ground and he missed his extra bird. His ninth carried two charges of shot to the front boundary line, and when "Lem" went after it tried to scale the fence. This it was not able to do, and finally, after chasing fully a hundred yards, "Lem" made one of his famous jumps and made it a "dead bird."

Whatton and Myers shot at 10 birds each, for $10 a side, loser to pay for the birds, each man standing at the 28-yard mark. The scores:

Whatton.....1220111102—8 Myers.....0100020022—4

Whatton shot a quick and accurate first, but was unable to use his second efficiently.

The rest of the day was filled in by shooting "Jersey" sweeps, the conditions being 4 birds per man, $3 entry, two moneys. The results of the various events, in order, are shown below:

	No. 1.	No. 2.	No. 3.	No. 4.	
Hedden	1122	1121	1111	2111—	16
Reinhardt	2112	1221	1212	1101—	15
Castle, Sr.	2221	0012	2111	2111—	14
Hollis	1121	1101	1121	1221—	15
Smith	....	1111	1211	2211—	12
Castle, Jr	2110	....	....	....	3

In Event No. 1 first money was shot off, miss and out. Hollis went out on the first round and the others divided; Castle, Jr., took second. In No. 2 first was divided. In No. 3, where all killed straight, the money was carried over to No. 4, in which Castle, Hedden, Sinclair and Hollis again tied. The two first moneys were put together, Hollis drew his pro rata and the others started to shoot off, miss and out; but after the second round, when each man had killed straight, they sensibly concluded to divide what was left of the pot.

Castle, Sr. and Smith then shot a series of 4-bird matches, $3 entry in each, these resulting in the following scores:

					Tie.	
Smith	2211	1102	1112	1101	o	14
Castle, Sr	0110	0110	1110	21o2	2	11
Engling	1100	....	..	....	.	2

Chicago Shooters.

WATSON'S PARK.—Burnside, Ill., Jan. 18.—South Chicago Gun Club, 20 live birds for medal, American Association rules:

F Willard 21012121222221—17 Reeves....00101102321211002102—13
Marsh....1112201202121202211—17 Fogli....0011222020120121122—16
L Willard 11100111110121012l—16 Dr Larkin2101021111111212111—18

Same day, 5 live birds, $2 entrance:

Geo Kleinman	12222—5	H McMurchy	11121—5
J E Price	12010—3	B White	21110—4
L Harrison	22011—4	A W Reeves	12010—3
Capt A C Anson	21022—4	M J Eich	11101—4
A J Atwater	11111—5	J A Place	22002—3
Q M Hamline	22212—5	O Von Lengerke	12220—4
F E Willard	01102—3		

First and third divided. In shoot-off L. Harrison and B. White divided second.

Sweepstake shooting, 7 live birds, $5 entrance, American Association rules:

R O Heikes	1111112—7	E M Steck	2121212—7
L Harrison	2110122—6	M J Eich	2121120—6
J E Price	2211221—7	L M Hamline	2010221—5
Geo Kleinman	1110220—5	B White	2221221—7
H McMurchy	2012212—6	Ed Marsh	0111001—4
A J Atwater	1211112—7	L C Willard	1211010—5
Capt A C Anson	2111211—7	A W Reeves	1112212—7

In shoot-off Heikes, Atwater, Anson and White divided first. Other ties divided.

Twenty-five live birds, $25 a side, American Association rules:

L M Hamline.....2111020102111012222210l—19
F A Place.....2220222022012012022020122—18

Twenty Peoria blackbirds,$2 entrance, ties divided: R. O. Heikes 18, A. J. Atwater 14, A. C. Anson 13, H. McMurchy 13, Geo. Kleinman 15, L. M. Hamiline 9, F A Place 8, O Von Lengerke 19.

Same day, 15 Peoria blackbirds, $1.50 entrance: R. O. Heikes 12, H McMurchy 11, A. C. Anson 11, A. J. Atwater 10, Geo. Kleinman 12, F. E. Willard 11, B. White 8.

Twenty-five Peoria blackbirds for the birds: R. O. Heikes 22, H. McMurchy 18.

Same thing: Geo. Kleinman 21, R. O. Heikes 20.

Ten Peoria blackbirds for the birds: R. O. Heikes 10, O. Von Lengerke 10.

South Chicago Gun Club, 30 Peoria blackbirds for club medal: A. W. Reeves 24, F. E. Willard 24, Ben Fogli 15, L. C. Willard 24. In shoot-off L. C. Willard wins.

Jan. 14.—The Prairie Shooting Club, of Chicago, for Johnson medal, 15 live pigeons each, American Association rules:

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $2.00. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

BOWDISH MFG. CO.—This firm is now very busy with skiffs and pleasure boats of various models, one of their novelties being a combination rowing and sailing boat with roller seats which may be quickly removed and replaced by chairs or ordinary fixed seats. The boat may be quickly rigged for sailing. The firm is also busy with several large orders for boats for summer resorts, thirty-five boats going to one place in the Green Mountains.

NEW YORK C. C.

THE New York C. C. at a meeting on Jan. 14 made two important moves which are interesting to the canoeing fraternity as well as to the club itself. After a long consideration of the question, for over a month, and a thorough discussion at the meeting, the club decided to move its house from Staten Island and take up a permanent anchorage at Bensonhurst, on Gravesend Bay. At the same time Mr. Whitlock, the incoming commodore, offered a motion to amend the constitution so as to change the titles of the officers from commodore, vice-commodore and secretary-treasurer to captain, mate and purser. The motion was seconded by Sec.-Treas. Stevens, and carried with but one dissenting vote, and it is certain to be confirmed at the next meeting.

When the New York C. C. was founded, in 1871, a number of its members were residents of Staten Island, and nearly all of the early races were sailed about the mouth of the Kill von Kull. The first permanent home of the club was the club house built at New Brighton, on the site now covered by the ferry slips and depot, in 1879. Here a number of races were sailed, and the club fleet was seen about the Upper and Lower Bay and the Kills, the brightest part of the club's history being included in the years 1880 to '86. In the latter year the club was driven out by the new railroad which has ruined the once beautiful water front of Staten Island, and the house was rebuilt on a scow, which was moored near the old site. Since 1885 this house and the new one built in 1890 have been moored at or near Tompkinsville, a mile or more below the old site. The increase of piers and docks has made it a difficult matter to obtain a suitable anchorage, the present one being very difficult of access from the street.

While the members of the club have remained loyal to their old sailing and racing waters on the Upper Bay, maintaining that the course was all that could be desired, the visitors, both home and foreign, have objected to the strong tides, the numerous obstructions along the shore, the many anchored vessels, and the flaws winds over the high hills; and the strongest objections have been made within the past two years. At the same time the advantages of Gravesend Bay for canoe sailing have been clearly demonstrated, and the club went so far last fall as to sail the international races off the pier of the Bensonhurst club. Since then the feeling in favor of a move has been growing steadily, with the result that all arrangements have now been completed, and by an agreement with the Bensonhurst club the house will be moved just inside the pier. While many of the members have felt a natural reluctance at leaving the old home, the two facts, that they would be driven out sooner or later by commerce, and that Gravesend Bay is the natural center of canoe sailing about New York, have been clearly recognized.

The first result of the move will be a large accession of new members, a number of prominent canoeists, Messrs. Paul Butler, H. C. Ward and others, having applied for associate membership. When fully installed in its new quarters, the New York C. C. will offer by far the best facilities for canoeing of all suburban clubs.

Among the founders of the club were a number of yachtsmen and naval men, and very naturally the officers' titles were made to conform to yachting usage. How the title of commodore has become a by word is well known to all canoeists, and the question of a change of title has been debated in the club since the international race last fall. The change just made is an admirable one, and other clubs will do well to follow it as they once followed the New York C. C. in adopting the title of commodore.

THE ROYAL C. C. RULES.

WE have already mentioned the changes of rules made at the recent annual meeting of the Royal C. C., the three years limit having expired. The full text of the rules is as follows:

Classification.—Sailing Canoes.

27. Decked Canoes, 1st Class. 28. Decked Canoes, 2d Class. 29. Open Canoes, 3d Class. 30. Sailing Challenge Cup Competition. 31. Paddling Canoes.

27. Decked Canoes, 1st Class.—Greatest length from fore side of stem to aft side of sternpost shall not exceed 16ft., with a maximum beam of 30in. for that length (a beading not exceeding 1½in. in depth and ⅜in. in thickness shall be allowed without being measured in the beam). The beam may be increased by ¼in. for each inch of length decreased. Minimum length 12ft. and minimum beam 28in.

Depth inside from center of deck to garboards (alongside keel) at fore end of well, maximum 16in., minimum 12in. Depth outside from top of crown of deck to lower edge of garboard not less than 12in., taken anywhere along up to 2ft. from ends of canoe. Depth from upper side of deck at 1ft. out from middle line abreast of fore end of well to level of lower edge of garboard at keel not less than 12in. A fixed keel of wood not more than 2in. deep, including metal band (if any) allowed.

All ballast (except keel band of not over ¼in. deep and centerplates, bilge plates and metal deck fittings) shall, if carried, be within the canoe and above the garboards. Ballast may be shifted during a race, but all ballast on board at starting must be carried throughout the race.

Centerplates, drop keels or bilge plates, must house within the canoe when they are hauled up, and must not exceed ⅝in. in thickness and 18in. drop below the keel band.

No deck seat shall be extended beyond the perpendicular on the sides of the canoe.

The total sail area shall not exceed 112sq. ft., exclusive of spinaker, which shall not exceed 50 sq. ft.

28. Decked Canoes, 2d Class.—Limitations as in 1st Class, and to be clinch built (plank edges overlapping and forming lands). The minimum beam shall not be less than 26in.

Sail Area.—The area of largest sail shall not exceed 60sq. ft., and the total area shall not exceed 75 sq. ft., exclusive of spinaker, which shall not exceed 25 sq. ft.

29. Open Canoes, 3d Class.—Any material and build; other limitations as in 2d Class, and end decks allowed, each not exceeding 2ft. 6in. in length; remainder of canoe not decked and not covered in.

Note.—The above limitations shall not affect adversely any canoe built prior to November, 1888, which might have been eligible to sail in R C.C. matches under the rules of 1888.

30. The Sailing Challenge Cup shall be subject to competition once each year, and if the race is not finished by the winning canoe within four hours from the start, it shall be re-sailed. The cup to be held for one year by the winner.

Paddling Canoes.

31. For paddling races, a canoe shall not exceed 16ft. in length, and her greatest beam shall not be less than 26in. No other limitations.

Yawl Definition.

Length over all not exceeding 20ft. Beam not less than 3ft. Depth, from upper side of deck to under side of keel (measured at any point) not exceeding 3ft. Rating (length multiplied by sail area, divided by 6000) not to exceed 0.5. No ballast outside or below the garboards, excepting centerplate or drop keels. No transom or counter stern.

WESTERN CANOE ASSOCIATION.

THE annual meeting of the executive committee of the Western C. A. was held at Cleveland, Ohio, on Jan. 9. We are indebted to the *Leader and Herald* for the following report:

Those present were Messrs. O. A. Woodruff, Dayton; C. F. Pennewell, Detroit; G. G. Case, Jackson, Mich.; George B. Ellard of Cincinnati, and G. H. Gardner of Cleveland. In deference to a request from Western members, the races which have always occurred at Ballast Island, the headquarters of the club, will be this year at Lake Winnebago, near Oshkosh, Wis. The date of the meeting was fixed for July 9 to 23, the races to occur during the week of the 11th. The following programme, submitted by the regatta committee, Messrs. J. R. Bartlett, J. O. Shiras, C. J. Stedman and C. W. Lee, was adopted:

No. 1. Paddling, Class 1—One-half mile.
No. 2. Paddling, Class 2—One-half mile; Record.
No. 3. Paddling, Class 3—One-half mile; Record.
No. 4. Paddling, Tandem.
No. 5. Sailing and Paddling, Classes A and B.
No. 6. Paddling. Upset—One and one-half miles. Sail first half mile.
No. 7. Hurry-scurry—Paddle second and sail third.
No. 8. Sailing (Gardner Cup), Free-for-all—Best two heats in three, each heat two turns of the course, or three miles. For Classes A and B; Record.
No. 9. Sailing (Trophy Cup), Classes A and B—Best two heats in three, each heat two turns of the course, or three miles.
No. 10. Sailing (Longworth Cup), Class C—Best two heats in three, each heat two turns of the course.
No. 11. Sailing (Man Overboard), Free for-all—At a given signal crew to throw a paddle to leeward, pick it up, and continue on the course across the line.
No. 12. Sailing Passenger Race, Free-for-all—Three miles, or two turns of the course.
No. 13. Sailing (Maneuvering), Free-for-all—At the minute gun all sails will be lowered; at the starting signal sails will be hoisted and canoes got under way, sailing to first buoy; after turning first buoy all sails will be reefed, canoes continuing to second buoy under reef; after turning second buoy reefs will be shaken out, canoes continuing under full sail across the line. Distance, one turn of the course.

All races will be governed by the rules of the W. C. A. The cup races will be called and sailed in the order above stated. Upon the suggestion of the regatta committee Rule 25, Sec. 5, was amended to read as follows:

"A canoe must start and continue to the finish of each heat (except in case of accident), and, winning two heats, shall be entitled to the cup. The same canoe shall not be eligible to win more than one cup at any one meet."

This has the effect of making each canoe participate in the first race, and is intended to debar canoes from remaining out of the early races in order to win a more desirable cup.

At 9 o'clock in the evening the canoemen sat down in the great dining-room of the Stillman to a banquet tendered by the Cleveland C. C. After justice had been done to the elaborate feast, ex-Commodore Bartlett asked all to drink to the memory of one who had passed away, and all rose and drank to "The Skipper," this being the name by which the late Judge Longworth of Cincinnati was always known in the club. Commodore F. F. Prentiss, of Cleveland C. C., greeted the guests, and said that he regretted that the Cleveland club had not a fine large club house in which to entertain their friends. He regretted his limited acquaintance with the members of the committee, but on behalf of the club offered freely any assistance in any form that could be of use to the W. C. A. Ex-Commodore Geo. B. Ellard, of Cincinnati, responded to the toast "Reminiscences." He recalled the organization at Ballast Island, July 24, 1885, the struggles and triumphs of the races, and indulged in several personal hits. T. J. Kirkpatrick, of Springfield, was called upon to speak to the sentiment "Canoe Cranks," which he did in a very pleasant manner. Vice-President F. W. Dickens, in responding to the toast "Our Western Continent," spoke highly of the special facilities of the West for regattas, owing to the number of small inland lakes. "The W. C. A." brought ex-Commodore J. R. Bartlett, of Freemont, to his feet. He said he felt his utter inability to do anything like justice to the Western Canoe Association, but his hearers thought otherwise before he had ceased speaking.

W. N. Gates closed the evening's programme by reponding to "The Press." The enjoyment then became informal, and social greeting and chaff were exchanged until the hour of midnight. Commodore G. H. Gardner of the W. C. A. presided at the banquet, and among those present were Hon. J. R. Bartlett of Fremont; F. W. Dickens, E. H. Holmes, Emil J. Harrison, Charles Rogers and A. P. Chapman of Milwaukee; O. A. Woodruff and W. H. Crawford of Dayton; T. J. Kirkpatrick of Springfield; C. F. Pennewell and William C. Jupp of Detroit; H. C. G. Ellard of Cincinnati; Nat. H. Cook of Chicago; F. H. Gary of Oshkosh, Wis.; G. G. Case of Jackson, Mich., and Hon. Geo. W. Gardner, W. H. Huntington, A. G. Hathaway, W. N. Gates, F. F. Prentiss, A. H. Van Gorder, B. W. King, J. O. Gardner, R. N. Lowe and B. M. Gardner of Cleveland.

A NEW CANOE CLUB IN TORONTO.

THE Corinthian C. C. was recently organized in Toronto with thirteen charter members, many of whom are ex-members of the Toronto C. C. The executive committee of the new club consists of Com. Colin Fraser, Vice-Com. Robert Tyson, Purser W. C. Lee, Committeemen D. B. Jacques, Vice-Com. N. D. A. C. A., and H. C. McLean. The other charter members are W. H. P. Weston, Purser N. D. A. C. A.; W. C. Jephcott, J. L. Kerr, J. D. Kelly, H. C. Fortier, A. Jephcott, J. Jephcott and W. A. Fraser. The membership is limited by the constitution to 25. Several new members have been recently elected and a number of applications are before the club, and there is a probability that the limit will be reached before the opening of navigation.

The Corinthians appreciate the deep obligation all canoeists are under to the American Canoe Association and they have provided in their constitution that every member of the club who is not already a member of the A. C. A. shall immediately on his election to the club be proposed by the purser for membership in the Association, and that the purser shall each year, out of the club's funds, pay the A. C. A. fees for all the members of the club.

Unpretentious but comfortable quarters have been secured on the water front opposite the Union Station.

Increased enthusiasm for canoeing is confidently anticipated as the result of the friendly rivalry of the Corinthians and the Torontos.

A WAR CANOE RACE.—The Brooklyn C. C. will open the season on Saturday, May 21, with a race for war canoes, with crews of fifteen men each, including steersman. Individual and crew prizes will be given to the winners. Particulars of detail will be published later.

A. C. A. MEMBERSHIP.—Eastern Division: Chas. H. Worthen, Taunton, Mass.; Howard E. Metcalf, Holyoke, Mass.; L. C. Sargent, Boston, Mass. Central Division: Wm. L. Miller, New York. Atlantic Division: Chas. W. Buckelew, Plainfield, N. J.

Yachting.

Small Yachts. By C. P. Kunhardt. Price $10. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

Yachtsmen who do not see what they want under this heading will please lookunder the hatches of the *Canoe*, peep into the *Kennel*, squint down the barrel of the *Rifle*, open the *Fish Car* and *Game Bag*, inquire of the *Sportsman Tourist*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising Departments*.

DIMENSIONS AND TONNAGE.—Of the many inquiries which come to us concerning yachts, not a few refer to craft of certain tonnage, tonnage length, or length on keel. We would call to the attention of our correspondents that so far as yachts are concerned, these terms are out of date and obsolete, and convey no definite idea of the size or length of a yacht. In describing a yacht or asking questions about one, the important measurements are the length on the waterline, the extreme beam, and the greatest draft of water. From these three a definite idea of the size and general type of the boat can be had, and if the extreme length on deck be given, the general dimensions may be considered as complete. We called attention some time since to the fact that the over all or deck measurement, as taken for many years and printed in all yacht lists, is not of the least value, the points of measurement depending on the construction and not on the model, the same yacht measuring differently when built in steel from what she would if of wood. This length also is taken in different ways by different rules.

For all purposes of the yachtsman, the proper length is from the fore side of the stem at the deck height, or of the trail-boards or other ornamentation forming the stem, to the after side of the arch-board or continuation of the planksheer, at the middle of the stern, just under the rail. This measurement gives a correct idea of the total overhang, which the others fail to do. It would be an excellent thing if the clubs would incorporate in their books a note concerning this measurement, and also if they would, in all cases where it can be obtained, substitute it for the figures now printed under the head of length over all. After knowing the waterline of a new yacht, the next question to-day is the length on deck; and it is time that some accurate and uniform system of measuring it was adopted. As for tonnage, there is no longer any use in using such on indefinite and ambiguous term in connection with yachts save when required by the Customs authorities.

TACKING SHIP.—There are many good fore-and-aft sailors, and not a few clever yachtsmen among them, to whom the handling of a square-rigger is a mystery, and who will be able to learn something from the interesting description of the work of tacking a ship, on another page. Our readers will doubtless remember the stirring poem on the same subject, by Walter Mitchell, published in the FOREST AND STREAM. The description here given will make clear the technical accuracy of the poem, one of its notable features.

CATBOAT RACING ON BUZZARD'S BAY IN 1891.

Date.	Club.	First Class, 24 to 30ft. L.W.L.			Second Class, 20 to 24ft. L.W.L.								Third Class, 17 to 20ft. L.W.L.									Fourth Class, 14 to 17ft. L.W.L.					Fifth Class, 14ft. and under.

SPOONBILLS AND WHALEBACKS.—The ideas exemplified in Gloriana and the new whaleback steamers and barges, of full, round lines in both, with a dome-shaped deck in the whalebacks, are likely to produce some curious craft in the near future. Some three months ago, at the suggestion of a friend, we sketched out over the lines of a Cape cat with a cabin house, a craft of similar underwater body, but with extended ends; while the cabin house was replaced by a little more freeboard and an excessive crown to the deck, giving the same headroom as the cabin house. The result was a curious-looking craft, but one that would be able, seaworthy, and superior to the original catboat in most respects. This week we were shown a rough sketch of a similar craft, and now the fertile Mr. Clapham is out with an original nondescript having some peculiar features, but of the same general type, spoonbilled and turtlebacked.

CATBOAT RACING ON BUZZARD'S BAY IN '91.

THE racing of the past season in Buzzard's Bay showed plainly the tendency of modern racing to confine itself to one or two of the smaller classes. There were but three boats in the first class—one new one. There was but one new boat in the second class. In the third and fourth classes, on the other hand, there were many new boats as well as many old ones.

In the first class Jenney had built a new boat, Hector; her only rival was the old Mattie. Mist, Widgeon, Surprise and Anonyma were the only ones raced to any extent in the second class. In the third class the old champions Eina and Puzzle, with Parole and occasionally Daisy, Cayuse and Hermione were in the field. There were also four new ones: Tycoon and Ashantee, built by A. M. Jenney; Buzzard, by Dunn; and Phenomenon, by Hucking.

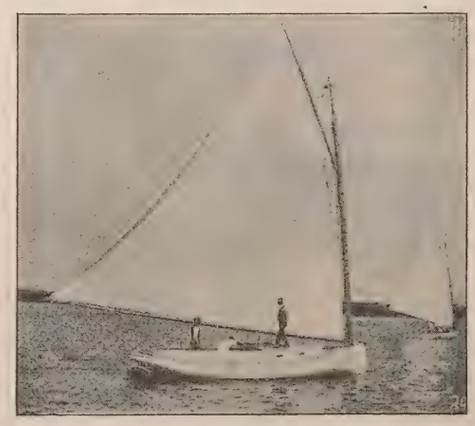
EINA.

Edith was the only fourth class racer to keep up her reputation. There were three new ones: Cat, built by Holmes; Squall, by Dunn, and Charmion, by her owner. Mr. J. Crane, Jr. There was hardly any activity in the little fifth class. Worry, Trana and Wideawake did some racing. Rana, a new boat built by C. A. Clark promised well but only raced once. The sneak-boat Bessie J. surprised every one by taking one first prize.

The first race of the season was on June 17, the 170th regatta of the Beverly Y. C., at Monument Beach. There was a heavy northeast gale blowing. In this race Surprise made her first appearance for several years, having been replanked and altered. The old Mattie easily handled her new rival, while Mist had little trouble in leading the second class. Widgeon was doing well when forced to reef, and then she made a mess of it. In the third class Tycoon and Phenomenon did well considering it was their maiden race. Phenomenon should have won, but she forgot there was a second round and waited three minutes before she started off the second time. Edith was the only fourth class boat to appear and so did not race.

The next race was the second open sweepstakes race of the Beverly Y. C. It was sailed on July 4 in a strong southwest wind. Hector sailed with more ballast and turned the tables on Mattie. Anonyma beat not only the second but the first class, while Surprise's sailing showed improvement. The old Mollie sailed as fast as ever. Moccasin made her first appearance, but was overmatched. She was built for the third class, but her builder, Crosby, made her 10in. too long—with disastrous results. Parole led the third class on the first round, but was passed by Puzzle at the last turn. Buzzard showed great speed running, but seemed unable to go to windward. In the fourth class Cat began her really wonderful career by defeating Squall by good five minutes.

The next race was the first open sweepstakes of the Sippican Y. C., the best race of the season. There was a moderate southwest breeze. Hector was delayed by a slight accident and was beaten by Mattie. She protested Mattie for cutting a buoy, but the weight of evidence seemed to show that Hector had mistaken a boat not in the race for Mattie, and the protest was not allowed. Mist won easily in the second, and Widgeon lost third place to the little Bonita on corrected time. Eina sailed beautifully, but

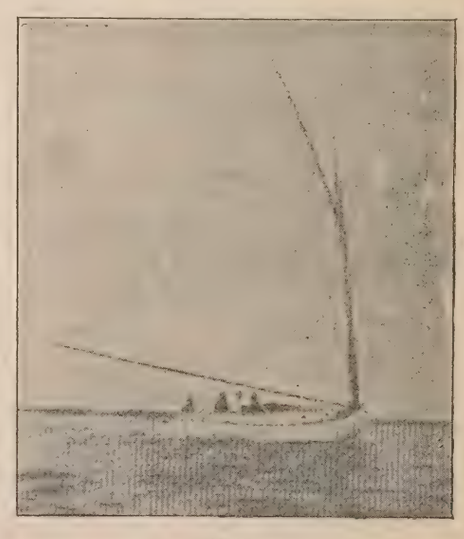


CAT.

Buzzard's performance was a disappointment. Cat continued her victorious career, and Squall showed some speed by handily beating Edith. Wideawake in the fifth easily defeated the smaller boats, but Rana was a good second.

On July 18 was sailed the first race of the Beverly Y. C. for the Buzzard's Bay championships, in a light and variable southeast breeze. Mattie had a walkover. Mist again had the heels in the second. Puzzle was beautifully sailed and earned her decisive victory in the third. Cat was still to be beaten, and Edith could do no better than second. Squall's sail was small and set horribly. The result was that she was last.

The Sippican Y. C. held its annual club regatta on July 25. There was a single-reef breeze from W.S.W. This time Hector had a walkover. Anonyma showed her speed by beating Hector as well as Widgeon and Success on actual times. Success found things too hot for her and withdrew. Parole was at her best. Eina came nearest to her and was second. But Ashantee, a cruising boat with a small sail, would have beaten Eina if she had not been handicapped. Cat was missed in the fourth class



ANONYMA.

but Edith and Squall promised to make a close race. Squall's sail, however, had gone from bad to worse and she simply could not go to windward, and in gybing round the last mark she came near tearing her sail and lost three minutes; so she crossed the finish line, a badly beaten boat. Worry had a walkover in her class.

The next race was an open race at Mattapoisett. It was especially noteworthy from the fact that Iris raced in the second class. Iris is a Herreshoff boat, and was supposed to be invincible in heavy weather. Here was just her time, a gale from the southwest with a heavy sea. But when Anonyma finished Iris was two miles in the rear. Tycoon was on her own ground and easily beat the third class. The fourth class race was a close contest for first place between Cat and Squall. Squall's sail had been cut over, and, though not perfect, set better than before; and since it was reefed the small size was not a drawback. On the first round Cat gained about 2m. Then both shook out reefs and Squall began very slowly to creep up. It was too late, however, and Cat finally won by about a minute. In the fifth class Worry was badly beaten, and Reba took first prize.

The third open sweepstakes race of the Beverly Y. C. was sailed on Aug. 8, in light northerly wind. It was a bad day for the heavy weather boats, such as Parole, Ashantee and Squall. Mattie withdrew, leaving Hector a walkover in the first class. In the second the race was for second place, for Surprise ran out a long lead. Grampus, just built by Crosby, made her first appearance, but did poorly. Eina, Puzzle and Phenomenon made a good race in the third. In the fourth class Charmion, just built by her owner, sailed her first race. She had been strained and leaked badly, so she did fairly well considering. She was beaten by the whole fleet, but gained by a fluke just before the finish and passed Squall.

The next race was set for Aug. 22, the open race of the Sippican Y. C., but on that day a very heavy southwest gale was blowing and no boats appeared. Squall, Edith and Red Wing, however, had a brush over the course, Squall winning by 20s., Edith second. The race was sailed off on Aug. 26. It was the worst kind of day possible. The start was in a very light southeast breeze. Surprise beat her rivals so badly that they withdrew. Puzzle had things her own way in the third class. Buzzard started out well, but when the wind fell was out of it. Charmion, with her enormous sail, had no difficulty in disposing of the fourth class. The wind came in very light from the northeast just before the finish and gave the boats a beat home. While the leaders of the fourth class were beating up to the line Red Wing was coming on with a good southeast breeze, and so, with the aid of allowance, she beat the Squall. Worry had a long lead in the fifth class, but Bessie J. got Red Wing's puff and took the prize.

MIST.

The second championship race of the Beverly Y. C. was sailed on Aug. 29, another light-weather race. Mattie, that had raced so long in the bay, and had won so many championships, had at last been sold out of the club and so there were no entries in the first class. Surprise again beat everything in her class and tied Mist for the championship. Puzzle by winning in the third class for the second time secured the pennant. Buzzard did better than usual, running very fast and beating Eina on actual time. In the fourth class there were so many flukes that the race soon lost all its interest. Edith got the benefit of a fluke and won the race by five minutes after she had really been beaten by the Cat. When it breezed up about half way through the race, Charmion had to reef and go home. The ex-champion, Kitten, withdrew after she had been badly beaten by Squall.

On Sept. 5 the second sweepstake race of the Sippican Y. C. was sailed. There was a steady reefing breeze blowing from N.E. Again Anonyma proved that she was a wonderfully good heavy weather boat. Tycoon won handily in the third class. Daisy beat the fleet in the windward work but was outrun: Eina sailed her usual good race and was second. Parole should have done better, but she had some trouble with her sail and it did not sit properly. Cat resumed her victorious career in the fourth class, while Edith and Squall took their revenge upon Charmion for the beating she gave them on Aug. 25. Worry beat Trana badly on the first round, and after that held her own enough to win by a good margin.

The Beverly Y. C. was unfortunate in the day for its open race. All through the morning of Sept. 7 there was a calm and a blinding rain. Just before the start it began to blow a gale from the northeast. Anonyma was far ahead in the second class, but was over confident and wasted a deal of time, and did not realize that Defiance was in the race until it was too late. In the third class Parole gave a marvelous exhibition of lugging sail. Puzzle, Daisy and Eina each had to stop and reef at least twice during the race, and Eina was forced to withdraw. But Parole cracked on her

single-reefed sail from start to finish, and won handily. Daisy came very near beating Puzzle.

The fourth open sweepstakes race of the Beverly Y. C. was sailed Sept. 12 in a moderate southwest breeze, Surprise and Anonyma making a very close race. Although beaten on actual time, Anonyma won by 1s. Eina sailed a close race with Tycoon, winning by about 20s. Daisy didn't find things to suit her and withdrew. Cat, as usual, won in the fourth class, with Edith an easy second.

The third race for the Buzzard's Bay championship came off Sept. 26 in a good whole-sail northeast breeze, which lightened toward the finish. The old Violet appeared in the first class, and she had a walkover, tieing Mattie for the championship. Anonyma sailed another close race with Surprise, and won by 22s.; so Mist, Surprise and Anonyma were now tied. In the third class Eina, with double-reefed sail tried to beat Daisy. But she found it would not work, and shook out her reefs in time to win the race. Puzzle had already won the championship in this class, and so did not race. In the fourth class Cat and Edith made a hard fight for the penuant, and Cat got it. Kitten beat Charmion on actual time but lost third place on corrected time.

The season ended with the sail-off for the championships in the first and second classes, sailed on Oct. 3, with a fresh southwester blowing. Violet had a walkover in the first class, since Mattie had been sold out of the club, Surprise, Mist and Anonyma sailed a very exciting race. Anonyma had the race well in hand until the wind lightened, and she shook out a reef. This operation she made a mess of, getting in irons and losing over a minute. In spite of this she rounded the outer mark first. But Surprise outran her, and in the luffing match between them Mist almost passed them. They all crossed the line close together, Surprise in the lead. So Surprise was champion, having beaten Mist by 2s and Anonyma by 7s.

The season's racing has settled the relative merits of a number of boats, but it has left some with their speed undecided. Mattie and Hector were quite evenly matched, Mattie perhaps having a little the better of it. Both of them are vastly superior to the old Violet.

In the second class Anonyma was the ablest boat, but in light weather Surprise usually won. Mist began the season well, but was not so successful toward the end of it. Widgeon did not do nearly so well as in the year before. The old Defiance did well in the two races she sailed in, but she was no match for the newer boats. The new Grampus was not a success, although she never had a chance to show what she could do in heavy weather. Mollie should have raced more, for she was sailing as well as ever.

In the third class Puzzle and Eina were very closely matched. Puzzle won the championship, but Eina did perhaps the best all-round work. If we take all things into consideration, Eina seems to be, for this season at least, the fastest boat in her class. Tycoon did well for a new boat and great things may be expected of her. Ashantee sailed well in heavy weather; but most of the races were in light weather and weather that boats did not get much chance. Fercle was probably the best boat in the class in a gale. Daisy appeared in a small rig and sailed well occasionally, but as a rule the larger boats were too much for her. Phenomenon was a very fast boat, but was sold to Boston early in the season before she had time to make much of a record in the bay. No amount of handling could persuade Hermione to sail any better than the season before. Cayuse was seldom raced, but when she did race she showed that she had not fallen off in the least.

In the fourth class Cat was champion beyond any doubt. She was only beaten once, and that was by a mere fluke. Her record of eight firsts and one second out of nine starts is an enviable one, and her designer and builder, Eben Holmes, has good reason to be proud of her. Next to her was Edith. Charmion, with her enormous sail, did well in a light breeze and smooth water; but she was useless going to windward in any sea. Kitten raced only when there happened to be a light wind, and with her small sail could do little. The two new Dunn boats, Buzzard in the third class and Squall in the fourth, did not come up to expectations. Buzzard seemed unable to go to windward. But she had great trouble with her sail and never in all the season got it to sit well. It is probable that she would have done better if trimmed differently. Squall showed more speed than Buzzard. In her second race, before her sail had stretched out of shape so much as it did later, she defeated the Edith very handily. But soon the sail set so badly that it had to be recut, and then it was made much smaller and the shape was changed. Her best race was on Aug. 1, when she came within one minute of Cat. With a new sail she may yet prove a prize winner, and Buzzard may also.

In the fifth class Wide Awake had things all her own way when the class limit was 15ft. But when the limit was 14ft. she could not race, and Rana was the best boat. Worry did not sail as well as usual, although it was only by a fluke that she lost the race of Aug. 26. Reba did very well in smooth water.

The appended table tells all that has not here been told. It is not pretended that this table gives the complete records of the yachts for the season; it is simply an outline of the races sailed in 1891 strictly in Buzzard's Bay. For years these races have been held in the bay; for years the leading builders—Hanley, Dunn, Holmes and Jenney—have been steadily improving the racing boats, until now, in the Amonyma and Cat, catboats have reached a degree of perfection known nowhere else in the world.

The following details of some of the leading boats will be of interest in connection with the summary:

Mattie, length over all, 25ft. 11in.; l.w.l., 25ft. 10in.; beam, 11ft. 8in.; draft, 3ft. Built by R. Youmans, Newport.

Anonyma, owned by F. L Dabney. Over all, 28ft. 2in.; l.w.l., 23ft. 6in.; beam, 11ft. 2in.; draft, 2ft. 2in. Built by F. L. Dunn, Monument Beach, 1890. Record: 1890, 10 starts, 4 first 1 second, 3 third; 1891, 14 starts, 6 first, 3 second, 4 third.

Mist, owned by George H. Lyman, Jr. Over all, 23ft. 3in.; l.w.l., 22ft 9in.; beam, 11ft. 6in. Built by A. M. Jenney, Mattapoisett, 1888. Record: 1889, 9 starts, 6 first, 2 second, 1 third; 1890, 10 starts, 3 first, 5 second, 2 third; 1891, 10 starts, 3 first, 4 second, 1 third.

Eina, owned by John Parkinson. Over all, 20ft. 6in.; l.w.l., 19ft. 11in.; beam, 9ft. 6in.; draft, 2ft. 2in. Built by C. C. Hanley, Monument Beach, 1889. Record: 1889, 14 starts, 6 first, 6 second, 2 fourth; 1890, 10 starts, 2 first, 4 second, 2 third. 2 fourth; 1891, 12 starts, 5 first, 3 second, 3 third. Winner of Buzzard's Bay championship 1889.

Puzzle, George G. Amory owner. Over all, 20ft. 5in.; l.w.l., 19ft. 9in.; beam, 9ft. 7in.; draft, 2ft. 2in. Built by C. C. Hanley, 1890. Record: 1890, 10 starts, 6 first, 4 second; 1891, 10 starts, 4 first, 2 second, 3 third. Winner of Buzzard's Bay championship 1890 and 1891.

Parole, owned by W. H. Davis. Over all, 20ft. 3in.; l.w.l., 19ft. 5in.; beam, 9ft., 7in.; draft, 2ft. 2in. Built by Eben Holmes, Marion, 1890. Record: 1890, 9 starts, 2 first, 2 second, 2 third, 1 fourth; 1891, 7 starts, 2 first, 1 second, 2 fourth.

Cat, owned by Bruce Clark. Over all, 19ft. 6in.; l.w.l., 16ft. 4in.; beam, 8ft. 5in. Built by Eben Holmes, Marion, 1891. Record: 1891, 9 starts, 8 first, 1 second. Winner of Buzzard's Bay championship, 1891.

SEAWANHAKA CORINTHIAN Y. C.—The annual meeting of the Seawanhaka Corinthian Y. C. was held at the club house on Jan. 12. In the absence of the flag officers, Mr. J. W. Beekman, the senior yacht owner, was in the chair. The regular reports of the officers and committee were read, after which the following officers were elected: Trustees—J. Langdon Ward and Charles A. Post; Com., Geo. H. B. Hill, schooner Miranda; Vice-Com., Henry Stanton, sloop Vandal; Rear-Com., J. William Beekman, sloop Mirth; Sec., Leon F. d'Oremieulx; Treas., Walter C. Hubbard; Meas., John Hyslop; Fleet Surgeon, J. West Roosevelt, M.D.; Fleet Chaplain, Geo. R. Vandewater, D.D.; Race Committee—Walter C. Kerr, Wm. A. Haines, Wm. H. Plummer, Walter C. Tuckerman and Robert Cooper Townsend; House Committee—Ashton Lemoine, Auguste P. Montault, Herbert L. Satterlee, Frederic D. Weekes and Theodore C. Zerega; Committee on Lectures and Entertainment—A. Cass Canfield, Lieut.-Com. Leonard Chenery, U.S.N., and Chas. A. Post; Committee on Lines and Models—John Hyslop, A. Cary Smith and Wm. P. Stephens; Library Committee—John T. Horne, Wm. Trotter and Edward M. Townsend, Jr.; Committee on Exhibits—Wm. Gardner, John F. Lovejoy and Wm. Whitlock; Law Committee—Sidney Chubb, Chas. W. Wetmore and Arthur Delano Weekes. Several amendments relating to crews and lines of winning yachts were adopted, the rule relating to crews being: "Rule X. There shall be no restrictions as to crews, excepting that in all classes below the 40ft. class but one professional shall be carried." In regard to lines and models, it is provided that the depositing of the lines of all winners shall not be compulsory, but that the club shall be entitled to the privilege of taking off the lines and making drawings and models of any winning yacht. The annual dinner will be given very shortly, and the opening of the club house at Oyster Bay will take place early in May.

BISCAYNE BAY Y. C.—At a meeting of the Biscayne Y. C. on Jan. 2 the following officers were elected: Com., R. M. Munroe; Vice Com., T. A. Hine; Sec'y, Kirk Munroe; Treas., Edward Hine; Meas., Richard Carney. The annual regatta will be held on Feb. 22. The lietch Micco reached Biscayne Bay on Dec. 1, after handsomely weathering a gale off the Florida coast. A number of new entries are expected for the regatta.

TACKING SHIP.

A WESTERN youth who had come to the metropolis to see the sights carried his investigations to Fort Hamilton, where a view of the ocean can be obtained. He gazed with absorbed interest at the mighty expanse of waters, and after becoming sated with the spectacle, turned his attention to other objects.

To the right a big steamship was breasting the Hudson's mile-wide tide, and a flutter of handkerchiefs from her deck indicated that the vessel was a passenger ship bringing home voyagers from foreign lands. Out in the bay a full-rigged sailing ship was beating her way up the channel, making short reaches against the adverse wind.

On the hotel pavilion near the Westerner stood a man with a telescope under his arm conversing with an aged boatman. The couple had been watching the movements of the big ship and making guesses as to her nationality. The youth listened to the conversation, and looking at the object of it, saw what was to him a very strange thing. First one set of yards on the vessel were swung around, then another pyramid of canvas braced a new way, and finally, when the course of the ship was altered to an almost opposite direction to the course she had been sailing, the young man's curiosity got the better of him and he asked what it meant.

The boatman gave the inquirer a pitying glance and ejaculated the single word, "Tacking!"

"But I don't know what that means," protested the seeker after information.

The man with the glass laughed and said the majority of people didn't. He then drew up a chair and explained why the evolution is performed and the method by which it is done. For the benefit of the many who have never given the subject a thought, as well as those who in a dim way realize that winds are not always fair, without understanding what seamen do on such occasions, his explanation is here given.

When a square-rigged vessel is headed off from her course—that is when the wind blows from the point in which her destination lies—the nearest she can steer to her true course is from five and a half to six compass points. Thus, if a ship's port lies due north and the wind is from that direction, the vessel braces her yards sharp up and sails as close to the wind as her rig will permit. Under these conditions, her course will be alternately east-northeast and west-northwest, and the ship will obliquely approach her destination, nearing it continually in the proportion of about one-third of the distance traversed. If slanting toward her destination on the easterly course the vessel will be what is technically known as on the port tack. There are several methods by which it can be altered to the opposite side, but the operation known as "tacking" is usually resorted to.

To tack successfully requires considerable judgment and skill, as well as a thorough knowledge of the qualities of the vessel, as some work quicker and some slower than others. Some will gain several times their length directly to windward while in stays, while others will gather sternboard and lose ground before standing away on either tack.

When the vessel is headed off her course by an adverse wind, the compass is ignored by the helmsman, who watches the leech of the mainsail instead, that being furthest to windward and the first to shiver when the ship comes too near the wind.

The boatswain's call, "Ready, about! Stations for stays!" summons every one on deck when it is thought necessary to go about on the opposite tack. At the call every one repairs to his allotted station, some aloft to overhaul the lifts and some to the gear for clewing up the mainsail. The majority of the force is distributed upon the weather main and lee cross jack braces.

The best helmsman is sent to the wheel, and when he takes it, the previous order, "Full and by!" is changed to "Keep full for stays!" In obedience to it the helm is put up, and as the ship lays her broadside to the wind and springs forward with increased speed, the officer in charge gives the command, "Helm's a-lee!"

Answering her helm the ship sweeps up into the wind, and as the sails begin to shiver the order, "Rise tacks and sheets!" is given, followed by the tramp of feet on deck as the men walk away with the clew garnets. As soon as the heavy mainsail is clewed up to the yard, the men spring to the weather braces. The ship continues to swing until she brings the wind directly ahead, and every sail is flat aback.

This is the critical moment, and very frequently a vessel misses stays, owing to the after yards being swung too soon or too late. Watching the weather vane, the officer gives the command, "Mainsail haul!" and the pyramids of canvas are swung around until the yards are pointed at an opposite angle to that to which they previously pointed. The ship's head pays off rapidly under the pressure upon the foremast sails, which, with the head sails, are still aback. As the after sails fill, the last command, "Haul well taut! Let go and haul!" is given. The head yards are braced smartly about, and if the operation has been successful the vessel stands away on the other tack.

"Wearing ship" is another method of going from one tack to another, and is usually resorted to when the wind is too heavy to make the operation of tacking practicable. It is the exact reverse of tacking, inasmuch as the ship is allowed to run off from her course and make a sweep of the horizon before coming back to the wind again on the opposite tack.

It sometimes becomes necessary for a ship to go on another tack when the wind is blowing with such force that no sail whatever can be carried. Under such circumstances the vessel has to wear under "bare poles," and to accomplish it in safety taxes every resource of the seaman and requires all his skill. To make the ship's head pay off when no canvas can be shown, tarpaulins are spread on the forward rigging. Should those blow into ribbons, as they sometimes do in very heavy gales, a body of seamen are ordered into the forward shrouds. If all else fails and the necessities of the case warrant it, the mizzenmast is cut away as a last resort and used as a drag.

Frequently the result of all efforts to save an imperilled ship is summed up in the brief announcement in some maritime journal: "Foundered at sea."—*New York Times.*

NEW YORK Y. C.—The Nominating Committee of the New York Y. C. posted the following nominations on January 11: Com. Elbridge T. Gerry; Vice-Com. H. C. Sturges; Rear Com. Archibald Rogers; Sec. J. V. S. Oddie; Treas. F. W. J. Hurst; Meas. John Hyslop; Fleet Surgeon, Dr. Morris J. Asch; Regatta Committe—S. Nicholson Kane, Irving Grinnell, and Chester Griswold. Committee on Admissions—E. M. Brown, F. T. Robinson, D. T. Worden, J. C. Bergen, and W. L. Brooks. House Committee—R. P. Lounsbery, R. S. Bowne, J. M. Wilson, and E. S. Stanton. Library Committee—J. M. Woodbury, J. S. Crosby, and S. B. Pomeroy. Mr. H. C. Sturges, part owner of the schooner Varuna, is nominated in place of Vice-Com. Morgan; the owner of Gloriana having sold his big schooner Constellation, which, as reports gives, renders him ineligible for the office of Vice-Commodore.

ELECTIONS OF OFFICERS.—*Hudson River Y. C.*—Com., H. F. Allen; Vice Com., E. Langerfeld; Sec'y, A. G. Buckholtz; Treas., R. V. Freeman; Meas., John McCabe; Fleet Surgeon, Dr. William Geoghan; Steward, J. T. Hufnagel. Trustees—M. J. Koplik, John Kelly, R. V. Freeman, Joseph Stilger, J. Hamil, J. R. Pringle, John F. Dougherty, S. E. Burns and John McCarthy. *Brooklyn Y. C.*—Com., B. F. Sutton; Vice-Com., John Cottier; Rear-Com., F. L. Townsend; Sec'y, Wm. Cagger; Treas., Willard Graham; Meas., H. W. Kilburn; Pres., Daniel O'Reilly. Trustees—E. H. Chandler, A. Clunan, C. J. Bergen, H. Clark, J. H. Coleman, John H. McCrae and G. B. Lyons. Regatta Committee—W. A. Taylor, F. W. Kearney and W. F. Miller. Membership Committee—A. G. Walden, Wm. Dodman and C. H. Frost.

THE GARDNER 18-FOOTERS.—We have received the following letter from the St. Lawrence River S., C. & S. L. Co.: "JAN. 15.—*Editor Forest and Stream:* At the request of two boat clubs we have extended the time from Feb. 1 to Feb. 10 for the latest date we will receive orders to build the new Gardner 18-footers at present advertised prices. You will confer a favor by making this intimation in your columns. You will be glad to know that this little craft has created great and favorable interest among boating men all over the States, and they are sure to be 'heard from' in some of next season's races.—ST. LAWRENCE RIVER S., C. & S. L. Co."

ATALANTA—Belleville, Ont., Jan. 14.—The unfortunate sloop Atalanta, the unsuccessful competitor for the America's Cup in 1881, may at last be given a chance to prove her abilities, unfettered by financial considerations, which have been her bane since the laying of her keel. She has been purchased by a Mr. Ward, of Chicago, and will doubtless be heard of, however, in 1893, if not before. Before leaving Canadian waters, however, she will be rebuilt, an operation of which she stands much in need.—PORT TACK.

"CHIPS FROM RIPPLE'S LOG."—We have received from ex-Com. George H. Newell, of the Rochester Y. C., a volume with the above title, containing a number of stories of cruises about Lake Ontario in the yacht Ripple, between 1878 and 1886. The book is interesting, especially to those familiar with the lake.

LAKE ERIE YACHTING.—The work of organizing a yachting association on Lake Erie is now being pushed, and a meeting of delegates will be held this week.

HARLEM Y. C.—On Jan. 11 Mr. C. J. Fagan, of the Harlem Y. C., delivered a lecture to the club on measurement and classification.

YACHTING FIXTURES.—Dorchester Y. C.: June 18, July 16, July 30, Aug. 13 and Aug. 27. Hull Y. C.: June 17, for boats of the fourth, fifth and sixth classes; July 2, class race; July 9, for boats of first and second classes; July 16, for third, fourth, fifth and sixth classes; July 30, for third, fourth and fifth classes; Aug. 6, for first and second classes, outside course; Aug. 17, ladies' day; Aug. 27, cup race for small boats; Sept. 3, open race for large-class boats only, to be sailed over the outside course.

CORINTHIAN NAVY.—The general annual meeting of the Corinthian Navy will be held at the Hotel Marlborough, corner Thirty-sixth street and Broadway, New York city, on Tuesday evening, January 26th, at 8 o'clock. The election of officers for the coming year will be held and several important amendments to the constitution will be proposed for adoption.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

L. H. PAWUTCKET, R. I.—The *National Review* is published at 695 Broadway; *Hatter and Furrier* at 7 Washington Place, New York. We do not know the paper you name.

E. S., Harrisburg, Pa.—Will you kindly name the last volume published of the U. S. Fish Commission Report, and also the last volume of the U. S. Fish Commission Bulletin? Ans. The Report, 1887, is last one published; Bulletin, 1889, is in bindery.

SHINNECOCK.—Have just passed 270 Columbus avenue, butcher and game shop between 72d and 73d street, and see quantity quails exposed. Please turn this card over to warden. Ans. 1. If you know of violations of the game law you should write to us or to the game protector and sign your name. 2. The law permits sale of quail in New York during this month.

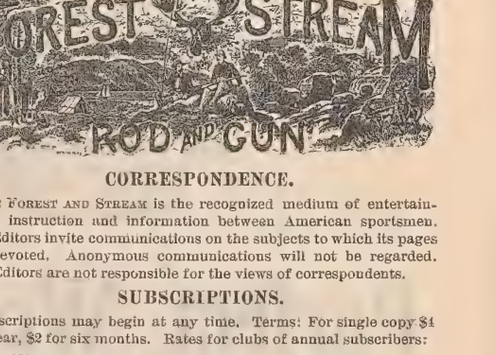
W. H. M., Montreal,—I have a gun made by F. A. Loomis. It is nicely finished and a good shooter. Could you inform me where it was made, and something as to the reputation of the maker? Ans. The gun you inquire about was made in England for Herman Boker & Co., of New York, wholesale gun dealers. The name "F. A. Loomis" is simply a trade mark. Messrs. Frothingham & Workman, or Coverhill, Learmont & Co., of Montreal, are agents for this gun and can give you all the information you want.

J. R. M., Morgantown, W. Va.—On December 23d, 1891, Melville Post and Geo. Schoonmaker of the West Virginia University Gun Club of this place engaged in a contest at 25 Keystones each, Schoonmaker pulverizing them all. Post missed (as we thought) his 16th shot. Both used same gun. The two men at the trap declared all targets broken, and upon examination the target was found in the tall grass, with small pieces out of the centre and two shot holes through it. They left it to the FOREST AND STREAM. Ans. The bird should certainly have been scored a "broken bird."

A. G. B., Holland, Mich.—Would you kindly let me know what gauge a muzzleloading shotgun which I have is? Its diameter at the muzzle, inside, is .52in. Ans. The standard tables give the following as the size in fractions of an inch for each bore:

Bore.	English.	American.	Bore.	English.	American.
4	1.052in.	1.03in.	12	.729in.	.73in.
8	.835in.	.85in.	16	.662in.	.65in.
10	.775in.	.79in.	20	.615in.	.....

The nearest gauge to .52in. is the 33-gauge, which is exactly .520. Your weapon may be a rifle bored out to a smooth-bore.



BOOKS RECEIVED.

WE have received a copy of the twenty-ninth edition of John Wisden's "Cricketers' Almanack," which we have found to compare favorably with its predecessors. It is a mine of information for cricketers.

THE SUPREME PASSIONS OF MAN, by Paul Paquin, is an exposition chiefly of the evil effects of over-eating and of eating wrong foods. Its wide reading will not fail to do good. (Little Blue Book Co., Battle Creek, Mich. Price 50 cents.)

A Paducah clergyman tells this: "I married a couple up in Allen County, and after I had pronounced them man and wife the groom took me to one side and asked me what the damage was. I told him that there was no fixed price. He might give me whatever he chose. 'Parson,' said he, 'I've got five hound pups down home for which I am asking $5 apiece, and I'll let you have one for $3!' Of course I declined so ridiculous a fee, as I had no use for the hound pups. When he got home he must have found his wife better than he expected, for he sent me one of the hound pups, accompanied with a letter saying that he was so happy with Maria that he would give me a dog for nothing."—*Louisville Courier-Journal.*

It is said that there are yet a few beavers along the Umatilla River to remind oldtimers of the days when these little animals frequented Oregon streams in large numbers. An immense beaver dam was discovered several miles below Pendleton the other day by a couple of hunters, who saw a number of the animals and succeeded in shooting one.—*San Francisco Call.*

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The Editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. The Editors are not responsible for the views of correspondents.

SUBSCRIPTIONS.

Subscriptions may begin at any time. Terms: For single copy $4 per year, $2 for six months. Rates for clubs of annual subscribers:

Three Copies, $10. Five Copies, $16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain.

Foreign Subscription and Sales Agents—London: Davies & Co.; Brentano's; Sampson Low & Co. Paris: Brentano's. Foreign terms: $5 per year, $2.50 for six months.

ADVERTISEMENTS.

Inside pages, 30 cents per nonpareil line. Special rates for three, six and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money, or they will not be inserted. Reading notices $1.00 per line. Only advertisements of an approved character inserted.

Address all communications:

IF NOT, WHY NOT?

Have you seen the CHUBB Catalogue of FISHING TACKLE for 1892?
If Not, Why Not?
This Catalogue contains 96 pages, devoted entirely to fishing. It describes and illustrates Fishing Tackle of *to-day*. It has Two Lithographic Plates of Eight-Strip Split Bamboo and Lancewood Rods, in seven colors. These have been pronounced by prominent anglers to be elegant, and to mark a new era in illustrating Fishing Rods.
It also contains eight plates, or over one hundred varieties, of Artificial Flies, in twelve colors, which every angler should have to select from.

WOODCRAFT.
By "NESSMUK."

A book for people who love outdoor life: for the hunter, the angler and the canoeist. The work has been of service to thousands of outers, and will help thousands of others. It is full of practical advice and information from one who has spent his life in learning by hard experience what he now tells his readers. No camper can afford to be without it. Cloth, 160 pages, illustrated. Price $1.00

Scientific Education of Dogs
FOR THE GUN.
A new work by an English writer, "H. H."

The instructions here given are the result of the author's amateur practical experience of thirty-seven years. A review in FOREST AND STREAM says:

"This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study. The chapter devoted to kennel management is a short one, but it is very nearly complete, and is alone worth many times the price of the work to any one that will heed its teachings."

Price $2.50, postpaid, by the

THE ART OF SHOOTING.

An Illustrated Treatise on the Art of Shooting. With extracts from the best authorities.

By CHARLES LANCASTER.

LONDON, 1891. PRICE $3 00.

AUTHOR'S PREFACE.

At the special request of many gentlemen who have placed themselves in my hands for instruction in the Art of Shooting, I have written this treatise. I have endeavored to meet the special requirements of those who are anxious to become proficient in the art, and who have hitherto been unable to obtain, in a precise form, the information necessary for studying the first principles of shooting at moving objects.

I have had the honor of coaching many gentlemen, and have carefully studied the points especially requiring attention that have cropped up from time to time while giving instruction. I hope that those who favor me by studying this treatise may quickly gain the knowledge so essential for the making of an average if not brilliant shot.

I have purposely refrained from touching on the several merits of any class of gun—being a gun-maker myself; and, indeed, so many good works on the subject have been written, that it is really unnecessary.

I trust that authors from whose writings I have made extracts will pardon me when they recollect that I have at heart one object, viz., the advancement of a manly sport which gives pleasure, health and occupation to many, and to the patronage of whose followers I am indebted for many pleasant days.

Forest and Stream Publishing Co., 318 Broadway, N. Y.

Book and Boy.

The visitor from New Jersey came in and said his wife wanted to give a book to a boy friend—a manly boy, blessed with a taste for *Forest and Stream* subjects; the book must be a manly book, and one to encourage these tastes. We named it—"Nessmuk's Woodcraft;" and the suggestion carried conviction. The boy has doubtless by this time read his book through three times at least, and has found something in the third reading that he missed in the first. And if he retains his sportsman's tastes he will read the book when he shall be old.

The Man and the Book.

For Read this note from Gen. D. H. Bruce, of Syracuse, in praise of "Woodcraft:" "Good old Nessmuk. I could have known him for years. What a delightful book. How every page reveals the attention of the woodsman, by its happy language in dealing with practical, every day things, and imparting hints of originality in respect to many things. I took up the book one evening, and could not sleep until I had read every page and looked several times at the quaint portrait of the veteran. I like such men."

BLUE ROCK.

The dog for Elcho bitches. A first prize show winner and winner of more field trial prizes than any Irish setter dog in America. Perfect in color. Fee $25. ELCHO KENNELS, Claremont, N. H.

Forest and Stream File Binders. Price $1.

BLUE RIDGE KENNELS.

IN THE STUD.

The celebrated champion stake winner **GATH'S MARK, GATH'S HOPE** and **DAN GLADSTONE.** The Blue Ridge Kennel has now opened its book for the fall season of 1891 and spring of 1892 for Gath's Mark and Dan Gladstone, limited to fifty services each. $2,000 is given away in premiums to the get of the above dogs, which win different Derby Stakes in 1892 or after. Particulars on application.

HIGH CLASS MILITIA SHOOTING.

THE scores published in our rifle columns of the work done at an indoor shoot of the 7th Regt., N. G., S. N. Y., ought to carry a lesson full of significance to the men and officers of every militia regiment in the country and for that matter to the regular army as well. Where is there a command which can make such a showing—to muster a team of 25 men from each of ten companies, to have the men shoot through a long match and come out with an average of centers for the whole 250? In other words, it was to keep the shots within an average 26-inch circle at 200yds., and within an average 38-inch circle at 500yds., and this was done not with selected rifles but with the arm issued by the State, and every rifleman the country over knows what sort of an arm the .50-caliber Remington is.

Turning back a bit into the history of rifle shooting by the National Guard of this State, the whole secret, if there be any, of this fine shooting for the Kemp Trophy, is made plain. From the start, as soon as rifle shooting was made part and parcel of the Guardsman's duty, the 7th men set out to reach the top round of the ladder of excellence. It meant hard work. It meant hard duty as instructors by those who had already learned how to shoot, and hard attention as pupils by those who had yet to learn. All through the shooting season, while the range at Creedmoor was open, this out-door drill went on. The official days of practice were not counted on as days of rare frolic for an outing in uniform, but were intelligently devoted to watching wind and weather, to noting the doings of the older and more experienced shots and to intense emulation on the part of the duffer shots to get into the marksmen class. How well this plan of campaign succeeded a glance at the record will tell. They became a regiment of marksmen.

But with the close of the season of pleasant out-door work came the period of armory practice. There was not chance for the rust of inactivity to gather on those rifles or the stiffness which comes from want of practice to bother these riflemen. A series of matches, of sharp little rivalries in score making, were established at the armory range, and one of these is chronicled in the scores of the Kemp Trophy match.

In the description of the new armories now building so generally in various cities at public expense, for the use of the volunteer forces, there is always an account of the excellent and safe range provided. How often after do we find these ranges dark and drear, closed and neglected. When official orders direct the men to go to the summer ranges for practice, what an incompetent showing the few who do obey make at the target. There are excuses by the score, but no scores of any other sort. What the 7th is doing any other command may do, and when they fail to do so their uniform becomes merely a cover for inefficiency, and their taking and spending of public moneys under pretense of being more reliable defenders of the public safety, little short of misappropriation. Certain it is that a single company of the 7th, shooting as its members do, would be worth a whole average regiment facing a riot on riot duty.

A STORY FROM RUSSIA.

AMONG the animals of the globe which through man's agency are extinct, or about to become so, are the buffalo, of North America, and the zubr, or bison, of Europe, its nearest living relative, often erroneously termed the aurochs. The latter has been preserved in Europe only by governmental protection, which has been given to it for many years, just as within a short time the protecting arm of the law has been extended over the American buffalo in the Yellowstone National Park.

Our own buffalo has been hunted by many of the readers of FOREST AND STREAM, and its practical extinction in the United States, almost without warning, is even yet scarcely realized by the people of this country at large. This extermination gives a great interest to its nearest relative in Europe, which has for many years been on the verge of passing from the list of animals of Europe, and which yet to-day probably equals in numbers the pitiful existing remnant of the millions of great beasts which once darkened our western plains.

Appreciating the interest felt in this subject, the FOREST AND STREAM recently made arrangements with a gentleman residing near Grodno in Russia, where the perserved herds of the European bison still exist, by which an elaborate account of the European bison should be written for these columns. This account, which is very full, will give for the first time in any American journal an adequate history of what the historian Pliny called Bonassus. It will tell of his history, his habits, the chase, the capture, and the life of the animal in captivity. That it will be read with intense interest by the naturalist and the sportsman we need not say.

In some works on natural history and in encyclopædias may be found a few brief paragraphs treating of this great beast which roamed through Europe in the days when Cæsar conquered "all Gaul" and all Germany as well; but the American reader who desires to inform himself on the history and habits of the European bison can scarcely do so unless he makes a journey to Europe and delves in some of the great libraries. The FOREST AND STREAM now supplies this want by furnishing an account so full and so trustworthy that nothing more is needed.

DELMONICO'S AND THE DISTRICT-ATTORNEY.

IN some parts of Canada last Tuesday the mercury went down 60 degrees in four hours; this was the quickest and deepest drop recorded since District-Attorney Platt and Judge Nelson Baker, of Westchester county, N. Y., cooled down so suddenly in the prosecution of Delmonico for serving woodcock in July. The facts have been given, but they are instructive and will bear repetition, as given in our issue of Dec. 10.

Some eighteen months ago, in July, 1890, Dr. Willett Kidd, the game protector of the district in which New York city is included, visited Delmonico's restaurant and found that woodcock were then served there out of season. He promptly put the case into the hands of District Attorney Platt, of Westchester county. Mr. Platt manifested a willingness to do his duty as a public officer with alacrity and dispatch. This willingness mysteriously gave way to reluctance and the alacrity to procrastination, and the dispatch in turn to innocuous inaction. Not even were the papers served. At length, since District Attorney Platt and his assistant, Mr. Verplank, were so crowded with work that they could not attend to the Delmonico case, the protector employed as outside counsel Judge Nelson H. Baker. Judge Baker was for an immediate, aggressive and uncompromising prosecution of the case. In due course of time Judge Baker was so overwhelmed with other business that he really could not give any time to the Delmonico case. The papers were still not served. Protector Kidd then transferred the case to New York county, and gave it to District Attorney Nicoll. This was done, we believe, at the close of last year (1890) or in the beginning of 1891. For some reason the case has not been tried, and this is the more worthy of note because the evidence is said to be very clear, and the District Attorney is believed to have a perfectly good case. We understand that the last stay of proceedings secured by the defendants will expire to-day; and we shall watch with much interest the further progress (or delay) of the case.

That was the summary up to that date, and now, over a month later, it is the summary up to the present date. From what we can learn District Attorney Nicoll is not a whit nearer bringing Delmonico to time. In reply to an inquiry last week, Mr. Nicoll advised us, under date of Jan. 21, that he expected "to have the case tried and disposed of within a few weeks." As this Delmonico indictment has been dawdled with for more than a year and a half, it will not involve a severe tax of patience to wait "a few weeks" longer for District Attorney Nicoll to act. We do not class Mr. Nicoll with Messrs. Platt and Baker, as having been first red-hot, then lukewarm, and all of a sudden stone-cold, for he has never manifested any special eagerness to bring this wealthy game caterer to time; his enthusiasm has not oozed; there was none of it to begin with. But whether or not Mr. Nicoll likes to do his duty, and whatever may be the nature of the Delmonico "pull," we insist that this case must be tried; that Delmonico must be treated precisely as would be the humblest market man charged with a misdemeanor; and that no mysterious influence shall be permitted to render the game law a nullity when it strikes Fifth avenue.

SNAP SHOTS.

WHEN Gov. Hill's summary removal of Mr. E. G. Blackford showed a purpose to convert the New York Fish Commission into a political machine, it was left to every right-minded member of the board either to remain in office and withstand the degradation of the Commission, or to resign and wash his hands of it. It is a cause for regret that Mr. Henry Burden has chosen to adopt the latter course and has tendered his resignation as follows:

OFFICE OF THE COMMISSIONERS OF FISHERIES, STATE OF NEW YORK, New York, Jan. 22, 1892. *Governor R. P. Flower:* Dear Sir—I herewith present my resignation as a member of the Commission of Fisheries of this State. The work of the Commission has increased very much of late years, and as the Board is at present constituted the labor will principally devolve upon two of us; in view of this fact I do not feel that I can do justice to the extra work that will be thrown upon me.

In the two and one-half years that I have been on the Commission the question of politics has not entered into the few appointments we have had to make, and I think I voice the sentiment of all my former associates on the Board that it should be kept out, as we recognize the fact that its efficiency would be destroyed if other than fitness and merit should control our appointments. I regret to say that our freedom of action has been somewhat hampered of late by politicians and State officials high in authority. The work of the Commission is of such a nature that it cannot be made a political machine without destroying its usefulness.

As we receive no salary I had a personal pride that our work should be conducted as one would his private business, that is, to give the people the best possible results with the means at our command. In view of the above facts I can not consistently longer remain a member of this Board. Very respectfully yours, HENRY BURDEN.

Mr. Burden was one of the most genuinely interested, capable and efficient members of the board, and his withdrawal will mean a distinct loss to the State.

A forthcoming contribution to the literature of American fishes is a report on the fishes of Pennsylvania, by Dr. T. H. Bean, of the Smithsonian Institution, and Angling Editor of the FOREST AND STREAM. It will contain descriptions of all the species, with notes on their common names, distribution, size, habits, reproduction, rate of growth, uses, modes of capture, etc., and will be accompanied by fifteen colored plates and about sixty small figures in black and white. It will appear in the appendix of the next Report of the Commissioners of Fisheries. The colored plates include shad, whitefish, carp, salmon, rainbow trout, brown trout, brook trout, lake trout, calico bass, rock bass, black bass, yellow perch, pike perch, striped bass, and white perch. The drawings were made by Mr. S. F. Denton. In all 157 species will be described.

The prospects for a large and much-interested convention of New York sportsmen at Syracuse on Feb. 12 are excellent. More than 500 circular invitatians have been sent out, and many responses received. Our publication of the call this week will reach a vast number of other people. The movement is in the right hands, and it is to be hoped that the attendance will be full and that the State at large may be well represented.

A bill has been introduced into the Virginia House of Delegates to tax dogs at their true value, none to be assessed at less than $10, the tax thus derived to go to the State school fund. If the assessors were to take the bench show catalogue valuations the revenue would provide not only for the school fund, but for the State debt.

Vol. XXXVII. was concluded with the issue of Dec. 31, which was No. 24. That volume contains only twenty-four numbers instead of twenty-six.

The Sportsman Tourist.

IN THOSE DAYS.

"NO," said Gilman, "the' wa'n't no railroads then, an' 't seems 's ef the' wa'n't much of anything else. The boys nowadays do' know anything about what the'r daddies hed ter git along with when they was young. I c'n remember when matches fust come 'round. The' was a young feller 't went over to Chatham, 'bout twenty miles f'm where we lived then, an 'he bought a little box 'bout ' big 's that, 'n' he paid a York shillin' for 'em. Well, every boy he come to on the road hum hed ter see one o' them matches lit, an' b' the time he got ter our place they was nigh about burnt up. We use ter cover up the coals keerful o' nights, but many's the time I've been round ter the neighbors to borry some coals. When we couldn't git 'em we'd put some loose tow in the old shotgun an' fire it out. Sometimes we'd use a flint and steel, but mos' gin'lly the gun. Then old flintlocks wa'n't much to brag on, but they was better 'n nothin'.

"It's jest about fifty year ago. I was about nine year old, I know, an' one night about 1 o'clock my mother shook father an' told him the bears was after Uncle John's hogs. We could hear 'em a squealin' awful. So father he got up 'n' lit the candle in the old tin lantern—you've seen them, I s'pose, full o' holes ter let out the light. He loaded up his old shotgun with shot—he hedn't no ball—an' primed her up, an' away he goes ter Uncle John's. It was jest about such a night as this—a rainin' hard an' dark as all git out.

"Well, he routed out Uncle John, an' an old one-armed sailor they hed there, name o' Simmons, an' he would swear awful. They loaded up another ol' flint-lock an' started for the hogs, an', sure enough, there was the biggest kind o' bear, with his arm right round one o' the hogs, and a-eatin' away at the back of his neck. He looked up an' growled, an' then went on a-eatin'. I was a shiverin' at the winder, and I could hear the hull racket. Then they opened the door of the old tin lantern, so's ter git a good sight, an' both on' em pulled, an' snap! went the old locks—they were both wet. Then they went ter work an' primed 'em up agin; the bear a-growlin', an' the

PARADISE FALLS—ADIRONDACKS.

hog a-squealin' all the time, an' the ol' sailor a-cussin fer all 'at's out. Seems ter me, I never did hear sich a-growlin', an' a-squealin', an' a-cussin' in all my born days, but I was a little feller then, an' wa'n't use' to it, an' I was feared the bear 'd eat up Father 'n Uncle, 'n all the hogs in the pen, 'fore he got through; an' fer all I knowed the' was forty bears—'t sounded 's ef there might a' ben—a-clawin' at them hogs.

"Then they opened the lantern agin, an' drawed another bead, an' that time Father's gun went off. He made a lucky shot, too—lucky fer him, I guess, fer 'f he hedn't, an' the bear 'd a' got a clip at the lantern, an' put that out, they couldn't a' see nothin', an' might a' run right into his arms.

"But he run off, up hill a piece, an' they follered on, an' there they see him, a-lyin' down. Then father wanted Uncle John ter gwup 'n hit him with the axe, an' he wouldn't, fer fear the bear warn't dead. So father he went up 'n hit him a clip, 'n he was dead, sure 'nuf. Four hundred pounds that bear dressed, an' they sold the skin for $12—a big price them times, but 'twas late in the fall. Yes, we use' ter see some tough times them days, but we ruther enjoyed it, a'ter all." KELPIE.

THE ADIRONDACKS.—I.

Recollections and Sketches of the Great Forest.

BY. GEN. D. H. BRUCE.

WERE you ever nearly sixty years of age, and were fifty of those years embellished with a love of natural history, and at intervals spiced by tramps with rod and gun? Do you not vividly recall the pleasures of your childhood while upon the winding stream, sauntering in the wood or beating the thicket? Where now is that gun with its percussion lock, and that "fish-pole," long and slender, which you cut in some sequestered place where the growth was tallest and thickest? Where the powder horn and shot pouch, the quill which held the "pills"? Where that full-blooded mongrel dog which did such good service? Those equipments were long since laid aside, supplanted by those of newer and better design, but no dearer to you than were those of your youth. However, we are quite willing to make the exchange, even if we retain fond recollections of the paraphernalia of those halcyon days. And who among us is there who would not now prefer to spend an hour in the old wood or follow the banks of the old brooks, to a day in any other place?

How in those days we tired of our too familiar resorts and longed for other and broader fields. What our joy when visions of the Adirondacks first broke upon us; how gladly we embraced the first opportunity to visit that grand forest, its mountains, lakes and streams, sublime in all their virgin purity. We lost ourselves in the contemplation of our surroundings. Nature opened up to us her most enchanting pleasure. The waters were filled with trout, the valleys and the mountains were covered with game; fur-bearing animals were seen everywhere. It was the sportsman's elysium.

I have applied the name "Adirondacks" to all of that northern region embraced in twelve counties, and comprising some fifteen thousand square miles of territory—St. Lawrence, Franklin, Clinton, Essex, Warren, Hamilton, Jefferson, Oneida, Herkimer, Lewis, Oswego and Saratoga. Former sub-divisions which bore the names of "John Brown's Tract," the "Reserve," etc., should cease to exist and the entire forest allowed to come under its original Indian name. Few and imperfect were the surveys which had been made for any purpose when an exploration was begun by the State in 1836 in furtherance of the volumes on natural history which were to be written pursuant to authorization of the Legistature. Verplank Colvin knows better than any other man how indifferently land surveys had been made where they were made at all; and to him the State owes more than it will ever pay for bringing order out of chaos and nearly completing an accurate survey.

ON THE BENCH.

It was a venturesome man who even half a century ago would attempt to penetrate some of the wild recesses of the wilderness, to which no trail led, much less a road. Here and there, a Sabbath day's journey apart, lived trappers, with indifferent shelter and no comforts; yet a stranger was always welcome to such poor hospitalities as they were able to extend. If they were poor in purse they were generally rich in heart. Few were the hostelries to be found anywhere, and such as existed were extremely crude in every respect. The food was coarse but wholesome, and now and then one, like "Mother Johnson's," won some reputation because of special cuisine appointments. Scientific explorers were occasionally met with, always under the escort of some competent guide, and now and then visitors for pleasure or sport would travel some well-known route. "Nature nestled in her wildness" indeed. But each year was witness to the Yankee instinct for exploration until well-worn trails took the place of blind trails, and now and then a road was pushed further into the forest. For many years the old "Albany road" and the "Ogdensburg and Lake Champlain road" were important avenues from which some important trails diverged. The line of both of these roads can still be followed, but they are mainly filled with "second growth," having been long since abandoned for public purposes. Year by year explorations were extended for scientific as well as for hunting

DOING DUTY ALONE.

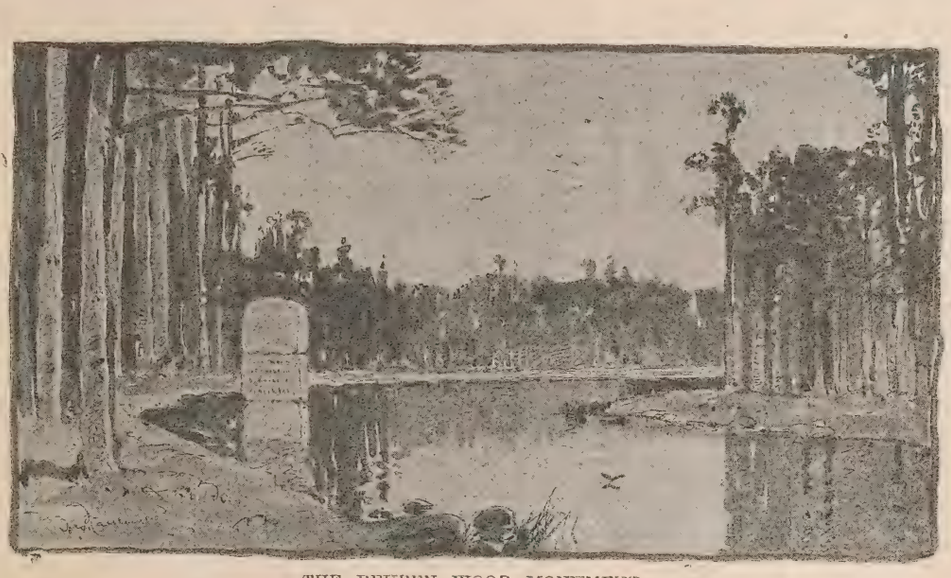
and pleasure purposes, and with the steady increase of visitors came comfortable hotels in many places. They were not plenteous, and as a rule their proprietors were woodsmen whose instincts taught them in some degree that which would be pleasing to their guests. The veteran hotel proprietor of the Adirondacks is Appollo A. ("Paul") Smith. While yet under age and a guide he laid the foundation of his present "St. James of the Wilderness," adding to its dimensions and attractions according to the public demand. He was keen of foresight in his early years, and often averred that he was to win a fortune on St. Regis Lake, and he has done it. Several other prosperous hotels are now owned by him and are under his management.

It was reserved for "Adirondack" Murray to draw such attention to the forest as Headly and Sweet had failed in doing. His facile pen and wonderfully vivid imagination gave him superior advantages. His writings opened the various gateways to floods of people and attracted thither vast numbers of invalids in the last stage of pulmonary disease, who entered these gateways with strong hope of recovery, but really to meet the great destroyer. Murray's tour was an extended one, and his descriptions of it were overcrowded with romance. The principal hotels of to-day are palaces of comfort and pleasure, fitted with every modern convenience and appliance, even to that for drawing strongly upon the guest's purse. Many of them occupy the former sites of trappers' shanties, with iron rails leading almost to their very doors over those old blind trails. Such are those at "Paul" Smith's, Loon Lake, Raquette Lake, Lake Placid, the upper and lower Saranacs, Childwold Park, Long Lake, Blue Mountain, Chateaugay, Keene Valley and along the eastern side. Others less pretentious, but full of comforts, are scattered everywhere, not only at Meacham Lake, State Dam, the Tuppers, Old Forge, Number Four, Schroon Lake, but also at many of the places where the larger hotels are found. There are now in the forest and its vicinity fully three hundred hotels of all grades, not to speak of many comfortable "camps" for spending a vacation away from fashion and people. A vast sum of money is invested in these hostelries, and, generally speaking, it is profitably invested. With many of these hotels business opens with fishing in the spring and continues until the killing of deer is prohibited in the fall. The "cream of the season" is from the middle of July until the same time in September. During these months the influx of tourists is really wonderful. In the month of August the forest literally swarms with people on pleasure bent, and the highways and byways lose all appearance of desolation. All is action, motion; yet all is quiet, restful. The maiden and the youth can tell you of the shaded nooks, the middle-aged of a variety of pleasures, while they whose silvery hair tells of the wisdom of age, find enjoyment in the shade and mountain breezes of ample piazzas. The lakes and rivers float gaily bedecked boats, and the "day camp" gathers its relics and curiosities, with enough birch bark to afford a supply until another season. Many are the pleasant pastimes easily invented to make the season fly like the wind.

Who can picture the transformation which time has wrought since the days when the St. Regis Indians were driven from Canada to the wilderness to starve. The masses of the people enjoy it, for new and never-tiresome scenes and experiences are opened up to them. The sportsman selfishly regrets it, for his days of enjoyment are ended, except as he may snatch out a little long-time sport in the spring and fall. The dude has come, the sportsman must go.

A GUIDE'S CAMP.

What charm there used to be in that camp by the river or lake, far from neighbors and civilization. Upon that little knoll, in that little clearing on the shore and near the clearest and coolest of spring water, you built your camp of bark. Perhaps you wholly inclosed it, or if only for summer occupancy you built a sloping roof from a pole above your head to the ground, leaving the front open, with a skillfully-built fire for cooking and spirit-cheering in front. Your kitchen was in your pack, your bed-chamber your parlor, and in wet weather also your dining-room. Your mattress was made of balsam boughs, your bedding of blankets. Around and about you were your guns, rods and various paraphernalia, and your furniture made of nature's crooks and odd growths of wood. Everything was in it place and in order, though the inventory might not be lengthy. Then your first morning in camp, and the day which followed, preparing you for such a supper as no hostelry could serve. After the supper your pipe and chit-chat by the roaring fire, if the evening was chilly, till weariness bade you at an early hour lie down to refreshing rest and pleasant dreams. All was still; the solitude lulled you, and yet the woods did not seem silent. Headley declares "that a nice and practiced ear can hear at night, in the full vigor of spring, the low sound of growing, bursting vegetation, and in the winter the shooting of crystals, 'like moonbeams splintering along the ground.' So in the forest there is a faint and indistinct hum about you, as if the spreading and bursting of the buds and barks of trees, the stretching out of the roots into the earth, and the slow and affectionate interlacing of branches and kiss of leaves, were all perceptible to the ear. The passage of the scarcely moving air over the unseen treetops, the motion it gives to the trunks—too slight to be detected by the eye—the dropping of an imperfect leaf; all combine to produce a monotonous sound which lulls you into a feeling half melancholy and half pleasing." But morning comes, with its clear, tonic atmosphere, the sun rising over mountain tops, the strange notes of a few birds bidding it welcome in tones full of flats and sharps; the bath, the breakfast, and you feel superior to any guest of the grandest hotel, full of zest for the enjoyment of the day. Where now can you locate such a camp away from the approach of idle tourists? Indeed, where can you find a place in which you can keep your larder full? Here and there such camps are occasionally found: but the home of the sportman has been invaded and he has become a wanderer in the land.



Among my earliest experiences in the wilderness was a trip to Meacham Lake, with a friend who could not speak English, because of trouble with his vocal cords, which needed and received the stimulus and tonic of the evergreens. Few knew of or visited that lake in those years, a beautiful sheet of water which was filled with

trout, but which now, alas! is the victim of the revenge of some evil-minded person who introduced to its waters the deadly pickerel in spite toward somebody. Here I met one of the most notable guides of the woods and kept him in my service during my sojourn—"Chris." Crandall by name. Little was known of his history, but it was said that he went into seclusion because of a love affair in Vermont. He was a very tall, well built man, though seriously maimed, with flowing hair and beard and a keen eye. While still-hunting with a friend, the old story was repeated by his being mistaken for a deer, a bullet was buried in his thigh, and he ten miles from any habitation, with the cold of winter chilling him and darkness near at hand. His friend, of course, could not conduct him home, and so built a fire, made him as comfortable as possible—after taking from him all weapons with which he might effect further injury upon himself, for he threatened suicide—and then proceeded through the woods and the darkness to obtain assistance, which did not and could not arrive until morning. Then the wounded leg was amputated, and the suffering man carried home upon an improvised stretcher. His wound healed and he became a most successful hunter, having a record when he died a short time ago of more than twelve hundred deer, many bears and not a few wolves, panthers and foxes. He was also an expert trapper. He was a thorough woodsman, and no ordinary man could follow his leg and crutch through the underbrush without severe fatigue. His temper was at times violent, especially when a person whom he might be guiding missed a good shot he would fly into a paroxysm of disappointment and profanity. He was a noted character in that northern region of the Adirondacks, a kind of king among guides; a man of fair education and a lover of natural history. In a book, "Camps and Tramps," which my friend wrote, he drew a somewhat amusing picture of "Chris," and the writer of this while navigating the rapids of the river below the lake just after such a rain storm as is peculiar to that tract of country.

Chauncey Smith, who during nearly all of his eighty-six years lived at or near Number Four, on the west side of the woods, was another noted character and was more widely known than Crandall. He spent all of his life in the woods, and probably killed more animals of all kinds than any other man. He had many adventures and many narrow escapes. During one of his wanderings on the eastern side of the woods he found a nugget of pure silver, and it was the regret of his life that he was never able afterward again to find the locality, though he spent weeks and months in searching for it. His friends never could understand why this should be so, for on all other long pilgrimages he was never at fault in his courses, though he never used a compass. He rendered material aid in the composition of the first map of the woods that was published. He was fond in his old age, and while he retained his mental faculties, of recounting his adventures, many times extremely thrilling, and sufficient in number and length to make a book.

But character sketching is not my intention in preparing these note and observations. Yet, in the incident which I am about to relate, such a phase will occur. It was at Hunter's Home, a mile from Loon Lake, that "Sim," a popular guide, was charged with having committed assault and battery upon another woodsman. A constable was sent in pursuit of "Sim," who was at Round Pond as guide to Mr. Ingersoll, a well-known lawyer of Cleveland, Ohio. Mr. Ingersoll told the constable that he could not then spare "Sim," that in the course of time he would deliver him to the constable, who thereupon took his departure contentedly. A few days later and the time of trial was appointed to take place before Justice Smith at his large and desolate Hunter's Home hotel, situated in a narrow and romantic valley, through which a large stream flowed and where gathered on Sunday the roughest human element of the locality. At the appointed hour, the Justice made his appearance in a large room, the only furniture of which consisted of an old table, one common chair and a few benches. The attendance was large. Fifty or more guests of the Loon Lake Hotel, with whom "Sim" was a favorite guide, were there to witness a judicial trial in the wilderness. Justice Smith was a short, stubby man, of many years experience in life. His large head was partially covered with long silvery hair and his brass-bowed glasses occupied a prominent place upon his nose, though he usually dipped his head and looked over them. Brown linen trousers, a coarse shirt unbuttoned at the throat, a pair of suspenders and a pair of army shoes made up his only apparent wardrobe. An old and dingy leather-covered book, presumably his "docket," was placed upon the table, and the "trial" began. The complainant was called by the Justice and told his story in simple language, and apparently truthful, for when he reached the real merits of the case describing how when "Sim" was on top of him and almost choked and pounded him to death, and exhibited the remnants of a once cloudy eye and discolored throat, the Justice took occasion to verify the statement, for said he, "I seen the fight from beginning to end." When the complainant had finished his story, the Justice asked "Sim" if he had anything to say, and indirectly hinted that he had no defense, that the place for him was in the jail at Malone.

At this juncture Mr. Ingersoll, tall, graceful and of commanding presence, arose, and in eloquent English, beautifully modulated speech and measured words, said to the Court that he appeared in "Sim's" behalf; that he did not desire to submit any evidence, but if the Court pleased he would state some extenuating circumstances and plead for the mercy of the Court. The Justice somewhat reluctantly granted the request—reluctantly, because he had been a witness to the encounter and to his mind the guilt of "Sim" was clear. He was a thoroughly honest-minded man, and believed in seeing justice done even if the heavens fell. Mr. Ingersoll began his plea. There in that perfect stillness of the forest, that secluded dell, before an audience of rare intelligence, he brought his very best acumen to bear upon the Court. His oratory was perfect, his voice clear and musical, and his logic all-convincing, at least to one person in the room. He employed all of the arts of his profession to change the opinion of the Court, now praising, then threatening. Quotations from "the books" were as many and thick as forest leaves, and technical questions were raised and answered with greatest ease. Points which had no bearing upon the case other than to befog it were raised, and the laws of Ohio dwelt upon with great effectiveness, always assuming that if the laws of Ohio and the laws of New York were alike—and of that the venerable and learned Court could best judge—then there could be no question that the plaintiff committed an act, such as no man who respects his own honor should fail to resent, when he, the plaintiff, shook his fist near "Sim's" nose. This proposition was elaborated, and with a great flight of oratory, which held the Court spellbound, the address was ended, twenty minutes from the time it was begun. It was the Justice's turn to speak, and he unhesitatingly acknowledged that Mr. Ingersoll had put a new "phrase" upon the affair; that some points of law had been presented which seemed to him like common sense. He thanked Mr. Ingersoll with much earnestness, and confessed that he could see how "Sim" acted in self-defense and that the assault was justified. Then addressing "Sim," he said: "'Sim,' I'm going to let you go this time; but be careful next time or you may go too fur." After this the justice frequently called upon and counseled with Mr. Ingersoll upon legal matters. Mr. Ingersoll had won his confidence, and advised him honestly.

THE REUBEN WOOD MONUMENT.

The natural monument which Justice Vann, of the Court of Appeals, dedicated so worthily, is situated in the inlet to Cranberry Lake. It is composed of three blocks of granite, which reach up about twelve feet above the water. This is the inscription composed by Justice Vann: "In memory of Reuben Wood, a genial Gentleman and great Fisherman, who was fond of these Solitudes."

I have said that Murray's promises to invalids were a delusion. His book was no sooner issued than hundreds of people, followed by thousands, who were victims of pulmonary trouble, sought the cure he so greatly magnified. The pure air laden with the odors of the balsam and the pine and other evergreens were held out as a panacea to those whose last hope was gone as well as to those who had not reached the last stages of consumption. In the beginning of the disease it is not questioned that many sufferers obtain relief, and many permanent cures are effected amid these nature's restorers; but, alas, how many left home and were carried in on stretchers only to return in caskets. There is scarcely a hotel in the wilderness which cannot write a sorrowful record, scarcely one which a few years ago did not have more the appearance of a sanitarium than a summer resort. Everywhere wan faces were seen; the drain upon guests for pity and sympathy was severe and universal. It was perhaps merciful for this class of deluded people for the hotel proprietors, after several seasons of sad experiences, to discourage the reception of both physicians and invalids within their gates, for the latter were not prone to trust themselves when the former could not be found. They, too, well knew what Murray's ill-considered promises and advice were accomplishing, as proven by the many funeral trains which emerged from the woods.

I well remember the gloom which one morning came over the guests of one hotel when they were informed of two deaths the previous night, one of a young lady who had on the day before been a member of a boating party, the other of a young man recently graduated at Yale with high honors. Neither thought the end so near, even, indeed, if death had been anticipated at all. The aggregated death record at "Paul" Smith's alone for many years past would startle the reader and stand out in painful contrast with the gaiety of that beautiful and most popular resort. It is well that at last the public have come to know the facts, that forlorn and hopeless invalids now but seldom seek for relief where none can be found. Great as are the healing powers of the Adirondacks for various troubles to which the flesh is heir, they cannot restore wasted organs of the body, though in many cases they may arrest the progress of serious disease. Consumption but seldom originates in the wilderness; it is said, you know, that guides never die of any disease, but blow away. Long continued severe exposure may breed some diseases, but who ever heard of a native afflicted with pulmonary troubles? The bacteria seem to be wholly in the forms of punkies, mosquitoes and black flies, with an occasional deer fly—all too large to vastly increase and multiply and attack the vitals, as the infinitesimal microbe is supposed to do.

But among all of these health-giving accessories one danger lurks—in the water. As much as the water is extolled, it is nevertheless true, I believe, that very little, if any, pure water can be found in the forest, and some of it is positively dangerous to health. Poets may sing of the sparkling spring, but almost universally it gives off a decoction of tannic acid and albumenoid ammonia, not to speak of other impurities hardly less injurious. These waters are leeched through great depths of vegetable decay and mineral deposits, and as water has a most ready affinity for impurities it must necessarily absorb those with which it comes in contact, even to colors. The water may be "ice cold" and as clear as diamonds, but neither the eye nor the palate can pass safely and absolutely upon its quality. It is the great bed of muck, the product of ages, which preserves to the forest its lakes and streams. It holds the rain as a sponge, relinquishing them stingily and covering the whole year with its leakage to springs and brooks. So impregnated is the water in many places with vegetable matter that when exposed to a temperature of seventy degrees for fifty or sixty hours both its taste and smell will become offensive. If a cube of sugar be added, a white film will appear, a sure indication of impurity. The extreme of care ought always to be employed in the selection and use of water, for the best is none too good.

Aside from the vegetable impurities which water may contain, are those which come from various metals, particularly lead, which is found in its crude state in many localities. Iron is found almost everywhere in the more mountainous parts, and the oxide of iron tinctures many springs. Sulphur and magnesia are found in considerable quantities in many localities. Most of the wilderness is rich in mineral deposits, not all of which are positively hurtful when held in solution and imbibed.

Of economical materials existing in the form of rocks, there is lime for mortar, various substances for clarifying sugar (and adulterating it), fire stones, sand for glass and for sandpaper, material for glazing earthenware, porcelain clays and clays for firebrick, ochres and stone paints, material for copperas, mica, non-conductors for safes, such as asbestos and other compositions, graphite, etc. Many of these are not calculated for good water filters. Iron ores are found nearly throughout the entire territory, without regard to the proximity of high mountains. The magnetic ores have mainly been sought and large amounts of money lost in fruitless attempts to convert them. Now, however, there is one successful mine, Benson's, near the Owegatchie Inlet, for a method for concentrating the ore has been discovered.

Probably the first attempt was made in the forest to reduce iron ore soon after 1812, at the "Old Forge," at the foot of the Fulton chain, by one Herreshoff, a son-in-law of John Brown, once the owner of "Brown's Tract." He was a wealthy and cultivated gentleman and was ambitious to establish a colonial estate. To that end he expended large sums of money in building mills for his colony, clearing two thousand acres of land, building and improving roads and introducing blooded sheep and cattle. He induced some forty families to locate on "The Manor," as he named it. He opened an iron mine and constructed furnaces and machinery for reducing the ore, and succeded in producing a single ton of iron. He at last spent his entire fortune in vain efforts to derive an income from some of his investments; but finally becoming bankrupt, and finding a draft he had drawn on Eastern friends dishonored, he committed suicide. From his exploits "Old Forge" takes its name, and some of the remnants of his folly are still to be seen there. Vast sums of money were squandered at Clarksboro, St. Lawrence county, many years ago, because, a mining expert told me last summer, the company did not understand the location and character of their vein. In Clinton county, notably at Lyon Mountain, there are mines which have been worked with some success for many years, but much more money, it is safe to say, has been lost in "prospecting" in various places than has ever been made as profits by manipulation. But new interest has been awakened, and with new processes it is probable that many successful developments will be made. Near Clarksboro is also a considerable vein of copper, which mineral has also been found in small quantities at Whiteface and March mountains. There are, unquestionably, precious metals hidden in recesses yet unfathomed, for it is a well established fact that a few specimens have been found. But I do not propose to write the geology of the wilderness, and have only touched some of its many mysteries.

Speaking of Whiteface Mountain, a moment ago, I am reminded of the origin of its name. In 1817, tradition has it, a slide began at its very summit and stripped its entire western side of everything but rock. The roaring of the avalanche was heard for many miles around and it is said that three hunters who were known to be in the vicinity were never heard of afterward. Another notably destructive event was the windfall of 1845, which began near Cranberry Lake, St. Lawrence county, and swept eastward some thirty miles, prostrating every tree in its path, from half a mile to a mile wide. Some parts of the land thus cleared are now under cultivation, but most of it is covered with underbrush which does not seem to have any ambition to replace the once stalwart forest. It was in this "windfall" that A. Ames Howlett, so well known as a genial gentleman and accomplished sportsman, killed several bears. And in the inlet of Cranberry Lake, near by, he took his famous trout, weighing when some time from the water 5lbs. 14oz. It was upon this lake and surroundings that "Uncle" Reuben Wood spent some of his pleasant days. Upon some stones of singular formation, piled one upon another, in monumental form, and at a point well up the inlet, Justice I. G. Vann caused a suitable inscription to be cut, in memory of the man whom every angler loved. He was the soul of honor and truthfulness, he could not tell even a fisherman's lie.

Many are the recollections of acquaintances I have made in my wanderings in the woods, as I think of my old friend. In a hundred places have there been such chance meetings, as many a camp fire has burned the brighter for them. A long list of names recur to my mind, and so of many friends whose names I cannot recall, but of whom the pleasantest recollections remain. Many have passed over the river, a few remain. We are all mortal. Thousands of high-minded, devoted sportsmen have gone before; thousands are to follow. Life's brook must be whipped for the last time, and the great whirlpool gathers us in. But we were the better for our communion with nature and nature's gift of wood, stream, lake and mountain.

What pleasure has fallen to our lot! Yes, there was joy in the anticipation of the trip, in overhauling the equipment and supplying deficiencies. What zest in planning the trip and making engagement of guide and quarters. Long sketches of previous enjoyment could be read from the leaves of the fly-book, and certain flies seemed almost alive and anxious to drop into old haunts. The friendly rifle was inspected with interest and precision and each individual cartridge wiped and laid in its place. At the appointed time all of the equipments were in readiness, and with a "good-bye" to friends and the severing of business or professional ties hard to break, the season of pleasure was begun. A railroad journey and miles over a wagon road, and the introduction to that which was to come was made. Here the garb of the true woodsman—of woolen, comfortable and serviceable, with none of the gew-gaws of the imaginative youth—took the place of fine linen and fashionable suits. Your guide and "pack" ready, and away to camp you went. Was there a party of genial friends? All the better. Over the quiet waters of the lake floated a platoon of boats, and in good time the camp was reached. Here for a week, perhaps, two, three or four weeks, there was rare zest, pleasure and enjoyment. There was good fishing by day, good floating by night; but no wastefulness. Peace, plenty and prosperity were forced by circumstances into alliteration, and the days went swiftly by. The time came for the "trip through the woods." Was it from "Paul" Smith's St. Regis Lake that the start was made? Very well. You hastened along the portages and over Cold Lake to spend the night on the Upper Saranac. Then with the rising sun you continued on to the Raquette River and Long Lake, where you spent the second night. The scenery of the day was superb. It was a day of hard work for the guides, but they did not complain. The following day the run through the river and Forked Lake was made to the Raquette through extreme wildness. You spent a day or two in floating along its ever curving shores and were never lost for something to attract the eye. What should the next place be? Either Old Forge or Blue Mountain Lake, the latter up Marion River, eleven miles away; but you chose the former. So away across the lake and through a winding tedious inlet, then over a pleasant carry and through the Fulton Chain of eight lakes. Every boat's length of the journey had something of special interest. There is no route, you say, which is so attractive, so satisfactory. Here was a favorite camping place and also a good hotel, where the vacation could be indefinitely prolonged. The trip could have been as well begun at Loon Lake or at Meacham Lake, giving more distance and time, and it could have been varied at the Upper Saranac by going through the Tuppers instead of Long Lake. The latter would have involved some hard work, the scenery would have been less enjoyable and the hotel accommodations less inviting.

The Beaver River offered much attraction previous to the advent of Dr. Webb; but strangers are no longer welcome upon Albany and Smith's Lake, and the old route through the Raquette is no longer to be enjoyed. Indeed, between the encroachments of clubs and their large holdings and Dr. Webb and his possessions of a vast territory, the tourist is in danger of being pinched out altogether. But too much usurpation of this sort may result in much outlawry, for there are thousands of people who feel wronged by the greedy possession of so much land by so few people.

The hope of the people for the future preservation of this gift of heaven to mankind, is in the movement for the establishment of a State Park. This great forest should remain the property of the people forever. The State owes it to the people to at once take possession of all and everything which constitutes the forest, and drive from it every person who would selfishly rob the people of the boon which this region alone can confer. Grand in its mountains, valleys, lakes, streams and verdure beyond the power of the pen to describe, let the prayer of millions for their preservation prevail as against the unholy greed of the few.

SYRACUSE, N. Y., December, 1891.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages. price $2.50. For sale by FOREST AND STREAM.

WILBUR R. WEBSTER.

DROWNED in crossing Moosehead Lake, Jan. 4, 1892, Wilbur R. Webster, of Northeast Carry, guide and woodsman, aged 30 years.

HAD he lived the whole FOREST AND STREAM family would have known him, for it was the editor's intention to introduce him to that goodly company and to add from his fund of woods observation and experience to the store already amassed. Of this loss I do not speak, but of the man: we were friends.

In the first place he was very much a man, prompt, decided, quick, outspoken, meaning what he said, ready to defend it. He had a fine, manly way of standing by himself and accounting to himself for what he said and did, which is the semblance of independence and well became him.

Some people have an atmosphere about them; others do not. Wilbur Webster was decidedly of the former sort. If you knew anything about men you knew the instant you faced him that here was a positive character. His letters, too, had a breezy rustle in them that made them charming even to one who did not know the writer. He spoke of things with a knack that nature gave him, just as she gave him his taste for tools and handicraft; for he was a man of many professions and perhaps better able to take care of himself in the woods by comfortable expedients than any man we have had since Hiram L. Leonard, the fly-rod maker, left our woods some thirty years ago. Aside from his inventive turn he had all the trades of the Indian; he could build his own canoe, make his own snowshoes in every part, make his own moccasins and not only kill the moose but tan the hides he made them of. In hunting and trapping he was well skilled for a man of his years. He could, without shame, take his place among cooks, lumbermen and river-drivers and do the work of any of them. He had also been a special warden at one time.

Nor was this all. He had knocked about the world somewhat in his more restless days and had had experiences. The eight days that we were together last spring were an Arabian tale; for, first it was when he had been a sailor, and, lying out on the bowsprit, had watched the porpoises play round the vessel's bows; then he was loading cotton in the South, commenting on Southern life as it appears to a Yankee stevedore; the third day we were alligator hunting with him in the bayous, at which trade he had spent some weeks or months; or we learned to ride a Texan broncho, or we hunted moose in the woods of Maine. Always there was life, and light and shadow in his stories. Who can tell, until the whole story of that stay last spring with the West Branch drive at Ripogenus can be written down, how evenings when the dusk was gathering, Joe Francis and Steve Stanislaus would come dragging wearily up hill to our tent after their day's work, and we would all lie round the fire on our blankets, drinking clear tea from tin dippers, and either telling stories or comparing woods notes?—evenings when the inimitable Joe told us his "Old Non Comprend's Dead," when Wilbur always came in a good second, and Steve beamed silent but appreciative in the fire glow. Those were days to be framed in silver! "The pictures," wrote Wilbur of some photographs I sent him, "bring back many pleasant recollections of the scrambles over logs and rocks, our search for the oven bird's nest, and above all, the moose stories that used to take my attention and spoil my cooking." He should have added that no small part of these were his own. "He hit out pretty straight at us guides," he wrote me this fall of a man he had been off with, "for telling big stories; but all the same, I don't believe he doubted any of them."

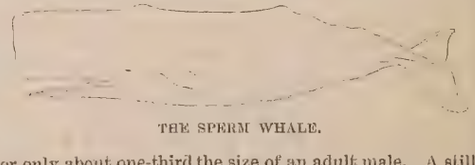
This last is highly characteristic of Webster. He was proud of the fact that what he said couldn't be doubted. He spoke straight out at you with blunt directness, and you must abide and believe it. That Saxon frankness was as marked a feature as his Saxon blue eyes and ruddy beard. Flinching and double-speaking were not taught in the school where he was brought up. And yet he was always more than willing to substantiate what he said. I remember one day a question came up about the nesting place of sheldrakes. Father and I said, in old stubs; Webster said, on the ground. We knew that we were right, and did not doubt that he was also, but still he was anxious to have us see for ourselves. If we went back by way of Caribou Lake and the Grant Farm, said he not once nor twice, but many times, he would agree to show us all the sheldrakes' nests we wanted to see, and all on the ground. And so he did. We scudded about in Caribou Lake, making from one rocky islet to another between the flaws—"If it hain't on this one, it certainly would be on the next"—until we saw under the little spruce bushes, as he had said, the big nest full of eggs wreathed with down and feathers; and that noon, on the last high ledge toward Ragged, we dined on sheldrakes' eggs, with the June sun blistering our noses and a blue-backed swallow twittering to her mate from the door of the old woodpecker's hole in the islet's solitary stub, where she had her nest.

One could not see Wilbur Webster long without observing that he had nerve and coolness and no small measure of that more brilliant courage which attracts more attention even if it be not so useful. He, indeed, never boasted, either what he could do or had done; he spoke of times when he had been over-venturesome—he wouldn't do that now, he said—and of times when he had been afraid; but when I urged the dangers of a course of action from which I would dissuade him, the smile in his beard said that these were the chief attractions. Prudent he doubtless could be, for a hunter must have that good grace, and yet his natural bent was to rashness, of which I may, perhaps, cite an instance. When I was working on the game laws there was a certain delicate matter which I desired to investigate. It was, in fact, so delicate that I thought not even those who knew me best would wish to put their knowledge on paper for me. Then the question was, who could tell me best. On account of his clear understanding and ability to write definitely and coherently, I chose to ask Wilbur Webster. At this time our entire acquaintance consisted of passing each other without speaking two years before on Mud Pond Carry and two letters on game matters—nothing besides this except slight business acquaintance with my father. Now it happened that in choosing him I had selected the very person who knew more about the matter in question than any one else. The result was that he sent me promptly full particulars, with no guarantee of my good faith, although he registered the letter for fear of its falling into the wrong hands and requested me to burn it immediately. The information thus given was of great service to me, although for himself discovery of what he had done would have been dangerous if not fatal.

Wilbur Webster was educated, but not in the schools. He left school at twelve, which he deeply regretted, as also that he had spoiled his mind by reading too much trash. For my own part, I see no cause to complain of a mind no more spoiled. It was strong and penetrating, naturally inclined to ask questions for its own solution. It was alert and inquisitive rather than heavy, but it was logical, and always kept well to the point. This indeed was particularly noticeable in his letters. The minds of woodsmen are generally clear, but their letters resemble rabbit tracks in their lack of continuity. Here, however, was one who wrote with ease and felicity. His observation of nature was true and good, minute in details with which a woodsman does not often burden himself. He had a fine taste in books and a reading wider than common. Dickens and Scott he spoke of, I remember; and he talked of Disraeli and Adam Badeau, to me unfamiliar ground; he said also that he liked Emerson. And in current events he was well posted; on undecided issues, fair minded. I remember that we were talking on prohibition that last evening at the Grant Farm and that I noticed with pleasure the points he made. He hid behind no conventionalities of phrase. If you wanted to argue, he left his intrenchments and came out single-handed; so was conversation with him refreshing and profitable.

I think it no more creditable to misrepresent a man for the better at his death than to do him this injustice for the worse in his lifetime. No one was freer to own that this man had faults than himself. He was a man of quick, hot temper, less steadfast than resolute, with less forethought than afterthought, of many faults and failures if he were judged by his own report; for, whether because he liked us as we liked him, or because we were all Penobscot born and therefore inclined to be clannish, he spoke to us without reserve. But at worst his faults were those of a nature inclined to be noble, while his virtues were sterling. Yet it was not to everyone that he showed the side which he uncovered to us. "I despised that party," he said, speaking of one that he had guided; "I was hateful as I could be. Why, I swore enough to have kicked me out of two parties, let alone the rest." Because he disliked a man he seemed to think it good cause for making that man dislike him. It was part of his impetuous promptness. Yet he was most generous wherever he found anything to praise. On occasions he was enthusiastic. I remember his saying of one New York man with whom he had been guiding, and of whose respect for the game laws he had the highest admiration, "That man was the *straightest* man that ever came into these woods." And of others now and then he said, "Oh, they were *straight*, they weren't sports."

But his chief attraction to me was his power of growth. Bit by bit he told us his life and we put the bits together. It was wonderful how from so troubled a life, a brain seething with thoughts and an almost fevered energy driving to action and change, he was working his way to clearer views and settled convictions, to an understanding of all-pervading order. He had an innate clearness and brightness of soul—that drove away fogs and clouds—a health of soul that needed no tonic and yielded to no odds; for it was noteworthy that with him habits which commonly take stronger grip with years were losing hold—not trampled under but outgrown. He was superior to these things; they dropped away. To us this growth in poise and candor of spirit, with the ripening thoughtfulness that attended, promised much. It was the promise as much as the achieve that was so refreshing and made our friendship.



I do not mean to preach, but one never has too many friends. There is left alone the young wife who had lived much with him in the woods, sharing many of his adventures, and of whom he always spoke with tenderness.

FANNIE P. HARDY.

Natural History.

A SPERM WHALE ASTRAY.

THE National Museum has added to its collection a very desirable and, as far as the Museum is concerned, unique skeleton of the sperm whale. Owing to the fact that the animal inhabits warm waters of the Atlantic and Pacific, and comes into cold waters off our coast only accidentally, the chance of getting a stranded specimen are very few and far between. The lower jaw with its formidable array of teeth is a familiar object in collections, but the entire skeleton is known to be found now only in Jefferson College, Philadelphia, and the National Museum. The whale is a young one with its teeth still concealed in the gums, and with a length of only 27ft.

THE SPERM WHALE.

or only about one-third the size of an adult male. A still younger individual measuring 16ft. and weighing about a ton and one-half, was taken in 1843 near New Bedford, Mass., and another 20ft. long was captured on the coast of Cornwall, which had in its stomach the enormous number of 300 mackerel. It may be interesting to the readers of the current shark stories to know that the sperm whale turns upon its side to take large objects between its jaws; this is owing to the peculiar shape of the head, which will be at once appreciated by reference to the figure on Plate 1 of the "Fishery Industries." The head of the sperm whale is not only heavy, but it is also tough, and when a fighting bull is mad his pursuers must approach him with extreme caution. The veteran whaler Capt. Owen, once told the writer of a personal adventure with a fighting sperm which rushed towards his boat with open jaws and thrashing from side to side. An iron was driven into his "case," whereupon he closed his mouth and shoved the boat ahead of him in the most exciting manner. A second weapon was launched into his mouth and this caused him to turn on his side, when a third iron was thrust into his "life,"

and the wild voyage ended; but the memory of that perilous encounter was not soon forgotten.

The specimen obtained by the Museum came ashore on the Maryland coast about 8¼ miles above the Green Run Inlet Life-saving Station and information of its stranding was wired by the keeper, J. J. Dunton. Mr. J. W. Scollick was sent down from the Museum and experienced no little trouble in securing the prize. The skeleton is now in course of preparation, but as much labor is required for the maceration, bleaching and articulation of the bones, the public will not see the frame work of this curiosity for some time. We have referred to the mackerel as one of the resources of this whale; it prefers, however, to dine upon species of squids.

While there may be some doubt whether or not sharks attack men, there is abundant evidence to prove that the sperm whale is a dangerous customer to tackle. Here is an illustration, quoted from the "Fishery Industries:"

"Capt. Clark on Thursday morning last discovered a Spermaceti Whale near George's Banks, mann'd his Boat, and gave Chase to her and she coming up with her Jaws against the Bow of the Boat struck it with such Violence that it threw a son of the Captain (who was forward, ready with his Lance) a considerable Height from the Boat, and when he fell the Whale turned with her devouring Jaws opened, and caught him. He was heard to scream, when she closed her Jaws, and part of his Body was seen out of her Mouth when she turned and went off."

SHORE BIRDS NEAR TORONTO.

AS the movements of the shore birds are of interest both to the sportsman and the naturalist, I send you the following record of my observations for the past season. The shore of Lake Ontario near Toronto consists of a flat strip of sand, the inner or bay side of which is lined and indented with marsh, the combination forming a perfect place of resort for plover and sandpiper during the migrations. This spot used to be frequented by them in vast numbers, but as the population of the city increased so the number of the birds has diminished, and the time will soon come when we shall have seen the last of them at this place.

Wilson's Phalarope (*Phalaropus tricolor*).—One taken July 21. This is the only one I saw, the species being very rare here.

Woodcock (*Philohela minor*).—These birds were formerly abundant here, but are now rare. Drainage and the gun have driven them off. First seen April 6; last seen Oct. 16.

Wilson's Snipe, English Snipe, Jack Snipe (*Gallinago delicata*).—Rare in spring. First seen April 21. Tolerably common in autumn. The first of the fall flight arrived Sept. 12, and the last was seen Oct. 27. A pair bred in the marsh this year, and probably some remain for that purpose every season.

Red-breasted Snipe (*Macrorhamphus griseus*).—Rare. The only one I saw this year I shot Aug. 24.

Stilt Sandpiper (*Micropalama himantopus*).—Rare. I saw only two this season, both of which I shot; the first an adult female July 18, and the other an adult male July 28.

Knot, Redbreast (*Tringa canutus*).—Common in spring, usually seen in flocks of thirty or forty birds. They are very unsuspicious and decoy readily. They arrive about May 24 and remain until the end of the first week in June. In the autumn they are rare. The only one I saw I procured Aug. 24. This bird was in the perfect silver-gray laced plumage, which is so delicately beautiful.

Pectoral Sandpiper, Grass Plover (*Tringa maculata*).—Abundant in the autumn; saw none in the spring. Saw first on July 23, and the last on Oct. 27. While here they are seldom seen on the sand, usually frequenting the muddy edges of the ponds. Before they leave they become so grossly fat that it is almost impossible to preserve their skins decently. The stomachs of all I examined contained larvæ of aquatic insects and of the blue-bottle fly, which they obtained from the dead fish lying about.

Baird's Sandpiper, Grass Plover (*Tringa bairdii*).—Tolerably common in August, but I did not see it in the spring. I killed the first I saw July 28, and the last Oct. 10. They frequently associate with the pectorals and other sandpipers, feeding either on the mud or sand.

Least Sandpiper, Stint (*Tringa minutilla*).—Very abundant in autumn. Not seen in spring. The first arrived July 4, and by the 10th were very common. From this date to the middle of September they remained, associating in large flocks with the semi-palmated sandpiper.

Red backed Sandpiper, Blackheart Plover (*Tringa alpina pacifica*).—This is the bird so well known as "the blackheart," arrives regularly in immense numbers on May 24, and, as that day is here kept as a public holiday, the poor birds meet with a very warm reception. The great majority of the birds that escape pass right over to their breeding grounds, but a few small flocks lingered about this season until June 13, on which day I saw the last of them. Some I shot at that time were, strange to say, in very dull plumage, not nearly so bright as the birds of the first flight. In the fall they are not abundant. They arrive early in October and depart at the end of the month.

Semi-palmated Sandpiper (*Ereunetes pusillus*).—Abundant both in spring and autumn, arriving about May 24 and remaining until June 13, on which date I shot three, the last I saw of the spring birds. On July 21 I shot an adult female. This was the first to return. It was in full plumage. From this date until Aug. 10 I saw several small parties, all adults in full plumage. On that date two young appeared in the ashy plumage. From this time the numbers rapidly increased until the middle of September, when they departed.

Greater Yellowlegs (*Totanus melanoleucus*) —Common in spring and autumn. First seen April 28. These birds only remained here a few days on their way north, and were scarcer that usual this year. On their return, I saw the first July 28. From that time but few were seen until Oct. 12, when they became common, and continued so until Oct. 27, on which day I saw the last. They occasionally stay much later than this; however. Last year (1890) I noted a flock seen Nov. 19.

Yellowlegs (*Totanus flavipes*).—Tolerably common in spring and autumn, but soldom appearing in flocks. This spring I saw none. On their return, the first appeared July 18. This was an adult female. But few were seen from that time until Aug. 22, when they became common, and remained until Oct. 6.

Solitary Sandpiper (*Totanus solitarius*).—Tolerably common in autumn; I have not seen it in the spring. Aug. 13 I obtained the first of the season, an adult female, and on the 17th another, also an adult female. From this time on some were seen nearly every day until Sept. 10, when they disappeared. This bird is not quite so solitary as one would infer from its name. I quite frequently found two together, and on one occasion four. They also at times appear to associate with the spotted sandpiper, but perhaps this is accidental.

Bartramian Sandpiper, Upland Plover (*Bartramia longicauda*)—This bird can hardly be called a shore bird, but on May 25, 1874, I killed one as it was flying along Burlington Beach near Hamilton. As a rule it frequents open fields inland and is but sparingly distributed throughout the western part of the Province of Ontario. Where it occurs, it is a summer resident and breeds. In 1870 I secured a set of eggs from a nest in a field of clover.

Spotted Sandpiper, Teeter, Peep (*Actitis macularia*).—Abundant: summer resident; breeds usually in the fields away from the lake shore. First seen May 1; last seen Aug. 10.

Hudsonian Curlew (*Numenius hudsonicus*),—Occurs rarely and only in the spring. One shot May 30. This is the only species of curlew I have ever seen here.

Black-bellied Plover (*Charadrius squatarola*).—Tolerably common in spring, arriving about May 20 and remaining until the end of the month. In the autumn they are scarce. The only one I saw this season I shot Aug. 28. It was a dull female still showing a few dark feathers on the breast.

Golden Plover (*Charadrius dominicus*).—I have never seen this bird here in the spring, but in autumn they are usually common. This year, however, they were scarce. There first appeared Aug. 31 an adult female. The last were seen Oct. 10.

Killdeer Plover (*Ægialitis vocifera*).—A tolerably common summer resident. First seen March 25; last seen Oct. 21. On Aug. 3 I shot two immature birds. To the end of the tail feathers of each are attached long, silky filaments. The birds were full grown and the plumage otherwise normal. This is no doubt the substance which preceded the feathers and formed the tail of the very young bird, but it is strange that it should have remained on the perfect feathers for so long a period.

Semi-palmated Plover (*Ægialitis semipalmata*).—Common in spring and autumn. First arrives about May 6 and remains until the end of the month. On the return, the first was seen July 23, an adult female; from that date until Aug. 24 a few adults appear, but after that they become abundant, the young birds arriving in large flocks and remaining until the middle of September.

Turnstone, Redshank (*Arenaria interpres*).—Tolerably common in spring, arriving about May 24 and remaining until June 15. I only saw one this autumn and that I shot Sept. 4. It was an adult female.

The following species have been taken here, but can only be considered accidental visitors, viz: Ruff (*Machetes pugnax*), Purple Sandpiper (*Tringa maritima*), Curlew Sandpiper (*T. subarquata*), Marbled Godwit (*Limosa fedoa*), Willet (*Symphemia semipalmata*), Buff-breasted Sandpiper (*Tryngites subruficollis*) and Piping Plover (*Ægialitis melodа*). I saw none of them this season.

Formerly the Sanderling (*Calidris arenaria*) and the White-rumped Sandpiper (*Tringa fuscicollis*) were abundant here in the autumn, but this year they were conspicuous by their entire absence.

You will observe that nearly all the first arrivals, on the return from the breeding grounds, were adult females; these birds I think had not bred this season.

TODMORDEN, Ontario, Canada. C. W. NASH.

ANOTHER COLLECTION OF HORNS.

Editor Forest and Stream:

"'Rah! for the FOREST AND STREAM and the 'Boyhood Number.'" It carries me back to my old Kentucky home and the old shotgun with a split tube, which used to burn my face, but that did not count against the bags of gray squirrels, ducks, quail and rabbits, with now and then a wild turkey. Verily, the old men dream dreams.

I have been much interested in Mr. Ames's letters from the Maine woods. The best help toward the enforcement of game laws and the preservation of game is just such letters and the circulation of the FOREST AND STREAM.

I noticed Mr. Ames's account of the display of heads and horns in San Antonio, Tex. I think I can tell him where he will find a counterpart (and it is, unfortunately, in a saloon). In Seattle, Wash., a year ago last fall I saw the collection, and it was fine. There was a large number of both horns and animals and birds. But the best part of the show was the curious shapes and malformations of horns, of which there were a large number. H.

EDGAR, Neb.

Words of Appreciation.

FOREST AND STREAM has been enlarged in size to 32 pages, and appears in altered dress and printed on a superior quality of paper. The paper's columns give an admirable record of sportsmen's experiences on land and water, and in them many subjects of interest to those who delight in field sports are discussed.—*Newark Evening News.*

FOREST AND STREAM, the well-known American sporting journal, has made a great step forward that will attract to it many new admirers. A sportsman could not "tie up to" a more congenial companion.—*Doylestown (Pa.) Democrat.*

First is FOREST AND STREAM, that has risen to the dignity of a patriarch among its kind—nineteenth year—wise in its care for the matter it contains, yet as fresh and vigorous each week as the ambitious youth of long ago. Age has been no impediment to its growth, as hereafter it will appear in thirty-two pages instead of twenty-eight.—*Texas Field.*

FOREST AND STREAM, the weekly organ of the sportsmen of the country, has just begun its thirty eighth volume, and is enlarged to 32 pages. The popularity of sports with the rod and gun has increased greatly of late years, and the development of this publication is keeping pace with this increase We heartily commend FOREST AND STREAM as a periodical of the first class, that is worthy of the great success it has met.—*Portland Transcript.*

Game Bag and Gun.

Antelope and Deer of America. By J. D. Caton. Price $2.50. Wing and Glass Ball Shooting with the Rifle. By W. C. Bliss. Price 50 cents. Rifle, Rod and Gun in California. By T. S. Van Dyke. Price $1.50. Shore Birds. Price 15 cents. Woodcraft. By "Nessmuk." Price $1. Trajectories of Hunting Rifles. Price 50 cents Wild Fowl Shooting; see advertisement.

SHORT GUN BARRELS.

Editor Forest and Stream:

The enthusiastic sportsman who kept cutting off the barrels of a 10-gauge gun until they were reduced to 24in., may have a marvelous arm for duck shooting, but many of your readers accustomed to the usual length will, I fear, consider it better adapted for scaring away domesticated ducks from the kitchen garden.

Nevertheless, in the light of several years' experience with a variety of guns, of from 28 to 10-bore and from 26 to 32 inch barrels, I can see no reason why such a gun should not make a fair pattern and have sufficient penetration for small game at short range.

The 24in. of a 10-gauge barrel should satisfactorily burn 3drs. of quick powder, sufficient to propel 1¼oz. of shot; but a cut-off gun, if properly balanced when built, will never balance afterward. Indeed, I should think it would be impossible to make a 10-bore of 24in. barrels that would handle and look well, as it is a common failing of most short guns to have to have the center of gravity too far aft. Guns with short barrels are usually designed for light work and are correspondingly of light weight, having a short frame and light standing breech. They are, therefore, unfit for continuous use with heavy charges.

Of short guns I have personal knowledge of four, each having barrels 26in. length and each of a different gauge. They are:

A 64cal. Maynard, weighing 5½lbs., which is about equal to an 18-bore, as fine a shooting gun as I have ever handled, using from 2½ to 2¾drs. of powder and from ¾ to 1oz. of small shot, 7s to 10s.

A 16-gauge Parker weighing 6lbs. 6oz., bored for field shooting, which does its best work with 2¾drs. powder and 1oz. of shot.

A 10-gauge by a local maker, of 7½lbs., chambered for short shells, and a very satisfactory performer.

A 10 gauge cut off gun, the name of the maker of which I do not now recall, but I do have distinct recollection of the way in which it brought down doves flying past a blind.

All of these were good shooters, but in each case the balance was more or less too far back; still that may be a matter of opinion, as a greater part of my shooting has been done with 30 and 32in. barrels, not from choice but of necessity.

A 10-bore is unfit for a short and light gun because of the great width across the breech, requiring a large amount of metal in the barrels and standing breech, which adds to the weight and destroys the balance. I admit that a heavy duck gun should have the balance of its weight well aft, but a light field gun of short length should have its metal more delicately distributed.

Guns are like cannon; the length of barrel should be proportioned to the caliber to secure the highest practical degree of efficiency. If circumstances or conditions require a short barrel, select the smallest bore which will satisfactorily shoot the required amount of shot, and you will have a gun of the minimum weight, and, if well built, of correct balance.

The charge of shot regulates the amount of powder, which in turn limits the shortness of barrel. The charge regulates the weight. A 12-gauge gun with 29½in. barrels will as completely burn 3¼drs. of powder as a 10-gauge of 31½in. barrel will burn 4¼drs. Similarly a 16-gauge will burn 2¾drs. with a 27in. barrel, and a 20-gauge 2½drs. with a 25in. barrel. They will burn more for these lengths, but the above charges are taken for illustration. I doubt, therefore, whether it is advisable to lengthen the barrels materially beyond the above figures, but for light guns they may be reduced.

My own choice for a field gun is one having 26in. barrels, weight 6 to 6½lbs., and either 12 or 16-gauge. Of course for the same weight the 12 gauge would cost nearly twice as much as the latter, for in one case it would be necessary to have very careful and delicate work and special pattern, while in the other the regular patterns will give the desired weight.

These considerations led to my purchasing the 16-gauge mentioned herein, and I am well satisfied with the selection. T. H. G.

Editor Forest and Stream:

I notice that one of your "Snap Shots" reads that an "enthusiastic gun man" cut his "trusty" 10-bore from 32 down to 24in., and found it to be a perfect wonder for duck shooting; meaning, of course, that penetration remains as good or better than before, and that the spread was just right.

I have talked and experimented a good deal on this subject, believing that a gun weighing 6½lbs. or less, 24in. barrel or less, 12-gauge, would do just as good shooting as a much longer and heavier gun. I have cut off a good many different makes, and have found that I did not lose any in penetration.

What a difference there is in people's ideas about boring. Is it such a science; or is it such an impossibility to bore a perfect cylinder? I believe there is nothing better than a perfect cylinder, and if they could be made so that they could be put into guns of ordinary price, then the work of "touching up" to make them shoot well would be done away with, and only resorted to by the restless genius, to whom we are indebted for so many valuable and valueless things. My mind cannot help running to this, in connection with the subject. I well remember going with a gentleman, about eighteen years ago, on a shooting excursion who had a gun that weighed 9½lbs. (32in. barrel); and at our stopping place for the night we met another sportsman who held a position in an armory for testing the guns. We found him a crank on short light-weight guns, he contending that he could make shot penetrate as far or further with his 6lb. 14oz. 24in.-barrel gun as my friend could with his arm. The result was a match, in which the little shotgun was the winner. That was what set me to thinking and experimenting.

Since then numerous tests have been made by gentle-

men throughout the State, from whom I hope you will hear. Notably among these gentlemen is Mr. Lane, of Hartford, who is acknowledged to be one of the finest and most thorough sportsmen in every sense of the word. He cut off a good many 12 bores, and if I remember correctly, found that he could cut them down to about 20in. without loss of penetration; but I hope to read of his experience from his own pen. I also know of a gun (in the hands of quite a novice) that weighed less than 7lbs., 25in. barrels, that was pitted against guns at least a third longer and heavier, in the hands of experts, but the short gun was the victor every time both for spread and penetration. Another trial with this gun after it was cut off another inch was made with a gun that weighed 8lbs. 9oz., 30in. barrels, 12-bore; but again the short gun distanced its competitor, putting in more shot and very much deeper. All these long guns were considered by their owners to be extra good.

I do not think there are any sportsmen, however strong and energetic, who care to load themselves with long guns, when they can kill an old partridge just as far with a short one. The only way to test it is at the target with gun in frame. A man to do good shooting must have confidence in his gun while in the field. There are some men down on Cape Cod, or in that vicinity, who have experimented with short guns against long ones, whom I hope to hear from. F. T. COOMBS.

CONNECTICUT.

WATCHING THEM ARRIVE.

MY pusher and I had run our boat into an old blind that was standing in the middle of a small lake in northern Indiana. It was just noon, and as we had been running all over the country trying in vain to find the birds, we had begun to get hungry, so I proposed having some lunch, to which proposal my pusher was always agreeable.

It was one of those warm still April days, when everything seems to be quiet except, perhaps, once in a while a cowbell is heard across the marsh, or an engine whistles some miles off.

As we were eating our lunch I asked Bill why the bluebills had not arrived. "They're due now," he said, with a wise sort of a look, "and if you stay down here a day or two longer you will get some of them."

While he was talking I heard a sort of rumbling noise, seemingly overhead, but as I looked up I could see nothing but clear sky. It kept growing louder, until finally my curiosity was aroused, and I asked Bill what he thought it was. "You just wait," he said, and with the exception of a very broad smile this was all I could get out of him; so I began trying to find out for myself.

By this time the noise was quite noticeable, and as I looked up I could see what I thought was a large flock of blackbirds, but as they came nearer I could see that they were an enormous flock of bluebills coming in from the south. They swung over the lake two or three times and then lit. During the afternoon several more flocks of less size went through the same maneuvers, and by 6 o'clock there were two or three thousand birds skipping around on the lake.

Bill's prophecy had come true, the birds came and I took thirty-five of them into the club house that evening, and all Bill said on the way home was, "I told you so."

J. M. M.

NOTES OF GAME.

THE season for quail in Indiana closed Dec. 20, with many thousands of strong, fat birds left; but as the law does not protect rabbits, the first snow brings an army of rabbit shooters into the fields. Their main object is to find a covey of quail bunched and to try how near every one can be killed by the simultaneous discharge of both barrels. It frequently happens that more quail are killed in one snowy day than are killed over dogs during the entire season. There is no help for it except to make the close season close for everything.—O. H. H.

AUBURN, Susquehanna Co., Pa., Jan. 7.—The shooting season ending Dec. 31 has been full of disappointments. But little game has been killed. Most of the shooting here is at grouse and rabbits. The covers contained a fair number of grouse, but the weather was such as to render good bags out of the question. Six for a day's work was the best I heard of. It took a good one to average two. Two very wet seasons in succession nearly exterminated the grouse. But the past season was very favorable, and on opening day there was double the birds of a year ago, and as but few have been killed a good stock for breeding remains; and if next season be favorable we shall expect a good supply of birds next fall.

Rabbits not as numerous as last fall, yet there was enough for good sport with the musical beagles. Not a particle of snow fell during the open season, which saved the lives of thousands. A tracking snow and a ferret make a combination they cannot withstand. Bar the ferrets and they will hold their own against dog and gun. But in this locality there are twenty-five ferrets to one beagle, and the slaughter is sickening. One young fellow boasted of killing 357 in less than three weeks, and another writes a companion of destroying 93 in three days. A shooting friend tells me of meeting a boy this fall with nothing but a sack and ferret in the way of "tools" and sweating under a load of fifteen rabbits. Such killing is not sport, it is slaughter; and such "sportsmen" should lay aside the guns and secure positions in one of the abattoirs of Chicago. There they could gratify their inordinate thirst for slaughter.—BON AMI.

EDDY, New Mexico, Jan. 15.—Game continues abundant in this vicinity. Myself and a friend drove out four miles east of town, a few days ago, and run on to a band of eighteen antelope, but they were on a flat, level piece of country where it was impossible to get a shot at them. The surveyors and land locators have recently, however, found several bands within three to ten miles of town, on rolling ground, and in several cases got within 50yds. of them. None of our local sportsmen here have hunted antelope for several months past, hence they are remarkably tame. A hunter brought in eighteen saddles of antelope and six of deer a few days ago. Mr. G. W. Patton, of Chicago, who is visiting here, has put in from two to eight hours every day, hunting jack rabbits, for the past month, and his score, to date, counts up something over 300.—G. O. SHIELDS.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

CHICAGO, Ill., Jan. 22.—Copious tobacco in fluid form, a discouraged stove and a close crowd around it of evenings in the country grocery. Given these what will be the topic talked of all through this region this week and may be next.

It will be quail. Some one will ask, "How many was it you killed at one shot, Bill?" "Seventeen," Bill will say. Then he will spit. After a while he will say, "Got the whole bunch. Jim, he got two shots, but he only got 13 one shot and 11 the other."

"What's quails bringin' now?" some one will ask.

"Dollar'n quarter."

"Gee! You made purty near two dollars to one shot. That's what I call a blame lucky shot."

Yes, but it's blame unlucky for the quails. Yet many and many such a shot is ringing now out in this western country, made possible and probable, and indeed certain by the heavy snow which has fallen over so wide a region within the week now closing. This storm must prove more destructive to game life than any for a number of years. For the last two years quails have been unusually abundant all through this immediate section. This was the result of a succession of milder open winters. We have had no such snow as this for a long time.

Snow began to fall here Sunday evening, and it continued to fall almost without cessation till Tuesday, late in the afternoon. At this writing the city streets are of course in a horrible condition of slush, but a little way out in the country the blanket of snow remains deep and white, and so will be long enough to prove the winding sheet for many a bevy, especially if sudden cold should follow.

It is in this sort of weather that the birds move about little and remain huddled up. The pot hunter who finds a "bunch" will destroy a bevy at a shot.

The storm was general over a large section of country. The Signal Service reported that the course of the storm was from northwestern Texas toward the Lakes. The temperature struck zero along the southwestern Kansas line. In North Dakota it was 20° below, 15° below in western Iowa and in Nebraska, St. Louis had 8° above, and 5 inches of snow. All of Tennessee near Memphis had sleet, rain and freezing slush. Mississippi had snow and unusual cold, with sleet and freezing near Jackson. Kanas City, Mo., had 24 hours of snow. Texas had a "norther," ruinous to stock and to game undoubtedly, from Dallas to the Rio Grande. altogether the worst storm for 5 years. Arkansas had snow, sleet and ice. Even Georgia and Florida suffered.

Six inches of snow and 5° below zero was reported from Quincy, in southern Illinois. Hillsboro, Ill., reported 2ft. of snow. Sumner, Ill., reported 6 to 20 inches of snow, drifting. Vandalia, Ill., had 15 inches of snow on a level, the deepest since 1874. Duquoin, Ill., had 9 inches of snow, and a strong wind.

Reports from Newton, North Judson and Warsaw all of Indiana, in response to personal inquiry, say the snow averages from 6 inches to a foot, but the birds were not thought in great danger unless sudden cold set in. Near Davis, Ind., the club men thought the birds would stand the storm all right

This storm has been by far the most important event of the week from a sportsman's standpoint. Its effect upon the shooting can not be told until next fall. It depends much upon what the weather for the ensuing week may be. At present it is mild in this vicinity. It would appear a moderate estimate to say that quails will not be so abundant in this section next fall by one-half as they were this fall.

After the weather comes the grip in importance. Numbers of our shooters here are down with it. Geo. Hofmann is a wreck of his once voluptuous self, having lost 28lbs. in 2 weeks. J. L. Wilcox is ordered South by his physician. Others are sick or half sick. Postponed matches are not unusual. Field shooting is not thought of.

From this last remark I must except the little Maksaw-ba party of three who, with a hound and a ferret, went out after cottontails early in the week. They accumulated 19. It was a wild and bloody hunt. The ferret would put the rabbit out of the hole, then all three of the hunters would fire two barrels each at it. After that, the hound would run it down. I withhold names, in consideration of the broiled rabbits which the guilty parties, or rather the chief instigator of the crime, offered in expiation at a little supper the other night.

Mr. Nat. B. Nesbitt, of Chesterville, Miss., well known in the doggy world, writes us out here that he went out on a "still hunt" for rabbits the other day, and got 73 to his one gun. This breaks the record for one gun so far as known. Those who attended the United States Field Trials at Bicknell, Ind., however, tell me that a man ought to kill 300 rabbits in a day there with a light snow. Two or three were in sight most of the time during the running.

A pretty good wolf story comes from Tuscola, Ill., and I offer what the despatches give:

"TUSCOLA, Ill., Jan. 21.—Early this morning a party of hunters, headed by Harvey and Stephen Campbell and Henry Bloase, started a large wolf near Bourbon, that has long been seen in that locality. They were mounted and had a pack of five trained English foxhounds. The snow was fifteen inches deep and the hunters' prospects were favorable. The beast is a large black timber wolf. The dogs got the worst of two skirmishes with him, and were very shy at the end of the chase. The wolf took dogs and hunters over all sorts of country, and at one time, within half a mile of town, was closely pressed. But he got away with some teeth wounds, and at dusk the hunters gave up the chase. The wolf left a trail of blood in the snow, and will be again sought to-morrow."

In earlier letters I have spoken of the wolf chase which lately took place in Chicago, and also the bear hunt. Since the account of the dead antelope found in the streets of New York, I have nothing further to say, although I think that story was only a bit of jealousy against Chicago as a big game center.

Some years ago, in writing a review of the sporting clubs of Chicago, I had occasion to describe fully the Mineola Club, of Fox Lake. A cut was shown of its magnificent club house, at that time certainly the finest in this part of the West, and probably only equalled by the palaces of St. Clair Flats. This morning there was a Mineola Club. This afternoon there is none. A mortgage for $23,850 was foreclosed to-day, and the club is no more. Its bonded indebtedness was $22,500, and there was $1,350 of interest due. The property, including real estate, club house and furniture, is valued at over $19,000. Capital stock was $50,000, with $29,250 issued. It is likely the club will be reorganized under another name. Mineola was a highly fashionable club. Really, the club house was nothing but a big hotel, used by the members as a summer resort. A hard-working sporting club it never was, but rather a dilletante. It was a problem from the first, whether the club could swing so large a plant on such a basis. Support must needs come only from the summer patronage. Of shooting Fox Lake could not offer, and has not of late years offered enough to attract more than a few rare visitors of the club membership. The patronage would not carry the club. Turned into a summer hotel, open to the full public, and its great building might pay for itself, for as a summer resort pure and simple these lakes grow yearly in importance.

Citizen Bill Griggs, of Browning, Ill., probably the widest traveled and most sucessful market-hunter in the United States, is at present on Galveston Bay, Texas, shooting canvasbacks. He has a sloop hired for transport to open the market, and is getting $15 a dozen for his ducks. He will make a trip to South America, starting within the month, and will not return till spring. He is going after plumage birds. The trip is an experiment. With all kindness for Bill, I hope the experiment will fail. Last year Griggs located a heron and egret roost in Mississippi, and made a young fortune out of it. He got his boat in to the heronry, and killed the birds with a .22 rifle, easily getting a load. The experiences this man has had would fill a book, and a mighty interesting one too.

Horicon Club is having some trouble in litigation, owners of adjacent land threatening injunctions if the work on the marsh dams is not discontinued. If I am not mistaken, there was once printed in FOREST AND STREAM a decision which would be of help to this club.

Mr. A. W. Knox tells me that yesterday he saw, at a West Side market near Des Plaines street, 24 barrels of black bass and pickerel, just received from the Illinois river country. He was told similar shipments were constant from that region. So much for one beauty in our fish law. Here is work for the State League.

There is one feature about the Ice law passed last winter prohibiting winter fishing. The prohibition extends only till March 1. If winter should hang on so late as that, and it often does, thousands of fish will be killed. The first week of March is worth three weeks in January, to the market-fishers. They catch the most bass just as the ice is breaking up. All the ice fishers of the lake country are observing the law very well, but as one of them says, they are "just layin' for the first of March." Thousands of lines will be out if the ice holds.

The bass which Mr. Knox saw were not caught on hook and line through the ice, and it is even probable that they were taken in seines. A favorite method of the Senachwine fishers at this season, as I know from personal observation, is the use of the "set net," or fyke, with wings and pocket. Except in especially cold weather, they will use this all winter, keeping the ice open above the pocket, which they empty every day.

Mr. Rolla O. Heikes is now in the employ of Thorson & Cassaday, of this city. Both should be felicitated.

The Cleveland Target Co. sends out a very full and tasty catalogue this year, the work of Paul North I am told. What a growth this artificial target business has had. At first a freak in sportsmanship, it now has its thousands in capital and its own special literature.

As may have been noticed elsewhere, Mr. B. Waters, one of the best known kennel writers of this country, has lately been added to the jewels on FOREST AND STREAM'S string. Mr. Waters is all right, but it was thought best to initiate him fully into metropolitan journalism and get him acquainted a little bit with the shooters also. Accordingly he was led up against a certain syndicate of practical jokers who have been victimizing the public ever since the shooting season stopped. This syndicate makes its home at that unique center of shooterdom mostly known here as "Billy's." Of Mr. Mussey's hall I have often spoken. There is no place like it in the United States as a general assembly place for sportsmen. Well, we will suppose this is the scene. Billy Mussey, head of the syndicate, is behind the counter where the billiard clocks are. Dick Cox, head capper for the game, is a little at one side. Doc Malcolm, assistant pigeon, is just beyond them. To these enter the victim, as per previous arrangement.

"Oh, here is Mr. Waters, now," says Billy. "Sixty cents, please—no, I beg your pardon, good morning, Mr. Waters" (Billy sometimes gets excited).

"Good morning," says Mr. Waters.

"You are the very man I was looking for," says Billy (truthfully enough). "A fellow has just been asking me about his dog, and I don't know a thing about dogs. Oh, there he is now, Dick Cox, over there. Say, Dick, here's a gentleman that can tell you what to do for your dog, I expect. Mr. Cox, this is Mr. Waters; Mr. Waters, Mr. Cox; forty cents on No. 10, please. I'll be there in a minute, Mr. —." At this stage Billy retires behind the clock and hugs himself while he watches the progress of the plot.

"I am glad to see you, Mr. Waters," says Mr. Cox (also truthfully enough). Then Mr. Cox smiles one of his dazzling smiles. The victim is helpless. Cleopatra wouldn't be in it with Dick Cox.

The talk now progresses smoothly for a moment, Doc. Malcolm drifting up, and the crowd gradually drawing about the group.

"Those kennels down at the club are all wrong," says Doc. Malcolm. "My Chesapeake Bay dog is just full of fleas."

"Well, I suppose that's where my fox-terrier got 'em, too," says Mr. Cox. "Oh, by-the-way, Mr. Waters—I was just asking Billy—but can you tell me what's good for fleas on a dog?"

"Gentlemen," says Mr. Waters, "there is an immortal work on the dog, known as 'Modern Training, Handling and Breaking,' by B. Waters. When I consult its pages, the best authority on the subject, I discover that after all there is nothing better for fleas than pure Persian insect powder, thoroughly applied."

"But, Mr. Waters," says Mr. Cox, with a troubled look on his face, "that kills them, doesn't it?"

"Why, yes, certainly."

"Oh! but you know I was asking what was good for fleas, not what would kill them!"

Then Billy emerges from behind the clock, and on the erstwhile silent air there falls a general sound of coarse, harsh laughter.

"Another victim," everybody says.

"Gentlemen," says Mr. Waters, "I— I— what'll you have?"

I wouldn't say a word about this if I thought any of the boys on the bench or trial circuit would read it, and so learn how Mr. Waters prescribed for fleas on a dog; but probably they won't see it, and on this basis the story is too good to keep. It only remains to be said that over 150 victims have this winter been "landed" on this simple scheme, including City Prosecutor Douglas, son of the renowned Stephen A. Douglas, and also a number of other prominent lawyers, with any number of business men, newspaper men, and others who ought to know better.

"Well, you got me buncoed, did you?" said Mr. Waters in private after this incident. "Now, do you know what I think? I think these shooters are a lot tougher sort than the dog men."

We are not yet in receipt here of any advices as to the whereabouts of Capt. Brewer, who is alleged to have started West. We don't believe he ever started West, or ever wanted to shoot a race with Charlie Budd or Geo. Kleinman, or anybody else. We have lost confidence in Capt. Brewer. There's a name that's never spoken, and a picture that is turned toward the wall. On the back of the picture we have pasted, "Lost—J. L. B."

E. HOUGH.

THE BLUE PARTRIDGE OF ARIZONA.

THERE is lying before me as I write one of the blue partridges of Arizona and Mexico—a Quaker dressed bird, and his slate-colored plumage on the breast is marked with brown and black. Each breast feather is perfectly rounded and margined with a delicate line of black, while through the center is a lance-shaped penciling of brown. The feathers on the wing coverts are elongated and tipped with white. The back is metallic gray and a plume of white on its head completes its dainty adornment.

In size it is a little larger than the Virginia quail, its tail a little longer, and its legs and feet are black.

Its scientific name is *Callipepla squamata*, and portraits with most charming descriptions of its habitat and manners can be found in Cassin's "Birds of California and Texas."

It may be wondered where this rare and beautiful bird was obtained. Right at our doors. Washington Market is full of them at $2.50 a dozen. A carload of them arrived a few days since and in a few days the Chinese and other cheap restaurants will be consuming the last of these half frozen and travel-stained birds, most of which arrived in poor condition.

Nothing better illustrates the consuming vortex of the New York markets. They drain the forests of Maine, the mountains of Wyoming, the plains of the Rio Grande and the waters of Florida. Nothing that is rare and beautiful will escape the ruthlessness of the game catcher when he is paid by the wealthy and inconsiderate of the great cities.

It is the cities of the seaboard that are destroying the conspicuous birds of the country. Particularly is it so with Jersey City, whose cold storage warehouses furnish quail, partridge, pinnated grouse, venison and antelope during all seasons of the year to outgoing ocean steamers. Commission merchants doing business in New York do not keep their unlawful game in New York, where they would be liable to punishment, but store it in Jersey City and distribute it from there.

It is strange that there is not educated sentiment enough in that State to stop this practice.

CHARLES E. WHITEHEAD.

THE CONNECTICUT LAKES.

LANCASTER, N. H., Jan. 18.—Those of your readers who are acquainted with the Connecticut Lakes, and the "region round about" will doubtless be glad to learn that the hotel at First Lake, the camps at Second and Third Lakes, and every thing pertaining thereto as regards hunting and fishing, have been leased for a term of years by Orville C. Bumford, of Colebrook. To those who stopped at the Lake House, First Lake, for the five seasons prior to 1890, Mr. Bumford needs no introduction, he being at that time manager of the Lake House for the Connecticut River Lumber Co., and he was the right man for the place in every way. Under his direction the house was thoroughly remodeled, every thing being done with a view to the comfort of his guests, and that his efforts were appreciated is evident by the large increase in patronage, and now that he has secured both First and Second Lakes he virtually controls nearly all the hunting and fishing territory in Northern New Hampshire. The sportsman who wishes to visit that vicinity now can do so at much less expense, and also with much more comfort, as new buildings are to be erected at Second Lake, a thing sadly needed for the past five years; also new boats and canoes; a large log camp with stone fire place to be used as smoking room and general loafing quarters, is already in process of erection. A party of gentlemen from New York, Hartford and Springfield have arranged with Mr. Bumford to open the house at First Lake for ten days or two weeks this winter, and probably this month, that they may come there for a few days of ice fishing for lake trout. It will serve as a sort of old-fashioned "house warming" for Mr. Bumford, and at the same time be a gentle reminder of what he may expect when the trouting season opens in the spring. ROB.

NEW JERSEY GAME LAWS.

NEW BRUNSWICK, N. J., Jan. 22.—*Editor Forest and Stream:* The Brunswick Gun Club have appointed a committee of five to draft a revision of the New Jersey fish and game laws, to be presented for approval at a meeting of the club early in February, before being sent to the Legislature for enactment.

The better protection of fish on their spawning beds, and change of the open season for shooting quail, rabbits and ruffed grouse are the principal points to be considered.

The coöperation of all interested in the protection of the game and fish of the State is invited.

C. S. VAN NUIS, Sec'y.

NEW YORK STATE CONVENTION.

Editor Forest and Stream:

The subject of how best to protect and propagate fish and game and protect the forests of the State from destruction, was perhaps never before under more general discussion than it was during the last season. Protection means the increase of both game and fish, consequently the cheapening of both. These products of nature were a gift to all mankind, not to the few, and it seems but right that a code of laws should be established which will secure equal rights to all. The ruthless denuding of the forests and rapid destruction of song birds are subjects of very wide and general interest; the pollution of lakes and stream, and the wilful introduction to such waters of other than native fishes, are also subjects which need legislative correction. There are numerous questions which are collateral to all of these, in which there is also public interest.

After correspondence with many citizens of the State in relation to the question of calling a convention to consider the general subject in all its relations, and after repeated conferences between local organizations, heartily in sympathy with the proposition—and which will be charged with the duty of making proper arrangements for such convention—it has been deemed best to call a special meeting of the New York State Association for the Protection of Fish and Game, to constitute a basis for a convention. Such meeting will be held in this city on Friday, February 12, 1892, beginning at 10 A. M., at Music Hall. All organized clubs, whether members of the State Association or not, are invited to be represented; also all individuals who are interested, whether members of organizations or not. The attendance is particularly desired of Forestry, Game and Fish Commissioners, and the members of the respective Committees on Game Laws of the Legislature. Game protectors and Wardens are also invited. A special invitation is extended to all Canadians who are interested in the protection and propagation of fish in Lake Ontario and the St. Lawrence river. This call, in short, is to all who sympathize with the objects and purposes of the convention, and the presence of all such is earnestly hoped for.

The local organizations which join in this call have appointed a joint committee of arrangement and reception, as follows: Onondaga Sportsmen's Club, W. E. Hookaway, James Nolan, Henry M. Chase; Anglers' Association of Onondaga, W. S. McGregor, Henry Loftie, Amos Padgham, M. J. French, J. N. Babcock.

HORACE WHITE,
Pres. N.Y. State Ass'n for Protection of Fish and Game.
CHARLES MOWRY, Secretary.

SYRACUSE, JAN. 20, 1892.

YATES COUNTY GAME LAW.

AN act for the better protection of Game in Yates County. Passed January 12, 1892, a majority of the Board being present. The Board of Supervisors of the county of Yates, in annual session at Penn Yan, do enact or declare by resolution as follows:

Sec. 1.—No person or persons, either residents or non-residents of the County of Yates, shall take or kill in any manner, or expose for sale, or have in possession after the same has been killed, within the limits of said County of Yates, any ruffed grouse; commonly called partridge, or woodcock, between the first day of January and the first day of October in each year. It shall not be lawful for any person, either a resident or non-resident of the County of Yates, to take or kill in any manner, or expose for sale, or have in possession after the same has been killed, within the limits of said County of Yates, any black or grey squirrel between the first day of February and the first day of September in each year. Any person violating either of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of twenty-five dollars for each bird or animal so killed or had in possession.

Sec. 2.—It shall not be lawful for any non-resident of the County of Yates to shoot game in any of the towns of said county, without first having obtained from a Justice of the Peace, living in said county, a license for the privilege of so doing. The fee for such license, which shall be good only during the open season in which it is granted, shall be ten dollars, and shall be granted as of course by the Justice applied to, unless he has proof that the applicant has been convicted of a violation of this section. The money so received by said Justices of the Peace for such license fees shall be paid by them monthly to the Treasurer of said County of Yates. Any person violating any of the provisions of this section shall, upon conviction, be fined not less than twenty-five dollars. Any person may bring action for the recovery of such penalty, and shall receive one-half of such fines for such prosecution, the other one half to be paid by the Justice imposing such fine to the Treasurer of said County of Yates. This act shall take effect on the first day of February, 1892. I hereby certify that the above is a true copy of an act adopted by the Board of Supervisors of Yates County, this 12th day of January, 1892.

W. IRVING JONES, Supervisors' Clerk.

"IDAHO FISH AND GAME COUNTRY."—New York, Jan. 21.—In regard to the article in to-day's issue of FOREST AND STREAM, entitled, "An Idaho Fish and Game Country," I would say I have hunted and fished in the section described. It is a great country for both black-spotted trout and Dolly Varden trout. There is considerable game there also, but very difficult to get at, and after it is killed, almost impossible to pack into camp; owing to the hilly and rough character of the ground horses cannot be used as a rule, and boats are necessary on Kanuskee Lake. We found ruffed, sharptail, dusky and spruce grouse in fair numbers. Caribou can only be found far up on the snow line in September, and in short it is the most difficult country to hunt in I ever struck. —W. HOLBERTON.

WILD PIGEONS.—Norfolk, Va., Jan. 16.—Wild pigeons and watermelons were among the delicacies exposed for sale in the city market this morning.—G. H.

W. M. Park, of Foxcroft, shot a buck and doe with one discharge of his gun recently while hunting near that town. He did not see the doe when he fired, but when he went forward to secure the buck, which he had hit, he was surprised to find a doe by his side. His gun was loaded with a heavy charge of buckshot, and two of them had entered the doe.—*Bangor Daily News.*

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will ma free on application a descriptive circular of Mr. Grinnell's boo "Pawnee Hero Stories and Folk-tales," giving a table of conten and specimen illustrations from the volume.—*Adv.*

Camp-Fire Flickerings.

"That reminds me."

LAST summer, while I was on a canoe trip up the chain of lakes that finds its outlet at Elk Rapids, an incident occurred that is too good to keep. We were four, Mr. Cox, the lawyer, his two sons and myself. Our tents were pitched near the mouth of Intermediate River, and we were amusing ourselves catching small frogs and large bass.

One afternoon some farmers drove over with their wives, daughters, sons and other relations, and pitching their tents a quarter of a mile from the lake started in for some fun: and fun they had, judging from the shouting and laughter we heard.

Bright and early the next morning they were out fishing, and so were we, and both parties were catching plenty of fish. We soon had all that our conscience would allow and pulled in to the landing just ahead of our neighbors, who came trooping along with fifty or a hundred, more or less, blue-gills, perch, rock bass and sunfish, running from four to six to the pound. Stopping abreast of Mr. Cox, Mr. ——— held up a long string of fish and exclaimed:

"Say, mister, ain't that a gay string of fish."

Mr. Cox gravely assured him that it was.

"Did you catch anything out thar?"

Mr. Cox, as gravely, lifted a string of six black beauties, which would weigh from 3 to 4lbs., or more, each. The chorus of exclamation was almost confusing and Mrs. ——— declared that she had rather "ketch one of them big ones than that whole string of minners;" but Mr. ——— said the little fellers made good "eatin' when you get them skun."

That afternoon they all started out to catch something; cast their anchors in easy range of us, and their worms abroad on the waters, and waited. Soon Mr. Cox's rod was bending nearly double and our neighbors all attention.

"Just see that pole bend."

"Oh my! Did you see that fish jump out of water?"

"He jumped more'n 2ft. high."

"Why don't you take hold of the line and yank him in?"

These are a few of the comments I caught while assisting in landing a beauty. Mr. Cox then, after the manner of his calling, quietly adjusted his frog and as quietly slipped it into the water. Our neighbors then began beating the waters with their plebean hackles and wondering at their ill-luck until, making a fair cast, I showed for the first time our bait.

Then came across the water, in tones of such utter astonishment that I shall never forget it, a woman's voice (the same who had so wished to "catch a big one"), "He's got a whole frog on his hook." V. E. MONTAGUE.

THE SIX-INCH TROUT LAW.

Editor Forest and Stream:

If you will allow me a little space in your columns, I would like to call attention to what I consider some errors of statement in the communication signed "Protester No. 1," in your last issue.

It has not been my experience nor, I believe, that of most fly-fishermen, that fish caught on the artificial insect are seriously injured thereby, except in occasional instances, and, therefore, "the slaughter of a mass of victims," which the gentleman speaks of, is quite unnecessary.

I have myself caught over one hundred trout in a single day's fishing during the past season, and returned over seventy of the number to the water on account of their being under 6in. long, and I do not believe a single one of them was the worse twenty-four hours after for the experience.

Streams must be small, indeed, where trout rarely attain to a length of 6in., unless they are all caught out by fishermen who have a fancy for the little fellows before they have a chance to reach such aldermanic proportions.

I for one am decidedly in favor of the six-inch limit which prevails in most of our States. As I understand the matter this limit is fixed because it is supposed to give the trout one spawning season before it is legal to catch them, and to lower the limit would simply mean a much more rapid depletion of the streams. Can Protester No. 1 tell how a law can be framed which will be so elastic in its provisions as to accommodate itself to the weather, making the opening day earlier or later according to the proportion of sunshine or storm meted out by the clerk of the weather? That seems to be one of the faults of existing laws in his eyes; they have an absolutely fixed date, before which fishing is not lawful, regardless of the fact that warm spring days may tempt the angler forth.

I am in favor of a short season because I believe it to be essential to keeping up the fish supply, but if we could have nine months of open season and still have plenty of fish in the streams each year, so much the better.

MICHIGAN. LEXDEN.

THE T. H. CHUBB ROD CO., of Post Mills, Vt., send out their new catalogue of angling goods for 1892. It is embellished with lithographic plates in colors of favorite flies, and contains very full descriptions of angling essentials. It will be remembered that the Chubb factory was burned last year. A new and larger and more perfectly equipped building has been provided, and the firm announces that it has every facility for meeting the demand for Chubb products.

TROUTING IN THE CASCADES.—VII.

THE MOLALLA COUNTRY.

FOUR o'clock found us at the falls of Milk Creek. The falls were at the foot of the long riffle mentioned in my last paper, and seemed a fitting termination of so interesting a part of the stream. We were at least two miles from camp as the crow flies, but at the point on the creek nearest Frank's cabin.

He decided to quit. I could fish on down to camp if I desired; but considering the fact that I would have to run most of the way to reach camp before dark, I concluded that I would not take the chances in a region of which I had so little knowledge. My creel, ditty-bag and coat were heavy with fish, besides some big fellows that I carried strung on a willow; and I was tired. I did not care for any more fish; in fact, I did not care for those I had, and only my intemperate love of nature and that wretched disposition to investigate could have induced me to go on down the creek, even with Frank for guide and company.

As a lover of nature, I had had ample opportunity to court her in her most pleasing mood, and I felt that I had done both myself and her ample justice for one day. So we closed the day's sport and sat down on the moss to count our fish. Together we had taken twenty-two dozen less one, but I will never tell you which of us won on the count. That "less one" did not suit me, so I picked up my rod and cast out into the deep pool below the falls. Instantly I hooked two fine fellows and landed both. The fates were evidently against an even number, so I wound up my line and unjointed my rod. I am satisfied that I could have taken two dozen fine trout out of that pool in as many minutes; but I do abhor a fish hog, and it began to look as if I, myself, belonged to a rather inferior breed of swine.

We lit our pipes and stretched ourselves upon the moss for a good rest before starting for home. Frank told me much about the country. He had wandered through these mountains more or less for nearly three years, and probably knew more about Cañon Creek and the huckleberry patch than any other living person. I observed that he frequently mentioned the "big burn." In answer to my question respecting it he told me that, as near as he could learn, the big burn extended several hundred miles along the crest of the Cascades. So I, myself, had seen the big burn many times. It seems that before the whites settled this country a great fire swept the upper mountains of the Oregon portion of the range. The effects are plainly observable wherever I have struck the crest of the range in this State. "Look! there's a deer!" exclaimed Frank. Sure enough, a fine doe was crossing the stream about a hundred yards below, but she soon disappeared in the brush, apparently without having observed us. Once, when Frank was up at the huckleberry patch (which is almost synonymous with the big burn) he had got lost, and came out on the North Fork of the Molalla. He was for three days without food, except huckleberries. "Talk about falls and trout," said Frank, "you ought to see the falls of the North Fork of the Molalla. They are about 80ft. high, and the trout below them are so thick that they crawl over each other." Of course I resolved, then and there, to see the falls of the North Fork some day; and I hope I may.

Frank's talk was very interesting to me and we might have reclined there on that lovely bed of moss until night had it not been for a little incident. I was gazing listlessly down the stream and listening attentively to Frank's description of scenes and happenings in the mountains. An old dead tree was lying across the creek just below where the deer had crossed, and as luck would have it, I was looking squarely at that log, when out upon it walked a great tawny creature with a long tail. I guess I was hypnotized or something worse, for my eyes were riveted upon his royal highness and I was dumb as a stone. I did not seem to realize what the animal was. The beast had reached the middle of the creek and paused to survey the surroundings before I found my tongue. "What's that?" I asked in a whisper. "A cougar, by thunder!" ejaculated Frank under his breath. There, then, was the "varmint" I had longed to see in his native wilds, but now that I had seen him I felt, somehow, that I could very well dispense with this part of the circus. The beast looked down the creek, then up, and finally at us. When I came to appreciate the fact that his gaze was centered upon us I confess that I felt a disagreeable sensation at the roots of every hair. Frank and I were silent and the cougar took his own time to move on. He was in no hurry and seemed disposed to take a good observation while the conditions were favorable. He stood there like a statue and gazed at us for what seemed to me to be about a week. Finally he stealthily left the log, stopping to take another impression just before entering the brush. He had crossed to our side of the creek. Really I do not know whether I am a coward or not. I am always wishing to experience earthquakes, see grizzlies, cougars, etc., but someway when my prayers are answered I weaken. "He's prob'bly follerin' thet deer," said Frank. It was a question in my mind whether he wanted venison or fisherman, and I suggested that we proceed to find our way out. I believe that Frank himself was a little nervous as he struck into the brush on a dim trail that angled toward the cougar's apparent course. I made the dog walk behind me, which was additional evidence that I was a coward.

However, I could not help reasoning that, in front, the cougar would meet Frank first, while behind, he would have to go over the dog to get at my precious carcass. I must confess that I felt much easier and braver when we arrived at the broader trail that led down to the camp.

Frank insisted that I should take all the trout as he did not care for them. I tried to explain that I had no earthly use for them, but he was determined. His were in a gunny sack and he said he would bring them down after supper. One of two reasons may explain Frank's generosity—either he desired to manifest his gratitude to me for flies and other favors, or else he was willing to give up his day's catch for just one chance look at Amy. Love will assert itself even though it costs every trout in the creek. I may be judging Frank wrongly, but the sequel is almost conclusive evidence of the correctness of my theory. During the autumn this same apparition startled me in my own office at Portland where he called for my assistance to aid him in getting over into Washington with his young bride, away from pursuing parents. My recollection of the argument between Hall and his wife that night at the camp fire convinced me that if Hall was following them at all it must be solely in the interest of peace and harmony at home, and only at the earnest solicitation of his better half; and that if the old gentleman found an opportunity to aid the young elopers on the sly, in a way that, by no possibility, could ever come to the knowledge of Mrs. Hall, he would do it in a minute. It is almost unnecessary to add that an early reconciliation followed the elopement, and I guess that everybody connected with the Hall household is satisfied, happy and prosperous now. S. H. GREENE.

PORTLAND, Ore.

FLY-FISHING ON THE SUSQUEHANNA.

REPORTS had come several times to this city during the past two or three years of some exceedingly successful catches of bass made with the fly in the Susquehanna River near Middletown, a village nine or ten miles east of this place. Now, I have often caught bass with the fly in the Susquehanna and Juniata rivers, and also in the Conodoguinet Creek, all, however, north and west of Harrisburg, often going out early in the morning opposite the city, catching a mess and getting home with them in time for an early breakfast. Fly-fishing for fall chubs and sunfish along the shore within the confines of the city has been a favorite amusement for years past, in early morning and sometimes in the evening about sundown; twenty to thirty chubs and a few bass has been the general catch without wading, sometimes, however, when the fish were on the feed further out from the shore than we could cast, wading was a necessity. To catch these fall chubs we generally used a fly tied on a No. 10 or 12 Sproat hook. I have often taken them weighing a pound, 12 to 13in. long, and bass the same size with a fly or midge tied on a No. 16 hook Opposite South street there is a chain of rocks extending out into the river about 60yds., ending in a large oblong rock commonly designated as "Big Rock;" beyond "Big Rock" and about 15yds. is a smaller boulder which never shows its head above the surface unless the water is at its lowest stage.

One morning several years ago I was fishing for fall chubs, using midges and wading and walking along the shore in the vicinity of these rocks, the water being very calm, I could see out beyond and above Big Rock that some pretty big chubs were feeding in the deep water. I went out along the rocks, partly wading in the waters and at other times stepping from rock to rock until I had reached the extreme point of the big rock; the water was very swift, and about 4ft. deep. After making several casts and getting my line out far or long enough to reach the ripple made over the boulder outside and seeing several rises above the ripple, I made a long cast and instantly fastened to two chubs, one on the stretcher and one on the hand fly. When they found that something was wrong with that kind of food one started up the river, the other had urgent business over in Cumberland county, a mile away. They were both good fighters and both appeared to be very cross. I had a drawn gut leader 9ft. long, and had to handle them tenderly in that swift water, but after a five or six minutes' fight landed them both on the rock. They were 14in. long each, and would weigh both together about 2¼lbs. These fall chubs are not satisfactory to a great many people as food; being very full of bones, they beat a shad badly. I always distribute the ones I catch among my neighbors if they relish such food and have time to pick out the bones; the flesh is sweet, especially in the early spring and late fall. That kind of angling, however, has ended. During the last three years the culm from the coal mines in our county and the mines near the river in counties above the city has been poured into the river and there is so much of it that the water is black along our shore and the fish have all disappeared, going over toward the other shore. All the same, however, we are drinking the water the same as we used to do, but can't call it pure Susquehanna River water as formerly.

Now to get at what I started with. After hearing these reports from different sources that good fly-fishing for bass was to be had near Middletown Ferry, a station on the N. C. R. W., and having seen some that my friend Horace had caught there, or at least said he had, I believed him and concluded to try a fly down there, and about the last week in October, 1891, one pretty cold morning, I left Harrisburg at 6:40 A. M. on the N. C. R. W.; found two other parties consisting of four men each, with their rods, creels, lunch and bait pails, all bound in the same direction. Found out later that they intended to fish at Goldsboro, two miles below the station I intended stopping at; and they were after bass also. Some snow had fallen in this locality a few days before; the air was pretty cold, and I was afraid my autumn fly-fishing would not be a success; besides, I did not know the ground, never having fished there or in that vicinity. Horace had told me where to go and where to fish, and I depended on his information to find the spot. I never had gone out fly-fishing so late in the autumn, especially when the nuts were falling, as I had an idea that the frost would make the water too cold for bass to rise well. After a 30 minute ride and the cars stopping at the station, I alighted, put my rod together, hung my line and arranged a cast—two bass flies on a six-foot leader.

The station of Middletown Ferry is in the woods near the river bank; the town consists of one very small two-story frame dwelling house. Al Stoner and his wife, with two kids, two ducks (they did have three one time; Al blames the railroad for killing the other one); they also had seven chickens. These all reside at Middletown Ferry. Al is agent, station keeper, porter and assistant ferryman. His wife assists him, and also keeps a store for the sale of cigars and stick candy, gathers chestnuts and hickory nuts, scolds the kids, pitches into Al, and from what we could learn makes things so hot about the station that a stove or a fire is useless. The next house is about a mile away across the mountain, and the mountain begins within 30ft. of the house. Al is a good fisherman, and may good luck go with him.

After getting things into shape, giving the wading boots an extra hitch, I started east along the shore, at the same time taking in the surroundings. I was then in York county, Pa. Hill Island was off to my left, about 300yds. away; this island is only an island when the water in the river is 4 or 5ft. above low-water mark. When the water is low, as it was that day, the island is connected with the York county shore on its west side for a mile or more by ridges of shelving rocks and boulders of granite, limestone, slate, etc. Pools of water are scattered here and there in the low places, some 30yds. across, others 3ft., and there is only enough water trickling through and among these rocks to keep the pools from becoming stagnant; in fact these rocks and shelving are a dam from the shore to the island, and there is all the time two rocks to one water all the way down for a mile. Now, H. had said that it was in these pools he had caught the bass, and some very large sunfish, that is, large sunfish for this section of the country. Soon after getting among the pools I began casting (always believe in keeping my line wet), and soon had a rise; it proved to be a baby bass, and, unhooking him carefully, I dropped him back, bade him good bye, advised him to grow large quickly, and started for another pool. Well, I traveled on, sometimes wading, sometimes walking on dry rocks, casting here and there, and in nearly all the pools would catch two or three small bass 6 or 8in. long; once in a large pool I caught two sunfish; one was too wee to keep, the other was a dandy, about ¾lb. in weight, and, as I am fond of sunfish fried, I dropped that fellow in my creel. The walking among, over and about the boulders was very tiresome, and a long-handled landing net which I carried came in good play frequently to prevent a fall. I had to look out for sharp-pointed shelvings, as they are death to gum boots.

After a long walk I came to a place where there were signs of an opening, that is, two waters to one rock, and could see below and further down the river and that several channels and open water led among the boulders and grass patches to the main water below. Then Hill Island began to look as if it really were an island; above it looked like part of the mainland. Looking over this water I came to the conclusion that here if any place the bass were lying, but even then had poor hopes of enticing any of them out of their lurking places. The sun was shining, but there was a cool northwest wind blowing on my back. I waded in the water going south, looking out for deep holes and casting right and left as I advanced; had several rises, hung a few sunfish and small bass within a distance of 40yds., dropped all but one sunfish back again, cautioning each one to be careful with the next fly he attempted to take. Soon I came to a grass patch, or rather a mud patch, the grass was all dead, went over it about 30ft. to the lower edge, took in the surroundings again, and then began to scold H. It was a good thing for him that he was not there. I rather think his ear burned him about that time. I believe now that I thought pretty loud that any fellow who said there were bass to be caught at Hill Island didn't know enough about fishing to bait a hook. Twenty minutes after I thought those thoughts out loud, as it were, I took them all back and thought (out loud again) yes, he does, he knows enough to bait two hooks.

Well, I must not get ahead of my story. After standing on the lower edge of the weed patch for a few minutes, almost willing to give up the battle, hesitating to start in to wade, as the water looked deep and uninviting. The water was open for fully 200yds. below, only about a dozen boulders with their heads out of water, bunches of dead grass and moss sticking out of the water and lying on top, no current to speak of, and a general desolate look. But at last I started in, going slow, avoiding the too deep places, tiptoeing at times across others; did not want the water to run into the upper end of my boots; a wetting that day would have been very unpleasant. I made my way down, casting in front, to the right and left, until I had gone about four rods, and was standing near a large square and flat rock on top; it was on my right. I had turned to cast over this rock and dropped my flies beyond it and at the edge of some dead grass, near what I supposed was some deeper water, when—zip! swish! a vicious rush was made out of the grass by some big fish; but he missed the stretcher at which he had taken offense. Oh, ho! I thought (yes, I guess I thought out loud again. Fisherman reader, did you ever catch yourself talking to the only fellow that was about when you were alone? That was my fix that time), here is the place Horace meant. I also thought, here they are, or at least one of them, and here I stay until I get that daisy in my creel.

To give him a rest the next cast I made was further to my left, and my flies had hardly struck the water when, swish, bang, boom, two, three, may be six, I don't know how many bass rose and tried to get those two flies; the water boiled, and when the steam from the boiling water had evaporated, or at least blown away, I found I had my hands full; two bass had succeeded in banging themselves, one on each fly, and I believe if I had put six flies on the leader six bass would have hung there. Each of these two had a different notion as to where he ought to go to get rid of his fly. It wasn't the fly as much as the hook that had been concealed under those gaudy feathers and silk. The bottom was mossy and full of decayed grass; they buried their noses in the grass, jumped out of the water, and had quite an acrobatic performance, their companions and myself being the audience, and I can assure you that I had a little circus of my own before getting them into the landing net. They weighed 1¼lbs. each by my pocket scales before placing them in the creel. I was using a 7oz. split bamboo, which made the fight so much more interesting than if I had used a heavier rod.

Getting my line stretched out again I cast over that hole again, and took another right away; two rose, but only one got the fly. I took six or eight out of that hole, one time catching two at once. Notwithstanding that the first fellow who had made that vicious rush when I first cast into the pool had sufficient rest, I made a cast right over where he was likely to be lurking, and sure enough he had been waiting on the gaudy fly all the time, and he rose again, just acting as he did before and missed; I did not feel him strike. Recovering the line quickly and casting again about the same place the rascal made such a rush for the dropper that after getting the fly in his mouth he came out of the water toward me fully a foot, falling in the dead grass, going to the bottom in about 3ft. of water, and you bet I had a time to get him out. I was using an automatic reel and recovered the slack at once, but had to pull him out of the grass by main force; but he was well hooked. He weighed there and then two ounces less than 2lbs., and was a beauty. I then mounted the rock, the top being about 8in. above the water, and continued casting from there. In a little while I had packed my creel full, several times catching two at once and landing both. Several times, however, one would get off, and several times I would miss the fish after getting them almost into the net. After the creel was full I waded back to the mud patch, emptied the creel and put the fish on a stringer. I had a stringer in the creel, but the fish being on top of it and no place

to lay them, they all being alive, I had to go to the solid ground. After stringing and counting them I found there were nineteen—five sunfish and the others all nice bass, none less than a pound.

Then I waded back to the rock, caught a few more, ate my lunch, lit a cigar and tried casting again; the intervals between rises were longer now, but in the course of an hour I had the creel full again and was weary. The rock I stood on was about half way between the shore and Hill Island, the water was not very clear, I could see the rocks on the bottom in a foot of water, but in deeper water the bottom was not visible; but a hungrier lot of fish is seldom to be found. When I quit at 2:30 o'clock P.M. there were still some more bass in that stretch of water and I have no doubt had I remained longer I could have caught plenty more. All the time I stood on the rock I could hear hickory nuts falling on the ground, and in the water on the main shore I saw a man hunting something in the grass on the shore and wondered what he was seeking, but after I waded ashore with my fish I found out that there was a grove of some twenty or thirty hickory trees (shellbarks) standing there and the ground was full. After stringing my fish, and finding I had 25 as pretty bass as any person of moderate desire would care for and 12 large sunfish, every one broader and longer than my hand, I picked up and put in my empty creel about four quarts of the nuts. The boys at home I knew would set more store by them than with the fish, especially as they would be the ones to clean them. I had the fish, however, and the satisfaction of knowing that they had been caught legitimately and with a fly, and I was not the only person that afternoon and evening that admired that string of fish. They were a heavy load before I got up to the station.

When I put them on the cars they were all alive except one bass and one sunfish. One of those men who had gone to Goldsboro in the morning and was returning home on the same train hung over those fish all the way to town, and it took considerable explanation to convince him that they had been taken with the fly. He and his party had caught six. I have been down to that same rock and fished in that same pool three times since; in November last I took eleven one afternoon, and one morning caught two at a time, and on the first cast, and fished or cast for an hour afterward and could not get a rise. The last time I was there they would not rise to a fly at all, but I tried a lamprey eel and took out three. I have not caught any fish since, either there or any other place. We are now looking after rods, lines, leaders and flies and getting ready for the opening of the trout season, April 15, Good Friday this year.

I failed to state that after seeing Horace and explaining where I caught the fish I found that he had never fished in that pool at any time he was down there, and if I forgot to ask his pardon for making his ear burn I do so now, and take all my loud thoughts back.

Middletown Ferry is a daisy place to catch bass with a fly even if it is late in the autumn, and we will all go there again if we live until the open season comes around, and we will go early and not wait on the snow and frost.

HARRISBURG, Pa., Jan. 13. RAMBLER.

THE PRESERVATION OF MINNOWS.

Editor Forest and Stream:

What I have to say can of course, prove of service to none save those anglers who use live bait. Here in our Middle Tennessee streams, fly-fishing is almost unknown. Occasionally a Northern expert will rig a whip of green drake, coachman, and brown hackle, and spend an entire day in making cunning casts of his alluring bait; but he never finds the black bass in responsive mood, while his neighbor with a "steel back" minnow at the end of his snood will capture a fine string of small and large mouth bass. I say "string," for in these waters we do not use the "basket" so common in print.

We still have a few good streams, notably Indian Creek, Horse Creek, Swan Creek, Lick Creek, Buffalo, Tiney, Duck River, Caney Fork, and Elk River. I have spent many a day on the banks of these streams. The Elk, in my judgment, ranks them all. It is a broad, deep, live stream, full of eddies, and with hiding-places galore. At its lowest stage of water you can find holes 400yds., long, 50yds., wide, and 10ft., deep, where the water rushes like a mill-tail. Again it becomes narrow and comparatively shallow, but is too rocky and to full of deep holes to give the seiner a chance to ply his unhallowed trade. Our bait par excellance is the minnow. Take one from 3 to 5 inches in length, put him on a 2-0 hook, attached to a small dark line, and then, with your No. 2 Meek reel and 10 oz. rod, cast him about 30yds., allowing him to drop gently into the deep hole at the upper end of which you are fishing, and in a few minutes But—I dare not begin to describe a battle with a 4lbs. Elk River bass. I have fished in many States, but have never met his equal for gameness. I simply wish to say a word on the preservation of minnows. When I can get within a couple of miles of the stream by taking the 'keers' I usually put 300 or 400 minnows in a large tank, made especially for this purpose. I did this on the 5th of last October. My friends and I reached our destination about 11:00 A. M., on an exceedingly hot day. We were met by a kinsman of mine, one of the oldest and most expert fishermen in this country. All of our minnows were alive, but tired. We at once carried them to a cold mountain brook, and immersed the tank-shell. Within a few minutes all of them were kicking up their heels in great glee. Half an hour later a motion to start for the river was made, I demurred on the ground that the minnows would die, and insisted that they ought to have a rest of several hours. The others insisted on going, so we started on our tramp of three miles. My companions took 25 minnows each from the tank, while I took 20 from a trap that had been put out the night before. Of course the minnows were in constant motion, but, when we reached the river, my friend's minnows were dead, while mine were alive. They charged that the minnows in the tank were "no good," and were bitter in their denunciations of the man who caught them, and were troubled at the prospect of having no minnows to fish with during the week following. The 20 minnows in my bucket caught for us 12lbs. of black bass, and I carried home that night five live minnows. This was Saturday. Each day of the succeeding week, we three took 20 minnows each out of that tank, and at night returned the surplus, in all from 12 to 20 minnows daily. One big fellow, whose markings were so distinctive as to render him easily recognizable, was carried to the river on Thursday and Friday, and each time was brought back. On Saturday, our last day, I fished him and caught with him a small-mouth black bass that measured 27 inches and weighed 5lbs 3oz., the largest of his kind I have ever captured in these waters. This by way of parenthesis. But not one of those minnows died. What does this prove? Simply this: After a long trip, either by rail or wagon, give your minnows a few hours of rest before using them. A fews days ago, we tested this rule in receiving a shipment of California trout. We took them from the car, put them in fresh water, and allowed them to rest for several hours. They were then put in tanks and carried to different streams, from 4 to 25 miles distant. Five of the 300 had died before starting. All the rest lived. W. D. MOONEY.

FRANKLIN, TENN., Jan. 12.

BASS AND BUTTERFLY.

I WAS fishing for bass one day in a quiet pool on Elkhorn Creek, near Frankfort, Ky., on the outer rim of what is known as Gault's Bend. A few yards above where I was standing, knee-deep in the water, was a broad shallow, where the current rippled over sunken, and about exposed, rocks—before subsiding in the deeper waters of the pool. As I drew my bait temptingly across the pool in search of a hungry bass, I noticed a yellow butterfly winging its zig-zag flight across the shallow mentioned, and close to the surface of the water, when half way across, a small bass, probably not over a quarter pound weight, suddenly leaped from the water, struck the butterfly with unerring aim, and fell back with a splash in the shallows. The butterfly was hit hard, as it fell dead or stunned in the stream about three feet from where the bass had intercepted its flight, but unfortunately the little gladiator failed to recover his prize, as it floated undisturbed down into the pool below.

Gen. Geo. B Crittenden, of Confederate fame, is the best bass fisherman I ever knew; his hook and line have tested the fishing qualities of hundreds of streams from the California coast to the River Jordon in Syria; and be once said to me that this same stream of Elkhorn Creek was the best natural bass-producing stream in the world, not the largest of course Full of rocks and rocky ledges, gravel beds, shallows and pools—shaded by forest trees and boarded by grassy banks—well supplied with minnows and crawfish as food—it has given in the years agone a rich harvest to thousands of Milam reels and as many enthusiastic anglers. But the seiner and dynamiter have sadly marred its glory, and recollection alone warms over the exploits and glorious fights of the days gone by. No big-mouth bass there—no dull, heavy splash and dead weight to pull in—but only the trim, eager, active, gallant and dauntless small-mouth bass—fighting like a hero and game to the last. The Creater made the white man and the Indian—so he made the big mouth and the small-mouth bass—but the one is no more alike than the other in staying qualities. OLD SAM.

FRANKFORT, Ky.

A FISH PRESERVATIVE.

Editor Forest and Stream:

I see by your issue of the 14th inst. that Dr. James A. Henshall has gone to Florida for a six weeks' collecting tour, to gather specimens of fishes, etc., for the World's Fair exhibit of the U. S. Fish Commission. It may seem very presumptuous on my part to make any suggestions in relation to the preserving of fishes for exhibition, especially so to as high authority as Dr. Henshall; but I will take my chances all the same. I have caught some fish in the last twenty-five or thirty years, and have also some specimens, both dry and wet; none of them have filled the bill as I desire it until within the last two years I struck Platt's chlorides. The great desideratum in the preservation of anatomical preparations, as well as fishes, reptiles, etc., is to retain the natural colors. After going carefully over the whole field, I have found nothing will do it except Platt's chlorides. I use the preparation with equal parts of pure, soft, clear water. Even the carmine spots of the brook trout are as brilliant as when they come out of the water, in short every tint of color is preserved and the subjects retain their original shape. Before me stands a jar containing the head of a 6-lb. wall-eyed pike, caught in August; the peculiar frosted eyes being just the same in appearance as when he came out of the Susquehanna. This specimen was kept in a warm room all the time and was not sealed. A similar jar contains two peaches, one 12, the other 10oz., and a nectarine. They also appear as natural and luscious as when taken from the tree last summer. Trusting that some of the numerous readers of the FOREST AND STREAM, who may desire to preserve some specimens of their catch to delight their friends with, will try Platt's chlorides and be convinced, I am, as usual, SHONGO.

LANCASTER, Pa., Jan. 15.

SALMON FISHING IN CANADA.

Editor Forest and Stream:

Did it ever strike any of the sportsmen who periodically ventilate their grievances in FOREST AND STREAM that, in spite of their wails, the Canadian Government has done something to protect their favorite fish? Let them look at the record:

1. The net-fishing season has been reduced by fifteen days.

2. The weekly close-time, which used to be continuously evaded or disregarded, is now strictly enforced.

3. The number of stands has been considerably reduced in the estuaries of rivers, such as the Ristigouche, the Nepisiguit, etc.

4. The length of nets on both sides of Bay des Chaleurs has been curtailed.

5. Wherever a vacancy occurs by death or removal the stand is abolished.

6. The Fisheries Act now prohibits the setting of salmon nets in the non-tidal portions of streams; thus cutting off a large number of nets, on the Miramichi especially.

Of course, I understand that all the above goes for nothing with a true sportsman, who would only be satisfied when the last salmon net has disappeared; but is not the Canadian Government entitled to a little credit for it, all the same? PISCATOR.

THE VELVET TRAIN of the Monon Route between Chicago and Cincinnati offers the best and most luxurious service obtainable between those points.—*Adv.*

ANGLING NOTES.

THE assorted weather which we have lately been receiving from the West has started the Florida anglers South in goodly numbers, and channel bass and tarpon tackle has been in good demand. Among those who have taken their departure for the "land of flowers," or are about leaving, are the following gentlemen: H. O'Neill, W. W. Jacobus, W. H. Beemer, A. W. Dimmock, Alfred Roe, Pierre Lorillard, Jr., John G. Hecksher, I. W. Paul and the Rev. Albert Mann, Jr. As usual, Mr. A. W. Dimmock will indulge in that most exciting sport of which he is so fond, that is harpooning the devilfish, sharks and tarpon along the coast. The tarpon will probably not appear in any large numbers until the middle or latter part of February. After that date they will become more and more plentiful until the big run in April and May.

The pickerel fishermen are having great sport fishing through the ice, and if the weather is not too rough, right jolly fun it is. When too cold and windy the holes in the ice choke up very quickly and interfere with the fishing. A good fire at the edge of the ice and a proper quantity of refreshments for the inner man are necessary, as well as plenty of live minnows. The latter are kept through the winter season in a cellar or spring house where they cannot freeze.

Though we are still in the midst of winter, the old trout fishermen are beginning to get uneasy, and at the first signs of the breaking up the annual fever will be sure to show itself—and it is very catching; in fact by the time the peepers are heard on the marshes it assumes the form of an epidemic. The first symptoms show themselves by the overhauling of rods and fly-books, and the talk begins to be of trout and trout streams and kindred subjects. Old fishing clothes and boots are lugged out of the attic, much to the distress of the orderly housewife, who looks upon this sort of thing with marked disfavor and who believes that it is ridiculous to make preparations three months ahead. When the fever once sets in nothing will stop it or effect a cure excepting the cold application of a good trout brook. In the mean time we must console outselves with dreams of rippling streams among the forest-clad mountains and the hopes of sport to come.

SCARLET-IBIS.

DEFOREST ANGLERS.—Unlike most conventions, perfect harmony and unanimity of sentiment characterize the meetings of the DeForest Anglers' Association, whose members indulge in trout fishing as a favorite pastime. The object of the Association is trout fishing and the maintenance of a resort or an outing place for its members. It has acquired a preserve, one of the most desirable in the State, near Hawkinsville, Oneida county. The preserve covers 200 acres, and includes three beautiful ponds and two brooks. The Association has club houses and boat houses which are equal to any in the State. The preserve is superintended by R. E. Gregory, of Hawkinsville, an experienced hand at the business. Members of the DeForest Angling Association are carefully selected and the membership is limited to 45. At present the Association has 42 members. Those who are admitted to membership take especial pleasure and delight in trout fishing in ponds and streams. New York, Buffalo, Syracuse, Rochester, Caledonia, LeRoy and Bayonne, N. J., are represented in the Association. These officers were reëlected: President, G. A. DeForest, of New York; Vice-President, J. P. Braner, of Buffalo; Secretary, Henry C. Peters, of Syracuse; Treasurer, Charles G. Soldan, of Syracuse. Trustees: James P. Robertson, of New York; George E. Warner, of New York; and Henry C. Peters and Charles G. Soldan, of Syracuse. The time and place for the next annual meeting will be determined at a future meeting, subject to the call of the chair. These gentlemen were at the banquet: George A. DeForest, of New York; J. P. Bronner, W. H. Case, George Stauber, William F. Buyer, Dr. J. S. Smith, William Jaeger, Peter Hoffman, of Buffalo; James P. Robertson and David J. Keefe, of New York; William L Baumer, Henry C. Peters, Daniel Ackerman, Charles G. Soldan, Justin Seubert and Henry Schmeer, of this city; and R. E. Gregory, of Hawkinsville, the superintendent of the preserve. Among the guests were Benjamin Hull, ex-Police Commissioner Nicholas Latterner, Peter Pfohl and Augustus Bloom, all of Syracuse.—*Syracuse Standard.*

THE TARPON RECORD.—Punta Gorda, Fla., Jan. 24.—On Saturday last Chas. A. Dean, of Boston, caught in Charlotte Harbor, the largest tarpon ever taken with rod and reel. Its weight was 196½lbs., length 7ft. 1in. This makes Mr. Dean's fifth tarpon in ten days.

Fishculture.

IMPASSABLE FISHWAYS.

Editor Forest and Stream:

The extracts from some of the Canadian Fishery officers' recent reports, which you reproduce in your issue of the 31st ult., allow me to say, are not only worthless because of the utter want of knowledge of the writers as to the subject upon which they undertake to enlighten the public, but on account of political and boodling influences and inspirations are at least 90 per cent. untrue, and about the time I get through your readers will have some idea of what you have escaped by keeping your inland fishery matters out of the hands of the politicians, and put them in charge of local or State boards of commissioners.

These men from whom you quote have had absolutely no experience; their lives have been spent in other pursuits, commercial and political, and they now write these untruthful statements to please their master at Ottawa, whose spiteful, vindictive inspirations guide and control the pens of his underlings. The cause of all this is easily explained and fully understood here in Canada, and I may, if driven to do so, explain the whole matter later; but for the sake of my country and the political party I support would sooner not.

Mr. J. R. Kinney is a nephew of one J. B. Kinney, the man I intrusted with my business and money in constructing fishways on the Columbia dam, with what results is well known to the commissioners of that State.

Inspector Kinney says, "Of all the fishways in this district, I know of but three or four that are properly cared for." (What does he mean by this remark? If they were out of order it was his duty to see that they were made right.) The three or four he admits are in order are the Rogers patent

but why did he not say so? Simply because he dare not, or he knew that my name would not be printed in any report connected with my fishway while the present Minister was in office, and I presume he knew the reason, too. Again he says, "In more than one instance, as I have before pointed out, the fishways have assisted in making the streams non-productive! For instance, take the case of the lower dam on Salmon River, county of Digby, where there is a 'patent' fish ladder, built entirely below the dam, without any attempt at an auxiliary or wing dam below."

I built this fishway, but it was not after my patent except the form of the bucket, nor was it intended to be, nor could any better be done at the time for several reasons; while an auxiliary dam would have ruined the water power. The idea of a defective fishway destroying the fish of a river is too absurd to think of; it might have failed to improve them. The dam and poachers had destroyed the fish long before any fishway construction was attempted; and if the fishway was defective, and no fish ascended, the river or the fish were no worse off for that.

Again he says, "Before the creation of fishways and ladders this stream was a noted salmon stream, but now the salmon and alewives have been 'patented' out of existence," and this man writes this false slander in the face of the fact known to himself that several dams in his own county have been and are made passable by the Rogers' patent, and the rivers are rapidly filling up with fish; but such facts well known to himself and thousands of others he carefully conceals. Why? As he is paid by the public to tell the truth, in such matters at least, simply he writes to please his master that his salary may be increased. And he still further enlightens us as follows: "Happily the lower dam on the Clyde River was so far demolished that fish have now unobstructed passage, hence the utility or non-utility of the fishway at that dam is no longer a live question, as the structure is perfectly dry at all times."

The facts in this case are, that over 35 years ago dams were built across this river for the cutting of lumber, and in a few years the fisheries of the stream were nearly all destroyed; so thoroughly was the work done that no returns of fish caught in that stream were obtained until four or five years after I put one of my patent fishways in the dam, in the fall of 1879, as the following table proves, and no artificial planting was ever done. The river has recently been purchased by a syndicate of sportsmen, who removed the dam, which of course does away with the fishway; but that fact will not have any effect in increasing the quantity of fish in the river until five to six years after, because salmon are five to six and alewives three to four years in maturing from babyhood, so that all the increase up to the present, and until 1895 and 1896, will be the offspring of the fish which ascended the fishway up to 1890, the year the dam was removed; but such facts are as nothing to men who neither read nor think; by all intelligent people, however, they will be readily understood.

FISH CAUGHT ON THE RIVER CLYDE, N. S., FROM 1868 TO 1891.

Year.	Salmon, Lbs.	Alewives, Bbls.	Year.	Salmon, Lbs.	Alewives, Bbls.
1868	None	None	1880	None	None
1869	"	"	1881	"	"
1870	"	"	1882	"	5
1871	"	"	1883	"	10
1872	"	"	1884	"	20
1873	"	"	1885	350	35
1874	"	"	1886	2 480	120
1875	"	"	1887	3,570	90
1876	"	"	1888	3,975	130
1877	"	"	1889	4 050	300
1878	"	"	1890	2,500	350
1879	Fishway built		1891	3,750	450

Statistics not to hand for 1891, figures estimated.

The statistics were gathered from year to year by departmental officers living on the spot, who had no interest to serve but that of the public, and they are taken from the Blue Books; their truthfulness has never been questioned, they are known to be true by everybody living in that neighborhood, and of which I have plenty of testimonials in my possession, as you know, Mr. Editor, for I showed them to you. The above table is worth more on the subject than the utterances of ten thousand fishery inspectors, especially of the sort you have quoted. I will say, however, that if they were writing under other circumstances they would likely talk somewhat differently and nearer the truth.

There is no branch of the fisheries which more readily feels the effects of passable fishways than river herring (alewives) and a way that will enable them to pass will readily enable all others to do so as well. Previous to the year 1879, when I first put any of my patents into the dams, I had succeeded in opening many streams fairly successfully with various old styles of ladder, which had improved this fishery along the years from 1878 to 1883, when the three or four of the patent fishways built in 1879 began to tell, but it was several years later before I could get any more built because of the interference of interested politicians, and many of those built later were defective because I was not permitted to see after their condition personally, so that inexperienced men spoiled them. You see I was not made of the material of which political "heelers" are gotten up, hence I must be punished in some way. From 1884 to '85 quite a number, defective and otherwise, were put in the dams, with what results the following facts will clearly demonstrate.

The catch of alewives in this Province for eleven years from 1869 to 1879, both inclusive, was 10,182bbls. per annum, and in the year 1878 they fell off to 5,733bbls.; three or four of the patents were put in as many dams in the year 1879 and more in subsequent years, as stated above, and the annual average catch during the twelve years from 1880 to 1891 was within a fraction of 20,000 (19,650bbls.), very nearly double that of the former period, being an increase of 10,000bbls. per annum, worth in the market $4, or an annual total of $40,000, which capitalized at 6 per cent. means that the Rogers patent has "patented" into existence permanent wealth amounting to $675,000, paying $40,000 per annum to the people, and of sufficient magnitude in a few years to buy out the whole town of Yarmouth, where Mr. Kinney resides. The statistics of fish caught on the Gaspereaux River, which I mailed you a few days ago, together with those of the Clyde above, prove this beyond all controvery.

For such men as you have quoted on this subject to criticise any fishway that I have personally invented or built requires about as much cheek or brass as I should need to undertake to criticise a steam engine built by a master builder, for I know no more about it than Kinney, Howkin and Wilmot do about fishways, or how or where to build or ocate them.

Heretofore I have not published any of the many letters and testimonials in my possession as to the complete success of the fishway, because I know there are so few people who have any knowledge of the subject, but concluded to allow the fish themselves to demonstrate the matter, as they are the best judges. They are now giving their testimony from many rivers in this country, as well as in the United States, and the man or men who are reckless enough to run against it to decry it only prove that they are of that class of beings who sometimes rush in "where angels fear to tread."

W. H. ROGERS.

AMHERST, N. S., Jan. 4.

VERMONT FISH COMMISSION.—The appointment of Messrs. John W. Titcomb and C. C. Warren as Fish Commissioners can not fail to give satisfaction to anglers and others interested in the welfare of fish and game. These gentlemen have taken active measures in organizing clubs for the propagation and protection of fishes, both as private and State enterprises. Mr. Titcomb is on record as a champion of the fish and game interests of the State, believing that the future prosperity of Vermont depends in a large measure upon the increase of its attractions for the lover of outdoor pleasures. We think Governor Page has made a wise selection for the present appointments.

AMERICAN FISHERIES SOCIETY.—The annual meeting of the American Fisheries Society will be held Wednesday and Thursday, May 25 and 26, in New York.—EDWARD P. DOYLE, Secretary.

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

FIXTURES.

DOG SHOWS.

Feb. 9 to 12.—Fourth Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Sec'y.

Feb. 16 to 19.—Second Annual Show of the Central City Kennel, Jackson, Mich. Chas. H. Ruhl, Sec'y.

Feb. 23 to 26.—Sixteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Supt.

March 1 to 4.—First Annual Show of the Chesapeake Bay Dog Club, Baltimore, Md. F. E. Lamb, Sec'y.

March 8 to 11.—Washington City Kennel Club, Washington, D. C. Fred. S. Webster, Sec'y, 738 Broadway, New York.

March 15 to 18.—Second Annual Dog Show of the Duquesne Kennel Club, at Pittsburgh, Pa. W. E. Littell, Sec'y.

April 6 to 9.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Sec'y.

April 20 to 23.—Fourth Annual Dog Show of the Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.

May 4 to 7.—Annual Dog Show of the California Kennel Club, at San Francisco, Cal. Frank J. Silvey, Sec'y.

FIELD TRIALS.

Feb. 1.—Fourth Annual Field Trials of the Southern Field Trials Club at New Albany, Miss. T. M. Brumby, Sec'y.

CANADIAN KENNEL CLUB RULES.

Editor Forest and Stream:

Mr. A. D. Stewart's letter in your last issue, under above caption, is not one calculated to inspire members of the Canadian Kennel Club with confidence in his judgment, or to promote that harmony in the ranks of cynologists which is at all times desirable, and which has heretofore been a leading feature on this side of the line. As one in accord with the recent changes, I shall attempt, as briefly as possible, to enlighten your correspondent with respect to the "very extraordinary" rules which appear to have met with his magisterial disapproval. Before doing so, I would remind him that dogmatic assertion is not argument, even when promulgated by the "President of the Hamilton Kennel Club;" and I respectfully submit that it would have been in better taste, to say the least, if this embodiment of all canine wisdom had offered some comments bearing on the changes made—even at the risk of being considered "uncomplimentary"—before characterizing as "idiotic" the deliberate action of gentlemen quite as competent as he to judge of what is for the best interests of the Canadian Kennel Club or Canadian breeders.

In the matter of championship wins, Mr. Stewart has a wrong conception of the object of the rule with which he finds fault. It is not "that dog shows generally may be boomed, and large entries secured," although this may to a certain extent be the result of the change. If so, the effect will be even better than anticipated. Had he a tithe of the experience which his lofty rhetoric would suggest to one unacquainted with his eccentricities, he must have known that for years past the impression has prevailed in kennel circles that the title of champion should carry with it a little more weight than it now does, and the dog claiming it a little more quality than some I could name. The C. K. C. has but kept pace with public opinion in this matter. The American Kennel Club has recently legislated in the same direction, and the English Kennel Club is even now wrestling with this vexed question.

With petty jealousies between local clubs or individuals, the C. K. C. has nothing to do, but I fail to see wherein a rule will redound to the glory of Toronto "at the expense of smaller exhibitions." The fact that two of the three wins required, may be won at small shows like Hamilton and Ottawa, precludes such a possibility. New York, Boston, Chicago and Pittsburgh will compete with Toronto for qualifying honors. What is to prevent an exhibitor sending his dog to any of these, and giving Toronto the "go by," should he think proper to do so? "Under this idiotic rule," says Mr. Stewart, "it is possible for one of the hottest classes that ever faced a judge to be found at a show which is not up to the standard insisted on by the wise men of the C. K. C., and really good dogs are therefore liable to fail in gaining the distinction due to them." What sublime logic! It strikes me very forcibly that a dog that could win at a small show in the hottest class "that ever faced a judge," can win in an equally good class at a show having 500 entries. A very good reason indeed why class legislation is not necessary.

A rule which removes an inconsistency and at the same time encourages the importation and indirectly the breeding of good dogs, should not be dubbed "idiotic." To so describe it denotes a barrenness of ideas truly lamentable. The old rule respecting the novice class was unjust to man's best friend. No matter what a dog's standing in England might be, even were he champion there, the fact would in no way qualify him for our challenge class. After being imported he was to all intents and purposes an unknown dog, and must begin again at the first round of the ladder. And yet, because of his past record, your correspondent would further degrade him by depriving him of the privileges accorded the meanest cur in the land, viz., the right to a first appearance in both the open and novice classes. I have heard of rules that could be worked two ways, and this is certainly one of them, but the rules that rob the imported dog of laurels won in England without placing him on an equal footing with the unknown dogs of this country, ought not to be perpetuated.

It was also unfair to the importer. Surely the man who assumes the expense and risk of bringing into this country the best dog that money can buy, is entitled to all the consolation to be derived from the little win in the novice class. Does not every good dog imported from other countries aid in improving the stock of this country quite as much as the good dog that may happen to be born here? "Encourage the breeder" is the popular cry, because it appeals directly to our love of self, but "improve the dog" sounds less mercenary, and is the only motto worthy of a national kennel club.

Our rules so far as they relate to winners imported from the United States are consistent. A winner under A. K. C. rules loses nothing by being brought into Canada. If he is a champion there he continues to be recognized as such here. The same holds good in respect to dogs exported to the United States. It is only the English dog that loses caste by a change of residence. Are the members of the C. K. C. prepared to accept the dictum of the "President of the Hamilton Kennel Club," and continue to discriminate against England and English dogs, while prize dogs from Scotland, Ireland, France, Germany, Russia or any other European country—or even from Asia and Africa—are permitted to compete in our novice classes without question?

Practically there was nothing in the old rule that could hinder the importer from exhibiting his English prize winner in the novice class, except his own conscience. He only had to change the dog's name and bridle his own tongue. Who in Canada could then identify the dog? Who in this country could identify one out of every hundred prize winners that might be purchased in England? If for no other reason than that a standing temptation to commit fraud has been removed, the change should be welcomed. But when in addition to this justice will be done the dog, importations encouraged, importers placed on an equal footing, whether they purchase in England or on the Continent, it seems almost incredible that one should be found to object.

Mr. Stewart's ungenerous reference to the efficient secretary of the C. K. C. recalls to my mind one of "Jedge Waxom's" proverbs, "There ain't nothin' much sadder in this glorious country of ourn than the man thet wants to hold offis and can't."

P. G. KEYES.

OTTAWA, Ont.

NATIONAL BEAGLE CLUB MEETING.

Editor Forest and Stream:

An executive meeting of the National Beagle Club was held at 266 Washington street Boston, Mass., Jan. 23, 1892.

President Chapman called the meeting to order at 9 P. M. Roll call of officers: President Chapman, Vice-President W. S. Clark, W. A. Power and H. V. Jamieson present. Proceeded to business. Communications from Vice-Presidents Kreuder and Turpin read and filed. Communications from J. R. Groves and Jas. Mortimer read and filed. Communications from Washington City Kennel Club read and the following motion was carried unanimously, that specials be donated to Washington City Kennel Club as follows: $5 for best dog, $5 for best bitch. Competition open to members of N. B. C. only.

Application of Wm. H. Hyland was read and on motion he was elected to membership.

Moved that the secretary be instructed to correspond with the World's Fair Committee in regard to specials. Carried unanimously.

Moved that a committee of three be appointed to revise the constitution and by-laws in anticipation of the new edition to be printed. Carried. Messrs. Power, Clark and Brooking were appointed.

Moved that the following classes be run at the next field trials: Class A, dogs 15in. in height and under. Class B, bitches 15in. in height and under. Class C, dogs and bitches 13in. in height and under. Derby for dogs and bitches whelped on or after Jan. 1, 1891. Absolute winner class open to first prize winners in the trials of 1892. Carried unanimously.

Moved that the entrance fee in all classes except "absolute winner" be $3 forfeit and $7 to fill.

Absolute winner class free.

Moved that a committee of three be appointed to look over field trial rules and suggest, if possible, any changes. Carried unanimously. Messrs. Turpin and Brooking were appointed.

Adjourned at 11 P. M.

H. V. JAMIESON, Sec.

THAT IRONCLAD COURSING RULE.

Editor Forest and Stream:

While I must disagree entirely with the conclusions of Mr. Flower in yours of 14th inst., I must compliment him on being the first to support the Draconian interpretation of this rule in a philosophic spirit, as a cry for the pound of flesh constitutes all the support so far given to this side of the case.

Let me point out to Mr. Flower and others that there is no shadow of authority in the coursing rules for visiting any penalty on an owner of a hound on account of the contesting hound running into him. This is positive and undeniable, not a word is contained in the rules (as I understand them) about the hound running into the horse. Rule 30 is exact and definite in referring to "riding over," and "riding over" is not being "run into" by any manner of means.

If the rule is to be broadly interpreted, and an inquiry permitted into all the circumstances, then it might very properly attach to a hound colliding with the horse, and an inquiry whether the collision was the fault of rider or hound. But it must not be forgotten that the contention is that the interpretation of Shylock must be given to this rule, and if this is the case, most unquestionably it cannot be widened at pleasure. Just stop to think what would be the results if laws as highly penal as this interpretation would make Rule 30 were to be advanced to embrace circumstances beyond their express wordings. This consideration shows the inherent imbecility of the rule, and the immediate necessity of an enlightened definition of it.

If "riding over" is to be construed into "ran into," what is to be the next advance? Being barked at by a hound or having a piece taken out of your leg by the same? Where is the line to be drawn? The hound would be as much delayed if it ran into a man on foot (particularly if he had his spurs on); shall not that disqualify?

W. WADE.

HILTON, Pa., Jan. 16.

NEW ENGLAND F. T. CLUB MEETING.

Editor Forest and Stream:

The annual meeting of the New England Field Trial Club was held at the Hotel Thorndike, Boston, Mass., on Wednesday evening, Jan. 20, at 7:30 o'clock. After the regular business of the club had been transacted the gentlemen present adjourned to the spacious dining hall and there partook of a fine dinner.

Among those present were noticed President W. A. Power, Secretary G. E. Stickney, Vice-Presidents Dr. J. W. Hayward, Geo. W. Lovell and D. H. Goodwin, Jr., Treasurer J. L. Wells, and Fred H. Clark, W. H. Batchelder, Harry Dutton and F. W. Freeman.

After dinner the president rapped to order and introduced Dr. J. W. Hayward, of Taunton, Mass., who said that he was no speech maker, but your correspondent was under the impression that he was, if judging from the time he consumed and the many brilliant and sportsmanlike arguments that he brought forth are any criterion to go by. A. M. Tucker, of Charlestown, Mass., the veteran, as he is called by some of the boys, brought forth some very witty yet telling remarks on the members. Also, D. A. Goodwin, Jr., got in his usual hard hits on the president of the club, much to the enjoyment of the boys.

The club purposes to lease 7,000 acres of land and stock it with quail the coming season, and I venture to predict that the New England Field Trial Club will be the coming sportsman's club in this country. The men who belong to it are hustlers from the start, and your readers may depend upon it that if money and brains will do it, judging from the remarks made at the last meeting, your correspondent will not be far out of the way in saying, as he said before, that it bids fair to be the largest field trial club in America.

SECRETARY.

Mr. Booth, manager of the Duchess Kennels, has sold the St. Bernard bitch Altonella, sister to Altonette, to Mr. A. H. Moore, of Philadelphia, Pa. This bitch has already had one litter to Lord Bute and will be bred to him again.

SPANIELS USED FOR FIELD SPORTS.

[*Continued from Page 12.*]

THE CLUMBER SPANIEL.

IN speaking of this variety, there is a danger of trespassing upon a preserve, which courtesy may induce one to accord to a writer who has made so admirable a champion of the breed in America. I refer to Mr. F. H. F. Mercer. We may agree to differ on the matter of the comparative merits of the different varieties of the spaniel family for varied field purposes, but there are points, and especially the one relating to traditional history, where it would be unwise to join issue, and one may be excused for objecting to its being said of "Stonehenge" that he "most unjustly maligns the breed."

The name of the residence of the Duke of Newcastle—Clumber House—has become inseparably connected with these dogs. His Grace of some two hundred years since, obtained some dogs from the kennel of the Duc de Noailles, in France, which were kept in the family and religiously guarded until about sixty years ago. They were used almost solely for pheasant shooting, and were generally termed pheasant dogs, until, in a later decade, to distinguish them from dogs something alike in appearance, they were termed Clumbers. They were supposed to have been the result of a cross between the smaller Spanish sporting dog—the true spaniel—and the French basset hound. This theory is amply supported by their source, color, and inclination to dwell on scent, like the basset, and unlike the other kinds of spaniels; their running mute is also contrary to other spaniels, or when excited their baying is more like the hound, rather than the barking or babbling of the spaniel.

The Clumber type and character are also very distinctive, and unlike the different branches of the spaniel family, there is also much variety in shape and conformation. Such impressions as these, given to old sportsmen, and men devoted to the dog, when this variety was first brought in competition with others, some fifty years ago, in England, should have considerable weight in deciding their antiquity, and as the specimens of to-day are generally of this descent, it is folly to try to revert to dogs, or writings of an earlier date, in order to be able to claim a different origin for Clumbers.

As to there being any dogs of a similar style in England when the Duke imported his, will ever remain an uncertainty. The Norfolk spaniel was perhaps the nearest approach, and they had been discarded, or merged into other strains with more keenness, hardihood and intelligence. Ere the advent of the Clumber, other sporting dogs were in more general use, and spaniels were being very much neglected. Some century and a half later there was an attempt made to save them from extinction, and it was then found that Lord Manver, Sir George Palmer, Mr. Besset, Mr. Yateman, Mr. Foljambe, Mr. R. S. Holford and Mr. Tryden had kennels of what were then called Clumbers, as well as the Duke of Newcastle.

There was much diversity of type, and after a time it was generally admitted that the Duke's dogs were more uniform and handsome, but this by no means implied that they were equal to the others in the field, and many sportsmen who preferred utility to beauty quickly made up their minds that these "new-fangled basset spaniels" were not to be compared with the "springers" for general work. They argued that the fire and lowness, essential points for coppice and thick brush work, were lacking, that their weight and their running mute were against them for marshy land, so that about the only purpose they were good for was pheasant shooting, and they were generally called "pheasant dogs." In this sphere they had to compete with setters and pointers, and this explains why they have never become popular with sportsmen whose first thought is utility. Still the Clumber is a very handsome dog, he is very companionable, and generally acknowledges but one master, besides having a solemn, dignified air which has attractions to those who do not look to utility alone.

The earliest importation of dogs of this variety to America were made by Mr. Jonathan Thorn, a Pennsylvania sportsman, who had a dog named Trimbush, probably bred by Mr. R. S. Horford, before mentioned. Mr. Jesse Sherwood, of Ohio, then secured Duke. Major Venables brought some of the Yateman stock over when his regiment came to Canada. Dr. F. C. Blunkett, of Lowell, Mass., also imported some specimens, but sufficient interest could not be aroused to induce any one to maintain a kennel until Mr. F. H. F. Mercer, of Ottawa, secured some of the produce of Ben (a dog imported by ex-Surveyor General Russell, from the Clumber House stock) and the produce of others brought over by Captain Todd.

The litter was not remarkable for type, nor were they of any surpassing excellence in any other respect, and yet the title of champion which preceded, and the long list of prizes which succeeded the names of Newcastle, Tyne, Johnny and Drake, give one a contrary impression.

Somewhat recent importations by Mr. H. B. D. Bruce and Mr. T. C. Bate, both of Ottawa, and Mr. A. L. Weston, of Denver, have materially changed the views of some judges of spaniels who had hitherto considered the American specimens the acme. Boss III., Bromine and Lass o' Beauty are among the recent importations, and as Snow has also come over for Mr. F. H. F. Mercer's kennel, there is now really an excellent quartette of these handsome dogs in America.

Although there is a great difference in the type of these four dogs, it must be remembered that there is a marked diversity in this respect, in the same litter, and the difference, in both type and character, between the sexes, is greater than is usual in other dogs, and is usually a characteristic of the breed.

NORA FRIAR. DI FRIAR. FRIAR BOB.
WYCOME RATTLE.

WINNING CLUMBER TEAM AT BIRMINGHAM, 1891.
Owned by Jas. Thorp Hinks, England.

THE TEMPERATURE OF THE DOG.

THE books are as silent on this subject as on the peculiarities of the pulse; and I have known a practitioner of veterinary medicine conclude that a certain specimen was suffering from pneumonia, basing his conclusion on the temperature largely, which temperature was only slightly over 102 degrees Fahrenheit.

Our knowledge of the subject of animal heat has of late been greatly advanced. It seems now to be pretty clear that the vital processes on which the heat of the blood and tissues depend are under the influence of the nervous system. In other words, they are heat producing and heat regulating nervous mechanisms, which are in part at least situated in the brain.

Fever may arise when these different nerve centers or collections of cells do not work in harmony. They are very apt to be disordered by the shock of a sudden change of external temperature, commonly termed "catching cold," and by various poisons produced within the animal, the result of disease caused by germs or otherwise.

It is manifest that if there is much alteration in the normal temperature this must imply a serious disturbance of fundamental vital processes, hence practically it is of the highest moment that the temperature be taken when any disease of an acute character is suspected. The temperature is a far surer guide than the pulse in most diseases, and it requires much less skill and experience to read its indications. But in this as in all other cases it is of great importance that the natural or normal temperature be known.

Being able to find little on this subject in works on the dog or veterinary medicine in general, I undertook the investigation of the subject and give here some of the results. The following tabular statement (which also appears in my "The Dog in Health and in Disease," just published) gives the range of temperature for the twenty-four hours:

GREYHOUND DOG. (Two Years Old.)		GORDON SETTER BITCH. (About the same age.)	
Hours.	Temp. in degrees F.	Hour.	Temp. in degrees F.
10:00 A. M.	102.0	10:00 A. M.	101.4
12:00 M.	102.2	12:00 M	102.2
2:00 P. M.	102.4	2:00 P. M.	101.7
5:30 P. M.	101.7	5:30 P. M.	101.9
8:15 P. M.	101.5	8:15 P. M.	101.6
10:30 P. M	101.5	10:30 P. M.	101.6
12:00 P. M	101.4	12:00 P. M.	101.2
2:00 A. M.	101.4	2:00 A. M.	100.8
4:00 A. M.	100.4	4:00 A. M.	100.7
6:00 A. M	100.4	6:00 A. M.	100.8
7:49 A. M.	100.6	7:40 A. M.	100.5

The temperature was taken in the rectum in each instance for ten minutes. As my experiments were intended to be scientifically accurate I used a self-registering Hicks thermometer with a Kew certificate testifying that the instrument was strictly accurate. Such a one costs three dollars, but for ordinary work a good instrument can be secured at a lower price; nevertheless it does not pay to buy a cheap thermometer.

As the temperature is reliable only when taken in the rectum, it is well to use all precautions to insert the instrument carefully, first covering the end with a little vaseline, oil or lard. It should be introduced about three inches and held steadily in place for fully eight minutes, always being careful to see that the mercury is shaken down to read as low as 99 degrees. Any first-class druggist can furnish the proper instrument and explain how to use it.

Returning to the table given above, it will be seen that:

1. There is a "temperature curve" or variation for the twenty-four hours, *i. e.*, there is a period of maximum and minimum temperature. 2. This varies for each individual dog, though to a slight degree. 3. These periods of greatest and least temperature do not occur for each individual at exactly the same time, even in the case of dogs of about the same age and kept under precisely the same conditions. This is still more clearly seen in the table below for the puppies of the same litter. 4. The minimum for the adult dog does not fall to 100deg.; the maximum may reach nearly 102½deg. So there may be a variation of about 2deg. in the twenty-four hours.

From this it follows that we must not conclude that a dog has an elevated temperature unless it exceeds 102½deg., provided his normal temperature is not known to be lower. It might be objected that I am drawing conclusions from a single table based on the temperature curve of two dogs, but I have numerous other tables which correspond with the above and warrant the general conclusions drawn.

I give as an additional example the consecutive temperatures in one day for a Great Dane bitch, eight months old.

Hours.	Deg. F.	Hours.	Deg. F.
8:30 A. M.	102.8	6:15 P. M.	101.7
10.00 A. M.	101.9	8:00 P. M.	101.1
2:09 P. M	101.3	10:03 P. M.	100.5
4:15 P. M.	101.5		

It will be seen that in this case the temperature in one instance reached almost 103 deg.

The temperature in puppies is rather higher and decidedly more variable than in grown dogs. The following table for two English setter puppies of the same litter, nine months old, illustrates this less than it does the variations for the same breed and individual kept under precisely the same conditions:

Hour.	Temp. in degrees F.	Hour.	Temp. in degrees F.
8:30 A. M.	102.2	8:30 A. M.	102 5
11:00 A. M.	102.6	11:00 A. M.	102.4
2:00 P. M.	102.7	2:00 P. M.	102.5
5:00 P. M.	101.7	5:00 P. M.	101.9
7:00 P. M.	101.9	7:00 P. M.	101.9
9:00 P. M.	102.0	9:00 P. M.	101.6

It will be noticed that the temperature in the case of one of these puppies reached 102 degrees, or higher, four times in twelve hours.

The thermometer has saved me as a breeder alone many hours of anxiety and enabled me to meet emergencies promptly in my kennel that might possibly but for this have gone on to a fatal issue.

I recommend all who have large kennels, at all events, to keep a first class thermometer on hand and use it whenever a dog seems really seriously out of sorts. If the instrument shows a temperature of over 104 degrees in even a puppy, suspicions of serious trouble should be aroused, and if this elevation is maintained hour after hour prompt treatment should be resorted to. The thermometer will also often enable a breeder to ascertain whether it is necessary to seek medical assistance, and, if the expert is distant, to obviate the necessity of frequent visits on his part by reporting the temperature and other symptoms by mail.

WESLEY MILLS, M.D., D.V.S.

LORD CLOVER'S PEDIGREE.

Editor Forest and Stream:

I observe that Dr. Cryer now charges me directly with "sending out pedigrees to the public that cannot be sustained." Kindly permit me to state that I have never sent out a pedigree of any kind whatever to the public. I have never used a Lord Clover stud card at all. I have never advertised the dog's services. I have never as much as sent out a circular to the public on which his breeding was printed. I have never projected his pedigree in type in any way, shape, form or manner outside of this correspondence, nor have I used any stud cards formulated by former owners of the animal. It is a matter of regret that Dr. Cryer should descend to tactics of this kind. I asked nothing but the barest justice and simplest act of courtesy at his hands. It is a pitiable reflection on the amiable character of the breed with which the doctor is associated that this courtesy was denied me. As it is I do not care to strike a man who is on his knees. In accepting Hugh Dalziel's enunciation of Lord Clover's pedigree he finally admits all that was asked of him. So far as the show record of Lord Clover and his ancestors is concerned I am perfectly willing to concede that I know little and care less about it. Dr. Cryer was not asked to certify to show ring credentials, nor did the term champion appear in any of my letters to him. It was a question of blood, not blue ribbons, and the doctor blundered in branding as spurious that which the English breeders assured me was genuine. I am not responsible for the errors made by former owners of the dog, and respectfully decline to act as scapegoat at the behest of any one. I had not as much as seen Dr. Cryer's book when I was deluged with requests to correct its errors in self-defense. There is nothing particularly visionary about these letters, and I can name well known dog owners who would not tolerate half the annoyance to which I was subjected while granting Dr. Cryer a reasonable opportunity to remedy his mistake without injury to any one or humiliation to himself.

In conclusion allow me to define the principle for which I contend through all this "fuss and feathers." In my judgment no man has the right to publish in book form or otherwise anything that by exaggeration or "omission" tends to injure his neighbor's stock or reputation without first giving that neighbor a fair chance to correct whatever mistakes he may have made.

Thanking you for unlimited courtesies,

THOS. I. BALLANTINE.

DEPRECIATION.

Editor Forest and Stream:

Your special reporter says of Gloversville show: "The great feature of the show was the quality of the exhibits; in fact, quality was better represented than at most of the shows of the recent Canadian circuit." He then mentions that this was chiefly owing to the exhibits of certain kennels that he names. As a matter of fact, all or nearly all these kennels were represented on the Canadian circuit, and in many cases by better dogs than those they sent to Gloversville. Several of the winners at the latter show were beaten over and over again on the Canadian circuit, and any one who knows our show dogs well and compares the winners of the recent Canadian shows with those at Gloversville, will be able to judge how erroneous is the statement of your reporter. It is doubtful if there was a single show on the recent Canadian circuit that did not surpass Gloversville both in numbers and quality; while it is a matter susceptible of demonstration that the general average of the Canadian shows, both in quality and numbers, was much in advance of that little show out of which your reporter tries to make so much.

Excepting the largest shows in the United States, those of the last Canadian circuit will bear favorable comparison with any on the continent. Your reporter is welcome to his own opinions as to the quality at Gloversville; but when he makes comparisons he should stick to the truth, and avoid gratuitous depreciation.

VICE-PRESIDENT C. K. C.

FIELD TRIALS AND FIELD WORK.

Editor Forest and Stream:

I have read with great interest the communications in the various weekly journals concerning the true uses of field trials, most of the late comments being suggested by the queer award to Antonio over Maid of Kent. Nominally, the field trials are supposed to call out and carry to perfection the qualities of the dog which are of the greatest use and conduce most to the pleasure of his master when hunting. But verily, if the drift of events, at High Point especially, afford any indication, the tendency is more and more to cultivate speed and a disposition to stay out of sight for an hour or two, and to ignore the old-fashioned attributes of a good dog—namely, a good nose and ability to find and retrieve game.

Clearly, we must drop our setters and pointers and take to greyhounds. Seriously, though, there is no sense in the contention that the work at our field trials should be so different from the work of the same dog out for a day of sport with his master. That there is a vast difference we all know; but, if field trials are ever to become generally in favor it is necessary to make them resemble something like a day's sport in the field which one would like where game is plenty. Few of us are rich enough to have two dogs educated, one for field trials and another for one's own field sport.

The field trials are becoming a farce if intended to show the field qualities which make a dog valuable for nose and bird-finding qualities. If not intended for that why not call them races.

MANHATTAN.

ASSOCIATE MEMBERS OF A. K. C.

Editor Forest and Stream:

This (Monday) morning's mail brings me two slips regarding my vote for officers of the associate members of the A. K. C. One from Chicago asks for the re-election of Dr. Perry, and Messrs. L. F. Whitman and C. D. Bernheimer, at present vice-president and secretary, and of Mr. J. L. Anthony as delegate. The other is from New York with an entire new slate with the exception of Secretary Bernheimer and delegate Anthony.

Permit me to say that in my opinion it would have been much more becoming in the one person on each ticket responsible for having sent it out to have simply stated that he was a candidate for such a position. I don't believe in getting up a ticket and putting in your own name, using other names to boom yourself through without asking their owners' permission.

What I desire to draw the emphatic attention of members to is that the great thing in our vote is the question of delegates. For 1891 we had the Chicago ticket given above with Dr. Perry and Mr. Whitman also as delegates. Now neither Dr. Perry nor Mr. Whitman attended one meeting of the executive committee during the entire year. What we want is the election of gentlemen who, like Mr. Anthony, can and will devote the time to attend meetings. Permit me to say that I am not a candidate for delegate, as I already represent a club. Select men who take an active interest in dog legislation, not necessarily dog exhibitors, getting them as near New York as possible, so that they can attend meetings readily. JAS. WATSON.

PHILADELPHIA, Pa., Jan. 25.

POINTS AND FLUSHES.

[*From a Staff Correspondent.*]

CHICAGO, Ill., Jan. 23.—Stormy weather of the true wintry kind has prevailed here for a number of days, more than Chicago could utilize, so that there was an overflow of bad weather which extended far into the South, an unusual occurrence, and it affectually stopped training and the preparation of dogs for the time being.

Out of a number of letters received from handlers, all are unanimous in the complaint of the idleness enforced by this state of the weather. If it should last long, it will undoubtedly result in running the dogs at the Southern trials in inferior form or short of training, or both; even if it does not impair the success of the trials. Fortunately, such wintry weather in that section is commonly of short duration, hence there may be some good work done yet before the trials begin at New Albany, on Monday, February 1.

These trials rank in the first class, and furnish competition to large numbers of dogs from the North and South. It would, therefore be a great disappointment to many and an injury to the field trial interest if bad weather should obstruct these trials.

This club was a strong advocate of the heat system at field trials, and has always heretofore conducted its competitions on that theory, but this year the old time rules will be superseded by rules based on the spotting system, a change which cannot fail to inure to the benefit of all concerned. The judges are all gentlemen of wide and thorough experience in all the details of field trial matters, and should prove most satisfactory arbiters.

Mr. W. W. Titus, of West Point, Miss., informs me that there is no prospect of his being at the Southern Field Trials, owing to the dangerous illness of his wife, a sad cause indeed, and one which I hope has ceased to exist. A field trial is always better when the genial and skillful "Billy" Titus is present. From letters of recent date I gather that those formidable competitors, Messrs. N. B. Nesbitt and H. M. Short, will be in attendance, and it goes without saying that with these and the other well-known handlers who will be there, the competition will be keen, skillful and interesting.

I recently noticed a communication from Mr. Norvin T. Harris, owner of the famous setter Antonio, which distinguished himself so eminently in the late field trials in North Carolina. Mr. Harris stated therein that he purchased Antonio from Mr. Avent in New Orleans last January, and that Antonio was run in his interest and at his expense ever since. There is a mistake here somewhere which should be corrected, now that the record is under discussion, and thereby save annoyance and uncertainty in the future.

I mention this only that the parties interested can correct it now, for I know that some fellow later on will cast his Argus eyes upon it and perhaps raise a question and inference which would be unjust.

In February, last year, the month following that in which Mr. Harris became the sole owner of Antonio, Mr. Avent entered and exhibited Antonio in his own name at the New York show and, if my memory serves me correctly, he won a divided first with the Blue Ridge Kennels in the competition for the English setter kennel prize. The A. K. C. ruling is that every dog entered in any show held under their rules must be the *bona fide* property of the person making such entry.

Mr. Harris is a true sportsman, a gentleman in the truest sense of the word, and Mr. Avent is so well known personally to bench show and field trial men that any indorsement would be an unnecessary act, therefore it can only be inferred that there is an unfortunate mistake in the date of transfer. Yet Antonio was not run wholly in Mr. Harris's interest, a trifling matter and possibly hypercritical, as he was entered and run in the late field trials as being owned by J. M. Avent and Norvin T. Harris. A win, acquired under such joint ownership, at least so presented to the world, would inure to the reputation and profit of both, not to Mr. Harris's alone.

But I presume that these are all matters which are simple to explain.

The new thirty-two page FOREST AND STREAM evokes the most unqualified praise; and it has a host of friends in Chicago and the West, as well as in other sections of this broad land. It is bright, newsy and instructive; qualities combined with high literary merit and careful editing which can not fail to place it still higher than the high place it has held in the realm of sports.

The St. Bernard Club of America, through its secretary, W. H. Joeckel, Jr., has notified the Mascoutah Kennel Club that it will present eight silver club medals, for members' dogs only, one each for the best rough-coated dog and bitch over eighteen months old, all to be American-bred. A class was made for King Charles spaniel puppies.

I dropped into Mussey's billiard hall a few days ago, a place where trap shooters and dog men congregate, the former in great strength and numbers, and there I had another illusion dispelled by a joke, a flea and dog combination joke. I had always believed that a joke, particularly a doggy joke, to be sparkling, crisp and effective, must in a manner be spontaneous and effervescent, holding some consecutiveness to something real or unreal, or some association to something near or remote. Nothing could be more mistaken. A joke, in the hands of artists, can be built up brick by brick to a complete, symmetrical whole.

My arrival was an event, but I did not know that fact at the time. With some of the shooters I was acquainted and some not. Mr. Hough introduced me in a most disinterested manner to several of the gentlemen whose names are familiar in the history of great scores at the traps. After awhile Mr. R. S. Cox happened along; at least it seemed as if he just happened to. We were introduced. His genial, affable manner, fine presence and twenty-four carat smile captured me at once. Mr. Hough kindly mentioned that I was a dog man. Mr. Cox's manner became deferential and interested, not violently, but real nice. The circle of hearers grew a little larger.

"Didn't you have a good dog which died of fleas?" said Mr. Hough.

Mr. Cox calmly said that he had. My opinion was that Mr. Hough was showing little tact in exposing Mr. Cox's cruel neglect of his dog. Mr. Cox said that he was almost discouraged and would not own any more dogs.

I suggested that he try again.

"That's just what I did do," said he. "I got a Chesapeake Bay dog."

"Ah! A retriever," I replied.

"Yes, a retriever. That's the kind we use on the Kankakee marshes, you know."

I didn't know, but he said it so earnestly and truthfully that I thought I knew. His manner was gradually growing blander and his voice sweeter.

"That dog is all covered with fleas too, isn't he?" said Mr. Hough.

"Yes," responded Mr. Cox. "By the way," and his voice was meekly earnest as he turned to me, "do you know what is good for fleas?"

I told him of a remedy that was sure to kill them.

His manner changed. His voice had gentle rebuke as he gazed at me and said: "That would kill them. I asked you what was good for fleas."

All laid back their ears, but me, and laughed. I paid the expenses, according to time-honored usage and the by-laws of the joker syndicate. This is a true story of the flea joke; all others are spurious. B. WATERS.

[According to the catalogue of the W. K. C. show, held Feb. 24 to 27, 1891, Antonio is entered in Mr. J. M. Avent's name only.]

BINGHAMTON DOG SHOW.

[*Special Report.*]

THE show was all in a muddle the first day, owing to the fact that they had no superintendent. Messrs. Kreuder, Farley, Fish and others soon got all going right, and then Mr. Farley was made superintendent and the dogs were well taken care of. Mr. Harry Hayden, who was superintendent last year, was given instructions this year how to proceed with "ads.," premium lists, etc.; but he failed to connect, hence the small entry. Next year they will have some of the dog men on the committee who live in the city, and all will be O. K.

In mastiffs there were two fiddle-headed dogs; Rex was better in bone and substance than Don.

Rough-coated St. Bernards—Imported Ajax made his *debut*. He has good size; was shown thin, could easily carry 40lbs. more flesh; good color, correct markings, nice mover; head massive, deep and well-shaped, intelligent and dignified, dense black shading. He beat Noble Otho hands down, who has only size in his favor, and is the worst dog behind I ever saw. Elsa III., in puppies, not yet developed enough to to tell what she will be; light in muzzle, ears wrong.

Newfoundlands—One shown, a fair specimen as they go nowadays, when any big black dog is called a Newfoundland.

Greyhounds—Spinaway, in better condition than at Gloversville and Albany, was alone in challenge class.

Wolfhounds—Only one, Modjeska, well known.

Vesta C., one of the very best, was alone in pointer bitches; she was described at Gloversville.

Jackson Belthus, also alone in English setters; a good black and white, stands on the best of legs and feet.

Irish setters are all well known.

Gordons—Only one fair dog, Roxie.

Collies—Not a good class. Dublin Scotilla, in fair coat, off in skull, first in open dogs. In bitches, Cora Belle in better condition can beat Roslyn Mischief, as she is better in formation of head. Niepar is not developed yet, but is apt to go all wrong.

Fox terriers—Only worth about price of their collars, although Rose, a pup, may make a good one.

Beagles—The Rockland Kennels' well-known string.

Cherry Boy, one of the right sort, just pleased the judge. He said that was the "good-time-coming cocker."

Pugs—The now well-known Curtis won his first in challenge class; bar his color, a hard one to beat. Treasure, reserve, should be retired. How did he get in the challenge class? Jessie and Flipp are only fair specimens.

Toys—Fannie, not a flyer, is too thick in skull.

Irish terriers—Vestal, the winner, is too large, bad ear, no coat.

PRIZE LIST.

Mastiffs—1st, Barton's Rex. Rough-Coated St. Bernards.—1st, Ajax; 2d, Noble Otho; 3d, Rex.—Puppies: 1st, Elsa III. Newfoundlands.—1st, Duke. Greyhounds.—Challenge Class.—1st, Spinaway.—Open Dogs.—1st, Zeno. Wolfhounds.—1st, Modjeska. Pointers.—1st, Victor C. English Setters.—1st, Jackson Belthus. Irish Setters.—Open Dogs.—1st, Nicho; 2d, Nemo.—Bitches: 1st, Nellie Husted; 2d, Cora Belle; 3d, Juno.—Puppies: 1st, Gen. Husted. Gordon Setters.—1st, Roxie. Collies.—Dogs: 1st, Dublin Scotilla.—Bitches: 1st, Roslyn Mischief; 2d, Cora Belle.—Puppies: 1st, Niepar. Fox-Terriers.—Dogs: 1st, and 2d, Larchmont Chang and Larchmont Bob; 3d, Trimly.—Bitches: 1st, Lady Belmont; 2d, Larchmont Rose. Bull-Terriers.—1st, Sport. Beagles.—Challenge Class.—1st, Roy K.—Open Dogs: 1st, The Rambler.—Bitches: 1st and 2d, Belle of Rockland, Lady Vic. Cocker Spaniels.—Challenge.—1st, Cherry Boy.—Open.—Bitches: Piotor's Ronea. Pugs.—1st, Curtis; reserve, Treasure.—Open.—Bitches: 1st, Jessie; 2d, Flip. Toys—1st, Fannie. Irish Terriers.—1st, Vestal.

SPECIALS.

Best mastiff, Rex Best St. Bernard, Ajax. Best bitch, Elsa III. Best greyhound, Spinaway. Best wolfhound, Modjeska. Best fox-terrier, Rose. Best pug, Rose. J. O. F.

ELMIRA DOG SHOW.

PRIZE LIST.

MASTIFFS.—*Dogs:* 1st, M. B. Buckley's Rab. *Puppies:* 1st, Ed. J. Tool's Donald; 2d, Daniel Caldwell's Hannibel.

ST. BERNARDS.—ROUGH COATED—*Dogs:* 1st, J. B. Dixon's Duke Anto; 2d, John Brand's Leon. *Bitches:* 1st, C. J. Clark's Nancibel; 2d, W. D. Dounce's Agnes Wickfield. *Puppies:* 1st, C. J. Clark's, unnamed; 2d, Geo. M. Robinson's Comodore.

GREAT DANES.—Absent.

STAGHOUNDS.—1st, P. McCann's Sailor.

NEWFOUNDLANDS.—1st, J. T. Rathbun's Colonel.

POINTERS.—*Dogs* (OVER 55LBS.): 1st, J. S Jaycox's Beppo Dick. *Bitches* (OVER 50LBS.): 1st, Geo. J. Reynolds' Lillie. *Bitches* (UNDER 50LBS.): 1st, J. T. Langworthy's Beppo Lass; 2d, C. W. Lewis's Christmas Vic. *Puppies:* 1st, B. A. Cheny's Fra. Diavolo; 2d, J. T. Langworthy's Beppo Lad; 3d, C. W. Lewis's Christmas Vic's unnamed puppy.

ENGLISH SETTERS.—*Dogs:* 1st, A. J. Lewis's Prince L. *Bitches:* 1st, Mt. Washington Kennels' Nia. *Puppies:* 1st, E. W. Andrew's Gypsey.

IRISH SETTERS.—*Dogs:* 1st, Glendyne Kennels' Glen Jarvis. *Bitches:* 1st Glendyne Kennels' Sedan; 2d, R. A. Spaulding's Wanda.—PUPPIES—*Dogs:* 1st, H. D. V. Pratt, Jr.'s J. M. P. *Bitches:* 1st, Glendyne Kennels' Molly Glendyne.

GORDONS.—*Dogs:* 1st, M. K. Davis's Fritz. *Bitches:* 1st, C. M. Jones's unnamed. *Puppies:* 1st, C. M. Jones's unnamed.

FOXHOUNDS.—*Dogs:* 1st and 2d, T. McCann's Jack and Singer; 3d, L. O. Bates's King B. *Bitches:* 1st, T. McCann's Belle. *Puppies:* 1st, B. S. Knapp's Prince.

CLUMBERS.—*Dogs:* 1st, Prof. J. W. Robert's Dash. *Bitches:* 1st and 2d, Prof. J. W. Roberts's Floss and Belle.

FIELD SPANIELS.—1st, Daniel Caldwell's Fan.

COCKERS.—1st, N. H. Allis's Jet.

BEAGLES.—CHALLENGE—1st and reserve, Rockland Kennels' Racer, Jr. and Roy K.—OPEN—*Dogs:* 1st, Rockland Kennels' The Rambler. *Bitches:* 1st and 2d, Rockland Kennels' Belle of Rockland and Lady Vic. *Puppies:* 1st, G. W. Rogers's Viva.

BULL-TERRIERS.—1st, A. C. Pettit's bitch.

MISCELLANEOUS.—1st and 2d, Coykendall & Decker's Nude and pup.

SPECIALS.

Best cocker bitch—Jet. Best beagle bitch—Belle of Rockland. Best foxhound bitch—Belle. Best Irish setter—Molly Glendyne. Best bitch in the show—Racer, Jr. Best St. Bernard—Nancibel. Best pointer out of Christmas Vic—Beppo Lass. Best field spaniel—Floss. Best kennel of sporting dogs—Rockland Kennels' beagles; second best—Glendyne Kennels' Irish setters. Best mastiff—Donald. Best pointer—Beppo Lass. Best English setter—Nia. Best Irish setter—Glen Jarvis. Best Gordon setter—Fritz. Best cocker spaniel—Jet. Best Clumber spaniel—Floss. Best beagle—Racer, Jr. Best bull-terrier—A. C. Pettit's bitch. Best pug—Lulu.

RE THE NAME PSOVOI VS. BARZOI.

Editor Forest and Stream:

Thinking that a letter of Lieut. G. Tarnovski's conveyed valuable information as to Psovois and was of much interest, I allowed you to read and make extracts from it, and I can hardly acquit you of lack of judgment in your selection, for the Mr. Rosseau referred to is of no earthly interest to Americans (except to those he has dry-nursed). I wish to express to Lieut. Tarnovski my sincere regrets that my good intentions should have brought about a Mephiticus americana shower, and I will assure him that American gentlemen and sportsmen do not approve of the turgid use of such terms as "a mass of falsehoods" any more than Russian gentlemen admire charging an officer and gentleman with giving a prize to a dog because he bred the dog's sire. Should any of us have a difference of opinion with another gentleman as to etymology, we would not think of charging a "falsehood," we would endeavor to prove our case. Should a Russian say publicly that he had some frog-tailed chickens, bought from President Harrison, we would explain to him that he was mistaken, that President Harrison did not sell chickens, that such a business did not accord with his position, and the Russian gentleman would never be guilty of saying in reply that we lied. An American gentleman and sportsman might also communicate to his Russian compeer, that the spectacle of an American doctor disputing with a Russian officer and gentleman as to niceties of the Russian language, is not looked upon with veneration, and that the spectacular drama of turning a coyote loose in a two-acre yard, to be "coursed" by eight Psovois, and giving another his "liberty" in a twenty-acre field, with a high fence and fourteen Psovois around the outskirts, is not considered sportsmanlike, manly or humane, and that characterizing as "self-constituted authorities, the laughing stock of the kennel world" any one who say that such a baiting demonstrates nothing as to the wolf-killing abilities of "Barzois," raises a question of fact, and so far the kennel world, as exemplified by the kennel press, has not taken on this opinion.

I trust that Lieut. Tarnovski, Gen. Bolderieff, Col. Tchebischoff, "Russian Bear" and other Russian sportsmen and gentlemen will take due allowance for the dissipation of visions of exclusive knowledge as to Psovois based on "all the works of authorities" pieced out by the sandpapering and varnishing of sundry dog dealers, and for the disrupted state of mind such dispelling of cherished dreams brings in its train.

Of course, any attempt at a sober, sensible reply to the second article of Psovois in yours of Jan. 21, would be as out of the question as ennobling "Barzoi coursing" in a two-acre field. W. WADE.

HULTON, Pa., Jan. 23.

THE AMERICAN FIELD TRIAL CLUB.

Editor Forest and Stream:

Several of the prominent sportsmen of this State met at this place Jan. 20, and organized a field trial club to be known as The American Field Trial Club, for the purpose of holding annual field trials of pointers and setters. The constitution and bye-laws adopted were in main in keeping with the constitution and bye-laws of the United States Field Trial Club. Application has been made for membership in the National Association, splendid territory for the initial trial the coming fall has been secured, and no effort will be spared to make its meeting compare most favorably with other meetings of the kind.

The following named officers were elected for the first year: President—Hon. Joseph F. Gent, member of the State Legislature and President of the Cerealine Manufacturing Company: First Vice-President—A. B. Reeves, member of the corporaion known as Reeves & Co., manufacturers of the Reeves strawstackers and threshing machine; Second Vice-President—U. R. Fishel., of Hope, Ind., who is so well and favorably known by the sportsmen the country over. Wm. J. Beck was elected as Secretary and Treasurer. The Board of Governors consists of A. B. Reeves, Charles S. Baker, U. R. Fishel, E. Nowatny, W. C. Bruce, Ed. B. Peel, and A. T. Quick.

Columbus, the point selected for the trials this fall, is situated in Bartholomew county, is on the main line of railroad from Indianapolis to Louisville, the Cambridge City and Madison branch of the same line is connected with Cincinnati by an arm of the Big Four. It is a city of 10,000 inhabitants, with splendid accommodations in the way of hotels, &c. The secretary, Mr. W. J. Beck, of Columbus, solicits communications from parties who anticipate making entries for the coming season. He is confident that his club can offer such inducements that an unusual number of entries for the trials will be made. W. J. BECK.

COLUMBUS, Ind., Jan. 23, 1892.

AMERICAN SPANIEL CLUB SPECIALS.

Editor Forest and Stream:

The following specials for best exhibits have been given by members of the club and others:

American Spaniel Club's silver cups, value $100, for field spaniel and American bred cocker spaniel; American Field silver cup ($100), sporting spaniel, any breed; Geo. H. Whitehead trophy ($25), cocker stud dog with two of get; each of above to be won four times. W. K. C., $15 each for kennels of four field spaniels and four cockers; J. L. Little, $10, $5 and $5 for kennel of five or more Clumbers, Clumber dog under two years, Clumber bitch; R. H. Eggleston, $10, black field spaniel dog in open class; J. P. Willey, $10, field spaniel other than black; Luckwell and Douglas, $10, cocker spaniel other than black; Murray Hill Hotel, $20, brace of field spaniels; C. H. Mason, 3l artotypes, cocker spaniel bitch; Book, spaniel puppy; New York *Herald* bronze medals, field spaniel and cocker spaniel each; F. H. F. Mercer, "American Book of the Dog," pair Clumbers; "The Spaniel and its Training," liver spaniel, black spaniel puppy and Irish water spaniel; R. P. Keasbey, silver flask, red cocker dog; American Cocker Kennels' cigar cabinet, cocker bitch with two of her progeny; Dr. F. W. Kitchell, oil painting, champion Newcastle and Clumber puppy; E. M. Oldham, collar, field bitch; A. C. Wilmerding, Hawkeye camera. American bred spaniel over 28lbs. With the exception of the W. K. C. specials and the New York *Herald's* these specials are open to members only.

BALTIMORE SHOW.—*Editor Forest and Stream:* The Chesapeake Bay Dog Club will hold its first annual show at Baltimore, Md., March 1 to 4, 1892. For all breeds of dogs the classification is liberal. Premium lists will be ready in a few days and can be had upon application to the undersigned.—F. E. LAMB (P. O. Box 602, Baltimore, Md.).

DOG CHAT.

LOVERS of that quaint little sporting dog, the dachshund, will be pleased to see that some one is waking up to its merits. We have received the following letter: "In the interest of the breed of dachshunde in this country, I should like to make the following offer: $50 toward a cup to be competed for annually at either New York or Boston show, the cup to become the property of the person winning it three times; $5 to be the entrance fee for competition for the cup, and the money to form a sweepstakes for the winner of the cup each time it is competed for. To be competed for at the Boston show this year. The value of the cup to be $200, which amount I hope can be raised through your paper by subscription, and you to have charge of all arrangements for same.—E. A. M." As there are several fanciers of this breed in the West, Long Island and in this city, this generous start for the fund should meet with ready response.

Our reports of the Binghamton and Elmira shows are necessarily rather obscure. There were no catalogues and Mr. Fellows has been too busy judging both shows to do the subjects justice. The Elmira show had the old style benches, but Spratts food and Sanitas disinfectant were used and everything was neat and clean. A kennel club has been organized and will apply for membership in the A. K. C. and will hold a show under the auspices of the Interstate Fair, Aug. 30 to Sept. 2.

The attention of the A. K. C. is drawn to the entry of Antonio in the W. K. C. catalogue of 1891, as spoken of by Mr. Waters in his letter this week. It behooves the kennel authorities to pay strict attention to the ownership of certain dogs. While it is well nigh impossible in some cases to prove that a certain dog is not owned by a certain person, still if this "prying eye" was kept on the catalogues it would be a deterrent influence. For that there have been several cases of "making up the team" is pretty well established in gossip round the show benches. According to Mr. N. T. Harris, he purchased Antonio a month before the W. K. C. show, but it was entered in Mr. Avent's name. In the field trials this year he was entered as in the joint ownership of Messrs. Avent and Harris. It is very misleading, especially in view of the fact that Antonio is now at stud in Mr. D. E. Rose's kennel, and many questions were asked as to whether Mr. Rose had bought the dog or who owned him. Such things need straightening out.

"Manhattan," in another column, sounds a good note on field trials and field work. There is a good deal of feeling on the question in the minds of men who, while they would like to run a dog in the field trials, are unwilling that their dog, which they naturally suppose to be possessed of more than ordinary field qualities, should be trained in a manner and for work so entirely different to the conditions that obtain in an ordinary day's shooting, for which they some time or other would like to take their dog out for their own amusement. This is a subject that should be discussed in all its bearings, so that in future, field trials may not be looked upon as racing tracks, and the dogs that run at these trials shall not require rebreaking before they can be used with any degree of pleasure at home. If we are to have field trials for the South and field trials for the North, East and West, all right. Then each trials can be run in the style which best suits the country and the conditions of shooting, and the dog trained accordingly.

From what Mr. S. L. Boggs says, the Duquesne Kennel Club intends doing things in fine style for their show in March next. The premium list, we are told, will be worth upward of $5,000, and added to this the courtesy and kind attention to the wants of the "boys" that the club men give, it is sure to be a favorite show, and the best will be there. Mr. Boggs will attend the Southern field trials along with his new Francotte gun, which he terms a "whistler."

At a meeting of the club it was decided to make the entry for larger and more important dogs $4, and the smaller ones $3. As the club has added $1,800 to the premium list some such action was thought necessary. The following officers were elected: President, S. L. Boggs; Vice-President, J. O'H. Denny; Secretary, W. E. Littell; Treasurer, J. H. Lyle: Directors, Messrs. John M. Chaplin, J. Moorhead, Jr., J. O'H. and Frank Denny, S. L. Boggs and Dr. J. S. Phillips.

It is proposed as a treat for visiting exhibitors that Mr. Hacke's Barzoi Kennel will course some of their best dogs on four or more wolves. The trials will take place under the auspices of the club at Greensburgh, Pa., or some nearby town on the Friday or Saturday previous to the show. A trophy will be given for the dog showing the best speed, courage, etc. We hear that the wolves have already been ordered from the West, are big fellows and were lately trapped on the plains. So far so good, but do Mr. Hacke or Dr. Grimes think that by such unsportsmanlike methods the Psovoi, Barzoi, or whatever his name is, will be benefited and properly introduced in this country? It seems to be the idea over here that because we fancy certain breeds of dogs we must cater to their supposed idiosyncrasies. As well might we get up trials for life-saving in the snow by St. Bernards and from water by Newfoundlands. Fanciers of Russian wolfhounds in the East cannot hope to indulge their dogs in the natural sport, so what is the use of pandering to a mistaken idea of sport by bringing the game to the dogs. It is on a par with rabbit coursing, rat baiting, etc., the dog has all the fun without any danger to himself, and the pursued has no hope for life or escape. To let a pack of hounds loose on a coyote in an inclosed strange field is barbarous. If we are to have wolf coursing take the dogs out West and hunt them properly on the prairies. A dog will follow in any country, but varmint will not lead where they know not.

We hear that Mr. Fred Kirby has been instrumental, with the aid of Judge Biddle of Philadelphia, in putting a man behind the bars, where he will have four months' time in which to reflect on his misconduct for coming to him with stolen dogs for sale. In self-protection Mr. Kirby has to know where the dogs he buys come from, as on him falls the brunt of the trouble should a dog he buys prove to be a stolen one, and he cannot satisfactorily explain where he got it from.

There will be a show at Baltimore after all. This time it will be under the auspices of the Chesapeake Bay Dog Club, and, as the members of this club comprise some of Baltimore's best known business men, the show is bound to attract a good deal of local attention, and that, we take it, is one of the principal aims of a bench show. In the interests of harmony in the dog world it is to be hoped that the discordant element lately brought to light in the recent unpleasantness in the M. K. C. will all be buried and that both clubs will work in harmony, and not for personal advantages. Coming just after New York show, there is little doubt that a good entry will be forthcoming, for it will be a welcome break in the journey to Washington, which comes the week after.

We have received an excellent photograph of Sir Melvale, the only St. Bernard Mr. Diffenderffer retained when he dispersed his kennel. This youngster is by Scottish Prince out of Hepsey. He is altogether in the rough—runs loose on a farm, and needs a brush. He is now ten months old, weighs 150lbs. and stands 34in. at shoulder. His head seems a good one. In body color he is nearly all white, though head is properly marked.

Mr. Eugene Loeb has lately imported the St. Bernard bitch Her Highness, said to be a good specimen; weight 175lbs. and stands 32½in. high.

Entries for the W. K. C. show are in advance of the same time last year, despite the increased entry fee, which does not seem to have a deterrent effect so far. The club has made a class for bull-terrier puppies. Most of the railroads will carry three dogs free when accompanied by owner or caretaker. Instead of Prof. Parker, who is, we hear, doing good business in England, the club has engaged Prof. Hampton, who is highly recommended by Parker, to do the dog circus part, which takes so well at our shows.

The importation of such noted bulldogs as King Lud and Peckham Lass will be sure to create a good deal of interest among the fanciers of this "beautiful" breed, as a contemporary terms it. They sailed on the s.s. Ludgate Hill, Jan. 10, and should by this time be safe under Mr. Brett's fostering care at Spratts Kennels. We have already noticed the fact of their purchase. King Lud is said to be about the best of his weight in England, and Peckham Lass has also done a fair share of winning. We have heard very little about the home bred dogs, but our breeders should by this time be able to make a respectable showing, but whether they have been able to snap the chain of ill luck that seems to attend the raising of these dogs in both countries will very soon be seen at the W. K. C. show. We hope they have.

The Psovoi Lucca returns to this country on s.s. Spain from her visit to Argos. She is consigned to Stoddard Stables, on Greenwich street. On the s.s. England a black and tan terrier puppy, called Victoria, also shipped by Spratts Co., comes over for Mr. J. G. Mahler, of Pittsburgh, Pa.

In *Fanciers' Gazette* a friendly bout on mastiffs has been going on lately between several well-known breeders. Mr. Court Rice, in the course of a letter, says, "However, as to cowhocks he (Mr. Taunton) and I are very far apart. I do not look upon them as faults at all, but deformity; actual deformity, not caused, like mere faults, by the dictates of fancy, but by a weakness of the frame. Certainly no one would be justified in discarding a dog for any fault; but deformities are a different matter, and as I believe the judge who passes over any deformed animal will do an enormous amount of good to any breed he may be judging, I shall not hesitate in future, should opportunity arise, to practice what I preach."

Mr. D. A. Goodwin, secretary of the N. E. F. T. C., has sold his English setter Snipe, that did so well in their late trials. The purchaser's name we are not told.

The English kennel papers just received devote black-bordered space to expressions of sympathy and condolence over the death of the Duke of Clarence and Avondale.

Vesuvian, the noted fox-terrier, by Splinter out of Kohinoor, has been sold by Mr. Astley to a Mr. Beacall, of Shrewsbury, England. Mr. Astley himself has just purchased Verdad from Major Vicary for $500. This dog is brother to Vesuvienne, Venio, etc.

Cruft's great dog show bids fair to surpass any that he has yet given. There are 495 classes in all and as classes are being added from day to day there will doubtless be more than 500 when the entries close. There are also over 200 specials. The show will be held in Agricultural Hall, London, Feb. 10 to 12, and is sure to be one of the most important fixtures of the year.

We hear that the deal by which Argos the Psovoi, alias Barzoi, alias Russian wolfhound, was to become the property of Messrs. Wade and Huntington is off. Something the matter with his tail has put the deal out of joint for a time.

An opportunity presents itself for breeders to secure some well-broken field stock in the disposal by auction of Sir Humphrey de Trafford's kennel at the Manchester, England, dog show, March 16. English, Irish and Gordon setters, pointers, curly and smooth retrievers and smooth and wire fox-terriers are the breeds that will find new owners, and many of the dogs have won high honors on the bench.

The regular monthly meeting of the American Pet Dog Club will be held at 329 Lexington avenue, New York, on Wednesday, Feb. 10, 1892, at 2 o'clock, P. M. Marion E. Bannister, Secretary. The club is rather exercised over this breed being relegated to Mr. Raper's tender mercies at New York, but we fancy that the latter gentleman will be able to give quite as much satisfaction, if not more, than the judges who have hitherto taken these classes, and it would be showing a discourtesy, that we do not expect from our American women, not to give the visitor as good an entry as the club can bring together.

The fox terrier world is on the *qui vive*, and rumors are flying fast, and a great air of secrecy, and a winking of the "alter ego" is apparent. Mr. Thayer seems, however, to hold the situation pretty securely. We are able to give the name of Mr. John E. Thayer's newest importation—Starden's King—purchased from Major How, of Gloucestersbire, England. This dog is by Stipendiary and dam by New Forest; therefore his breeding places him in the foremost rank as a stud dog. He is a young dog and a great terrier. We and all genuine dog men will congratulate Mr. Thayer on his successful efforts to "get there," and we trust he will have the success such a genuine fancier deserves.

The premium list of the Jackson, Mich., dog show is before us. Challenge classes are provided in nearly every breed with a silver medal as the prize. In open classes the prizes are $5 and $3, all the important breeds being divided by sex. Puppies are also provided for with bronze medals. There are 115 classes in all and Mr. John Davidson will judge them all. C. H. Ruhl will give free board during the show to the handler having the largest team; and the Club offers a $10 silver cup to be contested for by kennels of mastiffs, St. Bernards, Irish and English setters, greyhounds and cockers. The entries close Feb. 4, and we draw the attention of the management to the new rule of the A. K. C., that no puppies under 6 months old shall be exhibited. The general entry fee is $2. Entries must be sent to Mr. C. H. Ruhl, Jackson, Mich. The club draws particular attention to their additional Rule XV. As a stopping place on the way to the New York show no doubt this show will be extensively patronized, by the "regulars" at any rate.

Among the new kennel advertisements this week we notice that J. Fitzpatrick has beagles for sale; James J. Lyne, mastiffs; Henry N. Howard, a well trained pointer dog; W. H Pierce, cocker spaniel bitch; Thos. I. Ballantine, well-bred pugs; Rolf Peters, pointer bitch and several pups; Silver Spray Kennels, greyhound pups; L. Gardner, blue blood English setters; P. H. Coombs, Yorkshire terrier pups; Dr. G. Nicolai, a kennel of noted Great Danes; H. C. Graff, well bred pointer bitch; M. T. Mason, pointer pups; W. P. Fraser, Scotch terrier pups. Wants: Connecticut Valley Kennels, dogs for training; R., four broken setters. We also draw attention to the notice of the New York Poultry and Pigeon show.

The dog show at Los Angeles, Cal., April 20 to 23, will give no money prizes, and the club will rely on the specials for patronage.

The St. Bernard Mount Morgan, brother to Lord Bute, has been purchased by Mr. Lynde, of Yonkers, N. Y. He is something of the stamp of old Ben Lomond, no shadings.

Col. Ruppert's Lady Gladwin is expected by the S. S. Hindoo, of the Wilson Line, next Saturday. She left in good condition.

There are so many men now-a-days who, when business cares allow, betake themselves to the open fields and as a means of recreation devote hours to the training of their field dogs for private use, that a handy book on training should be welcomed by amateur or professional. The most accomplished trainer can always learn something, and in Mr. Waters's book, "Modern Training," the subject is so exhaustively treated, and so much valuable information is given, that no dogman's library is complete without it.

PACIFIC COAST FIELD TRIALS.

THE annual field trials of the Pacific Coast Field Trial Club commenced Jan. 18 under the most favorable auspices. Sportsmen were present in greater numbers than at any previous meeting. The country is well adapted for field work and the spectators can see most of the running. The judges were R. T. Vandevoort, D. M. Pyle and H. T. Payne. The meeting opened with the Derby with eight entries. S. W. Keshoff's Sam K., P. D Linville's Flake L., C. Studarn's Rush Croxteth and T. J. Wasson's Alice Gladstone were the winners in the first series. In the second series Sam K. beat Flake L; Rush Croxteth beat Alice Gladstone. Final, Sam K. beat Rush Croxteth and won first prize, Flake L. afterwards won second money and third divided between Rush Croxteth and W. J. Dolcher's Del Monte, the latter drawn from the first series. The Members' Stake was next run off with six entries. In first series Wallace's Solano B. beat Liddle's Fanny, Kilgariff's Sirius beat Post and Harper's Pelham, Mattie a bye. In second series Queen's Last beat Solano B. and finally Bassford. Queen's Last was declared the winner of the stake. The annual meeting of the club was held Jan. 19 and the election of officers resulted as follows: President, J. G. Edwards; First Vice-President, Fred Webster; Second Vice-President, W. E. Houghton; Secretary and Treasurer, J. Kilgariff. Executive Committee, Wm. Scriber, P. D. Linville, J. M. Bassford, Jr, D. M. Pyle, J. W. Harper, Jr. Our report will appear next week.

POULTRY AND PIGEON SHOW.

THE third annual exhibition of the New York Poultry and Pigeon Association will be held in Madison Square Garden on Feb. 3, 4, 5, 6, 8 and 9. This show promises to be the largest and most comprehensive ever held in the Garden. Entries have been received for four thousand birds in the eight hundred and odd classes, and among these are many rare and interesting specimens. For fanciers as well as the general public the show bids fair to be one that will long be remembered.

An interesting exhibit will be cage birds, domestic, foreign, ornamental and singing birds. The exhibit of incubators, breeders and breeding goods will be unusually large this year. In the former ducks and chickens will be "brought to light by artificial means" every few minutes in a way that will instil envy in every feathered breast. The classes most fully represented are the Brahmas, Cochins, Langshans, Plymouth Rocks, Wyandottes, Andalusians, Leghorns, Minorcas, Polish, Hamburgs, standard and Indian games. All the principal varieties of ducks, bantams, turkeys and geese and 305 varieties of pigeons will be shown.

JACKSON DOG SHOW.—*Editor Forest and Stream:* The premium list for the second annual bench show of the Central City Kennel Club is now ready for mailing. The show will be held under A. K. C. rules, and coming as it does the week following the Chicago and the week before the New York show, will make it convenient for intending exhibitors, as Jackson is on the main line of the Michigan Central R. R, the direct line from Chicago to New York, and the management here have secured good warm quarters for the purpose, so that all dogs entered here can come direct from Chicago as soon as the show there is over, and be taken good care of (free of charge) until our show opens. Our superintendent of last year, Mr. C. W. Davis, will have charge, which is a guarantee that the show will be conducted in the best possible manner; our exhibitors of last year will freely attest to this. Every possible arrangement has been made for the comfort of our canine friends. For premium lists and any other information address C. H. RUHL, Secretary.

THE ENGLISH SETTER CLUB SPECIAL.—New York, —*Editor Forest and Stream:* The medals offered this year as specials by the English Setter Club are to be competed for only by members of the club. I make this announcement because the fact is not made clear in the premium lists of some of the bench show clubs already published, the wording of which might be misleading. The expression "regardless of ownership," applies to the produce of stud dog or brood bitch, but not to the stud dog or brood bitch to whom the prize goes, whose owner—the real competitor—must be a member of the club; and in the same way, "the breeder of the best three English setters" must be a member of the club, "regardless of ownership" of the three dogs shown.—WILSON FISKE, Secretary.

DR. PERRY DECLINES RE ELECTION.—*To the Associate Members:* While issuing the call for the annual meeting the opportunity is favorable for me to inform you that even were you to re-elect me to the presidency I should decline to serve. Twice you have conferred upon me this high honor, and it should now fall upon some other associate. I have deemed this timely notification proper considering our necessarily peculiar method of electing officers. Thanking you for your generous support, and wishing you unvarying success, I am, yours sincerely, J. FRANK PERRY.

LORD BUTE'S SERVICES.—Phœnixville, Pa., Jan. 22. —*Editor Forest and Stream:* The W. K. C. saw fit to reject my offer of Lord Bute's stud service to be competed for as a special prize by American-bred bitches. As the offer was widely published, I propose to offer a free service to the American-bred bitch winning first prize, and Lord Thorndale's to bitch winning second prize. I make this announcement in answer to many letters I am receiving upon the subject.—KNOWLES CROSKEY.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Lilly of Kent. By H. E. Graff, Kensington, O., for white and liver ticked pointer bitch, whelped March 7, 1891, by King of Kent out of Telie Doe.

Hillside Rex. By R. C. Macy, Hudson, N. Y., for white, black and tan fox-terrier dog, whelped June 20, 1891, by Hillside Tarquin (Mixture—Lyra) out of Nellie (Raby Tyrant—Diamond Vic).

Nanette. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pug bitch, whelped Oct. 1, 1891, by Spokane out of Topsy K.

BRED.

☞ **Prepared Blanks sent free on application.**

Collie—Maney Trefoil. Fred Halverhout's collie bitch Collie to Carlowrie Collie Kennels' Maney Trefoil, Oct. 31.

Psyche—Maney Trefoil. Carlowrie Collie Kennels' (Denver, Col.) collie bitch Psyche to their Maney Trefoil, Nov. 6.

Spoiled Miss—Maney Trefoil. Carlowrie Collie Kennels' (Denver, Col.) collie bitch Spoiled Miss to their Maney Trefoil, Dec. 27.

Rosette—Prince Regent. Anglo-American Terrier Kennels' (Salem, Mass.) black and tan terrier bitch Rosette (General—Minnie) to their Prince Regent (Sir Henry—Lunk's Rose), Jan. 9.

Victoria Nanna—Domingo. Victoria Kennels' (Plainfield, N. J.) English setter bitch Victoria Nanna (Buckellew—Minnetonka) to Rosecroft Kennels' Domingo (Rockingham—Donna), Jan. 2.

Grange Nellie—Sir Walter Scott II. John Hawkes's (Cincinnati, O.) collie bitch Grange Nellie to his Sir Walter Scott II., Jan. 20.

Bonnie—Bradford Ruby III. J. E. McDonald's (Ligonier, Ind.) pug bitch Bonnie to Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.), Jan. 12.

Columbia Venus—Jim Blaine. G. W. Patterson's (Worcester, Mass.) St. Bernard bitch Columbia Venus (champion Keeper—Bayadere) to E. B. Sears's Jim Blaine (Bryan—Martha Washington), Nov. 12.

Gretchen—Blue Rock. W. D. Pugh's (Grand Rapids, Mich.) Irish setter bitch Gretchen (Elcho, Jr.—Fanchette) to Dr. Wm. Jarvis's Blue Rock, Jan. 15.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Smoky. Carlowrie Collie Kennels' (Denver, Col.) collie bitch Smoky, Dec. 27, eight (three dogs), by their Maney Trefoil.

Mermaid. Carlowrie Collie Kennels' (Denver, Col.) collie bitch Mermaid, Oct. 3, six (three dogs), by Senator E. O. Walcott's Roslyn.

Columbia Venus. G. W. Patterson's (Worcester, Mass.) St. Bernard bitch Columbia Venus (champion Keeper—Bayadere), Jan. 13, four (two dogs), by E. B. Sears's Jim Blaine (Bryan—Martha Washington).

SALES.

☞ **Prepared Blanks sent free on application.**

Fred Douglas Collie dog, by Roslyn out of Ollie O'Shanter, by Carlowrie Collie Kennels, Denver, Col., to F. Zimmerer, Oconto, Neb.

Roslyn. Collie dog, by champion Dublin Scot out of Madge, by Carlowrie Collie Kennels, Denver, Col., to Senator E. O. Walcott, same place.

Kitty. Collie bitch, by Clydesdale Hero out of Hermia, by Carlowrie Collie Kennels, Denver, Col., to Senator E. O. Walcott, same place.

Miss Gilderoy. Collie bitch, by Gilderoy out of Psyche, by Carlowrie Collie Kennels Denver, Col., to F. Zimmerer, Oconto, Neb.

Alexander—Bessie whelp. Orange and white St. Bernard dog, whelped Sept. 13, 1891, by G. W. Patterson, Worcester, Mass., to Miss Anna H. Whitney, Lancaster, Mass.

Lady Limond. Orange, white markings, rough St. Bernard bitch, May 29, 1891, by Plinlimmon, Jr., out of Lady Teazel, by G. W. Patterson, Worcester, Mass., to Thos. B. C. Jones, Detroit, Mich.

Nanette. Silver fawn pug bitch, whelped Oct. 1, 1891, by Spokane out of Topsy K., by Eberhart Pug Kennels, Cincinnati, O., to Dr. H. H. McLellan, St. Mary's, Kan.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.

M. R. R., Rochester, N. Y.—We cannot find any record of the extended pedigree of your Great Danes.

W. D. B.—1. We cannot give you the breeding of the greyhound you mention. She is not registered. 2. She is not in the first or second class. 3. Not registered.

J. D., Toronto, Can.—Would you be kind enough to tell me the name of the sire of Garry Owen, Jr., Irish setter? Ans. We do not know of a dog Garry Owen, Jr. Garry Owen II. is by imp. Sarsfield out of Neil.

L. G., Mount Vernon, N. Y.—Please give extended pedigree of Molton Baron, E. K. C. S. B. 2018. Ans. By Bang II. out of R. S. Bryan's Beta, by Crosse's Rap out of Princess, by Richard's Bang out of Juno. Bang II. by Bang out of Bell, by Lance out of Fan.

G. C., Citra, Fla.—I should like to know the best feed for pointer dogs in hunting season—south? Also how much he should have? Dog weighs 65lbs. How are Spratts or Austin dog biscuits? Ans. You will find any of the dog biscuits advertised a very handy food for dogs in the field. If the dog will not eat them dry, soak them in either broth or warm water. About three biscuits a day should be enough.

P. O., New Haven, Conn.—Will you please let me know the weight of the heaviest St. Bernard dog or bitch there has been in this country for the last few years, also the record, if known, of the heaviest dog of any breed in this country? Ans. We do not know which is the heaviest St. Bernard, Sir Bedivere or Princess Florence. The latter has weighed 216lbs. and at present scales 210lbs., and we believe Sir Bedivere weighed at one time about 200lbs. These are the heaviest dogs we know of. Champion Minting was one of the heaviest dogs known in this country.

FRED.—I am told Elcho Jr. is dead; if so, please state when he died and particulars. If noticed already in FOREST AND STREAM, in what issue, as I have failed to find any account of his death, also who owns Sarsfield at present? Ans. Champion Elcho Jr. died Nov. 9, 1891, while in the care of Mr. H. L. Goodman, Jr., Auburn, Ill. You will find a record of the death in FOREST AND STREAM, Nov. 12. We believe that Sarsfield is now owned by the Oak Grove Kennel, Moodus, Conn. A letter to Mr. W. L. Washington, Pittsburgh, Pa., his late owner, will elicit the information you desire.

R. A. M., Omaha, Neb.—Kindly give me the pedigrees of the following cockers: Champion Bene, Darkie, Champion Hornell Silk, Champion Brahmin and Tippoo, a dog imported into Canada. I do not wish to trouble you for a full pedigree, just a few generations back. Ans. Ch. Bene, by Bob III. out of Black Bess, by Brush out of Rhea, by Captain out of Rose; Brush by Rolf out of Nellie; Bob III. by Buccleugh out of Nell, by Young Bebb out of Lort's Dunce; Buccleugh by Bruce out of Nell. Darkie, by imp. Beau out of imp. Blackie, by Rolf out of Belle; Rolf by Beaver out of Runic; Beau by Bob out of Nell. Ch. Hornell Silk, by ch. Obo out of Pitcher's Chloe II., by Bullock's Dash out of his Nellie; ch. Obo by Farrow's Fred out of his Betty. Ch. Brahmin, by Bob out of Clew.

J. H., Fort Sherman, Idaho.—What is the matter with my dog, a setter bitch? There appears to be something in her ear, and although I have examined it several times am unable to see anything in it. She is continually shaking her head and inclining it to the left, and the inside of her ear is scratched and bleeding from her efforts to dislodge whatever there is in it; this last week she can scarcely bear even to shake her head. I have been told that it is a wood-tick far down in her ear. If so, what can I get to take it out? She is evidently at times in considerable pain. Ans. There is a form of mange which attacks the ears. The parasites (little white bodies) are to be found in the aural canal. Use the following: Nitrate of mercury ointment, 1dr.; almond oil, 1oz. A few drops to be poured into the ears twice a day. First warm the drops.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

Rifle Range and Gallery.

"FOREST AND STREAM" TOURNAMENT

FOR NEW JERSEY RIFLE CLUBS.

SCORES made during the past week are as follows:

Essex R. C. vs. Palisade R. C., shot on Essex range Jan. 18, distance 25yds.:

R Zoch	25	24	23	23	22	22	21	20	19	18	—217														

Second Class medal was won by J. H. Kruse, 229—eleventh time.

Third Class.

H Seltenreich	25	24	23	22	21	21	21	20	19	19	—215														
A Stadler	24	24	23	23	22	22	20	18	18	18	—212														
H F Meyer	24	23	23	22	21	20	19	18	18	14	—202														
F Kammel	25	24	23	20	20	20	19	19	19	12	—201														
F Dunsteadt	24	24	23	22	22	22	21	21	21	0	—200														

Third Class medal was won by H. Seltenreich, 215.

The next regular meeting and annual election of officers will take place at headquarters on Wednesday evening, Jan. 3. Capt. Dick Dewey will no doubt be re-elected as he has proved to be a most conscientious and painstaking officer. His re-election would gratify a majority of the members, as they know Capt. Dewey to be a hustler from "way back." Other positions to be filled are treasurer, first, second and third lieutenants, first and second shooting masters, secretary, trustees and sergeant at arms. Ernest Fischer will no doubt be re-elected treasurer. In looking over the books it was found that the club has a membership of seventy-one. The books will close when it reaches a hundred. Then the "rag goes up," says Capt. Dewey.

PALISADE RIFLE CLUB, Capt. John Reinhardt, Jersey City Heights, Thursday, Jan. 21, 10 shots off-hand, American 25-ring target, possible 250:

J H Kruse	24	24	24	24	23	23	23	22	22	21	—230														
G W Graf	25	25	24	24	23	23	22	22	22	19	—229														
J C Reinhardt	25	25	24	23	23	23	22	22	22	19	—229														
Chas Buck	25	25	24	23	22	21	21	20	19	19	—219														
H Rosenthal	25	25	23	22	22	21	20	20	20	19	—217														
J Johnson	25	25	24	24	23	22	21	20	18	15	—217														
J Kebrwald	25	24	23	22	21	21	21	20	20	20	—217														
G A Finger	24	24	23	23	22	21	21	21	19	18	—216														
Geo L Graf	25	23	23	22	21	20	19	18	17	16	—201														
H Hartring	25	25	25	25	20	20	20	20	20	0	—200														

The regular monthly meeting followed, after which the customary social session was in order. Speeches were made by Henry Boddy, who told stories of the time of '48, over seventy years back. The eccentric doings of Herman Rosenthal created considerable laughter. If Herman wanted to go on the vaudeville stage as a tall, lanky German comedian he would need no make-up whatever. Geo. W. Graf also presented the club with a handsome name rack.

HUDSON RIFLE CLUB, Marion, Capt. Henry L. Hansen, Monday, Jan. 25. The following scores were made to-night, 10 shots off-hand, 25-ring target, possible 250:

A Malz	25	25	25	25	24	24	24	24	23	23	—242														
H L Hansen	25	25	25	25	24	24	24	24	23	22	—241														
J Rebhan	25	25	25	25	24	23	23	23	23	22	—238														
H Boddy	25	25	25	25	24	24	24	23	22	20	—237														
H Mahlenbrock	25	25	25	24	24	23	23	22	22	21	—234														
W Mussehl	25	25	24	24	23	23	23	23	22	21	—233														
J Smith	25	24	24	24	24	24	23	23	21	21	—233														
C E Bird	25	24	24	23	23	23	23	23	20	20	—228														

This counts up a total of 1,888 out of a possible 2,000, which gives an average of 235¾. Good shooting for eight men.

NOTES.

The following matches take place next week in the FOREST AND STREAM tournament: Monday, Feb. 1, Hudson vs. Puritan, at Hudson's range; Essex Amateur vs. Excelsior, at Essex Amateur's range; Volunteer vs. Palisade, at Volunteer's range. Tuesday, Feb. 2, Greenville vs. Essex Indians, at Greenville's range; Miller vs. Jefsen, at Miller's range. Thursday, Feb. 4, Howard vs. Volunteer, at Howard's range.

"Blencker Co. No. 39, Germania Schuetzen Band," of Hoboken, Capt. A. Molhmking, are arranging for a prize shoot to take place at headquarters, 223 First street.

Treasurer Ernest Fischer, of the Millers, is a hustler, and will no doubt be reelected at the annual election, which takes place at headquarters, 80 Hudson street, Hoboken, on Wednesday evening, Feb. 3. Capt. Dewey and Frank Kammel will no doubt be re-elected also.

The Jefsen Rifle Club is improving its range, as the smoke remains in it for a minute and then comes out with a rush, which seriously inconveniences a shooter.

The Jefsen Rifle Club's five-men team are now doing better work, owing, no doubt, to the addition of younger blood in the person of F. Sessman and Fred Klaepping.

The Palisade Rifle Club, Capt. John Reinhardt, of Jersey City Heights, will soon have class medals for weekly competitions. First, second and third classes will then be formed. The Greenvilles, Excelsiors and Millers have these competitions, and it spurs the shooters on to make the best scores.

The Miller Rifle Club has dispensed with team shooting among the members for the present, as they do enough shooting just now without it.

The tournament under the auspices of the FOREST AND STREAM now in progress has added unusual interest to rifle shooting this winter; in fact it has regenerated many clubs.

August Thurk, of Hoboken, unattached, the proprietor of a fine shooting gallery, is an excellent shot with the shotgun, rifle, pistol and revolver. With the rifle his hobby is trick, fancy and difficult shooting, that is in holding the rifle in every conceivable way, and he scores flags every time. He also takes great delight in teaching the feats to his customers.

Last Sunday morning Capt. L. P. Hanson, of the Excelsior S. C., fired 10C shots, and out of a possible 2,500 points scored 2,372. Ward Channing fired 50 shots, and scored 1,180 out of a possible 1,250. This is considered quite good "holding" for that number of shots.

The Greenville Rifle Club held its weekly shoot for the six class medals, at headquarters, Metropolitan Hall, Jersey City, last Thursday evening. Their scores are steadily improving.

The Freischütz Co. No. 53 G. S. W. N. J., held a successful shoot at their headquarters, Third and Adams streets, Hoboken, last Sunday. L. Schmidt, of the Hansa Rifle Club, and J. F. Sagen, of the same club, procured the first and second medals with scores of 73, 71 and 71, 69 respectively. L. Schmidt secured the first money prize, J. Stace the second, F. Fritag and D. Miller tied for third and fourth. In the bowling for medals and money, J. Waugersheim, of the Hansa Rifle Club secured both the first medal and first money. A reception followed later in the evening. The shooting committee were F. Waugersheim, L. Schmidt, William Mable, Capt. Jos. Schauer and Wm. Bode.

The Wurfflein Rifle and Pistol Club.

PHILADELPHIA, Jan. 13.—Weekly official scores of the Wurfflein Rifle and Pistol Association, at 25yds., off-hand, using Wurfflein rifles, 10 shots, possible 250, ring targets, was completed on Jan. 22, at the association's private rooms, 227 North Eighth street, H. J. Mehard being in the lead for this week's competition:

H J Mehard	25	25	22	25	24	24	25	24	22	—230															
J J Mountjoy	23	23	23	23	24	24	24	23	21	25—235															
Dr Gardiner	24	24	23	23	22	22	23	24	24	25—234															
E Travis	25	24	22	21	23	24	22	22	24	25—232															
W Wurfflein	21	21	25	25	25	24	22	24	21	23—231															
A J Yergey	23	23	22	25	20	24	21	22	25	24—229															
Leslie Woods	21	24	21	25	23	24	20	24	24	21—227															
R L Dubbs	23	25	19	22	23	22	22	20	23	25—224															
E C Goddard	23	20	22	21	25	25	22	23	19	20—220															
J N Benners	25	21	21	23	18	21	17	24	25	20—215															
J C Wurfflein	17	20	20	24	22	21	17	23	23	23—210															

Massachusetts Rifle Association.

BOSTON, Jan. 23.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day with a good attendance of riflemen. The shooting conditions were unfavorable for high scores on account of the changeable wind and bad light.

At the directors' meeting Mr. Nathaniel C. Nash was re-elected president of the Association for the year 1892. Henry S. Harris was elected statistical officer, and J. E. Kelley executive officer.

Following are the best scores made to-day, distance 20yds., standard American target, all being re-entry matches:

All-Comers' Rest Match.

J Francis	111	M R Barter	101	A S Hunt	92																				
T Warren	107	A H Ballard	99	E T Whittier	87																				
M T Day	106	J T Mason	98																						

All-Comers' Off-Hand Match.

C H Eastman	78	M T Day	71	H E Comey	68																				
I B Thomas	75	A Maynard	70	D Martin	66																				
F Daniels	75	O Moore	69	J B Hobbs	63																				

All-Comers' Pistol Match, 50yds.

H Severance	91	S C Sydney	85	O Moore	78																				
A D Stevens	89	D Martin	83	H E Comey	74																				
L H Greene	87	J B Hobbs	81																						

New York State Shooters.

ALBANY, N. Y., Jan. 20.—The following scores were made by the members of the 3rd Brigade Rifle Association, 200yds., off-hand:

C H Gaus	7	7	10	9	10	9	9	7	7	8—83															
	6	10	7	6	9	9	8	7	9	3—74															
	8	8	8	8	9	6	8	9	9	9—82															
W C Gompf	7	9	9	6	8	9	10	8	7	7—80															
	8	8	7	6	5	9	6	7	7	10	6—69														
	8	7	8	6	8	8	8	9	9	8—79															
J B Taylor	8	6	10	9	8	8	6	7	9	8—79															
	8	8	6	7	7	10	7	8	8	10—79															
	8	6	8	10	8	10	9	6	8	8—81															
A Donner	8	8	7	7	7	10	8	5	7	6—73															

The Garden City Team.

CHICAGO, Jan. 19.—The Garden City Rifle Team met for their weekly contest this evening, at McCune's Gallery, 143 South Halsted street. Conditions were, 25yds., 25 shots each, open sights, free off-hand position, Massachusetts paper target, possible 300 points:

C A Hankle	267	H S Burley	261	G L Cutler	251			
Jos Hoser	267	T Ford	258	H A Parker	250			
W J Gibbs	265	R Taylor	251					

In shooting off tie Hankle won by two points.

Greenvilles.

THE following scores were made at the weekly shoot of the Greenville Rifle Club, at Metropolitan Range, 604 Ocean avenue, Jan. 22:

Capt Robidoux	236	J Spahn	225	E Barr	237			
C Boag	232	J Cook	222	J Filoramo	223			
C Schaleln	225	Wm Collins	242	J J Hill	245			
J Kaiser	231	C Purkess	232	J Dodds	217			
H Gotthart	220	C Collyer	232	G Brocker	218			
H Chavant	224							

Empire Rifle Club.

THE following scores were made by the members of the Empire Rifle Club, at their headquarters, 12 St. Mark's Place, on the 19th inst

"MODERN AMERICAN RIFLES."

BY "RALPH GREENWOOD."

"RALPH GREENWOOD" is a *nom de plume* well and favorably known in the literature of the hunting field. It now comes to us on the title page of a book on "Modern American Rifles." The book is an endeavor to gather up to date all that is known, or that the author knows or thinks is worth knowing, about the rifles now in the hands of American marksmen. The first feature of the book which strikes the reader is its wordiness. This is the age of condensed literature of hand-books, of guides and gazetteers crammed with just what the reader wants to know, and put in the most direct and most accessible way. There should have been a strong, long, sharp blue pencil let loose on the copy of that book just before it went to the printer. It would not have appeared as now with over 300 neatly-printed pages, but kernels of good meat could have been picked out without turning over so many pretty shells of rhetoric, so many supercautious ways of putting things, and so many pages of promise with so few paragraphs of real information. Perhaps, too, there would have been time and space left for an index, which the book has not, and which every book, except a novel, ought to have.

The book ought to be read by every rifleman and find a convenient place on the shooting shelf of every sportsman's library. It would emphasize the fact that rifle shooting information can only be secured through test and trial. It is not safe to generalize from one fact to another in this art. Load and shoot and note results is the only way of reaching exact knowledge. The writer has done lots of this, he has been a close observer where others were doing it, and in the book gives some of the conclusions reached, sometimes accompanied by the data on which they are founded, but too often without these instructive memoranda. There is no lack of illustrations in the book, though many of them are already familiar as catalogue pictures by various gun and gun implement makers. In the text matter this same familiar flavor strikes the experienced reader through his discussion of many points already covered most fully by the writer in the periodical press.

In his first chapter the writer considers the question somewhat of the old muzzleloaders against the modern breechloaders, and remarks:

"It has always seemed strange to the author that a nation of riflemen, as America can properly be called, should know so little about the mechanical construction of a rifle. Half a century ago many men who shot rifles were obliged to make them; a very intelligent class of mechanics they were, and they made very fine rifles. With the advent of the breechloaders, which for the past decade have been turned out in such quantities, there seemed for a time to be little thought given to improving the rifle by manufacturers; the principal object of a majority seemed to be to learn how to make the most rapid firing rifle."

On the next page the modern weapon is classed as a very good mechanical output, with a sort of a side slap not altogether unmerited against the manufacturers. The criticism reads:

"It is believed by most riflemen that modern American breechloading rifles of to-day are equal in accuracy to those formerly made by hand, have the advantage of easier and more rapid manipulation, and can be purchased at much lower prices. It is not so difficult a task to manufacture a good rifle as is generally supposed; it is a simple mechanical problem, and does not demand the superior skill which is necessary in some other mechanical productions. For many years the impression prevailed that there were but few artisans competent to produce a rifle; but to-day there are scores of practical riflemen who have made as fine shooting rifles as can be found anywhere, and produced them by employing their leisure hours in this work, which was an entirely new field of labor for them. Some of the most popular calibers to-day are the results of such individual enterprise, and modern American rifles are as much the result of investigations of practical American riflemen as of manufacturers."

The chapter on rifle barrels which follows is partly technical and again is advisory to the shooter on the care of his weapon after its purchase. He finds that

"There is a preference among some makers of muzzleloading rifles for cast steel, but decarbonized steel is generally used by manufacturers of modern breechloading rifles. There is an impression that iron is fit only for the cheap and unreliable rifles, but recently iron barrels have been fitted to first-class rifles in England, and the claim made that they possess superior shooting qualities, but wear out quicker than barrels of steel."

The rifling is described as a simple mechanical operation, with

"The rifling machine so constructed as to permit of rifling with various twists and adjusted to cut grooves of varying depths. The depths of grooves range from .0015 to .006 of an inch; generally .003 and .004 for small bores, and .005 and .006 of an inch for dirty shooting. An old riflemaker of my acquaintance informs me that the cutting is done from muzzle to breech. He also always cuts off from the muzzle, after rifling, from ¼ to ½in. to insure the corners of the grooves being sharp and clean cut right up to the end. This is done for the reason that when the cutter first starts in, it is liable to, and usually does, cut slightly rough and irregular.

"If a rifle is to be used for dirty shooting, or shooting without wiping the inside of the barrel after each shot, it is thought by some desirable to cut the grooves deeper than when the arm is intended to be shot with a bullet patched or jacketed with paper and the inside of the barrel carefully cleaned after each shot. The shallow grooves are also thought best adapted to the character of projectiles used in target rifles.

"The twist of a rifle is known by the number of inches it takes to make one complete turn. A 12in. twist is where the groove goes once around in twelve inches; a 10in. twist, one turn in that number of inches. The above twist might also be alluded to as one to twelve and one to sixteen. Twist in rifles can be computed on a theoretical basis, the density of the projectile affecting the circulation. Mathematicians assert that a projectile of a certain length requires a twist of one turn in a given number of diameters to insure accurate flight. A table by Major Cundill, an English authority, has been published from which the following figures, as applicable to American rifles, have been deduced:

.25cal.		.40cal.		.30cal.*	
Length of bullet.	Twist.	Length of bullet.	Twist.	Length of bullet.	Twist.
.50	21.1	.80	33.7	.60	25.3
.62	15.8	1.00	25.3	.75	19.0
.75	12.7	1.20	20.3	.90	15.2
.87	10.6	1.40	17.0	1.05	12.7
1.00	9.1	1.60	14.6	1.20	10.9
.38cal.		.45cal.		.50cal.	
.76	32.0	.90	37.4	1.00	42.1
.95	24.0	1.12	28.4	1.25	31.6
1.14	19.3	1.35	22.8	1.50	25.4
1.33	16.1	1.57	19.1		
1.52	13.8	1.80	16.4		

*Most American .32cal. rifles are .30cal.

These figures show about the minimum twist required to keep the bullet flying true on its axis; and by testing them they will be found nearly correct. Manufacturers of rifles generally decide on a cartridge or charge, and make the twist that they think is best suited to it. A slow twist will shoot a light bullet accurately, but not one beyond a certain weight; therefore, if a heavier bullet is desired, the twist must generally be quickened, or the bullet will not receive sufficient spin to make it fly accurately, and, in place of spinning on its axis, will tumble and take an erratic flight."

The whole question of twist calls for a large amount of comment by the writer, and he finds that:

"There is an inclination by those who seek range and accuracy to shoot the heaviest bullet the twist will spin; and this is carried to such an extent that bullets will sometimes tip slightly, or, as riflemen say, stagger, and still shoot with great accuracy; but often when this is carried to an extreme, a series of bullets will shoot with surprising accuracy, followed by one which would not spin on its true axis and tumble wildly."

He concludes that a slow twist will spin only bullets of certain weight; a quick twist will spin a light bullet. It is this necessity for a quick twist for heavy bullets which leads to the use of that in military arms.

"The objection to a great excess of twist is the liability of a very light bullet, backed by a heavy powder charge, stripping or being driven across the lands, and not following the grooves; its tendency to drift is also undesirable."

Great importance in the making of a fine barrel is properly ascribed to the leading or clearing of the new grooved and landed barrel from burrs and rough places. He quotes the conclusions of two practical rifle makers. Mr. H. V. Perry says:

"'I always lead or emery after rifling. To emery a barrel of the right shape inside, is a more delicate and finer job than rifling. No gun will shoot finely without being properly treated with emery or properly shaped, and in this particular many men fail in making really fine shooting guns. I can spoil the finest shooting gun in the world in just one-half minute with emery.'"

Mr. L. N. Walker from the Remington works says:

"'My experience teaches me that to secure the best results, the barrel should be leaded or freed to the proper shape before rifling, leaving the only work to be done with the lead (after the barrel has been rifled and properly freed in the grooves by the cutter), to just lay the grain or emery surface lengthwise, thus saving the wear of the corners of the lands, which occurs in leading after rifling, which is often greater than that caused by several thousand shots, thus prolonging the life of the gun, or at least its fine shooting qualities. Two or three strokes with a leading-rod is sufficient to spoil the gun for fine work, if not done exactly right; and right here lies the secret of steady elevation, as a gun which is all right everywhere else will often show scarcely any lateral deviation, but will string its shots up and down in a most exasperating way. I have often seen guns that, at a distance of 100yds., would, in a 10-shot string, cut a slot several inches in length, extending up and down, caused by the first ½in. of rifling at breech being a little dull, causing uneven friction in the passage of bullets through the barrel.' Many rifle barrels are practically worn out by the lead when they leave the shop, and will only shoot well as long as the sharp scoring of the emery lasts; and as soon as they become smooth or glazed they will vary greatly in elevation, caused by the riding of the bullets on the driving corners of the lands; this is easily remedied by a competent workman."

The making of the cartridge chamber in all its variations evokes a wail from the writer, who utters on behalf of American riflemen generally the cry for uniform chambering.

"A faulty chamber may cause shells to burst, permitting gas to escape, endangering the eyes of the shooter, fouling the mechanism, and affecting the accuracy of the bullet. If the chamber is not true, the bullet, if seated in the shell, does not start right, and its accuracy is impaired. Poor chambering also causes shells to swell; and if riflemen are able to use them again without swaging, they must be marked so as to be inserted in the chamber exactly the same as previously. It would be a great boon to riflemen if American manufacturers would arrange for one concern to manufacture chambering tools on a standard system, and at the present time it is not uncommon for riflemen owning two rifles of different manufacture, but shooting the same shell or cartridge, to find that shells that have been once used could not be inserted in the chamber of the other rifle."

The machine-made smaller parts of the rifle are described in the next chapter, and explains why "an American rifle can be manufactured and sold to-day for less than $15, which in every way is equal in shooting powers to those of foreign make costing over $100."

The slot for the ready sliding in of the sight block is condemned where he says:

"Although nearly all the factory-made rifles are made with slots cut for front and rear barrel sights, it is a question whether this is the best way to attach sights to rifles; many think not, and believe the inexpensiveness of the mode of attaching sights is the chief cause of its being so generally adopted. One or two small screws, or one screw, in base of sight, would permit attaching and detaching or interchanging target and hunting sights much more expeditiously than by knocking sights from slots. I am satisfied that many rifles have been ruined from this cause."

No less than five chapters are taken up with talk about rifle sights and illustrations bearing upon them. Front sights and rear open and rear peep sights. Combination sights and target sights with telescopic sights are all included. For front sights he concludes:

"After years of experimenting, I think it can be safely stated that no substance has been found equal to ivory. The tipping of front open sights with ivory, bone or horn, to avoid glitter, or to illuminate it in uncertain light, is no modern invention; but great improvements have been made within a few years, and almost perfect ivory-tipped sights are now supplied at very low prices, and also that from close observation I have formed an opinion that many riflemen are handicapped by a fine open front sight; those with a certain degree of fineness are so sharp as to make them difficult to cut the rifleman. When front sights are very fine they are not likely to be sufficiently strong; they are liable to bend and cannot be seen so readily when taking quick shots, and rapid firing is often necessary, and practiced by those using open-sighted rifles. I think there is a popular impression that the finer the front sight the better shooting can be done. It has been repeatedly shown that this is not so. As you decrease the thickness of the front sight you increase the tremor or motion and multiply the blur. Some of the finest shooting known to the writer, with open front sight, was with one one-eighth of an inch thick. Mr. Geo. C. Thaxter, of Carson City, Nevada, is an advocate of a wide front sight, and has done some wonderfully fine shooting at the target with a sight an eighth of an inch in thickness."

In the chapter on the rear sight the conclusion reached is that "the sliding bar on the rear sight has its objections. Many hunters would not use such a device, for it is liable to be knocked out of place, and the rifle fired with several points of windage the wrong way, which might result, if shot at one or two hundred yards, in the bullet striking wide of the object shot at. The same result would be likely to occur if a sliding-bar rear sight were used on a target rifle. Most intelligent American riflemen have long since expressed their disapproval of a rear wind-gauge with a sliding bar on hunting or military rifles."

Further on in the same chapter the author-shooter says:

"I have formed an opinion, based on my experience, that the front sight is least important of all. A plain open sight of almost any material, if sufficiently strong and firmly attached in the proper place, will answer for target or game shooting. I believe a more correct sight can be taken with a front open sight, shaped so as to bring the apex nearest the eye instead of semi-circular, and prefer a square edge like this, I, to any pin-head or other shaped sights. But this is a point individual preference must govern."

Of course the Lyman sight comes in for much consideration, and a sort of running up of its merits and demerits is indulged in:

"The points argued against these sights were: Danger in striking the eye by the recoil, the clogging of the aperture with frost and snow, inability to see through the aperture in bad light, danger from falling on the sight when in an upright position. The chief points of superiority claimed almost wholly by practical sportsmen were: Increased quickness in sighting, absence of blurring, increased accuracy gained by clear sight and increased distance between front and rear sight, better control of elevations and quickness in elevating sight."

In combination sights the writer describes one made by himself:

"Taking a Beach combination sight, I removed the combined open and pin-head, as well as the loop, and substituted two open heads of same height, one black, the other with an ivory tip. The black tip I use when target shooting, and the ivory tip when game shooting. It gives perfect satisfaction, and I think it is one of the best front sights for such a rifle I ever saw."

The Buffington sight is commented on in free fashion:

"Perhaps no combination military rifle sight is better known in America than the Buffington sight. This sight has been adopted by the United States Government, and is attached to the national arm, the Springfield rifle. It enjoys considerable popularity, because fine target shooting can be done with it. It seems to be the outgrowth of that absurd and useless arm, the special military rifle introduced a few years ago, which was a disguised match rifle. The Buffington sight is a good target sight, but I think a bad one for a military rifle. * * * It certainly has demonstrated that a rear peep sight is greatly superior to an open rear sight for fine shooting, especially at ranges beyond 200yds. The Buffington sights will not stand the ordinary uses military rifles are subjected to. The folding of the sight but one way is absurd in any military sight, as they are easily broken off. The sight quickly works loose. * * * I think all military rifles should be equipped with a plain open front sight, a set of leaf sights on barrel, and rear peep sight attached to tang, the latter so sunk into the tang as not to be easily injured, and out of the way when rapid firing is resorted to. The rear peep sight would then be placed at the proper position on the rifle, and could be used for target shooting, or picket firing and folded down out of the way when drilling, marching, or in rapid firing."

The chapter on target sights for rifles is sufficiently illustrated to make it plain even without the text, but contributes little beyond catalogue material. Telescopic rifle sights, with their adaptability to high accuracy, interest the writer, and he discusses them for fifteen pages, premising that

"The use of telescopic sights is even recommended for military arms to be used for picket work. There is no doubt an increased number of advocates of the telescopic sight each year, and, although most riflemen will admit that the use of such sights will be limited, those who have investigated the different departments of rifle shooting generally recognize the advantages of such sights under certain conditions and their legitimate place in the various departments of rifle shooting. There is a popular impression that the application of a telescope to a rifle immediately overcomes much of the uncertainty in sighting. This is fallacious; for as you magnify your vision you increase your errors in holding, so much so that few can use the telescopic-sighted rifle advantageously in off-hand shooting."

[TO BE CONCLUDED.]

A Notable Regimental Shoot.

DURING the past fornight the 7th Regiment of this city has been engaged in the annual contest for the Kemp trophy. It is a magnificent piece of art work and has come to represent the company championship in rifle shooting. The match is fired over the armory range of 100yds. with targets reduced for the distance to represent the 200 and 500yds. Creedmoor targets.

The conditions give each man five shots at the 200yds. target from the standing position and five shots at the 500yds. target from the prone position, with the regular issue of State arm but carrying reduced charges for the shorter distance. Each company is required to enter a team of twenty-five men and every one did so. Company B was the winner with a score of 1,052 in the possible 1,250, while low place was taken by H with 500 points.

Every military man, or any rifle-shooter for that matter, will appreciate figures. The leading squad average over 42 points per man and the last team within 9 points of an average of 39, while the entire body of 250 shooting men average over centers, or over 40 points per man on the grand aggregate. It is a magnificent showing by a body of men of worldwide fame as civilian soldiers. The scores stood:

Company B.

As a fitting sequel to this story of a fine armory shoot comes the return of the regimental practice during the summer under State orders, at Creedmoor. The regiment takes a justifiable pride in the achievements of its marksmen for the season of 1891, scarcely a member of the organization having failed to win his decoration. Great enthusiasm has been manifested by the several companies, and full advantage taken of the painstaking and intelligent instruction. The gratifying condition of affairs is due in no small measure to the efforts of Capt. William H. Palmer, inspector of rifle practice. Comparison of the work done by the regimental marksmen in 1891 and 1890 is interesting:

	1890.	1891.
Marksmen, including sharpshooters	1,014	1,047
First class	43	28
Second class	5	5
Total practicing	1,062	1,080
Strength at inspection	1,018	1,011
Official figure of merit	68.81	72.90

Corp. Petty's Revolver Score.

ON Jan. 16 W. E. Petty, of the Twenty-first Precinct, dropped into the pistol gallery at 12 St. Mark's place with a party of friends, and tried his hand at his favorite recreation of revolver shooting. After firing a few warming strings, he made in six consecutive shots the fine score of 57 out of a possible 60 points, his score comprising four 10s one 9 and one 8. This is so far as

known the highest score ever made on these ranges under similar conditions, the distance being 20yds., and the target the Standard American with a 2in. black, this being regulation for the distance. He used a Smith & Wesson .32cal. revolver with a 7½in. barrel; weight, 2¾lbs.; trigger pull 3lbs.; charge 7gr. powder and 33gr. of lead.

Below will be found a fac-simile of Mr. Petty's target reduced to one-half size. The score was witnessed by B. Zettler, C. A. Robinson and A. G. Heintz.

Trap Shooting.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Jan. 26-28.—Hamilton Gun Club, grand live pigeon and artificial bird tournament; $1,100 guaranteed. A. Smyth, Sec'y-Treas., Hamilton, Ontario, Canada.

Jan. 28.—Atlantic Rod and Gun Club, team of two match, 50 birds per man for $100 a team, West End, Coney Island.

Jan. 28.—Atlantic Rod and Gun Club, semi-monthly shoot, at West End, Coney Island.

Jan. 28.—Fred. Lumbreyer vs. Frank Class, first of a series of 100-bird matches, at Marion, N. J.

Jan. 28.—Jersey City Heights Gun Club grounds, open sweepstake shooting at live pigeons, beginning at 10 A. M., Marion, N. J.

Jan. 29-30.—Boiling Springs Gun Club, two days' tournament at artificials, Rutherford, N. J.

Jan. 30.—Brunswick Gun Club, monthly shoot, New Brunswick, N. J.

Jan. 30.—South Side Gun Club, weekly shoot at artificials, Newark, N. J.

Jan. 30.—Amateur Gun Club, monthly shoot at artificials, Newark, N. J. Match at 50 bluerocks each, B. A. Rist vs. W. Gebring, for a supper.

Jan. 30.—Sewaren Land and Water Club, team and individual contests at artificials, at Sewaren, N. J.

Jan. 30.—John Erb's ground, match at 25 live birds, $20 entry, open to all, begin at 1 P. M., Newark, N. J.

Feb. 3.—Central Gun Club, monthly prize shoot and open sweeps, at live birds, Branchport, N. J.

Feb. 3.—Fountain Gun Club, monthly club and open shoot, at live birds, Woodlawn Park, L. I.

Feb. 6.—East Side—Mutual Gun Club, open sweep at 20 live birds, $15 entry, birds extra, 1 P. M., at Wiedenmayer's Park, Hamburg place, Newark, N. J.

Feb. 9-11.—Reading Shooting Association's tournament, Reading, Pa. Walter D. Aller, Sec'y, Tenth and Muhlenberg streets, Reading, Pa.

Feb. 10.—Parkway Gun Club, monthly club shoot, at Dexter Park, Long Island.

Feb. 10.—Atlantic Rod and Gun Club, monthly club shoot, at Engeman's Park, Coney Island.

Feb. 10-12.—Forester Gun Club's tournament, Davenport, Ia.

Feb. 16-17.—Big Four Gun Club tournament, Burlington, Iowa. A. Runge, Sec'y.

Feb 18.—Newark Gun Club, monthly prize and open shoot, at live birds, John Erb's, Bloomfield avenue, Newark, N. J.

Feb. 22.—Cox and Malcolm vs. O Von Lengerke and Antoine, 50 live birds per team, at Watson's Park, Burnside, Ill.

Feb. 23-25.—Oskaloosa Gun Club tournament, at Oskaloosa, Ia.

Feb. 24.—Glenmore Rod and Gun Club, monthly club shoot, at Dexter Park, Long Island.

Feb. 25.—Essex Gun Club, monthly prize shoot, at live birds, for members only, Jersey City Heights Gun Club grounds, Marion, N. J.

Feb. 25.—C. W. Budd vs. Thos. A. Marshall, 100 live birds each, for a $1 000 purse, at Oskaloosa, Iowa.

Feb. 25-28.—Louisiana Gun Club's tournament, New Orleans, La.

Feb. —.—Sorocco Gun Club's tournament, Sorocco, N. M.

April 19-21.—Elk Park Shooting Tournament, two days at artificials, third day at live birds, Royersford, Pa. Address H. E. Buckwalter, Royersford, Pa., or Harry Thurman, Germantown, Pa.

April —.—Ridgewood Gun Club tournament, at Ridgewood, N. J.

May 2-7.—Fifteenth annual tournament of the Missouri State Fish and Game Protective Association, Kansas City, Mo. W. V. Reiger, Sec'y.

May 10 12.—The Ohio trap-shooters' annual tournament, Columbus, O.

May —.—Capital City Gun Club's tournament, Washington, D.C.

May 17-20.—Annual tournament of Kansas City State Sportsmen's Association, at Council Grove. G. W. Cleck, Sec'y.

June 13-18.—New York State Association's Thirty-fourth Annual Convention, at Syracuse, N. Y. Chas. H. Mowry, Sec'y.

Aug. 9-12.—Pennsylvania State Sportsmen's Association's annual tournament, Reading, Pa. Walter D. Eller, Sec'y.

Manufacturers' and Dealers' Association tournaments:
Baltimore, Md. Second week in March.
Staunton, Va.—Second week in April.
Savannah, Ga.—First week in May.
Pittsburgh, Pa.—Second week in May.
Brooklyn, N. Y.—Second week in June.
Watertown, N. Y.—Fourth week in June.

DRIVERS AND TWISTERS.

THE shooter who fails to visit John Erb's Old Stone House grounds on Bloomfield avenue, Newark, N. J., on Saturday, Jan. 30, to take part in the big sweep at live birds, will miss the chance of his life. Mr. Erb says he will have plenty of good birds on hand, and that everybody will be made comfortable. The conditions of the shoot will be 25 live birds per man, modified Hurlingham rules to govern, $20 entry, including the birds. If there are twelve to fifteen entries there will be four moneys; under twelve entries, three moneys; over fifteen entries, five moneys. The shoot will begin promptly at 1 o'clock. Thus far about a dozen local shooters have expressed their determination to enter, and as many out of town experts are also expected to take part.

* * *

The crockery smashers will have a good opportunity to try their nerve during the tournament of the Boiling Springs Gun Club, which will be held at Rutherford to-morrow and Saturday. The programme is a very attractive one, and the recent improvements to the grounds will make the occasion an enjoyable one. The members of the club assure a pleasant welcome to all who visit them. Carefully prepared meals and as carefully prepared ammunition may be procured at the grounds.

* * *

W. Fred Quimby, M. F. Lindsley and Harvey McMurchy are up in Canada cracking away at the live birds and artificial targets during the three days' tournament of the Hamilton Gun Club, and it is safe to say that they will have a royal time, win or lose.

* * *

Saturday will be a big day at New Brunswick, N. J., when the Brunswick Gun Club will hold its regular monthly club shoot at artificial targets and sparrows. The members of the club are enthusiastic shooters, and turn out strong at these periodical affairs.

* * *

I see that my old friend Oswald von Lengerke, formerly of Newark, and Charles Antoine, an old Hoboken man, who now comprise the firm of Von Lengerke & Antoine, of Chicago, are on the warpath, and that on Feb. 22, the aniversary of the birth of the great George, they will shoot a live-bird match against a team comprising Messrs. Cox and Malcolm, of Chicago. The conditions are 25 live birds per man, the affair to take place at Watson's Park, Burnside, Ill. The losing team will pay for the birds and a supper. If Oswald shoots in his old-time form he will do his share toward saving expenses, and Mr. Antoine can also be depended upon to do a fair portion of the "grassing."

* * *

The live-bird match for a $1,000 purse between Charles W. Budd and Thomas A. Marshall, to take place at Oskaloosa, Ia., on Feb. 25, is exciting a great deal of interest in the East, Charley Budd being, as he has always been, a prime favorite wherever he is known. While Mr. Marshall is noted as a nervy and skillful man at trap work, Mr. Budd is looked upon as a winner.

* * *

The East Side-Mutual Gun Club is out with an announcement of a big open-to-all sweep, to take place at Wiedenmayer's Park, Newark, N. J., on Saturday, Feb. 6. The conditions are 20 live birds per man, $15 entry (birds extra), Hurlingham rules to govern, the shoot to begin promptly at 1 o'clock P. M.

* * *

New York and New Jersey will vie with their sister States in sending representatives to the tournament of the Reading Gun Gun Club, to be held in Reading, Pa., on Feb. 9 to 11, inclusive. The Reading people are great entertainers, and visitors are always given a warm welcome to their city.

* * *

Branchport, N. J., will be the scene of some lively sport next Wednesday, when the Central Gun Club holds its regular monthly club shoot at live birds. The club is very strong numerically, and almost a full attendance of members is seen at these gatherings.

*

Some of the junior shooters of the Unknown Gun Club took a sleighride to the Old Mill Meadows, on Long Island, last Friday, taking fifty pigeons and a set of ground traps along. Arriving at their destination, the traps were set, and each one of the five men shot at ten birds, under strict Long Island rules, a purse of $25 going to the man who could kill the highest number of birds. The purse was captured by H. Knebel, Jr., who downed 9 out of his 10 birds, P. Ward scored 8, W. Simmering 6, T. Mark 7, G. Harned 6. The party had a very pleasant ride as well as a pleasant shoot, and will repeat the trip at the first opportunity.

* * *

The members of the Falcon Gun Club did not show up as strongly as usual for their monthly prize shoot at Dexter Park on Jan. 21, only four members putting in an appearance. Several of the regular attendants were detained by business engagements, while others were out of the city, and still others were wrestling with the ferrors of la grippe. The regular shoot took place, however, the conditions being 10 live birds per man, under the old style rules, gun below the elbow until bird is on the wing, second barrel kills to score one-half a bird. The prize is a handsome gold medal, which becomes the property of the member winning it the most times during the season. The birds were of good quality. The medal winner was J. Moller, who killed his 10 birds without calling upon his second barrel. G. Moller scored 8, J. Vagts 7½, and J. Lager 7½. The men shot from the 25yds. mark. J. Moller and J. Lager then shot at 5 birds each against H. Miller and J. Vagts, the scores being: Moller 4½, Lager 2, total 6½; Miller 1½, Vagts 2, total 3½. The same teams then shot at 10 bluerock targets each, Moller broke 5 and Lager 3, a total of 8; while Miller broke 6 and Vagts 9, a total of 15. On another trial the scores were: Moller 1, Lager 4, a total of 5, against Miller's 8 and Vagt's 9, a total of 17.

* * *

Next Tuesday afternoon the Active Gun Club will hold their monthly live bird shoot on their grounds adjoining the Newark Shooting Park, when each member will try his skill on ten live birds in the regular club shoot. This club has established a rule in effect that no money matches or sweepstakes will be allowed on their grounds. The shooting is purely for love of the sport, or occasionally for a bottle of wine, box of cigars or perhaps a supper. Non-members are allowed to take part in the shooting only when introduced by a member.

* * *

The West Side Gun Club, of Newark, is getting in shape for its season's work and proposes to hold a big open to all shoot at live birds on Washington's Birthday. Last Thursday evening the annual meeting was held, three new members being elected and two propositions placed upon the bulletin. The election of officers for the ensuing year resulted as follows: President, L. C. Meesel; Vice-President, L. Schelling; Secretary, W. Buob; Treasurer, J. Gerst; Captain, W. Draster. The regular club shoot at ten live birds per man for the club medal will be held early in February.

* * *

Trap-shooters all over the country are praying (yes, trap shooters do occasionally pray) for decent weather in order that they may enjoy a comfortable day's sport once in a while. The weather during the last two weeks has been miserable for outdoor sports of any kind, and has made a tremendous decrease in the attendance of club and open shoots. Then again it is almost impossible to get hold of a lot of birds that will turn out to be fliers while the weather is as damp and murky as recently. A few weeks of cold, clear weather would not only bring out the shooters but would serve to show their mettle to better advantage from the fact that the birds would act as though they meant business.

* * *

In 1888 the American Field offered as a prize for artificial targets a handsome trophy to be competed for by teams of ten men from any regularly organized club in the United States and known as the American Field Telegraph Diamond Trophy. The prize was won by the South Side Gun Club, of Newark, N. J., and was put up by that club as a challenge badge among the members. The time having expired through which these matches was to run, J. R. Beam was declared the winner and the badge now becomes his personal property. Mr. Beam did some hard work to retain his hold on the badge, having successfully defended it five times.

* * *

A team match is on the tapis between the North End Gun Club of Philadelphia and the Germantown Gun Club.

* * *

The Forester Gun Club, of Davenport, Ia., will hold its annual winter tournament on Feb. 9, 10, 11 and 12. Both live birds and inanimate targets will be used, and the members are sparing no efforts in making this shoot one of the best. Bluerock traps and targets will be used, with Paul North's electric pull. During this shoot Messrs. C. W. Budd, R. O. Heikes, T. A. Marshall and Harvey McMurchy will decide several matches between them that were arranged last November in Kansas City, Mo.

* * *

So the great and only "Doctor" Carver is at it again and has been shooting pigeon matches with his old-time grace and skill. The latter part of November he killed 90 birds against a score of 91 by Lewis Clark, Jack Brewer's old Australian opponent, the contest taking place in Melbourne, Aus. On Dec. 1 Carver turned the tables and killed 95 to Clark's 90.

* * *

Some lively fun will be seen at Red Bank on Feb. 10, when teams of 12 men each from the Riverside and East Orange Gun Clubs will try conclusions. Each man will shoot at 25 targets under American Association rules.

* * *

FOREST AND STREAM has received a supply of the Keystone rules along with the changes in the classification that will obtain during the coming tournaments of the Interstate Association. A copy of these rules will be sent upon receipt of a two-cent stamp.

* * *

The public at large, and trapdom in particular, are becoming about tired of the many reports, rumors and canards that have been floating about in regard to probable matches for big stakes between the world beaters of Chicago and vicinity and the men who have recently been doing such grand work before the traps in the East. It is said that "$1,000 is lying in Billy Muzzy's safe," etc., that Kleinman and others were ready and willing to make matches with Fulford, Brewer or any other man. But what does all the talk amount to? The fact of Billy Muzzy's safe holding $1,000 has nothing to do with match-making. If the Kleinman adherants or the adherents of any other prospective match-shoot mean business, let them, without any further parlaying, draw the aforesaid "thousand" and deposit it as a forfeit in the hands of some one who is empowered to make a match, and let this party get down to business at once. Brewer is anxious to shoot for the championship as well as a goodly store of pelf, and his backers are ready to put up a forfeit at any time. But if a challenge or series of challenges are sent out, they should come from the men who want to down the "king-bee." It is not meet that a man who considers himself "on top of the heap" should be obliged to go searching for opponents. Fulford and Brewer are at this time undoubtedly "on top;" hence the men who think they can wrest the honors from the champions should put up their money, send out their challenges, and get down to solid business. Don't waste any more time, nor ink, and don't let the "thousand" lie in Billy's safe until it gets mouldy, but put it where it will talk plainly.

* * *

The Philadelphia Shooting Association has elected the following officers for the ensuing year: President, E. W. David; Vice-President, I. P. Roberts; Secretary, Will G. Drury; Treasurer, John Raeyling; Field Captain, H. L. David; Assistant Field Captain, Thomas Rowcroft; Scorer, A. L. David; Trustees, W. H. Timm, George A. Fries and Thomas Cummings.

* * *

The Eureka Sporting Club, recently organized at Green Bank, Burlington County, N. J., has elected the following officers: Vice-President, R. E. Jones, Jr.; Corresponding Secretary, Mark Sooy; Secretary, George Loumis; Trustees, Watson Sooy, Mr. Allen, Mr. W. Fushrer; Treasurer, F. N. Corbyn; Stewards, C. Philpot, Job Sooy. A number of prominent business men of Philadelphia are included in the membership. The club proposes erecting a three-story house on the Mullica River, the house to contain a dining-room 72x32ft. and thirty-two bed rooms, each 9x12ft., with every city convenience. The initiation fee is fixed at $10, and there are no annual dues nor assessments.

* * *

Notice has been received of a tournament to be held on Saturday, Jan. 30, on the grounds of the Boerckel Gun Club, at Bridesburg Station. C. H. T.

Down by the Newark Meadows.

THE following scores were made at the weekly shoot of the South Side Gun Club, of Newark, N. J., last Saturday, all the events being at 10 artificial targets, $1 entry, 3 moneys:

	No. 1.	No. 2.

Terrill	0000011100— 3	0110110111— 7

All the above events shot under the Hobart rapid-firing system.

Details of the Reading Tournament.

CAREFUL plans have been laid out for the big tournament to be held in Reading, Pa., on Feb. 9 to 11 inclusive, and Secretary Eller assures a great big time to all who attend. The first two days shooting will be at artificials, and the third day at live birds. The shooting grounds are situated two miles from the city, and can be reached by taking electric cars, which run direct to the grounds, upon which is erected a large and comfortable house, and is so arranged that no kind of weather will interfere with the shooting, as the shooters and trappers are all under shelter.

The management, after careful consideration, have decided to adopt the following, which they think will encourage both amateurs and experts: Open to all and no handicap. Seven traps (all of which are under cover, so as to shoot in any kind of weather) will be used and squads of 8 men, rapid firing system. Birds are included in all entries and will be deducted at the rate of three cents each from purses before dividing. Five per cent. will be deducted from all purses, which will make a fund for average money to be paid each night—30 per cent. to the shooter having the best average exceeding 90 per cent., 30 per cent. to the shooter not exceeding 90 per cent., 20 per cent. to the shooter not exceeding 80 per cent., and 20 per cent to the shooter not exceeding 70 per cent. Average purses to be paid only to those shooting in all events on programmes for the day. Purses will be divided into five moneys: 25 per cent to first, 25 per cent. to second, 20 per cent. to third, 20 per cent. to fourth, 10 per cent. to fifth. If less than 15 entries, four moneys—30 per cent. to first, 30 per cent. to second, 20 per cent to third, 20 per cent. to fourth. All ties divided. Otherwise American Association rules to govern, except 12-bore guns allowed 1¼oz. shot.

American Association rules will govern live bird shooting. Twelve-bore guns allowed, 1¼oz. shot. All entrance includes birds at 25 cents each. Dead birds belong to Association. All purses divided into 40, 30, 20 and 10 per cent. If less than 8 shoots, into three purses—50, 30 and 20 per cent.

The Active Gun Club.

DEC. 22, 1890 was a very disagreeable one on which to venture out doors. During the evening a number of well-known sportsmen, men who made periodical trips in search of game in the field and covert, and who also took an occasional practice in front of the traps at live birds or artificial targets, were making themselves comfortable around a warm stove in Brandorff's Hotel on Market street. Euchre, pinnochle and cribbage, had been resorted to during the evening but each having lost its charm, the party began to discuss the past, present, and future of trap-shooting, and particularly the sport of shooting live birds. Included in the party were such old veterans as William H. Cleveland, Thomas and Barney Rudden and Joseph Belchor, while among the younger element were Arnold Brandorff, Robert Laiblin, Herman Schlegal. Conrad Hartenstein, Joseph Oschwald, Jr. and George Dammeron, all of wuom were enthusiasts.

THE ACTIVE GUN CLUB.

Finally the discussion was brought down to a question as to the relative merits of the party present. First it was proposed to inaugurate a series of friendly shoots to settle the question of supremacy, but this was soon improved upon when some one suggested the formation of a gun club for the purpose of holding regular monthly contests. The suggestion was no sooner made than acted upon and before the party dispersed there had been organized the Active Gun Club, with Robert Laiblin as president; George Dammeron, vice president and Arnold Brandorff secretary and treasurer. The club immediately set about finding a suitable place for a shooting ground, and after due deliberation settled on a field in rear of the old Newark Baseball grounds, adjoining the Shooting Park, on South Orange avenue, an eighth of a mile beyond the Newark city line. A neat clubhouse, of frame, 30×20 was erected, traps were procured, and on Jan. 13, 1891, the club held its first regular shoot and also had a very enjoyable house-warming. Since that time the club has shot on the first Tuesday of each month, and has had almost a full attendance on each occasion.

All shooting done by the club is done for pure unadulterated love of the sport, no money matches or sweepstakes for cash being allowed. Occasionally the members get together and hold individual or team contests for a box of cigars, basket of wine or perhaps a supper, but no matter what the result may be it is always accepted with good-nature. Up to the present time Arnold Brandorff leads in the averages, with Joseph Oschwald, Jr., Conrad Hartenstein, George Dammeron, Herman Schlegel and Robert Laiblin trailing him closely.

On Jan. 13, the club celebrated the first anniversary of its first regular shoot, every member being present and taking part in the live bird contest. In the evening a banquet was served at the Shooting Park Hotel, and a splendid table was arranged by mine host Alex. Volheye. After the wine and cigars began to circulate speeches were made by a number of the members, and jollity reigned supreme until the time arrived to catch the last car to Newark.

The half-tone cut shown was taken by Dolph Schnider, a well-known photographer who has also a reputation as a Dutch dialect comedian.

C. H. T.

The Death of Al Bandle.

CINCINNATI, O., Jan. 25.—Twenty minutes ago I looked on the dead face of Al Bandle. It was very white, but peaceful. His hands, always nervous and shapely, were as though carven in wax by a master sculptor. Ennobled and purified by death, there lay the body of one naturally noble, and whose instincts came from the deepest, purest fountains of the heart.

The death of Al Bandle needs more than passing comment. In him passed away not merely a man well known but a man well loved. He was prominent in shooting circles not more through his reputation and skill than through his character and personality. It is doubted if there is to-day before the shooting public a man so generally known all over the country as was Al Bandle. With his reputation went his characteristics. Thousands of men who never saw him could describe him, generous, jolly, rollicking, stalwart, hearty boy that he was, He died a boy, and that is well, for he never could have learned the coldness, the wisdom nor the shrewdness of old age. As it is, he will live more than the natural term of memory, the same fresh-hearted giant that he always was, loved by thousands, hated by none, a type unique even in the large-hearted world of sport.

Of Al Bandle's record at the trap, or of his prominence in shooting matters, it is hardly needful to speak. He had been shooting at the trap less than ten years, but his reputation was national years ago. His great race with Capt. A. H. Bogardus is fresh still in the minds of all shooters. If memory does not err, the score of Bogardus in that race was 95, yet Al scored 100 straight birds. About six months later he shot Dr. Carver with a score of 90 to Carver's 91. To-day I was talking with Mr. J. C. Bandle, Al's father, and he spoke with interest of that race, although himself an old gentleman who might be well excused from close interest in sporting matters. "I can see that bird yet that Al lost," said he. "It was a white bird, and it flew right over my head and fell over the line. So that was lost and Al could not win. I can see that bird yet."

It is perhaps not known, or clearly known, that Al. was not the son of Mr. Bandle, but was adopted. He was not taken from a foundling's home, as I have heard stated, but was the nephew of Mr. J. C. Bandle; his father, Albert Siedle, having married the sister of Mr. Bandle's wife. Mr. Bandle had lost three sons of his own, and the boy Albert Siedle being left alone by the death of both his parents, he adopted him legally under the name of Albert Jacob Bandle, and took him to his home and to his heart. It is said that he loved Al. more than he ever did a child of his own. What he did for him is known among the friends of both.

At the time of his adoption Al. was only three years old. Mr. Bandle to-day showed me an old photograph, card size, taken when the boy was perhaps 8 years old. In it could be seen the large, full eye, the frank face, the straight erect carriage which marked the man of mature years. Physically, he was fairly a giant as a man, over 6ft. in height, and weighing close upon 250lbs., without the appearance of grossness. The largest casket in Syracuse was required for his body.

Two weeks ago Al. went to Syracuse, to start upon the road for the Lefever Arms Co He would have had, I presume, practically the same work as that held by Mr. A. G. Courtney, who has, I am told, resigned from his former position. In a letter to his long-time friend, Mr. Ed. Taylor, of this city, written from Syracuse last Saturday, Jan. 16, Al. said that he was all ready to start for the coast on his big trip, that all was pleasant, and that he would probably be in Cincinnati for two weeks before he went on West. He complained of feeling wretched, and said he was very much worse off than when he was suffering from the grip, just before he started for Syracuse.

Al's friends would have been glad to hear of his new connection, for he would have filled the position well, and he needed it. His success had not fully reached him when it became too late for him to enjoy success. His trouble, which had been serious for two days before this, became worse, and on Saturday evening he was in the bed from which he was never to rise.

The sick man was away from home, but he was among friends. Shooters all know Harvey McMurchy. Let them know him now with all the kinder thought. It was to his own hotel, to his own room, to his own bed, that Harvey McMurchy took poor Al. Bandle, who at that time was in sore need of a friend. Mr. McMurchy was day and night at Al's bedside, doing all he could. He wired to all the sick man's friends in Cincinnati, and to Al's wife, telling her to come, for there was no hope. Mr. McMurchy was assisted by Mr. Al. Spangler, Milt Spangler, and by members of the sportsmen of the entire community, notably the members of the Onondaga Club. Three doctors and a professional nurse were on hand, called by Al's friends, but they could do nothing.

Mrs. Bandle arrived Wednesday morning, Jan. 20. Al was at times delirious, but not for long, and was conscious even on Thursday, though he seemed not to realize fully his condition. The trouble was a complication of lung and heart disease, and the immediate cause of death is stated as heart failure. There had been Bright's disease existent for some time, and the once iron constitution could not hold up under it all.

Escorted by the Onondaga Club, the body was placed upon the train for Cincinnati, arriving here 5 P. M. Saturday, Jan. 23.

The funeral was to-day, Jan. 25, from the home at 152 Carlisle street. The crowd was enormous. It was touching to see the grief of the big, hardy fellows we used all to meet at Al Bandle's tournaments. There were richly dressed and poorly clad alike. One laboring man, with tears streaming down his grimed face, begged if he might "go in the parlor where Mr. Bandle was," and when he came out there were many more tears upon his face. Al had friends of all ranks: and after all is done, no man accomplishes much more than that.

The main floral piece, offered by the sportsmen friends who have practically had charge of everything since Al's sickness, was in the design of a broken ball, at whose base rested a broken gun. This design was that of Mr. Ed Taylor, who has been here what Mr. McMurchy was at Syracuse. The latter could not be present to-day, for he is sick himself at Syracuse.

Al Bandle was only 24 years of age. Two years ago this Mardi Gras season he married the beautiful woman who now mourns him. Mrs. Bandle is grateful to the gentlemen who helped her in her time of distress. Speaking of the kindness she met at Syracuse, she said to Mr. Taylor that she "never knew before what it was to be among friends."

For the hard-pressed man or the distressed woman to be among sportsmen is always to be among friends. This is all that we have left of the ancient type of chivalry. It is because Al Bandle, sportsman and friend, belonged to this honorable order and stood high in it, that we shall remember him, knowing clearly that his faults, such as they were, were only such as are condoned or approved in those with whom fortune has been more kind. No fortune is kinder than the sincere tears of friends. I saw the o to-day.

E. HOUGH.

Some Brooklyn Scores.

THE Monahan Gun Club held its monthly shoot at Morris Park on Jan. 20, the attendance being good. Two contests were held, one at 10 bluerocks per man, for a gold medal, and one at 13 glass balls, for another medal. W. Monroe succeeded in capturing both medals. The scores follow. Bluerocks: J. Bennet 7, H. Van Sicklen 7, H. Selover 8, J. Camden 7, L. Hopkins 7, W. Monroe 10, J. Bookman 8, J. Monahan 7, M. Monahan 8, W. Strang 7, M. Anderson 7, H. W. Bramwell 7, J. Van Sicklin 6, Glass balls: W. Monroe 10, J. Bennett 8, H. Selover 6, J. Camden 5, L Hopkins 9, J. Bookman 6, J. Monahan 7, M. Monahan 5, J. Van Sicklen 5, W. Strang 8, W. Anderson 6, H. W. Bramwell 6, H. Van Sicklen 6.

The Wauregan Gun Club shot at Dexter Park last Saturday, the attendance being rather light. The first event was a 10-bird sweep, in which W. H. Brickner won first money on 9 kills, M. F. Brickner killed 8, G. W. Silberhorn 7 and C. Kranish 8. Other events were as follows: Mike Fay and J. Pilkington, match at 25 live birds, 28yds. rise, for $50 a side. A close contest, each killing 23 birds. Two of Fay's birds dropped dead just out of bounds. J. Loonie and F. Renaldo, match at 10 birds. 28yds. rise, for $25 a side. The score: Loonie 6, Renaldo 2. W. H. Brickner and G.W. Silberhorn, match at 5 birds for $10. Silberhorn 4, Brickner 3. P. J. McKeon and W. H. Brickner, 10 birds, 25yds. rise, for $20 The score: Brickner 7, McKeon 6. J. Loonie and P. Muller, match at 5 birds. Score: Loonie 4, Muller 3. G. W. Silberhorn and J. Fay, math at 5 birds for $10. Silberhorn 4, J. Fay 5. Sweepstakes, $3 entrance, at 5 birds, 9 entries. Pat Muller won first money with 5 straight, J. Pilkington, M. Fay, P. McKeon and G.W. Silberhorn divided second money with 4 each.

The appended scores were made at Dexter Park on Jan. 22, at the prize shoot of the Linden Grove Gun Club, each man shooting at 7 live birds, under modified Hurlingham rules: P. J. Ippig, 25yds., 4; A. Kelly, 25yds., 4; J. A. Ippig, 30yds., 5; W. Cunningham, 30yds., 6; C. Horney. 25yds., 5; J. Link, 25yds., 5; W. Follmer, 25yds., 4; L. Neir, 25yds., 6; C. Burmel, 25yds., 1; J. Burmel, 25yds., 6; J. Major, 25yds., 3. The first prize was given to Neir, the others waving their right. The tie for second was won by C. Horney on the shoot-off.

At the Maple Bay Traps.

STORMY weather cut down the attendance at the shoot of the Onondawa County Sportsmen's Club at Maple Bay, Syracuse, on Jan. 21, but those who were on hand were in great form and some big scores were made at artificial targets. C. H. Mowry won the medal in class A with a score of 49 breaks out of a possible 50 and Mr. King won the class B medal with 39 breaks. The scores:

Class A.

Kingbird targets were used, from 5 traps, unknown angles.

Big Shooting on the Union Grounds.

EARLY on Saturday morning, Jan. 23, a dozen odd members of the Boiling Springs Fish and Gun Club left their homes in Rutherford and trained to Hoboken, where they switched over to the D. L. & W. Railroad, and were soon speeding away over the rails toward Millburn. Arriving at that pretty little hamlet, they disembarked, entered the hacks which were in waiting, and a quarter of an hour later were deposited at the shooting house of the Union Gun Club, which nestles in a picturesque little valley under the shadow of the Orange Mountains, in Springfield, N. J. The object of their visit was to shoot a team match against the local club. The conditions up to 1 P. M. were good, the sun shining clear and bright and with just warmth enough to cut the edge off the cool, crisp mountain breeze. Shortly after, however, the conditions underwent a change, the sky became heavily overcast and in a short time a snow squall caused everybody to feel uncomfortable. During the afternoon these squalls were of frequent occurrence, with an occasional dash of rain to varry the monotony. No time was lost in getting down to the work of the day, everybody being anxious to shoot.

The conditions of the team match were 12 men to a team, 25 bluerock targets per man, from 5 traps, unknown angles. The scores follow:

Boiling Springs Gun Club.

Following the team contest came a match at 25 bluerocks each, unknown angles, between E. D. Miller and Neaf Apgar, the result being as below:

Apgar.....11101 01111 11111 11111 01111—22
Miller.....01111 11111 01011 11111 11010—20

Sweepstake shooting was then indulged in until darkness cast its mantle over the scene, when the shooters dispersed for their homes, but not until they had expressed their pleasure at the royal reception accorded them by the Union boys. A bountiful lunch was on hand during the day, and this was well looked after by the hungry army. The sweeps were well patronized, some of them having as many as 26 entries. The scores in detail follow:

Event No. 1, 10 bluerocks, $1 entry, 2 moneys:

Apgar	1011011110—7	M Klees	0100111111—7
Breintnall	1111110011—8	H Lightipe	1111110101—8

The Boiling Springs Tournament.

THE following programme has been received for the tournament to be given by the above club at Rutherford to-morrow and Saturday. The events are as follows:

Friday.—10 bluerocks, $1 entry; 15 bluerocks, $1.50; 10 bluerocks, $1; 25 bluerocks, $2 50; 10 bluerocks, $1; 10 bluerocks (expert rules at unknown angles), $1.50; 50 bluerocks, $5; 10 bluerocks, $1; 15 bluerocks, $1.50; 10 bluerocks, $1.

Saturday's programme is identical with the above excepting that the last event will be at 20 bluerocks, $2 entry. Shooting will begin at 10 A. M. each day and the events are open to all.

As a special inducement the club offers a handsome gold badge to the shooter who breaks the greatest number of targets in the regular events each day.

Purses divided as follows: 6 or less entries, two moneys; 7 to 11 (inclusive) entries, three moneys; 12 or more entries, four moneys. All events to be shot at rapid firing from five traps. American Association rules to govern all the events. The management reserves the right to change events on the programme with consent of shooters.

The East Side—Mutual Gun Club.

AWAY back in 1868-'9, when the writer was obliged to walk over a mile from his home to attend school, the route led him through an old chestnut grove located in a part of Newark that is now built up with houses, stores and factories and is considered one of the most thriving portions of the town. Between his house and the aforesaid grove was a blackberry and huckleberry swamp, covering several acres and extending along what is still called Old Elm Road. On the square now bounded by Ferry, Adam, Jackson and Lafayette streets was the old baseball grounds, whereon the Eureka Baseball Club used to hold forth. On this club in those days was Major R. Heber Breintnall, considered one of the most expert of the local players, but who in later years has forsaken the diamond for the smooth-bore and rifle. About half a mile below the before-mentioned chestnut grove on Hamburg place was old Wiedenmayer's Park, a place to which "us boys" delighted to meander in these days of long ago. The gate of the park was not always open, but we were spry and the fences were not covered with barbed wire. This park was a great place for picnics, and was supplied with rifle ranges, "merry-go-rounds," "scups" and other Coney Island attractions. Of late years, however, picnics at this place have been few and far between, and until a couple of years ago the park had almost been forgotten.

Now, however, it is again coming into prominence, not so much perhaps on account of the improvements in the picnic accessories as from the fact that it is the holding-forth place of one of the strongest trap-shooting clubs in New Jersey, namely the East Side-Mutual Gun Club. The club house of this prosperous organization is situated on the southwestern edge of the grove proper, being a neat frame structure, 40×20 and one story in height. The grounds, which allow a full 80yds. boundary, are inclosed with a 10ft. fence. The grounds, with the exception of a few swampy spots, are admirably adapted to the shooting of either live birds or artificials, the background being perfectly clear.

The club is a consolidation of the East Side Gun Club, which formerly held its shoots at Fischer's Woods, a good quarter-mile from these grounds, and the Mutual Gun Club, which held its shoots where the consolidation is now located. Both of the clubs were fairly strong numerically, but as a large number of the expert men were members of both clubs, and consequently held divided interests, it was sensibly decided to combine their strength, the result being that the East Side—Mutual Gun Club has about sixty-five active shooting members, comprising some of the most expert live bird and target shots in Newark. Gustav L. Freche, Robert Baar, Chris. Reinhardt, Henry Reinhardt, Robert Schraft, Frank Perment, Henry C. Koegel, William Hassinger, William Ostrander and Ferdinand Hilfers, all well-known as expert crockery or live bird shots, are included in the membership, as are Edward Hague, William Kraemer, Carl Von Lengerke, Charles M. Hedden, Thomas Richards, senior and junior, R. Young, Ernest Fischer and many others whose names I can not now recall. Once each month the members have a club shoot at 25 artificial targets per man, the club offering several valuable prizes for the best averages during the season. On nearly every Thursday and Saturday afternoon also the members get together for a number of sweepstake contests, sometimes using artificials, but oftener live birds, which they much prefer.

On Saturday, Jan. 23, the grounds were visited by quite a number of shooters, and as usual some lively work was done, live birds being used. The main attraction was a trial shoot for a wager of $50, which amount had been risked by ruddy-faced Chris. Reinhardt of the cpance of his killing 50 birds out of 100 shot at, Wm. Kraemer to furnish the birds, which he backed for the above amount against Reinhardt's gun. The day was a decidedly disagreeable one during the afternoon. Until noon the sun shone brightly, the air was cool and crisp, and everything pointed to a good shooting day. Soon after dinner the wind switched around, the clouds grew heavy and threatening, the air damp and raw, and along toward 3 o'clock came a light snow squall. Later in the afternoon these squalls became frequent and the shooters became uncomfortable. The trial shoot by Reinhardt was a disappointment to that gentleman, as he succeeded in killing only 72 out of his 100 birds. The pig ons were a fine lot of flyers, and a large number of them being of the vicious, twisting and zigzagging style that anyone is likely to lose. Kraemer proved his ability as a purveyor by the quality of the above birds.

By the time Chris had completed his trial the rest of the crowd was anxious to shoot, and an 8-bird sweep, $5 entry, with three moneys, was arranged. The scores were as below:

Freche	22111211—8	Reinhardt	01012221—6
Baar	21111012—7	Hilfers	01210221—6
Koegel	10112210—8	Perment	01201101—5
Hassinger	12101012—6	Perry	12002100—4

Freche took first, Baar captured second, while third was quartered by Koegel, Hassinger, Reinhardt and Helfers.

No. 2, same conditions as above:

Reinhardt	11111212—8	Perment	11111020—6
Hilfers	22021121—7	Koegel	11020111—6
Freche	20211211—7	Hassinger	11120110—6
Baar	11110110—6		

Reinhardt scooped in the premier pot; second and third div.

Final event, $2, miss and out:

Koegel	1111	Reinhardt	110
Hassinger	1111	Perment	110
Baar	1111	Freche	10
Hilfers	110		

At this stage of the game the supply of birds was exhausted, so the first three men split the pot, packed their kits and started for supper.

C. H. T.

A Wet Day at Frankford.

ON Tuesday, Jan. 19, about a dozen live-bird experts braved the pouring rain and journeyed to Frankford, Pa., to take part in the shoot arranged jointly by W. H. and Jas. Wolstencroft, Al. Rust and Harry Thurman. Had the day been at all favorable at least a score of shooters from New York and New Jersey would have been on the scene prepared to measure skill with the Pennsylvanians, but the prospect of having to face a driving rain kept them from risking the trip, the only ones on hand from this section being M. F. Lindsley and Eddy Collins, who took a supply of "family powder" from Hoboken and held up their end in great style. The first event was a shoot at 10 live birds, $10 entry, 3 moneys, Hurlingham rules to govern. The results are appended:

Jake	2112211121—10	M F Lindsley	2120222202— 8
J Wolstencroft	1011211112— 9	J Treadway	1120121102— 8
W Wolstencroft	1110111212— 9	E Collins	1222011220— 8
J Rothaker	2110111212— 9	H Thurman	2012201010— 7
R Welch	1011212212— 9	Muensch	0030222112— 6
Sheets	1211121210— 9	Davis	010 1111101— 6

All ties were div.

Event No. 2, miss and out, $2 entry:

Welch	12221	Kleinz	12120
J Wolstencroft	11212	Muensch	1120
W Wolstencroft	22122	Thurman	220
Rothaker	21221	Lindsley	20
Collins	21121	Treadway	20
Jake	21211		

At this stage those who had killed 6 straight each decided to split the pot, and another event of the same kind was shot, the result being as below:

Lindsley	22222	Kleinz	210
J Wolstencroft	12221	Muensch	10
Rothaker	11122	W Wolstencroft	20
Thurman	11112	Treadway	10
Collins	12111	Welsh	0
Jake	12112	Lawrence	0

An overplus of dampness and a falling light prompted the straight men to div., which they did with good grace, after which guns were packed and the party dispersed in various directions, but not until they had expressed a wish for another shoot on the same grounds on some date in the near future.

Auburn Defeats Syracuse.

Editor Forest and Stream:

The second match with the Onondaga County Sportsmen's Club has been shot. The date originally intended was Jan. 14, but the race was postponed to Jan. 19 on account of the death of one of our members, Geo. M. Reed. On the last named date 25 of our men boarded the morning train for the Salt City and were met at the station by a delegation of the Syracuse men, who piloted us to a waiting train on the D. L. & W., which soon landed us at the club grounds. The snow was about a foot deep, and still falling, and the mercury made a score of 18 to 20 deg. throughout the day. The warm and elegant club house of the Syracusians was duly appreciated by our men. W. S. Barnum served a delicious lunch, consisting of coffee, pie, doughnuts and sandwiches. After the race we were invited to take dinner at Mr. Barnum's house—the Maple Bay House—and a most excellent dinner it was. The shooter who takes dinner with Mr. Barnum while attending the State shoot next summer will have nothing to be sorry for, if our treatment there be a sample of his hospitality.

But to shooting. A few sweeps were shot off before the event of the day was called, and honors were about equal between the members of both clubs, the first sweep had 40 odd entries. The race was called at 1:30. B. J. Hoyt, of Weedsport, was chosen referee and Messrs. Dakin, of Syracuse, and Goodrich, of Auburn, acted as scorers. The race was 20 singles, unknown angles. The score was as follows:

Syracuse Gun Club.		Auburn Gun Club.	
Mowry	11111111111111111101—19	Corning	11111111110111111111—19

*Not members.

The medal it now the personal property of Dr. Hutchinson.

Jan. 22.—Score made to-day by the Chicago Shooting Club for the Illinois State Championship, four teams, gold badge of 1887, won by the club's team, 20 live pigeons each, Illinois State rules:

Mussey	22122011111102121221—18	Kleinman	11101200011001232222—15
Cox	21121212220002222212—17	Rock	02211121212011320121—17
Wadsw'th	22212000210222w	Ehlers	21021121002111122102—16
Eide	21122002121222211123—19	Steck	22211021011011012021—16
Atwater	12221112222222212221—20	*Dukes	22120202222212222212—18
Reves	11020110020012121211—14	*Price	11101001112212w
Hamlin	01221101122112122222—18	*Willard	21212120121201220111—17

*Not members.

Eide being allowed one bird and Hamlin two added to their scores are tied with Atwater for the badge and will be decided next shoot.

Same day, Peoria blackbirds, medal, 25 birds each:

Reeves	20	Steck	20
Kleinman	22		

Score made to-day by W. P. Mussey and R. S. Cox in shooting off the tie for the Chicago Shooting Club's medal at last club shoot, 5 live pigeons each:

W P Mussey	20120—3	R. S. Cox	20222—4

Same day, sweep, 5 live pigeons, entrance $3, 60 and 40 per cent., A. A. rules:

Atwater	01210—3	Reeves	02012—3
G Kleinman	12212—5	Cox	21010—3
Mussey	12122—5	Steck	01202—3
Hamlin	10210—3	Eich	12112—5

Jan. 23.—Score made to-day by B. Rock vs. George Burns, 50 live pigeons, $50 a side, A. A. rules, Burns allowed three dead birds added to his score:

B Rock	11212223121011122212320220212221210+2222220222222—45
G Burns	02121211123011121101222212222220202020100022122C02+3—41

Same day, O. Van Lengerke vs. Bob White, 50 Peoria blackbirds each:

O Van Lengerke	43	Bob White	40

RAVELRIGG.

Down Mamaroneck Way.

EVERY week or so, or as often as the whim seizes them, a number of well-known business men of New York city shoulder their smoothbores, and with ammunition case in hand, flit away for a day's sport at the traps at Mamaroneck, Westchester county. Their shooting is done at live birds, solely for sport, each man paying for his own birds, and the entry fee being nominal. On Wednesday, Jan. 13, a little knot of these sportsmen gathered about the comfortable fire in Arickson's Hotel, and after discussing the weather for a while, concluded that they wanted a little recreation and a number of sweepstakes was the result. The shooting was done modified Hurlingham rules, and the results are given below.

Event No. 1, 5 live birds, one money, 50yds. rise:

F Lawrence	11111—5	F Kolter	11011—4
S Arickson	11011—4	J Arickson	00110—2
D Stuber	11110—4	C Groltz	00011—2

Event No. 2, same conditions:

Lawrence	10111—4	J Arickson	01100—2
Groltz	11100—3	Kolter	10001—2
S Arickson	11001—3	Stuber	01100—2

Event No. 3, same conditions:

S Arickson	11111—5	Kolter	10110—3
Lawrence	11110—4	Geoltz	11000—2
J Arickson	10101—3	Stuber	00000—0

A question now arose as to the individual superiority as marksmen of Messrs. Lawrence and S. Arickson, in order to decide which the following match was shot:

Lawrence	11101010111—7	S Arickson	11111011111—9

By this time darkness had settled upon the scene and further operations had to be postponed. Neither man was satisfied to yield the palm, however, and in a subsequent issue FOREST AND STREAM will give the result of a match at 25 live birds each, "for blood."

In the Rain at Frenchtown.

QUITE a party of enthusiastic live bird shooters braved the elements on Jan. 19 and went to Frenchtown, N. J., to indulge in their favorite pastime, on invitation of William Apgar, of Apgar's Hotel. The rain came down in torrents nearly all day, but this did not deter the boys from cracking away until the supply of birds was exhausted. The shooting was done from one ground trap. The scores:

Event No. 1 was at 4 live birds, $3 entry, 2 moneys:

	Tie.		Tie.
W E Wagg	2112—4	A H Brinker	2101—3 0
Wm Holjes	1102—3 21	G Ott	0200—1
James Garner	1201—3 11	C Moore	0201—1
Wm Apgar	1201—3 20		

W. E. Wagg won first; Wm. Holjes and James Garner div. second.

Event No. 2, same conditions, except 3 moneys:

	Tie.		Tie.
J Warford	2111—4	11121	H Stout	2211—4	1121c
Abe Case	2111—4	1121	J Garner	1102—3	
H Millburn	1122—4	11221	W Holjes	2101—3	
W E Wagg	1122—4	21121	C Moore	2201—3	
Wm Apgar	2111—4	2111c	E Hoffman	0110—2	
A H Brinker	1221—4	1111c			

On shoot-off Warford, Case, Millburn and Wagg div. first; second went to Garner, Holjes and Moore; third went to Hoffman alone.

Event No. 3, miss and out, $1 entry:

Holjes	12111213—8	Wagg	21112212—8
Brinker	11112112—8	Millburn	11121222—8
Apgar	21112111—8	Warford	21112110—7
Case	21111112—8	Garner	11111110—7

At this point the birds were gone and the pot was div.

Saturday at John Erb's.

A COLD, raw wind, bringing along frequent squalls of snow, caused a sort of a chilly sensation to creep up and down the spinal columns of those intrepid sportsmen who wended their way to the Old Stone House grounds in Newark on Jan. 23. Among those who braved the elements were Frank Lawrence, one of New York well-known billiard caterers and a man by no means behind the times in the use of the smooth-bore; Vane Cockefair, the well-known expert from Bloomfield, and Mr. Vermoral, one of the cracks from Paterson, the city of silk mills and sportsmen.

First in order came a little team race at 15 live birds per man, for the price of the birds, Sam Castle, Sr. and John Erb pitting themselves against Sam Castle, Jr. and Vane Cockefair. The scores were as appended:

		Ties.
Castle, Sr. (23yds.)	112101121012221—13	011
Erb (28yds.)	211111201012l—13	111
	26	5
Cockefair (30yds.)	12111221212222—15	111
Castle, Jr. (30yds.)	20120212111010—11	101
	26	5

As there seemed no prospect of either team securing a victory, and other shooters wished to take a hand in the sport, the game was called at the above stage. Chas. M. Hedden was referee and official scorer, and he received a vote of thanks for the faithful performance of his arduous duties.

Next in order came the usual run of "Jersey" sweeps, the conditions in each being 4 live birds per man, $3 entry, two moneys, modified Hurlingham rules to govern. The results of the first two are here given:

	No. 1.	Tie.	No. 2.
Erb	1111	11	1111
Hedden	2221	12	0222
Cockefair	1111	0	....
Castle, Jr.	2211	0	1211
Vermoral	1211	0	1011
Castle, Sr	1011	..	2110
Lawrence	....	..	1011

Erb and Hedden divided first on shoot-off in first event, Castle, Sr., taking second alone. In No. 2, Erb and Castle, Jr., divided first; second carried over to the next event.

Event No. 3, same conditions:

		Ties for second.
Hedden	1121—4	
Castle, Sr	0111—3	111112211111112
Lawrence	1110—3	111111111121120
Erb	0111—3	1111110
Vermoral	2022—3	1110
Castle, Jr.	1001—2	

This was a hard-fought contest between Castle, Sr. and Lawrence, and although the former is a veteran at the trade, he found almost his match in the New Yorker. In fact, had the latter not made the mistake of using his second barrel on his fifteenth tie bird, a hard winner, after his first barrel had missed fire, the contest might have been carried on by candle light. As it was, Castle scooped the two pots.

The final event, same conditions, resulted as below:

	Ties.		Ties.
Erb	1111—4	Vermoral	1012—3	121o
Hedden	0121—3	2112	Lawrence	1001—2	2
Castle, Jr.	0222—3	2121		C. H. T.

The Essex Gun Club Shoot.

JAN. 21 was the date for the regular monthly shoot of the staunch old Essex Gun Club, of Newark, N. J., and a dozen members waded through the mud from the Marion depot to the Jersey City Heights Gun Club grounds, soon after dinner, carrying their shooting irons and things, all ready for hot work. This was the initial shoot of the season. Previous to the regular club affair Harry E. Smith and Chris Reinhardt had a sociable little "go," each shooting at 38 live birds. The match was to have been at 40 birds each, but Chris was shot out on the thirty-eighth round, so the match ended there. The scores:

Smith	11121221212221220112201101121171212—34
Reinhardt	01111011011011112122121210210211211—31

Next in order came a little "Jersey" sweep, at 4 birds per man, $3 entry, three moneys, the results being as appended:

R H Breintnall	1221—4	F Van Dyke	1012—3
C Reinhardt	2111—4	L Thomas	2121—3
G Freche	2221—4	C M Hedden	2010—2
H Smith	1220—3	W H Green	1020—2

Ties were divided.

Next came the club shoot for three prizes, 10 live birds per man, club rules, handicap rises, the scores of which are given below—Class A shooting at 30yds., B at 28yds. and C at 26yds.:

R Breintnall (30)	2211211110—9	H Leddy (28)	0121012212—8
W H Green (30)	2121101221—9	G L Freche (30)	0121202110—7
C Reinhardt (30)	0122221211—9	L Schortemeier (30)	1112o2201o—7
H E Smith (28)	1111101121—9	D D Terrill (26)	1001022111—7
C M Hedden (30)	2102210112—8	W Hughes (28)	02211o0112—7
D Morse (28)	2101221102—8	L Thomas (28)	1002102110—6

The rest of the light was utilized by shooting "Jersey" sweeps, with the usual conditions, the scores being as shown, all ties being divided.

Sweep No. 2:

Breintnall	2111—4	Reinhardt	2121—4
Hedden	1211—4	Hughes	1111—4
Smith	2111—4	Leddy	0121—3
Green	2112—4	Freche	2o11—3
Morse	1112—4	Van Dyke	0o11—2

Sweep No. 3:

Breintnall	1121—4	Reinhardt	1122—4
Hedden	2111—4	Freche	1011—3
Smith	2211—4	Hughes	2011—6
Green	1221—4	Morse	0120—2
Van Dyke	1111—4		

The Emeralds Shoot Well.

THE monthly medal shoot of the Emerald Gun Club, which took place at Dexter Park on Jan. 21, called out a big party of members, and the contest was a very close one. The conditions were ten live birds per man, modified Hurlingham rules, with a medal for A class and one for B and C classes. The men in A class shoot at 28 to 30yds. rise, B and C class men being handicapped from 27yds down. The scores of the shoot are appended in detail:

A Class.

G R Knowlton (28)	1211101211—9	Dr Allen (28)	2020101011—6
E Doenick (28)	1100222211—8	G Nowak (28)	1100220101—6
G V Hudson (28)	1110011202—7	J H Voss (30)	1120120101—6
L Schortemeier (30)	0011122022—7	P Butz (28)	0001111100—5
L C Goehring (30)	0021121010—6	J Maetzel (28)	1010121100—4

Classes B and C.

N Maesel (25)	1101112111—9	W Thompson (25)	0000102211—5
W Hartye (25)	1110001221—7	H Thau (25)	0102120100—5
R Regan (21)	0211011021—7	J Say (25)	0111002004—5
S P Leveridge (23)	2221001002—6	T Cody (25)	0001100210—4
M Quinn (21)	1012100120—6	C Horth (25)	1002100010—4
W Klein (25)	2110102200—6	L E Ryan (21)	0001022010—4

Knowlton won the A Class medal and the B and C class medal went to Maesel.

A Pleasant Letter.

CONSHOHOCKEN, Pa., Jan. 18.—*Editor Forest and Stream:* I have been a constant reader of the FOREST AND STREAM for about one year, and I find it to be the leading sporting paper of the United States.

Allow me to congratulate you on the able-bodied way you publish your paper, especially the scores. Any one can understand them. I wish you much success, and may all the clubs of the United States send you their scores, so you will still have to enlarge your paper.

As soon as the Conshohocken Gun Club opens their season for trap-shooting you can count on us as sending you our scores. May all other clubs do the same. We are strangers but will be friends. Yours fraternally, GEO. H. KRIEBEL,

Sec. C. G. C. and M. G. C., and Cor. Sec. W. C. G. C.

The Erie Gun Club.

THE monthly prize shoot of this organization was held at Morris Park on Jan. 20, the conditions being 7 live birds per man handicap rises. The results follow:

C Plate (28yds.)	1122211—7	A Still (25)	2100121—5
H Dohrman (28)	1222212—7	H Jankoski (22)	1211002—5
F Greefers (25)	0111112—6	M Hayden (25)	1111000—5
D Lynch (21)	1211120—6	J Plate (25)	1110200—4
C Jericho (28)	1111210—6	W Schultze (25)	1021100—4
C Leehrson (21)	1011011—5	W Alesson (26)	1020000—2

First prize went to Plate, second to Greefers and third to Leehrson. T. Doyle was official scorer.

Way up in Vermont.

PUTNEY, Vt., Jan. 23.—Inclosed you will find a report of the last shoot of the Putney Rod and Gun Club held Jan. 23. We expect to open the season about April 1 with an increased attendance. Will send scores weekly after we get "at it" in good shape. I am very much pleased with FOREST AND STREAM in its new dress.

W. E. A.

Canoeing.

CLUB REPRESENTATION AT THE MEET.—The early weeks of the year are always marked by a renewed activity in canoeing circles, the dull season of the early winter being broken by the club meetings, annual dinners and similar gatherings. Just now, when plans are being made for the coming season, is the time for the A. C. A. members in the various clubs to take up the matter of attendance at the meet. It is a duty which every club owes to itself to make a creditable showing at the great annual gathering; nothing does so much to increase the interest and spirit of the members, or to establish the reputation and standing of a club among canoeists, as a creditable showing at the meet. This may be made in various ways; three or four energetic racing men, even though none of them are cracks, may by energy, careful practice and good boats properly fitted, place their club in the front from a racing standpoint; those of the cruising men who can spare the time can make a fine showing by a cruise to the camp, living in the real old-fashioned 1880 cruising style with a good cruising outfit. Any club which can muster half a dozen members in camp can make a name for itself by a neat uniform, a well arranged club encampment, a vocal or instrumental quartette with a few good songs for the camp-fires, or any other means of contributing to the general enjoyment. Members who are planning to be present will find it far pleasanter, especially if they are new comers, to be a part of a well organized club delegation rather than to camp alone; and they should urge their friends and associates to join them. Of course the labor and expense of transportation, especially of canoes and outfit, are but little greater for half a dozen or a dozen than for one.

If anything is to be done, now is the time for action, before other plans are made. The Mohican C. C. has already taken the matter in hand; now what is the New York C. C. doing, the Knickerbocker, the Rochester, the Ianthe, the Toronto, the Springfield, the Vesper, the Puritan? It is time that all were at work, and that as soon as plans were made they should be announced in order to encourage others. Enough is known now about Willsboro Point to give every assurance of a most successful meet; the experience of last year has shown where great improvements can be made, which, with the recognized advantages of the location, will insure convenient transportation, good meals and a fine camp ground. The meet of 1892 should and probably will be the largest and most successful ever held.

WESTERN CANOE ASSOCIATION.—In spite of the manifest advantages of Ballast Island in many ways, there has been a strong feeling for some time that the interests of the W. C. A. demanded a change of site, and this year the movement has been successful, the decision of the executive committee being in favor of a meet at Oshkosh, Wis. The move has been made none too soon, as the cramping influences of a fixed camp with all the attractions and surroundings of a summer resort have been strongly felt in the W. C. A. In spite of the expense and labor attending a frequent change of location, it is only by such moves to each part of its territory in turn that an association can preserve its essential characteristics and avoid the danger of becoming a large local club.

MORE BEAM IN CANOES.—A few weeks ago we quoted and commented on a proposal made by the *Field* to enlarge the limits of beam in a canoe. We quote this week the same suggestion in fuller detail, from which it appears that the interests of the 30in. canoes are to be fully conserved. While it is possible that little harm may result, it seems to us best for the good of canoeing that the admission of a totally different type of craft to all canoe uses should be discouraged.

THE CANOEISTS' CLUB OF NEW YORK.

AS long ago as 1883 the canoeists of New York arranged and carried out a very pleasant and interesting series of winter meetings or campfires, as they were then called; social gatherings at which many practical matters connected with canoeing and club organization were discussed; the result being that many new recruits were added to the existing clubs, while new clubs were organized in various places. The meetings were mostly held at the rooms of the Kit Kat Club, a lecture being given by one of those interested. Last year a similar scheme was inaugurated and successfully carried under the management of the New York C. C. This season a new attempt has been made on a still larger scale by the canoeists of New York city and vicinity, all or nearly all members of the Atlantic Division of the A. C. A. Very comfortable quarters have been leased in the old Raquet Club Building, No. 55 W. 26th street, which are open every evening, and the following officers have been elected: Pres., L. W. Seavey, Knickerbocker C. C.; Vice-Pres., William S. Elliott, Marine and Field Club; Secty, James K. Hand, Knickerbocker C. C.; Treas., Frank L. Dunnell, Brooklyn C. C.; Council: The officers *ex officio*, and William Whitlock, New York C. C.; Robert H. Peebles, Unattached Canoeists; William R. Haviland, Yonkers C. C., J. Herbert Bagg, Crescent Athletic Club; Lincoln B. Palmer, Ianthe C. C. The rooms were opened early this month and will remain open until May, the dues being $5. Monday night is the special meeting night. On Jan. 18 Mr. W. T. Wintringham gave an exhibition of canoeing views from a large collection of lantern slides which he has made. On Jan. 25 Mr. Poultney Bigelow described to an interested audience his recent cruise down the Danube, his companions, Messrs Willet and Parsons being present.

SUGGESTIONS FOR A CENTERBOARD.

Editor Forest and Stream:

If Mr. Silsbee, who has given an illustration of his proposed centerboard (and which by the way is very clever) in your issue of Jan. 14, wishes to carry his experiments further let him make the board narrower and in two sections, that is rivet together two similar plates side by side, but far enough apart to inclose a thin space, and then put a stop at each end to limit the extent of drop. Let the inclosed space be sufficient for another plate to work in and fasten the lifting and lowering device to the short arms of the central plate by passing through the arms of the main board. He will thus be enabled to nearly double the area of his board when down, use less lead, and thinner material if desirable, or by using heavy plate get good low down ballast, and also reduce the height of the trunk and gain more room thereby. CAYUGA.

KNICKERBOCKER Y. C.—The following officers have been elected for 1892: Mr. Alfred Varian, who has been the secretary of the club for 12 years, declined a re-election, his present home being too far distant from the club station. Com.—A. N. Holden, sloop Alice. Vice Com.—F. B. Clark, launch Vida. Rear Com.—H. Stephenson, cutter Nanita. Sec.—O. H. Chellborg. Treas.—Charles Coughtry. Meas.—E. P. Mowton. Fleet Surgeon—Dr. E. Ringer. Board of Directors—E. M. Macdonald, C. R. Smith, Jr., G. K. Rosenquest, George Gage and W. H. Ward.

SEAWANHAKA C. Y. C.—A steam launch, 42ft. over all, 8ft. beam and 3ft. draft, is now building by Seabury & Co., of Nyack

DOWN THE MISSISSIPPI.

A Canoe Cruise in 1883.

BY COMMODORE GEO. W. GARDNER AND WM. H. ECKMAN.

WERE I about to spin the yarn of our cruise to an audience of ordinary land lubbers, I should proceed at once to enter upon the story of peril, hardship and adventures; but as I find myself before a congregation of intelligent, learned and experienced old sea dogs, a few preliminary remarks of a scientific nature seem necessary.

Our cruise extended from Pork to Banana, that is to say, from Cincinnati to New Orleans, through boundless areas of corn, cotton and sugar; and it is to be understood that these several vegetable growths do not affiliate. Where it's corn it's all corn, where it's cotton it's all cotton; and neither corn nor cotton invade the domain of sugar cane. There's no option—it's corn, cotton, sugar, or nothing—that is so far as the raw material is concerned. Corn juice has been found in the cotton belt, and there are several well-authenticated cases where it has got down as low as the sugar belt—indeed it has gone down below many other belts, sometimes straight, sometimes in the seductive form of a cocktail. My experience, however, is limited. Cotton has gone up and down, and it's a singular fact that we found numerous aboriginal savages as low down as Honduras and Guatemala wearing cotton shirts and nothing else, others were clothed in the same manner without the shirts.

The waterway passing through these broad areas of corn, cotton and sugar, is a lawless, relentless, resistless surge of liquid mud, contributing nothing in itself to the enjoyment or pleasure of the voyager upon its broad yellow bosom. The lower Mississippi is a monster, which has ever defied, and probably always will defy, man's efforts to restrain it and keep it within bounds. Its channel is constantly shifting, invariably tending westward. In time—if time lasts long enough—the Mississippi Valley will be somewhere in the Pacific Ocean, and the future canoer will then miss the corn, cotton and sugar fringe of the river banks.

The winds in the Mississippi Valley are as regular as grandfather's clock. They have no occasion for weather vanes in that section, as it always blows one way—up stream (bear in mind we were going down). The river is very crooked, at times doubling upon itself for miles, but, as I said, and I'll produce our log to substantiate it, that the wind was always dead ahead regardless of bends, creeks, turns, angles or sinuosities. This wind usually sets out in the Gulf of Mexico as an innocent zephyr, freighted with the fragrance of the tropics; as it approaches the confines of civilization it grows as formal and stiff as a Presbyterian elder; later on, that is to say higher up, it develops into masses of frigid ozone, and finally terminates in that exclusively northern production known as a cyclone. On the occasion of our cruise, however, a special dispensation seems to have been ordered, and we had more cyclone than zephyr—by a very large majority.

With these few scientific preliminaries I will proceed to unfold the tale of our midwinter cruise.

There were two of us, a pair, not a very good pair to draw to, as each one of the pair had a skin full of aches and pains, a choice collection of rheumatics and neuralgia, and the diversity of opinion—medical, expert and otherwise—as to the result of our venture was confusing; but we left the croakers and our good clothes behind, donned a suit of butternut duck, stepped into our 14ft. craft, 30in. beam, at Cincinnati on a raw Thanksgiving morning, paddled out into the swift ugly stream, with the dull November clouds and a dense veil of black smoke overhead, waved a last farewell to our friends on shore, and drifted under the great bridge with New Orleans 1500 miles away. Thirty-four days after, on New Years morning, we landed cold, wet, muddy, and hungry at the Crescent City. We left Cincinnati as I said on Thanksgiving morning, and not being inured to work, nor quite free from bone aches, made short runs and early camps, averaging about 30 miles between 8 A. M. and 4 to 4:30 P. M. Later on a steady pull of 50 miles and even more in 10 hours was an easy run, made without great exertion or weariness; and as our canoes were sharp fore and aft, and drew but four inches, it can be seen that the current was of but little assistance. It was in fact a steady paddle, as in all the distance we did not have to exceed 24 hours of fair sailing breeze.

The constant raising and falling of the waters of the two great rivers renders the shore in many places entirely inaccessible, and we invariably experienced difficulty in finding a camping ground. On this account and for other reasons, these streams are not desirable to cruise upon; to this fact may, at least in a measure, be attributed the entire absence of craft devoted to recreation or pleasure.

To follow the log closely would consume more time than is allotted and I will therefore select a few pages at random—reserving the balance, together with wise deductions and philosophical moralizing, for some possible future occasion. At the outset, by an implied understanding, the light weight assumed charge of the culinary department, while the other discharged the onerous duties of chambermaid, and in a few days our respective duties were so evenly balanced that the evening meal, (we had but two) would be served at the same moment that the pitching of the tent and making of the bed was completed—the same rule held good at the breakfast. This had its disadvantages as well as its advantages, as on at least one notable occasion a simultaneous demand for the single hatchet in the outfit bred an incipient riot in the camp. The cook had hacked out a section of cuticle while chopping drift wood; had raised a lively blister in a vain endeavor to rescue a toppling coffee pot—the contents of which had extinguished the fire; had upset the lantern, leaving us inlings in darkness, and set his rubber quad foot in a skillet of frying bacon. The chambermaid had been equally as enterprising—tent cords were in a snarl, tent pins were refractory, blankets were mislaid and—"Where's that hatchet" came like an angel whisper simultaneously from both sides of the camp. The elements seemed to grasp the situation and a hush fell on all things. "Where's that hatchet?" This occurred near Posey county, Indiana, and as one of its citizens had informed us that Posey county was the wickedest corner of the American Union we felt somewhat relieved, hoping that our little outbreak would be overlooked in the general and universal wickedness.

Our first bill of fare may be taken as an example of all, there being an occasional variation of fresh meat, devilled ham, lobster, and other canned edibles—it was this—fried bacon, potatoes and hard tack fried in bacon fat, baked beans, pickled onions, coffee, toothpicks, and a pipe. For our stomach's sake a hot punch on retiring, and for several evenings at the outset, on earnest recommendation, three grains of quinine. Writing up the log finished the day and by 8 o'clock (rarely later) we had turned in.

We were at first inclined to be a trifle fresh with the homespun, butternut clad natives, but that soon wore off, as we began to fully realize that our rather unique costume gave us at least an appearance of being no better than we should be. The first stab was administered the second day out at Sugar Creek, 62 miles below Cincinnati—we had pulled into the creek, made a landing, and were preparing to go into camp; when there appeared on the bridge spanning the creek a frowsy headed damsel, a sort of symphony in red hair, red face and red dress. This figure silhouetted against the setting sun, which was ablaze in a glory of red clouds, stirred the poetic youngster and in his mildest voice he said, "Fair maid, can you give us our bearings, indicate to us the particular section of fairyland we are in?" The maid replied, "You must think you're smart, don't you, but you aint." "No, but tell us where we are," in a milder tone. "Yes, but I shan't, and if you don't get out I'll set dad's dog on you." The conversation was dropped, as dad's dog was an unknown quantity that we had no use for just then.

Some days after we had an experience somewhat similar, but with a more agreeable sequence; there wasn't any prospective dog this time. We had pulled out of Louisville at 2 o'clock, made the dash over the falls of the Ohio, of which more anon, and having caught some dampness in the operation, concluded to go into camp under a roof, and the town of Bridgeport, Ind., 12 miles below Louisville, was determined on. Our guide-book informed us that Bridgeport was a town of 200 inhabitants, where boat building was carried on quite extensively. We were skirting along the Kentucky shore, with an eye to windward to discover this enterprising town when a nondescript craft, a cross between a Chinese junk and a threshing machine, hove in sight near the other shore; a ferryboat propelled by two horses—that is to say an assortment of bone and horse hide, tramping in a circle on the main deck and thus turning two spavined wheels. The crew consisted of father and son, both fitted to their vocation and surroundings.

Having sized up the craft we hailed the master—"Ahoy stranger, where's Bridgeport?"

"If you were here you would be there," came the somewhat paradoxical answer.

We got there. "Can we find a place here to put up over night?" was our next query as we clambered on deck. The modern Charon eyed us closely for a moment, sized up our brown physiognomies and our butternut togs and then knocked us over with, "Well, I don't know about that. What be you any way—chicken thieves?"

Slipping out of our uniforms, our shore clothes being underneath, we had no difficulty in satisfying his scruples and Mr. Ned Smith, the ferry-man, housed us in his snug little cottage, half a mile back from the landing, gave us a supper and a breakfast, and in company with the entire family escorted us to the canoes in the morning and waved us *bon jour*.

Our host's family consisted of himself, his wife, four strapping sons, a buxom daughter and a pretty visiting niece from Canada. The most enjoyable feature of a pleasant evening in this goodly company was the host's account of himself. An Irish immigrant, married soon after arriving, drifted to New Orleans, got scared at sin and wickedness of the city, declared his conviction that the thin crust of dirt on which the city was built would some day break up, started north on a steamboat, froze in at Bridgeport, disembarked (this was in 1850), found the whiskey was good, cheap and plenty, and stayed. I would like, had I time, to pay a tribute to this good-natured, jolly, happy-go-lucky son of the old sod for his hospitality, but may only say that the memory of our sojourn under his roof is an abiding one, even though he did inject bitterness into our souls by suggesting chicken thievery. Faith in our guide book was rudely shaken by Smith's assertion that the town never had over 50 inhabitants, he never knew of a boat having been built there, and as to Blakesville, 6 miles below, as the guide book had it, he never heard of the place.

We pulled into Louisville on Dec. 2, the last 8 miles of a long day's paddle being made in the darkness. I can do no better than quote literally from the log.

"Sun had set in a crimson glory flecked with shimmering gold, and the pale crescent moon gazed down coldly and calmly on our struggles with the paddles, the evening star gleamed brightly in the lingering streak of color in the west, and a thin veil of murky smoke floated across the horizon from the chimneys of Louisville. The color faded from the sky, giving place to the cold blue of night, with it went the many ever changing hues of the water; deep shadows gathered on all sides, taking upon themselves weird and ghostlike forms. The tower and twin smokestacks of the water works stood as tall, grim, silent sentinels over the waste of waters; the sound of the flood tumbling over the falls came floating up from below like the echo of an endless chant. It was a lonesome stretch with, however, enough of poetic charm to kill monotomy, while the uncertainty as to our proximity to the falls gave some zest to the situation. We passed through a shute behind an island, encountered a forest of snags and a maze of coal barges; edged up near shore, not knowing but that we might at any moment be caught in the rapids and hurried into the falls. A blue light ahead became an unknown but welcome beacon."

"Hello! Boat ahoy! Will you please show us a light and give us a hand to make a landing?"

"Aye, aye. Are you the canoers from Cleveland?" came the unexpected but welcome reply.

That night and the next day we were the guests of Captain Wm. M. Devan, of the Louisville Life Saving Station, and right royally did he entertain us."

Among the mail received at this point was a letter from Dr. Neide, Secretary of the American Canoe Association, who had gone over the falls in a much larger boat than ours the year previous, advising us not to attempt it. Captain Devan also urged our going through the canal. But it was not to be thought of. Ours were the smallest craft in which the jump had been attempted. The stage of the river was 6ft. 1in., giving a fall of 28ft. in about a mile and a half, through a tortuous channel flanked by great masses of rock, against and around which the water dashed and eddied and swirled in a wild and boister on fury. We started from the Life Saving Station at 2 o'clock in the afternoon, with a lowering sky overhead and a cold raw breeze ahead. Captain Devan preceded us in his large lifeboat, manned by four lusty oarsmen. We followed in his wake, with instructions to obey his word or motion after getting into the whirl.

Paddling out into the stream we got our first view of the falls. It had a ticklish look, but we were in for it and with a swish we were into it. This is what the log says:

"Hatches were battened tight, every nerve was at concert pitch, the trusty paddle was tightly held, prepared for any possible emergency that flood or rock might bring. With a rush the Cuyahoga plunged into the surge, the spray tumbling over the forward deck and into my face. On the starboard quarter twenty feet away the City of Cleveland was dashing ahead in gallant style, and beyond was the life-boat with Captain Devan standing up shouting his quick commands.

"Starboard—Port—Steady."

Then there came a moment when neither the Commodore nor the Captain had any interest for me. Either Captain Devan had given his command too late, or I had been too slow to obey, and, caught in the eddy, I was being carried up stream at the rate of about 7,000 knots a minute, so far as I was able to calculate the time.

"Come about, come about;" shouted the Captain, in a voice to resurrect the dead.

Well I was working the lee end of my paddle over the port rail of that obstinate, self willed, measly Racine canoe with a zeal that was simply frantic, but the brass bound nose of the crazy craft kept a point up stream and sizzled and cavorted over the foam as though seven devils were after her. Now I leave it to any reasonable man if, under such circumstances, the innocent victim was called upon to submit to being yelled at to "Come about."

I recalled a large and choice collection of miscellaneous profanity which would have fitted the occasion, but had neither time nor energy to spare to fire it off. Had I done so I think that good-natured but unreasonable life-saver would have shrivelled away into some diaphanous nowhere and been heard of no more.

"I never brought that canoe about at all, and I suppose if it had not been for an accommodating back action eddy, I should still be going up stream to the music of a loud and sonorous "Come about." It makes me tired to think of that pull.

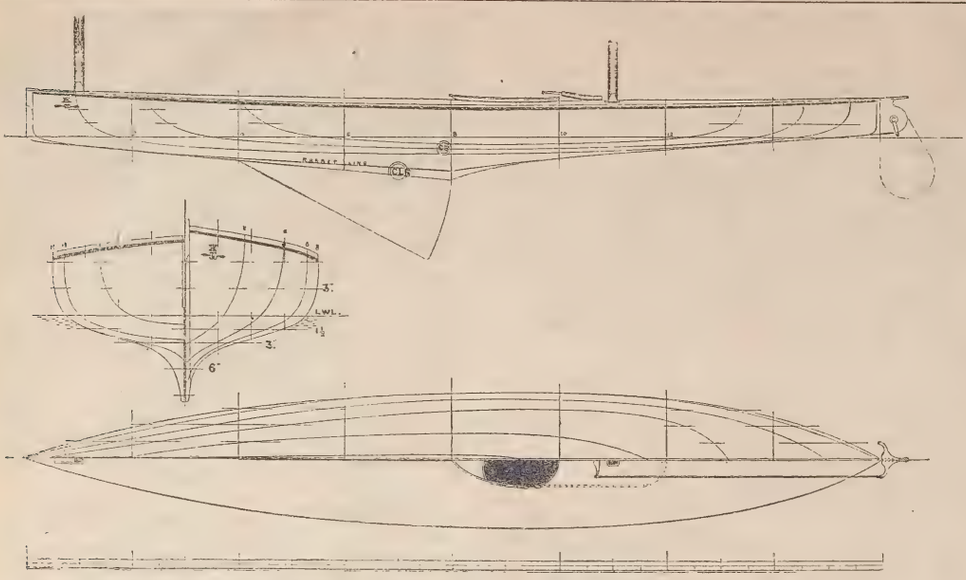
After I got about and went scurrying down stream again I discovered the City of Cleveland had also gone on a tangent, making Dexter time towards a breaker, big enough and hungry enough to swallow an entire American navy. Holy Smoke! how that cedar shell did plow through the water, but there was a bunch or so of iron muscle in that cockpit, and the muscle conquered, not however without catching a tub full of that breaker."

Days followed days, some cold, some warm, some dry, some wet, and each day brought its incidents of pleasure or hardship. The canoer cannot be sociable en route, as it is impossible for any two paddlers to remain for any length of time within speaking distance. For hours we were not only out of speaking distance but out of sight, and yet at no time was there a sense of lonesomeness. Dull and uninteresting as the river and country is, there was always some feature or circumstance to relieve the monotony.

Probably the nearest approach to the lonesome feeling during the cruise was experienced in the 50 miles run from Paducah to Cairo made Dec. 13. We had been most hospitably entertained at the former place by Captain Godey and other gentlemen, all of whom and the usual complement of small boys escorted us to the landing to see us on board.

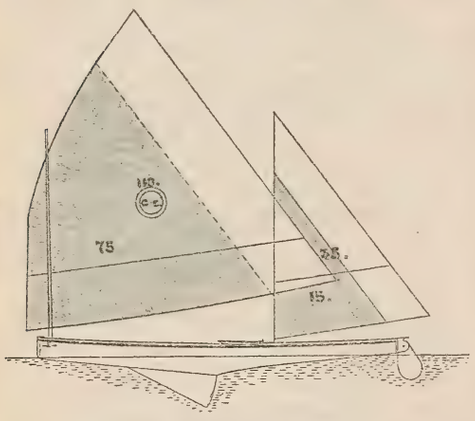
The morning was raw and cold, and very soon a drizzling rain set in which continued uninterruptedly. Before noon a semi-darkness followed, which shut out from view every animate and inanimate thing beyond a radius of ten feet.

We had agreed to make Cairo. We made it, but despite tight fitting hatches, rubber coats, hats, boots and gloves we were soused to the skin, soaked to the marrow, but as dry as tinder inside. It was a long, dreary, solitary, moist, uncomfortable, never to be forgotten day of dip and paddle, drip and drizzle. Even the consolation of a pipe or cheroot was denied us as not a spark would live in the all permeating moisture.



It will forever remain a question as to which of us arrived at Cairo first, but there never can be any question as to who was the most thoroughly soaked, as no mortal could be more soaked than either or both, not barring the chap who on another notable occasion observed to Noah that he didn't believe 'twould be much of a shower anyway.

It may not be entirely uninteresting at this point, where we leave the Ohio and dip into the Mississippi, to introduce you to captain and crew and describe the outfit. It will hardly be worth while to go into the details of size, features, weight and antecedents of the two individuals, who constituted all hands; but a word about their twin make up is worth handing down to prosterity. It was simple—a baggy roundabout buttoned to a pair of baggier pantaloons, both made of butternut duck; simple in material and construction, but, my sympathetic friends, those roundabouts and pants developed such improbable possibilities, suggested such thoughts, aroused such fears and hopes, and created such divergent and irreconcilable moods of hilarity and despondency, as to keep our minds in a constantly unsettled state. We could never be certain as to what new and unsuspected shape those garments might take upon themselves. The wrinkles and kinks were a sight to behold in their calmest moments, but when they took a notion it was a picnic. McGinty was nowhere in his best suit. There were hills and valleys, yes, mountain tops and canyons, of butternut duck, not always in the same place, but in any place, and in the most unlikely places.



The scribe in his log says, "A great fear took possession of us, that we might grow to fit those duck suits. That as the suit would not conform to our bodies, our bodies might in an unguarded moment mould themselves to the suit. These suits, besides winning for us the title of chicken thieves at Bridgeport, caused us to be mistaken for raftsmen at Paducah, where we could get no civil treatment from the wharfmaster until the togs were shed, and at Cairo "No river pirates could pull their skiffs on to the wharfboat," but the gentlemen canoers from Cleveland were accorded every courtesy."

[TO BE CONTINUED.]

AMERICAN Y. C.—Arrangements have been made by Com. Watt for a steamer between Milton Point and New York, East 24th St. She will leave Milton Point at 8 A. M., reaching New York at 9:30, returning in the afternoon.

DESIGN FOR RACING CANOE UNDER ROYAL C. C. RULES.

SAIL PLAN—RACING CANOE.

A NEW RACING CANOE.

WE reproduce from the *Yachtsman* the accompanying design for a racing canoe, the sail plan being disposed of according to the rule and practice in England, the mainsail much larger than the mizen. The hull which is to carry this sail plan is cut away aft accordingly.

HARTFORD C. C.

THE annual reunion and dinner of the H. C. C. took place at The Heublein on Jan. 23. The tables were handsomely decorated with the colors of the A. C. A. and the Hartford, Mohican and Springfield clubs. By the side of each plate was a small, miniature white satin flag, bearing the sailing totem of the club—a red star and cre cent. The menu was printed on white satin, headed by the club totem. The banquet was served at 8 P. M., and thirty six members and guests sat down to one of the appetizing spreads for which this hostelry is famous. The following prominent canoemen were guests of the club: Com. Winne and W. Howard Brown, of Albany; F. A. Nickerson, A. R. Patterson, E. C. Knappe and Mr. Parsons, of the Springfield club were also present. Patterson's Submarine Band, consisting of banjos, guitars and mandolins, did good work during the evening in enlivening the assembly. Pres. Parnell, in a neat and pithy speech, introduced Com. Winne, who did his duty by the Association in a very effective speech, at the same time expressing his pleasure at being present. By special request the "Controlling Influences of Drink" and "McFluffy's Canoe" were delightfully rendered. The Com. was elected an honorary member of the H. C. C. and presented with a silk flag of this club. Mr. Nickerson gave some ideas of canoeing and camping at the annual meets; the same "Old Nick." Mr. Brown was called upon, and as usual was most interesting in his remarks. The dinner was a great success throughout, and will be long remembered as a most pleasant affair. Though the Commodore's stay in Hartford was necessarily short, it is very apparent already that his visit did much to strengthen and enlarge the firm hold which the Association has in this vicinity.

NARRAGANSETT BOAT CLUB.—Providence, R. I., Jan. 20.—*Editor Forest and Stream:* At the annual meeting of this club on Jan. 12 the following officers were elected for the ensuing year: Board of Governors: Pres., Hiram Kendall; Vice-Pres., John Shepard, Jr.; Sec'y, Chas. E. Hudson; Treas., Chas. W. Rhodes; Capt., Chas. H. Gurney; Lieut., Frank A. Sheldon; Governors, James S. Aborn, Alonzo E. Flint, Stephen Waterman; Auditor, Frank Bowen. The past year has been one of unequaled success notwithstanding the boating season has been short owing to the lateness in completing our new boat house (built to replace the old one destroyed by fire on Dec. 6, 1890). Our membership has increased very much, owing greatly to the new house and elegantly equipped navy; also to the easy accommodations for reaching there, only ten minutes ride from the center of the city. Our prospects are of the brightest for the next season. Assuring you of the high appreciation we have of your valued paper, I am, CHAS. E. HUDSON, Sec'y.

MOHICAN C. C.—The annual meeting of the Mohican C. C. formed the first part of a very pleasant campfire of the club on Jan. 16 at the residence of Mr. Howard Brown. The following officers were elected: Capt., C. W. Winné; Mate, Wm. Martin; Purser, W. H. Hackett; member of Executive Com., Harry Miller. The year has been a very successful one for the Turtles, the membership of the club has increased, the finances are in a very satisfactory condition, the purser's report showing an income of $1,368.04 and an expenditure of $1,211.37, leaving a good balance, and the club made a most creditable showing at the A. C. A. meet. The members are already at work in preparation for a large representation next August, and they are determined that the club shall do credit to its captain, Commodore Winné.

WESTERN C. A.—The Secretary-Treasurer of the W. C. A., Mr. O. A. Woodruff, Dayton, O., will be glad to hear of canoeists not members of the W. C. A., or who have not attended the meets; especially those in the vicinity of the coming camp in Wisconsin. He will furnish all information in regard to membership, transportation, etc.

AN ANCIENT BRITISH CANOE.—A boatman named Swabey, living at East Molesey, has just found in the bed of the Thames at Hampton Court what appears to be a relic of early British times—an ancient British canoe, made of the trunk of a tree, the interior having been burned or scooped out.

A. C. A. MEMBERSHIP.—Atlantic Division: Glentworth R. Butler, M.D.; C. R. Richards.

GOSSOON, cutter, Messrs. Adams' 40-footer, has been sold by Stewart & Binney to C. A. Morse, owner of the 30-footer Saracen No. 2, who will use her for cruising.

PURITAN C. C.—We have received a very tempting invitation to the annual dinner of the Puritan C. C. on Jan. 30.

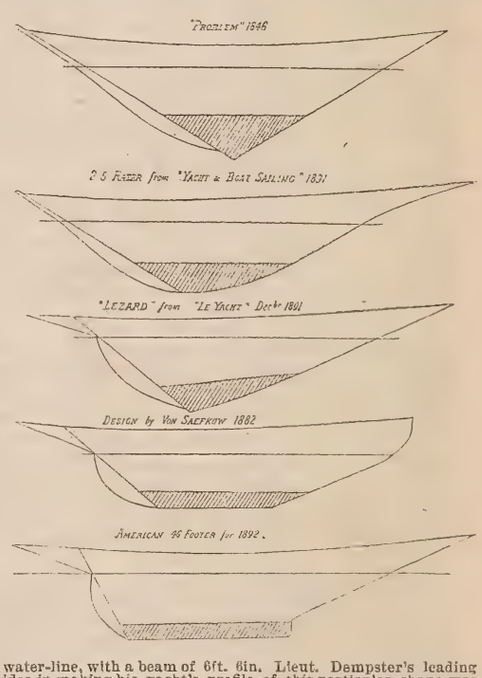
Yachting.

Small Yachts. By C. P. Kunhardt. Price $10. Steam Yachts and Launches. By C. P. Kunhardt. Price $5. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

SIZE VS. QUALITY.—A striking instance of that worship of mere size, which has worked such injury to yachting in the past, is found in the recent action of the Nominating Committee of the New York Y. C. in omitting the name of Vice-Commodore E. D. Morgan from the list of nominees. Mr. Morgan is to-day one of the most conspicuous figures in American yachting, not merely as the owner of the most noted yacht since the days of the America, but as the best representative of the younger and more active racing element in the club. He has done more within the past five years to promote the designing, building and racing of yachts than any three other yachtsmen in the world, having in commission through the whole of each season a large private fleet of steam craft and sailing yachts. To him is due at least a part of the credit for the production of Gloriana, a yacht whose fame exceeds even the famous Burgess trio of cup defenders, and which is probably the fastest yacht for her size afloat to-day. The omission of Vice-Commodore Morgan's name after he has filled the office creditably for a year, and with most of the old officers renominated, is emphasized by the fact that his proposed successor, though an old and popular member of the club, is in no way prominent as a representative of racing, cruising or other interests, but was chosen because he is a part owner of one of the older schooners. The reason given for the change is that "by an unwritten law of the club" the commodore must be a steam yacht owner and the vice-commodore a schooner owner. When elected last year Mr. Morgan was the owner of the huge schooner Constellation, a yacht noted chiefly if not entirely for her size, and it now appears that by the sale of this craft he has rendered himself ineligible for re-election, in spite of his present ownership of Gloriana. Two logical conclusions may be drawn from these facts, that the club elects flagships rather than flag officers, and that its unwritten laws are as badly in need of amendment as some of the written ones. The sequel to the action of the Nominating Committee will not be known until the election on Feb. 4, as an opposition ticket, containing the names of Vice-Commodore Morgan and Rear Commodore W. Butler Duncan, Jr., has been posted in the club house.

MINIMUM LIMITS TO BALLAST.—Among the many odd proposals for the regulation of building and racing that have been made within the past year in England, one of the most unreasonable, as well as one of the latest, is to the effect that every yacht must carry a weight of metal ballast equal to one ton for each half unit of rating; thus a 20-rater, such as Jessica, would be compelled to carry 10 tons, a 2½-rater, such as Smuggler or Needle, would be compelled to carry at least 1¼ tons of lead. While, in the event of the proposal being adopted, the limit might be placed so low as to work no harm, the principle involved is a wrong one; as it can hardly be disputed that the ideal yacht is the one which carries the least possible weight of ballast consistent with safety and speed. While we would never advocate the taxing of ballast at the same time the designer should be left perfectly free to produce the best possible craft with the least possible ballast. It is possible that some limitations may be necessary to meet the case which has given rise to this curious proposal, but, whatever form they may take, nothing but harm can come from a rule compelling the general use of large proportions of ballast.

MR. BURGESS AND HIS WORK.—On Jan. 12 Mr. W. E. Waterhouse was present at a meeting of the Philadelphia Y. C. and delivered a very interesting talk on the subject of Mr. Burgess and his work as a designer, including in his remarks much of a practical nature concerning designing and construction.



INSTRUCTION IN NAVAL ARCHITECTURE.—A correspondent informs us that the faculty of the Massachusetts Institute of Technology has this year added an elective course in naval architecture to the fourth year studies in the mechanical course.

THE "GLORIANA FISHERMAN."—From all accounts, the new fisherman Jas. S. Steele, known as the "Gloriana Fisherman" from her peculiar model, has proved a great success, although not ballasted in a way to do justice to her model. Her amateur designer, Mr. T. F. McManus, has every reason to feel proud of her.

MODERN SHEERPLANS.

WHILE the midship is now, as it always has been, the most important factor in yacht designing, it has been thrown somewhat into the shade of late, while fashion at least, and let us hope something more substantial in the way of science and common sense, has been busy with the sheer plan and lateral plane. For many years under the influence of the tonnage rule in England and various length or bulk rules in America, the lateral plane, and in fact the entire sheer plan, remained almost unchanged, while the modifications of the midship sections were innumerable. From Musquito of 1848 to Vanessa in 1873 and Maggie in 1878, and even later boats up to 1885, the sheer, overhang and keel contour showed no marked differences; and in the same way on this side the sloops and schooners of 1880 had the identical snub ends, rank sheer, straight keel and plumb sternpost of 1870 or even 1860. The changes that were but gradual between 1880 and 1885, on both sides of the Atlantic, have become rapid and extreme to a startling degree within three years, the triangular outline indicated in Thistle and realized in Minerva and Yama having been followed by the abnormal outlines of Gloriana, the Rogers boat, Dilemma and the British yachts of small rating; while even more fantastic shapes are now on paper and may be seen in wood and lead by next June. We take from the *Field* the following interesting summary of the history of the changes of sheer plan within the last fifty years:

"The attempts to introduce a very raking stem or keel forty years ago did not generally succeed, although we had such notable successes as America, Kitten and Lulworth. Indeed, the deep gripe or fore-foot seemed to have so many advantages that the square toe was fashionable until about a decade ago. The great depth given to the new style of length-class boat about 1881, and the now familiar teachings on surface friction and the repeated enunciation of the fact that, if a vessel's head can quickly fall off the wind, it can as quickly come to, had a great deal to do with the gradual merging of the keel and stem into a straight line. It is curious, however, to reflect that the notion of this existed in the inventive brain of the late Lieutenant Dempster, of the Indian Navy, and in 1846 he actually built himself a yacht 21 ft. on the water-line which literally had no keel, as keels were then understood. He said he took the idea from the 'grabs' and dhows of the Gulf of Arabia and Indian Archipelago, the only difference between his vessel, the Problem, and the eastern craft, being that he 'made the sternpost rake at exactly the same angle as the stem.' The yacht was built of iron, and had lead run into the lower part of her hull. Her mid-section was much the same as that of a modern 2.5-rater, and she was 21ft. on the water-line, with a beam of 6ft. 6in. Lieut. Dempster's leading idea in making his yacht's profile of this particular shape was thus described by himself: 'Suppose that the angular hull is lying over at an angle of 30deg., then there is more length and body of the vessel immersed to leeward than there is to windward, and the fluid acting powerfully upon a weather helm has a tendency to press her bodily to windward.' Lieutenant Demoster had thus something more than a mere glimmering of what actually takes place when a vessel is by the wind and heeled at a considerable angle; and we might say that the subject is worked out with more exactness in 'Yacht Architecture,' pages 72 and 76.

"The latest form of the triangular profile is shown by the 2.5 rater and the French yacht Lezard.

"The raking stem and horizontal keel are very ancient arrangements. They are to be met with in old Scandinavian vessels and in men-of-war of the fifteenth and sixteenth centuries. Von Saefkow, of the German navy, adopted it for the numerous yachts he designed between 1875 and 1883, and we republish the profile of a yacht he sent us in 1882. This profile is now being reproduced by American designers, and it may be said that the 30 footer Bonina had a similar sort of keel in 1881—much modified in form, but with a horizontal lead in view. The American 46-footer building for Mr. Archibald Rogers by Herreshoff & Co., of Bristol, Rhode Island, is the most advanced type of the horizontal keel and raking stem, and a career is anticipated for her equal to that of the Gloriana. The main advantages of this form of profile are that the weight of metal keel can be got very much lower than it can with a longitudinal section, shaped like that of the modern British 'rater.' Also, in a disturbed sea, vessels with a straight length of keel are much steadier on their helm, and at the same time are smart enough to work short tacks, even with a Problem, inasmuch as what they lose in actual quickness in flying round they gain by not having their way so much deadened—due to the less sudden gyration.

"A curious fact in connection with the very raking stem is that vessels which have them are less prone to run off their helm than vessels with a deep fore-foot or gripe.

"The overhanging stem came in soon after measuring length on deck was abolished, and it now pretty well equals the amount of overhang given to the Bombay boats and to the Problem. This excessive overhang fore and aft is, we are afraid, credited with virtues beyond what it possesses; but there is no doubt whatever that it may, under certain conditions, add to the power of the vessel which has it. In still water and at low speeds, the water-line would not be lengthened; but at high speeds it would be, as the quarter wave crest would pretty nearly take in the whole counter. As this wave crest is a "follower" it exerts some forward pressure on the counter which the vessel would not experience if she were cut off short at the sternpost, and this can be taken as equivalent to a reduction of head resistance. The overhanging counter and bow (the latter in a smaller degree) may also assist stability under certain conditions, but not quite in the manner sometimes claimed for it. If a yacht is much heeled and sailing at a high rate of speed, a wave hollow is formed both to windward and to leeward at about amidships. The one to leeward more seriously affects stability; and no doubt a large portion of the diminished power is given back by the wave crest under the counter and on the lee bow; and this recuperation does not exist to the same extent in a plumb-stemmed and square-sterned vessel. The other advantages justly claimed for the overhangs are greater deck room and dryness in a sea way. The disadvantages for the racing yacht are the great weight of the counter and the overhanging bow. This adds to the weight or displacement of the vessel, and also raises her centre of gravity, or, what is the same thing, diminishes her stability. Whether the advantages outweigh the disadvantages is a moot point with many; but we are inclined to regard the overhangs, if untaxed, with most favor,

Also a yacht with heavy overhangs will be generally more strongly built, and will necessarily be of greater weight—two qualities which are getting rather deficient in the modern racing boat with plumb stem and square stern. As a set-off against this appreciation it can be stated with unerring certainty that, if the overhangs were included in the length for rating, they would instantly disappear, as not worth the tax. It was the same under the old tonnage rules, and would be the same again."

CRUISING SPOONBILLS.

Editor Forest and Stream:

Mr. Wicksteed's letter on small cruisers in your issue of Jan. 14, contains some interesting suggestions relative to single-handers, but his comments on my letter relating to the spoonbills, which you published on Dec. 31, shows that he mistakes my position. I endeavored to make it clear that I was writing about a small and compact sportsman's cruiser, and deeply regret that he should have construed my writing as a criticism on the admirable little single-hander whose lines he has given in your issue of Dec. 17. If Mr. Wicksteed is as handy with rod and gun and as well versed in campcraft as he is with the designer's and builder's tools, he surely must appreciate my discrimination. It is more pleasurable for me to indorse the work of brother cruisers than to hunt for defects, and let me say that I believe the boat he has designed will prove a source of pleasure, for I recall a delightful vacation spent some four years ago in a yawl rigged craft built on lines similar to those of the boat he is building.

The difficulty in writing about small cruisers and single-handers is enhanced by the variety of types and uses which the terms involve. I had selected a type of craft for the use of those who delight to hunt, fish and travel through the bays along our coast and over the inland lakes and waterways where both oars and sails can be used and rough water encountered as well as navigating shallows. For nearly a score of years I have annually spent a portion of the open season with rod and gun cruising and exploring in some sort of craft, while many winter evenings were devoted to the fascinations of designing and building, although maybe in an imperfect and amateurish manner. I may have neglected opportunities for observation and improvement, so that among my idiosyncrasies crops out a partiality for the type of boat exemplified in Moccasin for the purposes indicated. According to my lights, however, I find such a craft should embody: 1. Sufficient size to carry the cruiser and his camp duffle. 2. Ease and speed under both oars and sails. 3. Handiness on shore. 4. Handiness afloat. 5. Considerable initial stability. 6. Ability in any water where it will float. 7. Facility for transportation.

To better comprehend these requirements I have usually changed the common way of estimating s'ze on the water-line to the over-all measurement method, which is another heresy in the manual of the single-hander. Moccasin represents one of three different models of the spoonbill family that I have designed, and although larger than the requirements of one person demand, still while it will accommodate two persons and a dog with all the camp and cruising outfit, it can be easily handled on shore by one person. Dismantled it can be rowed or poled over grass clogged marsh, or its nose poked up narrow and winding streams tributary to more open water, while under sail it will ride a rough sea, and along smooth water skim like a bird. To add on the long taper overhang will increase its weight and size, and which reverses the rule in a craft where you do not restrict dimensions. It also reduces handiness on shore, prevents the drop rudder being hung on a well rockered skag, so essential in beaching, and serves no truly necessary purpose beyond the fashionable one of looks. It will to some extent diminish the spoonbill's ability and safety in taking the beach on the crest of a sea, by inducing too great ardency, and hamper the rudder in working clear from the bottom as the stern drops. It also prevents access to the rudder in many unpleasant or critical situations when speedily necessary during a voyage or hunting trip. In running before a strong wind and a high crested sea with a liberal sail spread, there is some care required in a boat having the beam and perpendicular bow of the spoonbill, to prevent taking a header; and may not the overhang increase the liability to some extent from a sharp or sudden lift at the stern which helps depress the bow already crowded by the sail pressure? A properly designed elliptical stern will rise easily to a following sea and escape danger from being seriously pooped or flooded in this craft and from which less danger is to be apprehended than getting lifted over endwise.

While the production of the overhang is a small matter to the experienced builder, yet it increases the cost and difficulty of construction over the narrow, elliptical transom, which is an item to the novice who essays to try his hand at building. Hence, from the reasons I have set forth and others not essential to enumerate at present, I am inclined to consider the cruising spoonbill handier without the addition of the overhang, and to favor its use on craft of different model and purposes.

Two prominent builders, one of New York and the other of Illinois, recognizing the ability of the rudder in small craft, have attempted to combine its use with the overhang. One has carried the skag to the end of the stern, while the other has left a recess or slit in the overhang for the rudder to house in. But neither has made the boat of a given capacity any handier on shore, which I consider important. I am obliged to say that Mr. Wicksteed's solution of the weed and rudder difficulty does not cover my view fully, as one who has got tangled in a grass patch will comprehend. The drop rudder properly hung on a rockered skag will perform wonders of its own accord, but I have seen drift rubbish and grass so choke up under the stern of the little cruiser as to interfere with the working of the blade, and had to go over the transom with my sleeve rolled up.

While recognizing the serviceability of the yawl and cat yawl rigs on comparatively longer and narrower boats, yet I have tried about every variety and form of rigging known to small craft on the spoonbills, and I still maintain the desirability of putting the canvas in some form of a single sail, but give preference to the balance lug as an easy sail in running and readily detachable from the mast. It is no disparagement to Mr. Wicksteed's craft to say it will not fill the requirements I have mentioned, no more than to compare a yacht or canoe or other famous type, for they have their proper uses and fill them satisfactorily. I am also frank to say that for a craft like his I believe the overhang to be extremely useful as well as ornamental, and well adapted to the purposes for which it is designed. For a short, light boat that can be readily handled on shore, it is not necessary nor desirable to have it riding at anchor in a heavy sea. As it is easily and speedily hauled up above the waves, your outfit can be kept dry and is more readily accessible than when tossing at moorings, and it can be more readily launched and boarded from the shore, thus doing away with a tender. How often does the sportsman cruiser appreciate this when he builds his campfire on shore or desires to take a run up the bank for a shot or to visit a neighboring locality. Hauled up thus with everything stored inside and hatch closed, and perhaps belayed to a tree to keep some vandal from casting it adrift, it is as safe and sure as a big Saratoga, and as ready for shipment by its own element as well as by wagon or rail.

If Mr. Wicksteed has never cruised in a spoonbill I trust he may some time enjoy an opportunity on the inland lakes of New York, where he can interview the lake trout, the bass and pike, and have a broil over hardwood coals; or else skim over the waters of Barnegat Bay; take a shot at duck, go crabbing or angle for salt water fish; or perchance cruise, shoot and fish for a few weeks in the bays and bayous of Florida or Louisiana in one of the handy little craft. Since I built Moccasin, business demands have necessitated my removal from old haunts in the East, and up in the Northwest my cruising is confined to deep water craft or in a river canoe. But I know of a stretch of water where the fishing is good and shooting ditto, where I hope the coming summer to launch a new spoonbill which, while differing somewhat in minor matters from Moccasin, yet will embrace most of her best features. CAYUGA.

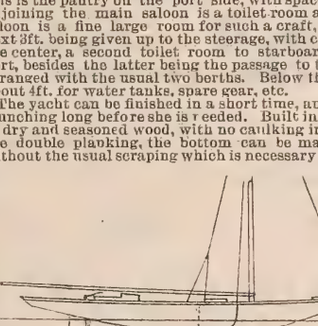
COM. CROWNINSHIELD.—The death is announced by cable of Mr. B. W. Crowninshield, Commodore of the Corinthian Y. C., of Marblehead, and one of the leaders in yachting about Boston and Marblehead. Com. Crowninshield, who has always been a warm friend of the smaller yachts and of Corinthian sailing, has been traveling for some time in Europe for his health. He has owned the 40-footer Tomahawk for two years.

SIPPICAN Y. C., Marion, Mass.—Officers for 1892: Com., J. Gorham Palfrey; Vice-Com., Bruce Clark; Sec.-Treas., G. Griswold Van Rensselaer; Meas., Wm. H. Davis; Auditor, J. S. Whiting. Board of Directors, J. Gorham Palfrey, Bruce Clark, J. Henry Clark, Jr., G. G. Van Rensselaer, Royal S. Ryder, Eben Holmes. Regatta Committee, J. Gorham Palfrey, G. G. Van Rensselaer, Wm. H. Davis.

JACK O'LANTHORNE.—This 24½-rater, whose lines were published in the FOREST AND STREAM of July 29, owned by Capt. Henry E. Bayly, made five starts last season, winning four firsts and one second prizes, the value being £26.

WADENA.—The new steam yacht Wadena, which sailed from New York on Jan. 9 for Nassau, has not yet been reported.

BUILDING AT BRISTOL.



THOUGH the Herreshoff shops are by no means taxed to their full capacity, the floors of the building shops are well covered with racing craft of novel form and more than usual interest. The Rogers 46-footer, not yet named, is practically completed, the outside being ready for the final coat of paint, the deck laid, caulked and seams payed, the bulwarks on, and the interior work well advanced. The exact dimensions have not been made public; in fact, but few authentic figures concerning Gloriana are available, so that it is difficult to compare the two, but the new boat has about the same beam and probably about 11ft. draft, or a little more than Gloriana, while her designed waterline will be nearer 46ft. than 45ft.; Gloriana, by accident or design, having measured exactly 45ft. under the official tape line.

On this length, the forward sections and waterlines are even fuller and rounder than in Gloriana, and suggest strongly the bow of the new 5in keel craft for Mr. Morgan and for the Clyde. The outline of the stem above water is also different from Gloriana, hers being almost a straight line with just a suggestion of a hollow, while in the new boat the whole line, from the waterline up, is slightly convex, the upper part in particular showing quite a strong upward curvature. The effect conveyed to the eye is that the whole bow is fuller, and that while the actual length of overhang is about the same, the boat is still larger than Gloriana about and above the forward quarter of the waterline. The stern also shows a very round and full waterline, though the frames about the tuck are well hollowed out. The massive and heavy lead keel, a fine piece of solid casting, has been re-inforced by nine straps of 2in. brass on each side, let into the lead and the lower planking and well bolted, each strap being about 30in. long. The main keel bolts are heavy and of Tobin bronze, the straps being supplementary to the usual keel construction.

The deck is, both in appearance and for practical use, an improvement on the canvas-covered deck of Gloriana, being of 2½in. pine, laid fore and aft in the usual way, the seams being paid with Jeffreys marine glue, which is used liberally on all the new yachts in the shop. The rudder is of oak, with a bronze stock about 2in. in diameter through the rudder trunk. The chain-plates are on the frames inside the planking, there being no channels. The mast partner is a circle of angle steel, riveted to a steel plate, from which the deck diagonals radiate. The scantling is light throughout, but the workmanship and fastenings, as well as the disposition of the various members, is such as to secure ample strength.

The interior is handsomely finished in butternut, the planning being much the same as in Gloriana. With moderate beam, full fore and aft lines above water and the steel framing, there is a very large amount of space compared with the other boats of the 46ft. classs. The forecastle is long, light and roomy, extending a couple of feet abaft the mast; abaft it on the starboard side is the captain's room, about 6ft. 3in. long and of good size. Opposite to this is the pantry on the port side, with space for a passage, and adjoining the main saloon is a toilet room and w. c. The main saloon is a fine large room for such a craft, about 8ft. long, the next 3ft. being given up to the steerage, with companion ladder in the center, a second toilet room to starboard, and wardrobe to port, besides the latter being the passage to the after stateroom, arranged with the usual two berths. Below the floor is a depth of about 4ft. for water tanks, spare gear, etc.

The yacht can be finished in a short time, and will be ready for launching long before she is needed. Built in a warm shop, and of dry and seasoned wood, with no caulking in the close seams of the double planking, the bottom can be made ready for racing without the usual scraping which is necessary with puttied seams.

The new Morgan 35-footer is well advanced, the decks being laid and the joiner work partly in. The accompanying sketch we take from the Providence *Journal*. The yacht will be 52ft. over all, 35ft. l.w.l., about 8ft. beam, and about 2ft. depth of hull, with nearly 6ft. of steel fin, or over 7ft. 6in. total draft. The frames are all steamed and bent, of oak; the deck beams are also of oak, narrow and deep, and spaced but 9in. They and the frames are crossed by galvanized steel straps running diagonally. The deck is of ½in. pine, 2½in. wide, laid with a new ship lap, the two edges riveted together, leaving a seam for marine glue. The outside planking is a fine piece of work, all of mahogany, and will be varnished above the waterline. The fin is a plate of ⅞in. steel, about 16ft. 6in. on the upper and 8ft. 6in. on the lower edge, the lead cylinder being in two halves bolted to the plate. The headroom is of course limited, being about 4ft. under the flush deck, but fore and aft there is plenty of room for berths, galley, etc. The yacht will be rigged with a pole mast, bowsprit, staysail and jib. The rudder is of the peculiar shape shown. The 2½-rater for the Clyde is very similar, but only 25ft. on waterline and about 38ft. over all. The fin in this case will be of Tobin bronze.

The new steamer for the St. Lawrence River, the duplicate of the Katrina, is now nearly planked, the boat being built keel upward. The cruising steam yacht before described is still in the shop, as is the 25ft. cat for the Jersey coast. No other keels have been laid yet, though in addition to the 25-footer for Mr. H. Maitland Kersey, of New York, there is talk of one or two more of the 25 or 35-footers, and also of a 20-rater for England and possibly of a new high-speed steamer. In the machine shops a number of engines are under way, mostly for stock.

"PORT" AND "STARBOARD."

SINCE July 1, 1891, the old words of command for altering the helm, viz., "starboard" or "port," have been given up on board the ships of the North German Lloyds and the Hamburg-American Line, and the order "right" or "left" substituted.

It is difficult to break with old customs, and seamen in especial are conservative; it is therefore not a matter of wonder that many old sailors look with great disfavor upon this latest innovation. On board the steamers of the two great lines mentioned above; however, the change has been made obligatory and, according to a report forwarded to the directors by one of their oldest captains, who was himself opposed to the idea, has been attended with the happiest results.

As soon as the order "right" is given, the telegraph is moved to the right, the wheel is revolved to the right, the ship turns to the right, the rudder-indicator points right, the rudder itself moves right, and the steering-mark on the compass as well; and so *vice versa* when the order "left" is given. Nothing can be simpler, and no possibility of mistake can arise.

The objection has been raised that the new words of command are not international and therefore illegal. This statement, however, will not hold good, as both English and American pilots, in whom every one has confidence, have made no difficulties in using the new words of command when piloting the ships of the two before-mentioned companies.

Such special words of command as "luff" and "keep away" will naturally be retained when ships are under sail; but otherwise it is pretty certain that before long in the whole German merchant service "right" and "left" will be substituted for "starboard" and "port," as has already been done in the German Navy; and men returning from the latter will no longer have to unlearn what they have been taught on board the men-of-war.—*Nautical Magazine.*

LAKE ERIE.—On Jan. 19 a meeting of yachtsmen from lakes Erie and Huron was held at Detroit, the following yachtsmen being present: George W. Bills, Charles P. Curtis, Henry Tracy and Frank Lee, Ohio Y. C., of Toledo; S. L. Matthias, Joseph Hechburn, Toledo Y. C., George W. Gardner, Cleveland Y. C.; L. D. Miller, F. D. Whitney and Alex. McLeod, Michigan Y. C.; E. A. Davis, Ed. Bedigere, George Newberry and H. C. Kendall, Citizens' Yachting Ass'n, of Detroit; and L. G. Northrup and F. L. Bennett, Buffalo Y. C. George W. Bills was made chairman. Commodore Gardner moved that a club be formed to be called the "Lake Erie Yachting and Racing Association." Mr. Tracy moved to amend by calling it the "Inter-Lake Yachting and Racing Association." Mr. Miller moved that it be called the "Lake Corinthian Yachting Association," and that its membership be limited to amateurs. Commodore Gardner earnestly protested against excluding professionals. The Toledo people favored Detroit's idea of confining the organization to amateurs. Alex. McLeod moved as a substitute for all the name "The Lake and Straits Yachting Association." This substitute was supported by Commodore Gardner, and it was adopted unanimously. The club fee was fixed at $25 annually and assessments were prohibited except by unanimous consent of all clubs in the organization. The place or places for the annual meet will be determined by the managing board of the association, and no one city can be named for two successive regattas. It was decided to give money prizes and to have no entrance fee. These matters will be reported to the several clubs for ratification, and a constitution and by-laws drawn up accordingly. The new organization starts out with every prospect of success.

EXPERIMENTS WITH SHIP MODELS.—Messrs. Kelso & Co., of Glasgow, are at present engaged with scientific apparatus for an experimental tank for the Russian Government, pointing to the conclusion that the value and importance of results obtained from experiment with ship models are becoming to be more appreciated. The same firm, a number of years ago, supplied Messrs. Wm. Denny & Brothers, Dumbarton, with a similar apparatus. The Admiralty had previously adopted Mr. Froude's method and Messrs. Denny followed their example. Leading up to a similar order for the Italian Government, Messrs. Kelso fitted up one in the royal arsenal at Spezia. The dynamometer truck and the screw propeller truck apparatus now being made will be fitted up in St. Petersburg next year.—*Field.*

FALL RIVER Y. C. OFFICERS, 1892.—Com., D. J. Burdick; Vice-Com., Isaac H. Lawton; Rear Com., Charles L. Cummings; Sec'y, W. E. Blossom; Treas., C. E. D. Pierce; Meas., P. E. Borden. Directors: D. J. Burdick, Edward Shove, H. W. Tinkham, Hale Remington, Irving Cook. Committee on Membership: George B. Pierce, T. Haggerty, Andrew Borden, James F. Davenport, D. J. Burdick. Regatta Committee: Benjamin D. Briggs, Enoch Horsfield, Fred. B. Durfee, Fred. Waterman, Thomas W. Holbrook. Auditing Committee: D. J. Burdick, H. M. Tinkham, Edward Shove. The total membership of the club is 362.

A NEW 21-FOOTER.—Mr. W. P. Fowles, owner of Saladin and the two Saracens, will build a 21-footer, of 30ft. over all, 8ft. beam and 6ft. draft, for racing at Marblehead.

Answers to Correspondents.

L. W. W.—The rifle you name will suit the purpose; it has a reputation for accuracy.

F. H. B., Meriden, Conn.—For glass to inspect target address E. B. Meyrowitz, 295 Fourth avenue, New York. Rifle telescopes are made by L. M. Mogg, Marcellus, N. Y.

H. G. W., New Haven.—Bird lime is made of linseed oil boiled down until it becomes thick and glutinous. Boil it in an earthen pot and outdoors. Be sure that cover of pot is tight while the oil boils.

J. G. S., Brooklyn.—1. Who is considered the best all-round off-hand pistol shot in the world? 2. How long has the FOREST AND STREAM been published? Ans. 1. Walter Winans, of Brighton, England. 2. Since 1873.

"HEAD OF THE STURGEON RIVER."—Will some reader who is familiar with the fishing and hunting at the head of Sturgeon River, Alger county, Mich., give us information through the FOREST AND STREAM columns or send me their address.—C. H. BATES, Manistee Junction, Mich.

J. H. F., North Adams, Mass.—I note your reply to letter about the waters of Haystack Pond in Wilmington, Vt. You say that pickerel or pike would destroy trout, which is correct; but no fish of any kind are known to inhabit this pond. Ans. If there are no fish in the pond perhaps the trout and bass have starved. Why not introduce some minnows and landlocked smelt as food for the game fishes?

SUBSCRIBER, Watertown, N. Y.—Will some persons familiar with the matter please advise when, where and how to deposit trout fry to bring about best results? I understand the State Commissioners issue no instructions. Ans. Assuming that you have secured trout adapted to the waters of your region we note that brook trout have been distributed from February to May, though chiefly in March and April; lake trout from March to August; rainbows and brown trout in April and May. Lake trout are suitable only for deep, cold lakes of large size and well supplied with fish for their food. Applicants are usually advised to deposit all fish as near as possible to the head of the lake or stream, and liberate fry at night in order that they may find hiding places before most of their enemies begin to feed. It is now generally believed that yearlings are best suited for stocking because they are less liable to destruction than young fry and yield results more quickly.

P., Fredericksburg, Va.—1. I have constructed a pond of 2¾ acres in which I propose to place large-mouthed black bass. The pond is 10ft. deep in places, and contains no other fish except many thousands of minnows. I have procured with much difficulty ten bass from 8 to 9in. in length, and have put them in the pond. Can I hope with so few fish for a proper proportion of the sexes, and can I expect them to spawn next spring? The pond is fed with pure spring water. 2. Can you tell me where I can procure large-mouthed bass? Ans. 1. The probability is that a sufficient number of the two sexes are included among the bass you now have and we should expect to find some of them spawning next spring, say about the middle of May. The young fry will eat one another, and old fish devour the young, especially the large-mouthed bass. You must protect the young by partitioning off a small part of the pond with screens through which the young, but not the adults, can pass freely. 2. Perhaps Hon. W. J. Green, of Fayetteville, N. C., would send you some young bass from his preserves. Dr. S. P. Bartlett, Secretary Illinois Fish Commission, Quincy, Ill., can probably give you aid. The U. S. Fish Commission, Washington, has recently begun the distribution of this fish in the summer months. Henry Huddleston, Remington, Ohio, furnished some fair ones for the Cincinnati Exposition.

"WITH FLY-ROD AND CAMERA."

By EDWARD A. SAMUELS,

PRESIDENT OF THE MASSACHUSETTS FISH AND GAME PROTECTIVE ASSOCIATION.

This superb volume, in the preparation of which author and publishers have been long engaged, is now ready. Of the text, which relates chiefly to salmon fishing on the famous rivers of Canada, it is sufficient to say that it is from the pen of one who is a master of the angler's craft. The vivid pen-pictures of camp life and fisherman's luck are drawn with a firm hand. This is the work of no novice. From the first page to the last it is seen that the chapters have been written out of a full experience.

The illustrations are of a character fittingly to supplement the text. They are full-page reproductions, by a marvelously faithful half-tone photo-engraving process of Mr. Samuels's own invention, from photographic negatives made by the author for this work. They picture all the phases of Canadian salmon and trout fishing, with far-famed scenery and views of the quaint old towns through which fishermen pass on their way to the salmon streams.

The work has been prepared in the most luxurious style, printed on heavy plate paper, and elegantly bound in cloth and gold, with gilt top.

Size of page, 7x9½in.; 477 pages. Price $5.00. Sent postpaid.

IF NOT, WHY NOT?

Have you seen the CHUBB Catalogue of FISHING TACKLE for 1892?
If Not, Why Not?
This Catalogue contains 96 pages, devoted entirely to fishing. It describes and illustrates Fishing Tackle of *to-day*. It has Two Lithographic Plates of Eight-Strip Split Bamboo and Lancewood Rods, in seven colors. These have been pronounced by prominent anglers to be elegant, and to mark a new era in illustrating Fishing Rods.
It also contains eight plates, or over one hundred varieties, of Artificial Flies, in twelve colors, which every angler should have to select from.
Send 25c for Catalogue. This may be deducted from first order for goods amounting to One Dollar or more, by enclosing Coupon which accompanies Catalogue.

WOODCRAFT.

By "NESSMUK."

A book for people who love outdoor life: for the hunter, the angler and the canoeist. The work has been of service to thousands of outers, and will help thousands of others. It is full of practical advice and information from one who has spent his life in learning by hard experience what he now tells his readers. No camper can afford to be without it. Cloth, 160 pages, illustrated. Price $1.00
FOREST AND STREAM PUB. CO.,

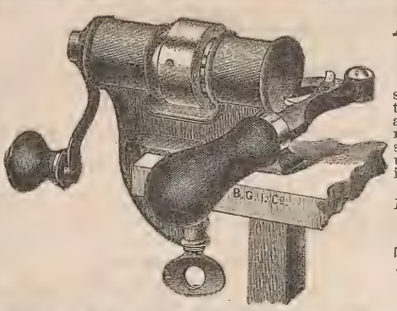
DAVIES & Co., 1 Finch Lane, London, Eng



Scientific Education of Dogs FOR THE GUN.

A new work by an English writer, "H. H."

The instructions here given are the result of the author's amateur practical experience of thirty-seven years. A review in FOREST AND STREAM says:

"This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study. The chapter devoted to kennel management is a short one, but it is very nearly complete, and is alone worth many times the price of the work to any one that will heed its teachings."

Price $2.50, postpaid, by the
FOREST AND STREAM PUBLISHING CO.,

A Wonderful Crimper.

The New Handy Closer No. 3.

It will make a round or square crimp on any shell regardless of thickness or make, and is the only closer that will crimp every shell alike. The reversible pins for making either round or square crimp are made of hardened steel. It has an automatic follower and burnisher, which seats wad firmly and makes interior of shell as smooth as a gun barrel.
This closer will outlast ten of other make.
For sale everywhere, or sent express prepaid on receipt of **$2.50.**

THE ART OF SHOOTING.

An Illustrated Treatise on the Art of Shooting. With extracts from the best authorities.

By CHARLES LANCASTER.

LONDON, 1891. PRICE $3.00.

AUTHOR'S PREFACE.

At the special request of many gentlemen who have placed themselves in my hands for instruction in the Art of Shooting, I have written this treatise. I have endeavored to mee the special requirements of those who are anxious to become proficient in the art, and who have hitherto been unable to obtain, in a precise form, the information necessary for studying the first principles of shooting at moving objects.

I have had the honor of coaching many gentlemen, and have carefully studied the points especially requiring attention that have cropped up from time to time while giving instruction. I hope that those who favor me by studying this treatise may quickly gain the knowledge so essential for the making of an average if not brilliant shot.

I have purposely refrained from touching on the several merits of any class of gun—being a gun-maker myself; and, indeed, so many good works on the subject have been written, that it is really unnecessary.

I trust that authors from whose writings I have made extracts will pardon me when they recollect that I have at heart one object, viz., the advancement of a manly sport which gives pleasure, health and occupation to many, and to the patronage of whose followers I am indebted for many pleasant days.

Forest and Stream Publishing Co., 318 Broadway, N.Y.

Book and Boy.

The visitor from New Jersey came in and said his wife wanted to give a book to a boy friend—a manly boy, blessed with a taste for *Forest and Stream* subjects; the book must be a manly book, and one to encourage these tastes. We named it—"Nessmuk's Woodcraft;" and the suggestion carried conviction. The boy has doubtless by this time read his book through three times at least, and has found something in the third reading that he missed in the first. And if he retains his sportsman's tastes he will read the book when he shall be old.

The Man and the Book.

For Read this note from Gen. D. H. Bruce, of Syracuse, in praise of "Woodcraft:" "Good old Nessmuk. I could have known him for years. What a delightful book. How every page rivets the attention of the woodsman, by its happy language in dealing with practical, every-day things, and imparting hints of originality in respect to many things. I took up the book one evening, and could not sleep until I had read every page and looked several times at the quaint portrait of the veteran. I like such men."

PUPPIES FOR SALE.
H. NORTHWOOD, Martin's Ferry, Ohio.

BLUE ROCK.

The dog for Elcho bitches. A first prize show winner and winner of more field trial prizes than any Irish setter dog in America. Perfect in color. Fee $25. ELCHO KENNELS, Claremont, N. H.

NO ONE is better known as a trainer and handler of dogs used for shooting, whether in field trials or by the every-day sportsman, who loves to roam through the coverts or over the prairies for grouse, quail, woodcock or snipe, than Mr.

B. Waters

He had great success as a handler, but besides knowing how to train a dog and to use a shotgun, he possesses the art of writing of these topics in a plain and practical way. He has produced a comprehensive work on the training, care and management of field dogs. This should be in every sportsman's library. Every man who has Hammond's "Training vs. Breaking" ought to have also Waters' "Modern Training." The two books written by two men, each of whom was very successful as a trainer, are entirely different, and it is interesting to see how the same end is attained by such diverse methods. The book contains 373 pages, is bound in cloth and sells for $2.50. It can be had of

Forest and Stream Pub. Co.,
318 Broadway, New York.

TO INSURE INSERTION in the next issue of "Forest and Stream," advertisements must be received not later than Monday morning.

FISHWAY CONSTRUCTION.

UNDER this heading we publish a communication from Commissioner McDonald which was brought out by numerous letters of inquiry from persons interested in the permanence of the fish supply, and whose queries could not be answered individually. The importance of the subject is generally admitted, as well as the necessity of reliable information and efficient application of approved principles. Mistakes in a matter of such moment are often attended with failure of the end desired and serious waste of money. The Commissioner brings to the discussion of this subject the mature skill of a trained engineer and the ripe judgment of an experienced fishculturist. His statements can not fail to assist the public in its choice and management of apparatus intended to aid the ascent of fishes to their spawning grounds. We invite full discussion of the problems involved and the presentation of complete details as to the practical working of any device known to our readers. If this can be done in a scientific spirit and without the interjection of personal criticism we shall be the better pleased. It is our intention soon to outline the known systems of fishway construction and to describe briefly the various devices employed for overcoming obstructions in streams.

THE EUROPEAN BISON.

WE print this week the first instalment of the history of the European bison to which reference was made in these columns last week. It gives briefly the history of this animal, shows that the name, aurochs, should not be applied to it, and describes its appearance. The illustration is after one of the sketches of Herr G. Mutzel made for Brehm's "Thierleben."

Men who in old times used to hunt buffalo in the West will recognize many differences between the looks of this bison and the one indigenous to America, and the best authorities agree that, although nearly related, these two are specifically distinct. The larger, heavier hindquarters of the European animal make its hump less noticeable, and, indeed, its shoulders and chest are actually smaller than those of the American buffalo, while its quarters are heavier. The different kinds of country inhabited by the two forms may account in part for this difference in shape since the bison has always been an inhabitant of a forest country, while the buffalo is for the most part a dweller on the plains, and so is a runner. It may be that a series of specimens of "mountain" or "wood" buffalo, if it could be obtained, would show an approach to the European form.

The whole paper, of which we print to-day the first section, is very suggestive to the naturalist, and the succeeding instalments, which tell of the chase and the capture of the bison, will be found full of interest.

The paper is especially worthy the attention of readers of FOREST AND STREAM who dwell in the distant Canadian Northwest, near the present range of the few surviving wood buffalo. It may be in their power to furnish specimens, which will throw light on the exact relations of that supposed race to the European bison and to the buffalo of the plains.

There has already been published a volume on the bisons of America which is of the highest scientific value and popular interest, since it is from the pen of one of our most eminent and careful biologists, Dr. J. A. Allen; but there is yet a work to be written on the bisons of the world, which shall be a monument to a race practically extinct. For such a volume this history of the European bison may furnish some facts and suggestions.

SLAUGHTER OF BIRDS AND FISH.

WE publish this week a faithful account of the present condition of the bird and fish life of West Florida from a correspondent who has recently returned from a collecting trip at Tampa. The useless and unpardonable destruction of birds for the sake of their plumes, so often described in FOREST AND STREAM, has been continued until the bright-hued species are well nigh extermination. Untimely frosts have fallen like a blight on millions of fish in the shoal parts of Tampa Bay, as elsewhere in Florida, and of late years the fertilizer companies and wasteful methods of fishing have nearly annihilated the pitiful remnant left by the ice king's ravages. When armies of men and boys are employed to maim and kill egrets, flamingoes, paroquets and other beautiful birds for no useful purpose, while millions of delicious mullet are seined and ground up with sharks and other offal to make guano, and still other multitudes are stripped of their roe and then thrown away, it is time for those who are interested in the future of Tampa to call a halt. Not only is the mullet a superior food fish, but it is one whose breeding habits are practically unknown and its artificial culture has not yet been accomplished; it should, therefore, be protected and fostered by a determined public sentiment demanding the enforcement of laws already in existence covering the very offenses described by Mr. Simpson. The killing of and traffic in birds of plume, such as the cranes, egret, ibis, curlew and heron, are punishable by a maximum fine of $300 or imprisonment in a county jail for a period not exceeding six months, at the discretion of the court. The capture of mullet, trout (weakfish), redfish, sheepshead, pompano, mackerel, bluefish, red snapper, grouper or jurel within waters under the State jurisdiction for the purpose of making oil, fertilizer and compost therefrom involves a maximum fine of $200 or two months imprisonment, or both, at the discretion of the court. Catching fish for the roes only is also illegal. Now let those who are interested in the preservation of the birds and fish use their influence to secure the prosecution and conviction of law-breakers, or fold their hands with resignation while the priceless attractions of West Florida are annihilated and its chief source of revenue dissipated.

THE SYRACUSE CONVENTION.

THE gathering of sportsmen at Syracuse next week gives promise of being an event of unusual interest and importance. For the first time in more than ten years the New York State Association for the Protection of Fish and Game will then convene seriously to consider the purposes implied in its title. This means that the proper conservation of the fish and game of the State is to be looked to by the organization which of all others should look to it; it means that the Association is actually to concern itself with the subject which of all others should have first place in its conventions.

The meeting has been called by President Horace White, whose letter we published last week. The clubs throughout the State have been invited to send representatives; and the responses already received show that the attendance will be large, and the delegates in earnest. Special consideration will be given to the game bill prepared by the codification committee. The practical work of the convention, we assume, will be the discussion of that measure and its approval in whole or in part.

If the delegates who meet next week shall agree on what to ask of the Legislature, or shall appoint its committee to do this, it is reasonable to assume that the Legislature will accede to whatever the Association thus represented may demand; and we shall then have in place of the present obscure, contradictory and inefficient statutes, a game law which shall be simple, consistent and effective.

The promoters of the Syracuse meeting are gentlemen whose ripe experience, abundant information and sincere interest in the cause supply ample assurance that the true welfare of the sportsmen of the State will be the one thing sought by them.

CANADIAN SALMON RIVERS.

ELSEWHERE we print a petition, which is now circulating among anglers interested in Canadian salmon rivers, asking the Minister of Marine and Fisheries to direct that, in the season, all salmon nets shall be raised during three successive days and nights of each week. It is pointed out—and with unanswerable truth—that in this matter the true interests of anglers and netters are identical. If excessive netting injures the supply, that injury cannot affect one class of fishermen without affecting the other class as well. It is well established that the decrease of the salmon is due to netting; and in the end the net fishermen must feel most acutely the ruin of their industry. In their petition, then, the salmon anglers are not seeking favoritism nor selfish discrimination in the interest of a class; they are making a reasonable plea for such action as ultimately will benefit all concerned. With greater freedom of passage, the fish will reach their spawning grounds in greater numbers; and Nature herself, thus given the opportunity, will maintain the salmon supply, which no expenditure of revenue by the Dominion can restore so long as the destructive agencies of the nets shall be permitted.

We trust that the petition may be signed by all who are concerned in the interests it is intended to promote.

If the Canadian and United States authorities had from the beginning exercised ordinary business precautions to conserve the salmon of Atlantic coast rivers, by limiting the use of nets, there would never have ensued the depletion of these resources, nor would it have been necessary to expend so many thousands of dollars in efforts to replenish the supply.

SNAP SHOTS.

THE account of the game—especially buffalo—seen during a recent snowshoe trip through the National Park by Scout Burgess and his companions is very interesting. It is from the pen of our regular correspondent, and gives important details of the observations, a summary of which was printed in these columns some time since. The estimate of the number of calves seen is particularly interesting and agrees closely with the opinions advanced in our previous remarks. The occurrence of the mouse-colored bull is noteworthy. These mouse colored animals were very unusual, even in the old days of buffalo plenty. Who knows but that the Yellowstone Park may yet be the home of a white buffalo?

In their annual report for 1891 the Massachusetts Fish and Game Commissioners call attention to the increase of vermin, like foxes, weasels, skunks and red squirrels, and their depredations as a factor in the destruction of the game supply, and they recommend a reasonable bounty to be paid by counties on the heads of noxious species. The Commissioners are of opinion that in certain districts where it is now almost out of the question to raise poultry owing to the industry of these night prowlers, the losses by farmers would justify such bounties. The report comments on the scarcity of ruffed grouse in New England in the last months of 1891 in sections where young birds were in the early season plenty and apparently healthful. The probable causes assigned are the invasion of "grouse ticks" and the large increase of predatory animals. No mention is made of the grouse snarers, but the fact that the great majority of grouse sent to city markets are snared birds affords reasonable ground for the theory that the snarers must be given a due degree of credit. In New York city markets not only are most of the grouse snared, but most of the quail are netted birds.

Among the bills before the New Jersey Legislature is one to permit land owners to kill game on their own lands from Sept. 1 to March 1. This has passed to a third reading, and immediate steps should be taken to prevent its becoming a law.

The Sportsman Tourist.

SUCKER DAYS.

THE shytepokes dangled their loose legs doubtingly before settling down to a wobbly perch among the red-budding tops of the soft maple saplings, but after many balancings and upstretching of necks they could finally look down through the white sumacs and choose a safe alighting place in the mucky, trembling swamp where we boys never could go. It was not a large swamp; in fact, it would not strain any one very much to heave a stone half way across it nowadays, but at the time I have in mind it was a great sphagnum-lined mystery of a place, and it seemed to us youngsters that the other side was way, way over there. The boulders in the rough pastures round about it were partly hidden with chaplets of huckleberry bushes and sweet fern, and here and there along the stone walls some of the butternuts that a past generation of squirrels hid too well had developed into scrawny trees. Through the leafless bushes of the swamp we could get a glimpse of a little round pond hole out near the middle, and tradition had it that no one had ever found bottom there. That was because no one had ever tried. If any one had ever found bottom there he surely would have told of it; and so the question remained as settled with us. The swamp was just one of a thousand in New England, but special interest centered in this one because Brown Brook emerged from it, and with its many little swirls and swishings and bubblings among the bogs and rocks finally entered the old mill pond right where the button bushes grew thickest.

Brown Brook was not exactly a spring brook, because in the summer time the water got pretty warm, and sometimes there wasn't very much of it anyway, and that's why the boy of whom I am going to write never heard from the ten small mottle-backed, skittish trout that he lugged over from Sandy Brook in a tin pail and put into it. Possibly they are up in the bottomless swamp hole now and weighing a pound or two apiece, but only the minks know about that.

There was one thing that the brook was good for and that was its suckers. Who ever heard tell of a brook that was good for nothing? In the springtime, when the soft maples were beginning to invite the purple finches, suckers ran up from the mill pond, and during the day remained hidden beneath the larger stones in the brook. When school was out for noon recess "us boys" had time to run over to the brook and catch a sucker or two in our hands by feeling for them under the stones and then encircling them in all of the death-like grip that was possible in short, chubby fingers. The suckers were not very large ones, but sometimes a half-pounder was caught, and on a day that I want to remember all about, the boy found an "awfully" great big one way in under a shelving rock. Just as he was getting ready to grab, the sucker darted out between the boy's feet and fluttered and splashed over the ripples into another hole further down stream.

Any fish is to a boy something worthy of his entire attention, and it didn't matter if the water in the hole where the big sucker had gone was rather deep, for who cared about getting in over the tops of his boots when such a fish was within reach! I don't remember exactly how old the boy was, but probably he had not heard the first jingling of the peep-frogs more than eight times, and it was hard for such small ears to notice the bell that announced the ending of recess time, or the calls of Ned Ellis and Joe Carroll as they ran back to school.

The boy knew precisely under which stone the big sucker had gone, and carefully reaching one hand beneath it he could feel the cool, smooth sides of the fish as it crowded a little further in away from him. Then, putting the other hand in position to head off attempts at escape, he suddenly held the struggling, gasping sucker in both hands. The stones were slippery, and in an effort to steady himself the boy partly lost his grip, and felt the sucker surely working out of his hands—you know how it feels—and despairingly tossed it toward the bank. The sucker struck among the dry pebbles, protruded his long, white nose and opened his round mouth in surprise, and then with one ungainly flop threw himself into the brook again. Why can't a fish ever flop the other way just once? The boy in confusion could not see which way the fish went, and a moment later there was a peculiar sort of mist in the boy's eyes that prevented him from seeing much of anything, and the round drops welling up straight from his heart, followed each other in quick succession down his cheeks.

Sorrowfully he trudged up to the school house and made wet tracks to the hard board seat in the middle of the room. That seat had seen quieter moments, when the boy had time to "fire" spit balls up on the wall overhead, or to bore converging holes in the desk, into which various luckless flies were tucked when the teacher was looking the other way. Miss Chapman was of the tall, austere type, and her glasses presented the only smooth outlines in her mien. She must have been young, for her mustache was not markedly visible from the other end of the room, but her strong right arm swung with a freedom that we were accustomed to see only when the best of woodchuck skin flail strings gave security at a joint. Usually she took off her glasses before descending to the boy's seat, but on this occasion there was too much necessity for promptness in attending to him, and they rattled upon the floor in the midst of a medley of ruler whacks and sobs. All that afternoon and during the night visions of the big sucker filled the boy's brain to the exclusion of all other ideas, and at the woodpile at home he unconsciously made a sudden grab for the biggest stick and scattered the uncertain armful already collected.

Of course we boys all rushed off to the brook next day at recess, and while Ned and Tom and Joe went to fishing under the stones near the road the other boy followed the brook down into the pasture and began to poke under rocks in all of the holes, to see if the big sucker was still in that part of the stream. All at once it rushed out in sight, and the shouts of the boy brought the others on a run as fast as they could come.

"Right under that stone he is, fellers, and an old whopper, too, by golly," said he. "I'm going to hold on to him this time, you bet!" Just then came the sound of the school bell across the fields. It is called a musical sound, but somehow or another it seems to a boy to be different from the voices of the robins and the wood thrushes and the vireos. Ruefully the boy paused a moment and listened, then reaching around and feeling the tender parts that had not quite recovered from the previous day's reddening, he decided that they would have to stand one more ruling from the bench, and into the brook he stepped. His hands trembled with excitement as they went under the water and under the stone and felt the fins of the hiding sucker, but with a decision that brings success in all things he squeezed the fish in a good double grasp and carried it so far out in the meadow grass that it left all hope behind. Wasn't it a beauty! We picked it up and let it flounce out of our hands a dozen times before it became submissive.

"How will you trade him for mine?" asked Tom Allen. "Oh, but that one of yours ain't anywheres near so big as this one," said the boy. "No," said Tom, "but them big ones is all innards and no meat. Just heft mine onct. There's twicet as much meat on him." So, always ready to be taken advantage of in a bargain for any plausible reason, the boy traded the great big sucker for Tom's smaller one, and we lugged our respective fish almost to school and hid them under the stone wall. It is unnecessary to refer to our experience within the doors, but our aches were tempered with the prospective exultation of carrying the suckers home in our hands after school was out. Alas for the trustfulness of youth! The old gray cat had found the fish and dragged them off to a safer place.

Oh the sorrows of a boy! Is there in after life anything that makes the heart really ache as did our schoolday griefs?

MARK WEST.

KELLUP'S ANNUAL.

THE other evening, after supper, Kellup sat poking the kitchen fire with a flushed, weather-beaten countenance unusual for him and a happy, contented expression. His gaze, apparently fixed on the glowing coals, was really inverted to watch the panorama of woods and fields playing across the retina—a phenomenon well known to sportsmen. He had just got back from his annual hunt. At this point there was a commotion in the entry, the door burst open, and in came Madge and Tommy.

"Oh, did y' get my squirrel tail, Gramper? Did yer? Did yer?"

This was from Madge. Tommy was more dignified. Kellup reached up and took a big gray brush from the mantel. It was not quite dry and there were vacant spots where the fur had been.

"Y' see, children, the way that happened ——"

"Oh, begin at the beginning, Gramper, the very beginning."

So Tommy settled in an armchair some sizes too large, and Madge on a cricket with elbow on Kellup's knee, her chin in hand and little finger in lips.

"Well, well then, Jake met me at the train that night ——"

"Who's Jake, Gramper, the one you went fishing with that time?"

"Yes, yes, well, Jake said 'How do, how do? This my brother-in-law Ben,' so I said 'How do, Ben, how do,' but I didn't know his name and I don't know it yet."

"Ben go with you, Gramp?"

"No; he brought a dog over for us, a nice, handsome hound, came from Kentucky, called him Grim. Jake had a dog, too, black and yellow, with short thick legs—part hound and some other things; but the part that was hound I don't think had any pedigree, 'Chum,' they called him. Well, next morning we bundled into the wagon, dogs and all, Jake and Chum on the front seat, and Trim sitting up straight beside me, with his long handsome ears flapping my face while he viewed the landscape wisely. I couldn't keep the blanket over him, so pretty soon they both tumbled out. Chum came stubbing along behind, but Trim's long legs sent him careering. The slightest touch to earth put him over the wall and away."

"I choose Trim!" said Madge promptly, with a half defiant glance at Tom.

"Well, by and by we came to a little white farmhouse with a big black rambling barn; so we put the horse away in a nice old cobwebby stall under the hay and then went out back the barn and put in the cartridges. Jake says, 'There's a good nice swamp over there. I'll bet there's sixteen rabbits in it.' So we trudged down a long yellow hillside and the dogs went in and surveyed it thoroughly, but said never a word, so by and by we found ourselves in the big woods, and there, Madge, there I met your friend the squirrel."

Madge touched her cheek softly with the big gray brush and Tom moved closer.

"You see, I sat there on a big rock in the stillness, listening to Jake's voice in the distance sending in the dogs, when just then I heard a pitter pat and there sat Mr. Squirrel. Well, I watched him awhile, with his fat, sleek, pretty ways, and then I happened to think of you, Madge, so I began to draw a bead, you know," and Kellup dropped on one knee with stealthy, dramatic action, while Tom promptly moved out of range and Madge drew back half skeptical, half credulous. "Then," said Kellup, "*I fired.*" Tom seemed relieved, and simulated a glad, fierce look, but Madge sprang back with a face full of horror and reproach.

"Why, Madge, you said you wanted one, you know."

"Yes, but not that one Gramper. I'm going home now."

"Oh, well, I didn't hit him at all, Madge. I didn't even try to hit him." So finally she was pacified and came back.

"Well, you see he just gave a jump and made a blue, undulating streak across the leaves. He looked big as a fox when he shook his tail out. Well, in a minute the dogs came galloping in, and by the time Jake arrived the hound had got the trail and stood barking at a big chestnut with a hole near the ground. I concluded your little friend was safe, Madge, so I told Jake all about it."

At this point Kellup stopped to turn a big blue stocking hanging on the oven door. Madge looked perplexed.

"Well, the first thing I knew, Jake had a long rod with notches cut in the end rammed up that hole as far as he could reach, and was twisting it. When it came out there was fur twisted in. Then he went at it again, and pretty soon he pulled slowly, slow-ly, with both dogs wrinkling their noses to a point at the hole."

Kellup made a period here and observed the symptoms. After a minute or two he said: "Well, then we had some lunch and started again, and at last old Trim began to talk to the moon. Chum dropped all engagements and joined in too, and their voices went off in the distance with their tails wagging after. Jake said 'You sit on that log and they'll fetch him round.' So I sat and waited a long, long time till the sounds seemed coming my way again, and presently sure enough a light quick footfall on the leaves and hopping along came Mr. Bunny.

Here Kellup stopped provokingly and seemed inclined to doze.

At length from Tommy, "Hit him, Gramp?" No response. "Did y' *try* to hit 'im, Gramper?" This time a slight assenting nod.

"Well, *did* you hit him then?" from Madge pulling his sleeve.

"Yes, I think I must because he stopped coming toward me and went off somewhere else. When we got there, Chum was lying by and Trim was out of sight in a burrow with his tail sticking out. Jake says 'I can slip up to that barn on the hill and get a ferret in ten minutes.'"

"What's a ferret, Gramper?"

"A ferret's a little, long, snaky animal. You put a ring on his mouth and put him in the hole. Sometimes the rabbit runs his nose in the ground and dies of fright, with his fur all clawed off, but generally he comes out."

"Well, did Jake get the ferret?"

"Well, I stooped down and listened, 'n I thought I heard a little whimper, 'n old Bunny was saying, he says: 'I loped round for half an hour,' he says, 'and put up a square game against two men, and two guns, and two dogs, so now let me be this time and some day I'll give you another run.'"

The snore that followed this period was pronounced and eloquent, and the children knew the tale of the annual hunt was ended.

JEFFERSON SCRIBB.

AN UNDISCOVERED COUNTRY.

"IS it possible that you read FOREST AND STREAM?" a lady said to me in a half-shocked way, yesterday. "Is there anything in it besides sporting news?"

I replied, "I am very fond of all natural objects, and I find every week most delightful and often long-sought-for information in regard to birds, animals and fishes in its breezy columns."

One touch of nature makes the whole world kin, and what a feeling of sympathy and comradeship we have for some reveler in the beauty of an autumnal day, who, we understand, reading between the lines, cares more for the sweet smells and sounds of the woods than for the filling of his game bag.

One may neither hunt nor fish and yet sympathize with the spirit of the true huntsman and feel a thrill of indignation at sound of a gun after the game law is on.

I am grieved at the wanton killing of any of God's beautiful creatures. I sit down by a forgotten snare, set by some maurader in my own woodland, and regard with moist eyes the little heap of feathers that show the sacrifice of an unfortunate partridge.

I know the haunts of these birds, and where quail, rabbits and gray squirrels may be found, and I have a fancy that the pretty creatures know me. Would I give them away to the lad with the gun?

By no means, no more than I would set a hound on the trail of the red fox that ran out of a wayside thicket and trotted airily along in front of our horse for several rods as unconcernedly as a dog, and as he took to the woodland again turned a shy, curious glance at us over his shoulder, as much as to say: "I was sure you had no gun, so I have taken pleasure in showing you that a fox at his ease is really a beautiful creature."

Rabbits sit up and look at us as daintily as kittens, and woodchucks pause on the edge of their dugout and chatter their teeth with an air of genuine good fellowship.

Here and there all about this section, where my wild friends have their haunts, are farms for sale.

One, the little cottage of which would make a picturesque hunting lodge, has long been the comfortable home of a bright old couple, both over 80, who died within a few days of each other in December. The property goes to nieces living far away, who, of course, would never think to make a game covert of the meadows and woodland or to stock the streams with fish.

There are other farms with comfortable and commodious dwellings, where the old, long-time residents have died and the young people most foolishly gone away to the factories, that would make healthy and altogether delightful summer homes that can be purchased for less than the cost of the buildings.

This is, strangely enough, an undiscovered country to the summer resident. There are no hotels and the thrifty well-to-do farmers will not take boarders.

"I can see no virtue in killing myself with work in order that some one else shall have an easy time," said a notable housewife last spring when importuned to open her beautiful house to boarders. "I enjoy a dainty gown, a book and a rocking-chair under a tree in summer just as much as if I had spent my winter in a city, and by keeping my family comfortable I have earned a right to my leisure."

If city people wish to come to these healthy and beautiful hills why do they not buy one of the farms that are for sale, be independent, hunt their own fore-ts, fish their own streams and ponds and take all the comforts there is.

I wonder if New York people are aware of the cheap farms within easy distance of the city by the way of the comfortable Sound steamers and the New London Northern R. R; farms within easy distance of the railway stations, large beautifully-situated dwellings in a country as healthy, as free from hay fever and as picturesque as the Berkshire Hills or the White Mountain regions of New Hampshire.

This is not an advertisement. It is written out of pure sympathy for the city resident who every summer spends enough money to buy one of these farms in pursuit of real comfort that is all too-seldom found.

There are private ponds stocked with fish where lines barbed with silver or gold may be cast by occasional visitors. There are numberless opportunities for similar ponds in sheltered vales, where the now rare wild duck might settle down grateful for the inviting seclusion.

There are stories told of flocks of wild geese spending stormy nights on these ponds, among the hills, while on their migratory journeys, and now and then some one tells of catching a string of 100 trout in an afternoon along some ranging brook; but the warning "No fishing or hunting on these premises" is conspicuous by every stream and in every forest.

The flowers, ferns and mosses in Tolland county are

unrivalled anywhere in New England, and I never pass one of these deserted farms without seeing its possibilities and without my heart reaching after puny boys and girls in pent-up city quarters who would thrive in body and mind under the summer skies in the liberty, freshness and beauty of these surroundings.

MRS. ANNIE A. PRESTON.

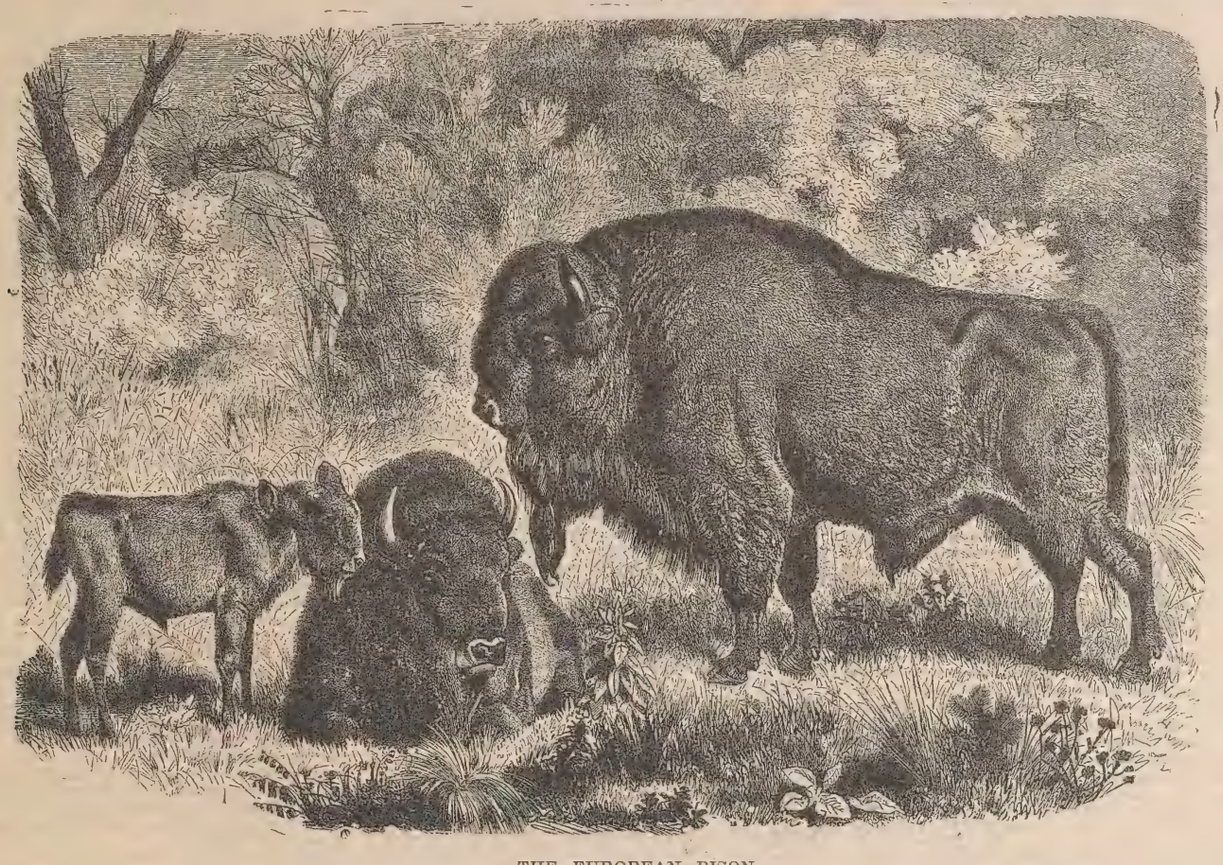
MAPLE CORNER, Willington, Conn.

Natural History.

THE EUROPEAN BISON.

BY R. WALDEEK.

THE animal most nearly allied to the American buffalo is the European bison, loosely called the old German aurochs, and to-day termed in the German and Russian languages, *wisent*, an animal which about a thousand years ago inhabited the whole of Germany, Austria, Hungary and Russia.



Though this animal is commonly called by the people, aurochs, this is not its proper name. The aurochs was quite a different animal which became extinct many years ago. About it we know little more than can be gathered from examination of its fossil bones and from the descriptions of old Roman and German writers, such as Seneca, Pliny, Albertus Magnus, Thomas Cantapratensis, Johann von Marignola, Bartholomaus Anglicus, Paul Zidek, von Herberstein and Gessner. The old German laws and hunting reports also speak of two different kinds of wild oxen, and the celebrated "Niebelungenlied" also speaks of them. Pliny says that the bison or *bonasus* was frequently brought alive to Rome, where it showed its enormous strength in the bull fights. He further says that the bison was remarkable for its long mane, and the aurochs (*Urus*) for its horns. Writing of Germany, Cæsar says "there is a kind of wild ox much like our domestic cattle, only with much longer horns." This refers to the aurochs. Lucas David writes that in the year 1240, Otto of Brunswick presented to his brother some bison and some aurochsen. Cramer says that Prince Wradislaw killed in the year 1364 in Pomerania a bison which was nearly as large as an aurochs. Herberstein gives a figure of the bison and one of the aurochs, the latter closely resembling the domestic bull. Under this picture is written "I am Urus, called in Poland, Tur, and in Germany Aurochs." This is about the last definite information we have about the Urus. Dr. Cunrat Forex in the year 1583 writes about the urus or aurochs, but speaks of it as a species which has died out.

All old writers speak very highly of the meat of the bison as also of that of the aurochs. The skin was also highly prized, and was used for girdles and other ornaments for ladies of high rank, and even princesses and queens were glad to wear them.

To-day in Europe we find the European bison living wild only in the western part of Russia, in the extensive forest of Bialowitza, Bialowesch or Bialowiez, where it is carefully protected by the Russian government. This almost pathless forest is about 35 miles long and 30 wide, comprising a district of 1,050 square miles in which are to be found only a few log houses for the use of forest guards, though some small villages adjoin the borders of the wood. About four-fifths of the forest consists of pine, but in some places where the ground is moist, we find also the fir tree, oak, lime, hornbeam, birch, alder, poplar and willow mingled with the pines. All the trees which grow here reach a great age and enormous size, and the whole forest still presents the same aspect that it did more than a thousand years ago.

The gigantic trees are never felled by man. They are overthrown only by heavy storms, and rot where they fall, giving room, light and food to the younger trees growing up beneath them, which thus seem to rejoice in the death of their fellows. Here and there among the forest are found wide meadows or parks, where grow different kinds of grass and herbs mingled with heath and underwood. These plants furnish ample food for the gigantic inhabitants of the woods. These open spaces are usually the result of fires which often take place. Only here and in the Caucasus in Asia is the bison to be found to-day. Over all the rest of the globe he has become extinct, and had not the Emperors of Russia carefully protected him for centuries, he would to-day be no longer ranked among the existing animals of Europe.

Many years ago it was different. Then the bison was scattered over the greater part of Europe and Asia. In the palmy days of ancient Greece, it was found in Paonia and in what is now called Bulgaria, and everywhere in Middle Europe. Aristotle gives an exact description of him and calls him bonasus. Pliny terms him bison and names Germany as his home. Calpernius in his "Loges Allamanorum" writes about him in the year 282 and states that he found him in Wasgau (Alsatia). Charles the Great, of Germany, in the year 800 hunted bison with spear and axe in the Hartz Mountains, and in Saxony. By the year 1373 it had been driven back to Pomerania, in the fifteenth century to Prussia, east and west; in the sixteenth as far as Lithuania; in the eighteenth to the eastern part of Prussia between Tilsit and Laubiau, where the last of the race was killed by a poacher in 1755.

THE EUROPEAN BISON.

The Kings of Poland tried hard to preserve the bison. They built barns and feeding places in the middle of the forests in order to winter these animals, feeding them hay. Sometimes the royal order was issued to capture bison alive, and these were presented to kings and princes. In this way two were given in the year 1717 to the Duke of Hesse Cassel; two others in 1738 to King George of England, and some to the Empress Catherine of Russia. Notwithstanding the efforts to preserve it, the bison disappeared entirely from Poland. In the forests and mountains of Transylvania in Hungary, it existed longer than in Prussia and Poland. We read in old books that in 1728 there were still many of them in the Szekler forest, close to the small village of Fülle.

The descriptions of the bison (*Bison bonasus*) which have been given us by ancient writers leads us to conclude that the bison of to-day has diminished in size, though he is still a strong and mighty animal. We are told that in the year 1555 a bison bull was killed in Prussia which measured 7ft. 10in. at the withers, was 14ft. in length and weighed 2,085½lbs. To-day, however, bison are not generally found heavier than from 1,700 to 1,800lbs. with a height of 6ft., and a length of from 10 to 11.

For many years it has been stated that one remarkable difference between the bison and the American buffalo, is that the former has only 14 pairs of ribs while the buffalo has 15 pairs. As has been shown by Dr. Allen, this statement is entirely erroneous. The American buffalo has 14 pairs of ribs like the bison.

The head of the bison is of moderate size and well formed; forehead arched and very broad; the nose is round; the ears round and short; the eyes small and full of light and fire; the neck short, thick and very muscular and with a mane or dewlap below, which reaches from the chin to the breast. The body is round and plump; the forelegs short but very strong and with oval hoofs; the hoofs of hind feet are much smaller than those of the front. The back of the bison is highly arched over the shoulders but not so much so as in your buffalo. The horns are placed at the side of the head and grow at first horizontally outward, then turning upward with the points slightly turned in. They are a little longer than the horns of your buffalo. The body is covered with a thick coat of light brown curled hair; the head, feet and shoulders being dark brown and the tassel at the end of the tail black. The hair on the head is very long and straight, and the beard reaches nearly to the ground, and continues under the throat down to the breast.

The bison cow is much smaller than the bull. Her color is the same, but the horns are shorter and lighter and the mane is less developed. A new born calf is much lighter in color.

In the year 1829 a count of the bison in the Bialowitza forests gave 711 head, of which 633 were old ones and the remainder calves.

In the following year, 1830, the number increased to 722, but in the next year, 1831, it was reduced to 657. The laws for its protection were more severely enforced from this on, and in consequence the number of bison increased until in 1857 there were 1882 head. Soon after this, during a revolt, many bison were killed by the people, and the last census of this animal, held in 1880, gave only about 550 bison, including cows and calves.

[TO BE CONTINUED.]

A VACATION IN WEST FLORIDA.

THE evening train from the North ran in to Tampa, the brightest, most energetic, prosperous looking town we had seen in Florida. In the fading western light the Moorish towers of the great Tampa Bay Hotel showed dimly, the electric lamps shone on clean looking brick blocks, which bore the unmistakable stamp of a booming city. Over the Hillsborough River, out on the tongue of land between the two great arms of the bay, and so on to a long low trestle-work, of which we were made aware in the darkness by the peculiar rumble of the train and the phosphorescent gleam of quiet waves below and around us. A few minutes more and we were at Port Tampa and were ushered into "The Inn."

The aforesaid we consisted of my companion, a young and enthusiastic conchologist and all around naturalist, and myself; and our object in visiting the west coast of the State was to spend the holidays in making natural history collections.

Next morning a strange sight greeted the eye. We were in a city built wholly on piles, a city which vaguely suggested Venice, the dwellings in Lake Maracaybo, or of the prehistoric tribes of Switzerland. Railway depot, stores, hotels, dwellings, and all the various buildings and appurtenances of a town were elevated on piling 5ft. above the clear water, through which we saw fishes, crabs and gleaming shells, the whole at least three-quarters of a mile from the shore.

Our hotel was a gem in its way, built and finished wholly of Southern pine, one of the most beautiful woods for decorative purposes in the world, when properly selected and varnished. It seems strange that the people of the United States have so generally neglected it; the only reason perhaps being its commonness and cheapness. When the long-leaved southern pine shall have become well nigh extinct it will no doubt be properly appreciated.

Around us lay the low shores of Tampa Bay, to the south and west the Gulf of Mexico. Our destination was the Manatee River, which, by one of those strange contradictions in geographical nomenclature, is not a river at all, but an arm of Tampa Bay, a beautiful sheet of water a mile or more in width and some eight or ten in

length. The real stream emptying into it is only an insignificant affair.

At 8 o'clock we were afloat on the Margaret, a pretty side-wheel steamer which makes trips from Tampa to the various small towns and landings in and around the bay. I think it is Ruskin who has said that three elements are necessary to form a perfect landscape, diversity of surface, rich and varied vegetation, and water. The first of these elements of beauty is totally lacking throughout this region. No country in the world, except perhaps Buenos Ayres, is more level than South Florida. The shores rise nowhere more than a few feet above high tide, save where the prehistoric tribes have built their kitchen middens or mounds of shells and earth, and any bank rising abruptly to a slightly greater elevation than the rest of the shore is invariably denominated by the inhabitants a bluff, and such names as Orange Ridge, Pine Ridge, and those of various mountains are applied with ludicrous effect to slight elevations in the interior that are imperceptible to the eye of the stranger. The vegetation, though in some places varied, is rarely rich, and for the most part consists of uninterrupted open pine woods. Any great assemblage of trees of a single species is monotonous, but a continuous forest of Southern pines, with straight, branchless, reddish-brown trunks, surmounted by a small tuft of crooked, gnarly limbs, is dreary in the extreme. And yet with but a single element of beauty abounding, there is an indescribable charm in the scenery of this region. The air is soft and languid and filled with a dreamy sensuousness, the water—teeming with life—glances brilliantly, and in the distance, low islands, or keys as they are called, seem to float in beds of shimmering silver. The warm wind sings soothingly through the pine needles, and over and above, and around all is poured a flood of brilliant semi-tropical sunlight. No one ever visits this country without carrying away with him delightful memories of this indescribable beauty, or without feeling a desire to see it again.

We watched the pelicans, the only birds we saw in any considerable numbers, birds that my friend declared were the saddest he had ever seen.

There certainly is something lugubrious about these droll creatures that ply their avocation as fishermen with such untiring industry. They look mournful enough, and yet in their apparent sadness there is something irresistibly ridiculous and which excites in one the same desire to laugh that a man would who falls on a slippery pavement. But to one who, like the writer, has been familiar in years gone by with this country, there is a great change noticeable in the greatly diminished amount of bird, reptile and fish life along these shores. Ten or twelve years ago the waters literally swarmed with fish, of which about one hundrad edible species inhabited the west coast. I have seen schools of mullet miles in length along these keyes, among which sharks held high carnival, and the incessant sound of these fish as they struck the water after making the characteristic leap was often so deafening that one could not hear conversation, and well authenticated stories are told of these same mullet swamping and sinking boats which happened among them. Yet during our cruise of ten days I did not see a dozen fish jump from the water, and although our boatman and cook were experts with the cast net they tried in vain to capture enough for a mess. There are, perhaps, two reasons for this rapid diminution of one of the most valuable food products of the country: The bottom of the sea in this vicinity is as flat as the dry land, and usually quite shallow. Several times each winter severe wind storms set in from the north which are locally called "northers." When unusually strong these storms drive the water out of the bays along the west coast and into the Gulf of Mexico, often laying bare tens of thousands of acres of muddy or sandy bottom. Occasionally at such times the mercury falls below the freezing point, and the fish, which are essentially tropical, are driven into shoal water and chilled until they become perfectly helpless, and so turn upon their backs and drift before the wind, and are often landed in ricks on the lee shores. If the tide rises soon and the weather moderates most of them are restored to life, but if it continues to blow cold they perish.

In the winter of 1886 there occurred a norther of extraordinary severity; snow fell on the Manatee for twenty-four hours, and ice an inch in thickness was formed. As a result millions of fish were drifted ashore and destroyed, and when the tide came in at last the water was so filled in many places with the dead floating about that boats could neither be pulled or sailed through them. They lay decaying in countless numbers along the shores, food for birds of prey, and creating an intolerable stench for miles inland. The fishermen made a fortune gathering them up and shipping them as iced fish as long as they remained good, but after this their avocation as fishermen was well nigh gone. Since that time, I am told, fish have never been so abundant as before. But the truth must be told. There can be no doubt that they have been ruthlessly slaughtered by fishermen. I am informed that companies formed for the purpose of making fish guano have captured the mullet in untold numbers in their seines, and used them with the sharks and other fish for their preparations. Catching mullet for roe is quite a business in its season, and many fishermen instead of returning those which are not gravid to the water, allow them to die on shore. The killing of the goose that lays the golden egg has again brought disaster, for many of these common fish seem well nigh extinct.

Not so very long ago flocks of roseate spoonbills and the scarlet ibis* were abundant, as well as white egrets and other lovely-plumaged birds, and the great flamingo and Carolino paroquets were often seen. Now, on account of ceaseless hunting, the latter are practically extinct, and the former are only seen on rare occasions.

Our collecting trip was a perfect success in every way. Christmas on the Manatee was uncomfortably warm, and in yards and gardens roses, Chinese hibiscus, the gorgeous purple-tracted Bougainvillea, and Cuban morning glories flaunted their gay flowers in the air, which was musical with the drone of honey bees and humming birds.

We chartered a five-ton boat, and with a skipper and cook and ten days' provisions aboard began our cruise. During low tides we searched the shores and sandy mud flats for shells, crabs and other marine life, and when these were covered we got under way and kept the dredge constantly at work. This implement, which consists of a double-bladed iron frame attached to a bag of twine netting, is dragged along the bottom by means of a rope attached to it, the boat being brought up into the wind, so that it barely moves. After it has been allowed to remain down for ten or fifteen minutes, scraping up as it does all that lies loose, it is drawn aboard and dumped; and this is always an interesting and exciting moment, much as is the landing of a fishing seine. Mollusks, ascidians, sponges, bryozoa, corals, shrimp, crabs, starfish, sand dollars and sea urchins, with curious bottom fish, and many other quaint and startling forms of sea life, are among the possibilities of the haul. These animals are surprised in their homes and appear as if astonished at this sudden and rude interruption of their daily affairs. It is fascinating work to the naturalist, and one becomes so interested and absorbed that he does not even want to stop to eat, and night always comes too soon. In running out of one of the passes between two keys one day, we put a line over, baited with a piece of meat. There was all at once a wild rush at the hook, which was followed a moment later by that of the crew. The cook dropped his dinner pots; to the naturalists the dredge, which had just been landed with specimens, suddenly lost its attractions, and even the skipper, always thoughtful of his boat, let go the helm and for a few minutes she steered herself. For a quarter of an hour there was a savage struggle; all hands on board against a single fish in the water: everybody cautioning everybody else to be careful and not let him get away, as he made fearful lunges and occasionally sprang from the water—a gleam of silver—and disappeared. At last he was on deck, an amber jack, a splendid fellow, weighing perhaps 35lbs, and after another severe fight of a few minutes he was dispatched by a few blows on the head with the cook's hatchet. The flesh of this fish is very dark, looking like beef, and is not considered good eating.

To the naturalist, no matter what branch of biology he may be interested in, the west coast of Florida is a delightful resort. The sea is alive with mollusks, crustaceans and radiates, with many forms of fish of wondrous beauty and interest, and other marine life. Numbers of birds and reptiles are to be obtained in the forests and swamps, and it is a paradise for insects. Something like five hundred species of trees are found in the State, a considerable portion of which belong to this region. Its flora is a mingling of the plants of the more northern region with those of the West Indies and Tropical America; the latter planted by that great sower of seeds, the Gulf Stream. Palms and pines, the magnolia and the mangrove, the live oak and the India rubber tree, struggle for existence in the same soil and flourish side by side. While we are searching to the ends of the world for the new and the rare, to our shame it may almost be said we know comparatively little of the natural history of Florida. Its geology is only a half-explained mystery, its vegetation is but imperfectly known, as constant discoveries attest, and no doubt large numbers of forms in the realm of the zoölogist people its shores and unexplored regions that are either new or have hitherto been credited only to the West Indies.

Chas. T. Simpson.

Washington, D. C., Jan. 21.

*Mr. Ridgway, of the National Museum, informs me that he has never been able to obtain this bird from Florida, though it is not rare in tropical America and has been reported from Louisiana, etc. Ten or fifteen years ago a bird called in Florida the pink curlew and answering in appearance to the scarlet ibis was not at all rare about the bays and keys of the west coast.

Birds of Bridgeport, Conn.—Mr. C. K. Averill, Jr., recently prepared for the Bridgeport Scientific Society a brief annotated list of the birds found within ten miles of that city. The list is based on recent observations, but the earlier papers on the birds of Connecticut, that by J. H. Linsley (1843) and of Dr. C. Hart Merriam (1887) have been consulted and a number of species introduced on their authority. Credit is given to several local observers for records received from them, but the author is responsible for most of the species noted. The list numbers 246 species and contains some interesting information, though we feel inclined to complain of the brevity of the annotations. The recent breeding of *Gallinula galeata* near Stratford is noteworthy. The nomenclature used is that of the A. O. U. list, but the proofs have been carelessly read.

The Linnæan Society of New York.—Regular meetings of the society will be held at 8 P. M. at the American Museum of Natural History, Eighth avenue and Seventy-seventh street, on the 3d and 17th of February. No paper has been announced as yet for Feb. 3. On Feb. 17 a paper by Mr. B. Hicks Dutcher, "A Summer's Collecting in Southern California."—Jonathan Dwight, Jr., Secretary.

Words of Appreciation.

It is probable there is no weekly paper that comes to Maine which enjoys the wide popularity possessed by the Forest and Stream. Other papers have a larger circulation than this, but none is treasured more highly or quoted so often. It is read by country farmers, by village and city sportsmen, by backwoods lumbermen and trappers and guides, as well as business and professional men all over the State. The rough hunter reads it for tales of stirring adventures in the woods, the college student and summer vacationist read it for facts about canoeing and yachting; the crack shot scans its pages for target records, the dog fancier studies it for ideas about breeding and training and prize winning, and the modest naturalist patiently peruses the paper for new facts about the habits of animals. The editor of this paper has sat in a lumber camp forty miles from the nearest habitation and heard the foreman of the crew read Forest and Stream to over half a hundred delighted lumbermen, many of whom did not know one letter of the alphabet from the other; yet all were pleased and taught new facts by the paper that had come to them over snow-clad hills and icy ponds. Guides carry copies of it about in their pockets for months, and when the contents have been learned by heart it is turned over to some other guide or trapper as a precious keepsake. In short, Forest and Stream preaches the gospel of the forest to the woodsmen of Maine better than any other paper published.

Last week with the first number of its thirty-eighth volume Forest and Stream came out in enlarged thirty-two paged quarto form, with many of its old features amplified and several new ones added. It is the same old Forest and Stream, only larger and better and more worthy of patronage. Under its present form and management it is as near perfect in its line as it is possible for a paper to be. Its opinions are sound, its statements are reliable, and its influence wide and constantly increasing. May its triumphs continue until everybody shall recognize the merits of Forest and Stream.—*Bangor News.*

Game Bag and Gun.

The full texts of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

INTRODUCTION OF THE CHOKEBORE.

In looking over the shelves of a book store the other day, it was my good fortune to obtain a copy of "The American Shooter's Manual," by a "Gentleman of Philadelphia County," published in 1827 by Carey, Lea & Carey. It was copyrighted in May of that year. The various articles on "Shooting," the "Dog," "Gun," "Ducks," etc., are very interesting, and the directions for using the gun, etc., are remarkably clear and concise. Among other subjects treated of is that of the boring of gun barrels. As the book is probably quite rare, it may be well to give the quotation in full:

"Not many years since," the author writes, "bell muzzles, as they were called, were all the rage, but they are at present entirely out of use. Mr. Johnson suggests that the bore be made somewhat larger at the breach [*sic*] and some inches up the barrel." The author then quotes Mr. Johnson's account of the manner in which he discovered this method. Johnson purchased a gun and was delighted with its shooting qualities. On examination he found it had this peculiarity of bore, and so he had a very inferior gun rebored by the method he gives, with results "that far passed his most sanguine expectations." This Mr. Johnson was an Englishman who wrote "The Sportsman's Encyclopedia," 1831. Our author seems to quote from an earlier work.

In the volume entitled "Sport with Gun and Rod" (edition of 1883) published by the Century Co., we read on page 781 from the paragraph on chokebored barrels that "Colonel Hawker, in 'Instructions to Young Sportsmen,' London, 1814, had very strong opinions against chokebores. We next find mention of chokeboring in 1835, in Deyeux's 'Le Vieux Chasseur.' Mr. Long in his 'American Wildfowl Shooting,' New York, 1879, gives the invention of a really successful mode of chokeboring to Jeremiah Smith, of Rhode Island, who discovered its merits in 1827 [!]. From him it was learned by Nathaniel Whitman, of Mansfield, Mass., and the method practiced by Joseph Tonks, of Boston, 'in 1870,' and these chokebores of Tonks came rapidly in favor with duck shooters."

It certainly is a curious coincidence that Mr. Smith, who is supposed to have been the inventor of the chokebore on this side of the water, should have hit upon this plan in the very year in which an American author quoting from an English book described the method of boring the gun with a choke.

Granting that it is perfectly possible for Mr. Smith to have discovered this method on his own account, yet on the other hand it is just as possible, nay, perhaps a little more probable, that he happened upon the plan in the pages of the "Manual" (published early in that same year, 1827), and being of a quick and practical disposition put the method at once into actual operation.

If this supposition is correct, we are enabled to trace the chokebore back from Tonks in 1870, through Whitman to Smith, who on his part obtained the idea from the English author Johnson through "The American Shooter's Manual."

We conclude, then, that the chokebore was introduced into this country in 1827, rather than that it originated here. However distasteful this view of the subject may be to us as Americans, yet the evidence seems to be largely in its favor.

J. Stuart Auchincloss.

Philadelphia, Pa.

GOSSIP OF GAME AND GUNS.

Ruffed grouse have been scarcer in this vicinity during the season just closed than at any time since '69. Two of my brothers, who live in Boston, were here the last of September and the three of us spent a week hunting grouse and woodcock. The total bag for the three guns was ridiculously small, and we covered from six to ten miles a day.

A feature of our week's shooting that compensated to some extent for the poor bags was the excellent work of our six months old cocker puppy, a Brant—Jill whelp from the kennel of Dr. Nicol, of Cookstown, Ontario. The doctor told us that this youngster would make a good fielder, and subsequent events have shown that he knew what he was talking about. Half the grouse we killed were shot over him. He would retrieve as well as an old dog, and a ruffed grouse is a cumbersome mouthful for a pup that age. More than that, he could keep going as long as we could, and show fewer signs of fatigue.

In '81, our last previous poor grouse year, water fowl were unusually plentiful, and by a strange coincidence it was the same this season. The great banks of teal that used to visit us in September seem to have gone to stay, but black ducks and bluebills were here in immense numbers. There was about the usual quantity of whistlers and broadbills.

The last week in October we had a cold snap, accompanied by a snowstorm, that failed to find a parallel within the memory of that well-known citizen, the "oldest inhabitant." On the Saturday evening of that week Samuel Vanwart, who shoots for the St. Paul market, taking his gun and seven "catteridges," all he had loaded, sallied forth amid drifting snow to spy out the land and see if there were any ducks left. He went down to the Dugway, opposite Layetown, on the St. John River, and found black ducks in the air in "families of tens and dozens." It was nearly sundown. Seating himself on the snow in plain view of any duck that chanced to look, and accepting no shots where he could not "line up" several ducks in range, in twenty minutes he killed thirteen ducks and exhausted his ammunition. Then he sat there and saw about thirty good chances go by. Any one would not need to be acquainted with Samuel to imagine his feelings, but his oldest friends would fail to reproduce the choice Anglo-Saxon in which they found vent.

He shoots a 14-bore under-grip English gun, with 36in. barrels. In leading, he "doesn't pay any attention to this foolishness of drams and ounces, but puts in about the right amount of powder and shot, wads well, and crimps with his fingers." There is little doubt that he has killed more ducks than any man in this Province. I heard him tell a young city tenderfoot last summer that an old hand

could load "catteridges" about as he liked, but they would resent any liberties taken by a greenhorn.

I had a few duck hunts myself this fall, but, as Mr. Woodyard Coupling remarks, "that don't belong to this yarn."

Your correspondent who thinks that a 12-gauge gun will do good work with 3¼drs. of powder, is right. In a 7¼lbs. 12, on grouse this fall, I shot 3drs. Hazard's "duck shooting" and 1oz. chilled 6s, and never did better work. My brother shot the same load successfully in his little 6¾lbs. 12. For brush-shooting woodcock, I used 1¼oz. chilled 10s in right barrel, and up to 25yds. I never shot a more satisfactory load.

Late one afternoon, when out after woodcock, my brother was beating out a small alder swale and I was in the middle of a cleared field loafing. He shouted that a bird had flushed wild and was coming toward me. I saw that the bird would pass at 45yds. range. The time to ring in a long-range shot on a cross-flying bird is, of course, when it is opposite to and nearest the shooter. Selecting this moment, I killed the bird with the above load of 6s in the left (full choke) barrel. Later in the season I duplicated this shot with the same load, the gun having missed fire at a closer range.

One day my brother, who shot the light-weight 12, had been beating a bit of isolated cover, and was coming through a large field to join us when he routed a flock of crows. One of them circled around him just out of range, and headed up to the strong wind about 60yds. away, when he fired and killed the bird dead. It was the kind of shot that provokes applause, and he got it. I am well satisfied that a 3drs. load of powder can do good work, though I could not recommend it for 60yds. shooting. Speaking of feather-weights, I have shot them, and the trouble is not the recoil, but my inability to gain any command of them. When I swing it on a sight it passes the object before I know it; in short I cannot place the sight where I want it.

It goes without saying that a light-weight gun will give more recoil than a heavier one of the same gauge and style of bore. But with me recoil doesn't count. Give me an ounce of shot, and two common black-edge wads over powder, and I will fire a hundred consecutive shots from a 7¼lbs. gun, with all the powder that a 2¾in. shell will hold. Except when I shoot from some cramped position that brings the thumb of my grip hand too near the bridge of my nose, I never know anything about recoil. Whether it is because I throw a gun very firmly to my shoulder, or have a physique capable of withstanding that kind of punishment, I do not know.

McDONALD'S CORNER, N. B. L. I. FLOWER.

MR. CLEVELAND'S SHOOTING TRIP.

IF there is any individual I envy just now it is Grover Cleveland, for he is now on a hunting trip to the finest private preserve in America, for certain kinds of game, and this is the season when it is at its best.

Take the map of Louisiana, and away over to the southwest, beginning at Morgan City—where the Teche has become a mighty river and flows into the sea—follow that poetic stream. At New Iberia you leave Morgan City 125 miles eastward. Looking southward from the swarthy, quaint little French town I have named, where you clear the Teche Woods line, you will see what at first glance seems to be an uncommonly massive black cloud rising out of the bosom of a great prairie or sea marsh where sky and prairie unite. It looms high above the level sameness of the long line of marsh. It is an extinct volcano, and is Jefferson's Island, the winter seat of Joe Jefferson, the actor. The island is a truncated cone. There are 4,500 acres of the finest land under the sun on its top, and nearly as much more sea marsh "appertains thereunto," to use the old quaint legal phrasing. This cone is almost surrounded by a lake of very deep, clear water. A short canal of less than a quarter of a mile would connect the two ends of the horseshoe-shaped water, and make "Jefferson's Island" one in reality. There is a splendid avenue of huge live oaks shading the great drive up to the mansion, which is a fine old residence built of brick laid in water lime, so that the entire structure is now as solid as stone.

The largest orange trees in Louisiana are on this place. It was out of the track of the two armies during the war and was not plundered as some of the Teche places were, and the orange tree finds something particularly congenial in the soil and air of Orange Island, as it was called before Jefferson bought it 25 years ago. There are a good many orange trees in Mr. Jefferson's groves that are 18in. in diameter 3ft. from the ground, and one, the patriarch of the estate, is nearly 3ft. through. It still gives its annual crop as regularly as it did thirty golden years ago.

But the glory of the place is in its game and fish. It is protected by four families of Acadian hunters, who still use the 36in. 16 bore muzzleloader and manage to kill an uncommonly large quantity of game with them too. These people keep off all other hunters from these waters, for Mr. Jefferson leaves the place alone for six months at a time and maintains a good supply of boats and fishing appurtenances. I have never seen such flocks of all kinds of waterfowl as in the winter live on the lake, and in the shallow water and high grass of the sea marsh of Jefferson's Island. Wild Canada geese, the Western brant, the snow goose, or white-fronted goose, wild ducks of every species, mallards, black ducks, "French" ducks—a species of large duck whose scientific name I do not know—bluebills, the gorgeous-plumed woodduck, shining like an opal in the morning Southern sun as he preens himself and majestically accepts the homage of his modest-hued spouse, an occasional flock of swans; these make up the migrating waterfowl. Then, too, there are the native birds; the great white ibis, the wood ibis, gros-bees and bee-gros entirely distinct birds, each evidently of the ibis family, the shy "flamano"—flamingo—and rarer roseate spoonbill, complete a list of birds which are not often seen as they can be seen in the great sea marsh and the heavy timber of Jefferson Island. Of the two kinds of teal there are simply uncountable little flocks. They are not cannonaded nor scared to death on their feeding grounds by pot-hunters. The few that are killed are shot on the narrow strip of land between the points of the horseshoe as they fly fearlessly across. Of snipe and woodcock, in the cornfields there are an abundance from one point to another.

The fishing is equally fine. Huge 10lbs. big-mouth bass can be seen any of these splendid Louisiana mornings leaping and chasing schools of minnows up into the shallow bays and coves, where duck food is abundant. There black bass, croppies, white and black perch, channel catfish "goggle eyes," and the long, lean, hard-fighting pike. There are other varieties, but neither time nor editorial patience will permit a fuller list. And in the evening, to take a beautiful light sail boat when the wind begins to blow in from the summer sea, whose gentle ripple you can almost hear, and glidea down the seven miles stretch of deep water, as the Southern moon rises broad and red in the east like a burning world; with all the mysterious sounds of the night-life of nature softly repeated from coppice, grove or woodland, and then disappearing away in the misty blue, these things are some of the charms of winter life in the furthest South.

You may travel for miles in this section, and from white nor black will you hear one word of English. The soft bastard French of a century ago, is the mother tongue of this region. The few people in the country immediately contiguous to Jefferson's Island, have their wealth mainly in cattle, and those perfectly gaited, tireless little "Creole" horses. You can buy all you want of them for $30 to $40 each, and a more durable, faithful horse—in a warm climate—one could not have.

This is the curious country Mr. Cleveland will test his double 12-bore, 8lbs. Scott in, or the heavier 10 bore, 10½lbs. Purdey which he has taken along for noble game, and his bass rod, made according to genial Joe Jefferson's own, which is evolved from much experience and knowledge of what it must do. May the communion with nature teach the ex-President how fortunate is he who understands our old mother! WM. HUGH ROBARTS.

CENTRAL NEW YORK ASSOCIATION.

THE third annual meeting of the Central New York Game and Fish Protective Association was held at Ithaca, N. Y., on Jan. 27, President W. S. Gavit of Lyons in the chair. Upon the call of the roll by Secretary Hammond, delegates were found to be in attendance from the counties of Wayne, Ontario, Seneca, Cayuga, Cortland, Tioga, and a goodly number from Tompkins county. The president appointed the following delegates to the Syracuse convention: Tompkins, Dr. A. H. Fowler, C. C. Van Kirk; Wayne, W. S. Gavitt, Calvin Hotchkiss; Cayuga, Henry C. Carr, George R. Peck; Tioga, Fred Davis, Elmer J. Shaw; Cortland, A. M. Schemerhorn, J. C. Gray; Seneca, J. N. Hammond, Chas. T. Silsby; Ontario, J. G. Stacy, Lyman Root.

The treasurer submitted his report, showing a balance on hand of $54.05.

It was resolved by the association to recommend, and by all honorable means to further, the passage of assembly bill No. 228, entitled "An act for the protection, preservation and propagation of birds, fish and wild animals in the State of New York and the different counties thereof," in its entirety, and the representatives from the seven counties from this district, in both branches of the legislature, are earnestly requested to use their influence to effect the passage of the same.

An executive committee from each county, consisting of three members, was appointed to assist the general committee in the work of soliciting new names, and other work of interest to the association. The following resolution was unanimously adopted: "That it is the sense of the Central New York Game and Fish Protective Association in annual meeting assembled, That Henry C. Carr, of Union Springs, N, Y., State Game Protector for this district, is the right man in the right place; that we unqualifiedly endorse his past acts and proceedings for the propagation of game and fish; that we fully appreciate his honesty, fidelity and fearlessness in the performance of his official duties; that we desire his retention in the office which he has so ably filled, and we herewith pledge him our support in the future."

The time for holding the annual meeting was changed from January to October, and the next meeting is to be held at Lyons, in October, 1892.

The following were elected officers for the ensuing year: President, W. S. Gavitt, Lyons; vice-president, Edw. H. Bostwick, Spencer; secretary and treasurer, J. N. Hammond, Seneca Falls.

BOSTON NOTES.

BOSTON, Jan. 30.—The fifth annual dinner of the Megantic Fish and Game Corporation, which took place at the Hotel Brunswick, in Boston, on the evening of Jan. 28, was a gathering of sportsmen long to be remembered. About 220 lovers of the rod and gun from all parts of New England were present, and all entered with a keen zest into the enjoyment of the evening. The main dining room of the hotel, in which the banquet was held, presented a magnificent sight. The entire stock of Mr. Frank Blake Webster, the taxidermist, was placed at the disposal of the club for decorating purposes. Almost every native wild animal and game bird of New England was represented in the collection, and the results attained by the committee were superb. A life-size black bear stood ready to embrace the guests on entering the room, and the number of moose, deer and caribou heads scattered around were sufficient to arouse enthusiasm for the chase in a heart of stone. Added to these were a number of splendid fish paintings from the studio of Walter M. Brackett. They were gems, indeed, and were very much admired by all present. President I. O. Woodruff, of New York city, received the members and their guests in one of the parlors of the hotel from 5 to 6:30 P. M. Then began the movement to the dining room, and in a short time all were seated and enjoying to the full the splendid repast provided by the club. The Germania Orchestra were located in one corner of the room, and discoursed sweet music during the greater part of the evening. At 9 P. M. President Woodruff started the speech making by a statement as to the condition ot the club. He said that during the past year the membership of the association had increased from 217 to 283. At the annual meeting of the stockholders in May, it was decided that the remaining shares in the treasury up to 300 should be sold at $100 per share, the remaining shares up to 500 to be sold at $500 per share. During the past year he stated that the club had paid off bonds to the amount of $2,200, leaving in the treasury to-day $2 235 in cold cash. By acquiring the Seven Ponds district last year the club has now 159,600 acres, or nearly 250 square miles. It was shown that the Megantics controlled (with the exception of a few strictly private clubs) the largest preserve in the United States. The president also said that during the past year there had been killed on the preserve 7 moose, 8 caribou and 32 deer; 8,000 trout had been caught, and probably not half of the number taken had been registered.

Mr. G. W. Wiggin, president of the Massachusetts Fish and Game Association, followed in a short speech, commenting on the good feeling which exists between the members of his own organization and the Megantics. His remarks that this feeling ought to be encouraged for the mutual benefit of both organizations were received with applause. Col. Eliot B. Hodge, of the New Hampshire Fish and Game Commission, spoke on the subject of early experiences on the Megantic preserve and hoped to see the time when that region would again abound with game and fish as of yore. Hon. Frank B. Currier, of New Hampshire, naval officer of the port of Boston, proved to be one of the best speakers of the evening. His remark, to illustrate the dryness of the Merrimac River at certain seasons of the year, that it was difficult to see a salmon for the dust he raised getting over the dam, brought down the house and was received with laughter and applause. Gen. Douglas Frazer proved very entertaining and sung Chinese and Japanese songs in an inimitable manner. Telegrams and letters of regret were received from W. H. H. Murray, Gov. Russell, ex-Gov. Long, Hon. John Tilton, minister of Marine and Fisheries of Canada, Mr. Samuel Wilmot and others.

Capt. Fred C. Barker, the oldtime guide and proprietor of the well known Bemis Camps in the Rangeley Lake region, is spending a week in Boston, enjoying the hospitality of his many sportsmen friends. Few visitors to the Rangeley region are unacquainted with Capt. Barker, and his great popularity testifies to his worth.

Mr. J. K. Souther, of Boston, left last week for Cuba, intending to devote some time while away to fishing in Florida waters. Mr. S. is a devoted angler, and delights in catching bass in the inland waters of the State. Each winter finds him engaged in this pleasant recreation, and some of his catches have been almost phenomenal in numbers.

The celebrated Jock Darling, of Maine, who has received so much notoriety in the past for alleged violations of the game laws, is stopping a few days in the Hub. Boston sportsmen who have met him have been agreeably disappointed in the gentleman and pronounce him a very pleasant and genial fellow. His reminiscences of oldtime fishing and shooting in the wilds of Maine are very interesting. WM. R. SCOTT.

Capt. Fred C. Barker, well known to the FOREST AND STREAM and to the sportsmen who annually visit the Rangeley Lake region, with Mrs. Barker, has been stopping a few days at the Hub. He is quite enthusiastic concerning the deer in this part of the country. He says that there were but comparatively few killed last year, and that the woods are well supplied with them. One has to go but a very short distance in the woods this winter to find fresh tracks. If the crusters will let them alone, the breeding supply for next year will be in excellent shape. As for the trout, he believes they are in good supply notwithstanding the very low water and poor success in autumn.

Game Warden Jonathan Darling was present at the Megantic Association dinner, and he created a very favorable impression upon those who had occasion to see most of him. One gentleman remarked, who saw him there for the first time, that he looked like an honest, determined man, and one who would go ahead in what he believed to be right in spite of many obstacles.

Charles H. Hubbard, a well known sportsman and guide of Kelsars Falls, Me., has come to end his life in a way rather sad to those who knew him best. He was out with his gun on the thin ice of the early winter and fell in. The cold water and the long walk home gave him a chill that rapidly developed into typhoid pneumonia, and noble, strapping fellow that he was, he could not survive against the disease. He had been cold and wet hundreds of times before, but the last time was too much. He was well known to several Boston sportsmen who annually visit that section of Maine, and genial, honest and kind-hearted as he was, they will read of his demise with sorrow.

SPECIAL.

A SHOT WITH THE OLD MUSKET.

HOW many of us can remember our first shot at game? I was slightly built and ten or eleven years of age when I discovered that a flock of woodducks frequented the creek. I resurrected the old family flintlock musket, which family tradition said had seen service in the War of the Revolution, and has been used in the War of 1812 in the endeavor to repel the British, when Buffalo was burned. The flint was gone. I searched the field where I had seen flint Indian arrow heads, and found one out of which I manufactured a passable flint for the old gun. I obtained some blasting powder from a neighbor and crushed it fine. For shot I cut some pieces of lead to a suitable size; wadded the powder and shot firmly with tow. Proceeded to the creek crawling through the short brush as only a boy or rabbit can do, trailing the old musket, which was so heavy I could barely with the exercise of much will power bring to my shoulder. Arriving near the point where I believed the ducks were located, I carefully raised my head above the brush. The ducks rose. I brought the old gun to my shoulder and pulled the trigger. The old musket went off and so did I—head over heels, seeing stars the names of which I never knew. I picked myself up with a bruised shoulder and a bloody nose, and the old musket, good for further service, and—five ducks! Stars, bruises and bloody nose were forgotten. Glory! I guess I huzzaed. And was I not the hunter of hunters among my mates of whom there were many? Over a half century has passed since I made that shot, to me then a famous one. Yes, but where are those mates? Of them all I almost alone remain. H. L.

SPORTSMEN'S ASSOCIATION OF CHEAT MOUNTAIN.—Preserve, Cheat Bridge P. O., Randolph County, W. Va.—Pittsburgh, Jan. 26.—At a meeting of the Sportsmen's Association of Cheat Mountain, held Jan. 19, the following officers were elected for the ensuing year: President, W. M. Kennedy; Vice-Presidents, W. K. Shiras, D. McK. Lloyd, W. S. Edwards, Utilles Baird, Nathaniel Ewing; Secretary, Theophilus Sproull; Treasurer, D. P. Corwin; Naturalist and Surgeon, Dr. W. J Riggs; Board of Directors, Hillary S. Brunot, A. P. Tallman, Dr. Jos. N. Dickson, S. B. Elkins, W. G. Crown, C. C. Scaife, M. S. Verner.—THEOPHILUS SPROULL, Sec'y.

GAME NOTES.

LYKENS, Pa., Jan. 18.—Field shooting in this (Lykens) valley has never been better than the past season. Quail in abundance and plenty left for seed. I know of one farm on which there are at least 100 old birds, and so far we have had open weather. Should we have no severe winter there will be thousands for next fall. Myself and a brother-in-law killed fifty-three quail on the first of November last over a pointer which I bought two years ago through the advertising columns of your valuable paper. Rabbits have also been plentiful, and as we had no snow to track them in season there are lots of them left. Of ruffed grouse there have not been so many as heretofore, but notwithstanding their scarcity I succeeded in bagging 126; they are my particular game.

On Nov. 23 my friend Dan Hawk and myself started for a ten days' hunt in Clinton county for deer and bear. We arrived at North Bend (Youngwoman's town), a small station on the P. & E. R. R. three miles east of Renova, at 5:30 P. M. After spending the night with landlord Fox, of the Thompson House, we took passage on a train of timber cars for our d stination, the head-waters of the left hand branch of Youngwoman's Creek, where we arrived at noon. After a good dinner at the loggers' camp, where we secured board (25 cents per meal), we concluded that with the assistance of Sport, my Irish setter, we would try to kill a deer. In one hour after leaving camp I, who did the driving, drove out four deer, but as there was but one man on the watch we saw none of them. The next day we had the same luck, but on Thanksgiving Day Dan killed a forked buck and we had him banging up by 10:30 A. M. In the afternoon I drove out a five-prong buck and Danny artistically broke his neck.

Friday was our red-letter day. While making a drive for deer Sport got on the heels of an old she bear, which also fell to the unerring aim of my friend. When I came up to him he said: "You are a good fellow to go to drive deer and then send me a bear, but he is stopped all safe up the hill there." With the close of that day our success came to a end, the snow melted and it rained, and although we saw plenty of sign both of deer and bear, we did not get another shot. So on the following Thursday we packed up our traps and went home resolved if we both live to see the fall of '92 to have another go at the game of Clinton county. W.V. B.

Last week while the ice was twelve inches thick on the river and everything was covered with snow, several hunters out south of town noticed that there were geese in some of the cornfields. By judicious creeping they managed to get a shot into a flock and killed six. The weather has been so warm for several days that the streams are clear of ice in the swifter places and I hear that there are some ducks along the river. Rabbits are very plentiful. I saw seven drawn rabbits sold for fifteen cents yesterday, and figures tell better than words. They seem to be abundant in all parts of eastern Kansas.

Wildcats and coyotes are more numerous than usual, though I have not heard of any being killed this winter. The wildcats keep themselves hid during the day but one was recently seen quite close to town. The coyotes are not as shy and may be seen in the daytime, but no one seems able to kill them. In a round hunt at Silver Lake, six miles west of here, there were three wolves in the circle but they all got away, while the men were shooting at rabbits. One jack rabbit ran down the line with a dog at his heels and every man he passed would shoot at him. About the twentieth shot the dog was killed, but the rabbit lived till shot No. 35 struck him. As soon as the crowd saw the rabbit was killed they looked around for their wolves but couldn't find them. They got tired waiting and went home, I think. F. B.

OTTAWA, Kans., Jan. 23.

THE PROMISE AND ITS FULFILLMENT.

Editor Forest and Stream:

Under date of July 26, 1891, "Special" wrote in FOREST AND STREAM:

> The reports of deer are numerous in Maine. They are frequently seen by the fishermen who go into the woods. Already illegal shooting has begun. I have now one authentic report of a deer killed by a well-known guide and camp keeper, and another by his guest, a Boston poacher. This dastardly work has begun early, but the ending may not be as easy for the law breakers as a year ago, when illegal shooting was by far too common, as already explained in the FOREST AND STREAM. But this year the case is liable to be different. The Commissioners are neither dead or asleep, and a warden is likely to drop in when least expected. The able and conscientious Commission has some means to work with this year, and I am sure it will be used in just such a way as the Commissioners themselves believe to be for the best. Neither the opinion nor the consent of certain individuals, themselves poachers, will be asked. These individuals will be allowed to falsify and malign the Commission in such of the public prints as will give them space, and no notice of their defense of murderers and outlaws will be taken except possibly they may be invited to answer to libel suits later on.

The close season closed Oct. 1, and to show how the promise given above was kept, I quote from a letter by one of our best guides, dated Kineo, Oct. 25, 1891:

> I am going to try and start a move to have Jock Darling sent up here July 1 and kept till Oct. 1, 1892. Do you think we could get enough interested to do it? and would he want to come do you think? I have not talked with Mr. O. A. Denren yet, but think he will work hard for anything that will help stop some of this summer slaughter. As for myself, I am on the fence at present. There seems to be two things a man can do. One is to work heart and soul to protect the game, and the other is to wade in with the rest and get all I can. The sportsmen are doing it. The Canada Indians and French hunters are doing all they can to wipe out the moose, and our lumbermen are not slow. One good thing Miss Hardy's writings of last winter did was to scare Jock Russell out of the State. He has gone bag and baggage down the Allagash, and is hunting somewhere in New Brunswick. The State gave $7 500 last winter to enforce the game laws with. I cannot see where $1 of it has been spent in this part of the State, where, in my opinion, it is the most needed, although Mr. Haseltine, of Belfast, told me there would be a good man here sure. There may have been a man here, but he was a long way from being a good one, or he would have reported some of the game killing parties. Perhaps you will say that I have forgotten that Stilwell sent two wardens up here to investigate the truth of Ed. Harlow's letter, but I have not. They came up here and went straight down the West Branch, and did not visit one of the places which were mentioned (and it is thought here that they could not have found them if they had wanted to) and then went home to report that letter a false fabrication, only written to mislead the wardens. Now, it is well for them I did not write that letter, for I can bring men to prove that some of it is true, and it was all gathered from guides. Now, if Stilwell is to lay back on that $7 500 and do nothing, what is the use for a hunter to hold back and try to save the game when every moose hide means from $15 to $25? I have killed very little game in the last four years, but if something is not done this winter and next summer I don't think it will be of much use to hang back any longer.

I will next quote part of an article written by Henry Hall, of the New York *Tribune*, who has been on the ground, knows the situation, and is one of the very few who dare tell the truth:

> But the worst sinners of all are the summer visitors. They do not kill the most, but their example is the most powerful. I can speak of this, being myself a summer visitor. In the comments by writers on this subject, the summer visitor has heretofore been gently treated. Every one of them who goes into the woods spends from $150 to $300 on his trip. Many of them spend more. William Ziegler, of Brooklyn, a great admirer of this magnificent region, and a constant visitor took out one party of thirty-five friends and fourteen guides to Caucomgomoc Lake last summer, and another of twenty-five friends and fourteen guides to Ripogenus Lake, and spent, it is estimated, nearly $5,000 in this princely hospitality. These are large disbursements, and the aggregate in the State is immense. The State authorities seem to feel that this profitable business ought not to be discouraged. It employs the guides, helps the railroads and hotels, stimulates trade, and is a great benefit to the State. And the opinion seems to be that if a summer visitor kills a few wild animals out of season, perhaps nothing ought to be said about it, so as not to drive the visitors away. But, as a summer visitor myself, and one who has talked with others equally anxious for antlers, I think I am justified in saying that the State authorities take a wrong view of this matter. The law ought to be enforced peremptorily against the summer visitors; and, if an honest attempt be made to do so, against all classes alike, these very visitors will be its most cordial upholders. If, however, one man from outside the State is allowed, because he is a good fellow and free with his money, to kill a moose out of season without paying the $100 fine, every other free and independent American in the State who has the chance will do the same and expect to go free also; and half the unlawful killing by hunters and residents of the State is inspired by the example of the summer visitors. The poor man in Maine, who either wants meat for his table or can smuggle a haunch to Boston, or who wants a hide for trade, will not submit to seeing the laws suspended for the benefit of the rich and enforced against himself. He will (and often does) kill out of season merely from revenge for the injustice inflicted upon him, and as an assertion of his manhood equality with persons of wealth. It is useless to say the laws cannot be enforced.

While there is abundance of evidence from reliable parties that the summer killing has been as large as usual, I have been unable, after diligent inquiries, to find a single case where any attempt has been made to prevent or punish it. I asked one of the most prominent wardens why he never went into the woods in summer, and received the reply that "he was not going into the woods when the flies were so plenty." I hear that a warden who never goes into the woods is on the track of a Boston man who in October last killed a cow moose while nursing its calf. While I sincerely hope he will be able to convict him, I will say that the case was undertaken only when it had become a matter of public talk in Bangor; and if the offender, whose name is well known here, should have to pay a fine, we shall probably not see his name in the papers. There seems to be a great difference in the way cases are treated. A short time ago many papers had notices of the arrest of a Mr. Glidden for killing more deer than the law allows, for the purpose of selling them. Five different wardens, all in the eastern part of the State, near where he was arrested, have been mentioned to me as doing the same thing for a business this fall, but I have yet to hear of any of them being arrested. A writer in *Shooting and Fishing* for Dec. 17, who signs himself "A Camper Out," gives four cases of wardens who either killed illegally or allowed things illegal to be done, and gives the names of several. He, however, says: "There is evidence enough to show that the fault does not lie with the Game Commissioners." I used to be of the same opinion till I was forced, by what one of the Commissioners himself told me repeatedly about his wardens and why he kept such men, to believe differently. When a Commissioner says that certain wardens have kept all the fines they have taken, when half belonged to the State, and still has them appointed to office, is it not his fault? Either he knows of the actions of his wardens or else he does not know. If he does not know, after being repeatedly told in print and in private, he has not the capacity needed for the office. If he does know, and does not remove them, he is himself as guilty as they. I charge the fault home where it belongs. M. HARDY.

BREWER, Me., December, 1891.

GAME IN THE NATIONAL PARK.

YELLOWSTONE NATIONAL PARK, Jan. 18.—*Editor Forest and Stream:* We are having a good old-fashioned winter—if hard winters are old-fashioned—plenty of snow and the thermometer registering way down below zero. So far the gentle Chinook has not paid the Park a visit, although it is long past due. The snow is dry and loose, making rather hard snow-shoeing. As soon as the first Chinook comes it will settle the snow a little, so that one can get over it more comfortably, and not have to go through it as now.

On Dec. 2 scout Burgess with Corporal Boyce and privates Nemo and Bronson were sent on a snow-shoe trip to the southern boundary of the Park. They went on horseback as far as the Upper Geyser Basin, an escort going with them to bring the horses back. From the Upper Basin they took their outfit of sleeping bags and provisions on their backs. Only one of the party knew anything about snow-shoeing; that was Corporal William Boyce, who has had several winters' experience in the Park. He was a member of the troop stationed here when Ed Willson was scout, and made several trips on snowshoes with him, looking up buffalo and other game. Accounts of these trips have appeared in the FOREST AND STREAM. On this scout Corp. Boyce had to go ahead all the time and "beaketrail" for the others, quite a task and a severe test of a man's endurance.

The party was driven back from Lewis Lake by severe snowstorms and left their sleeping bags there, picking them up on the return trip later. At the Upper Basin Hotel they waited until the storm was over, and having obtained an additional supply of provisions they struck out once more, making Shoshone Lake the first day, the outlet of Lewis Lake the second and the boundary line the third. They crossed Lewis River on a narrow strip of ice, the only place where they found it frozen over. They did remarkably well to travel so far in three days. They scouted out of the Park to Snake River, up Pole Cat Creek a few miles, then back to Lewis Lake the same day, reaching it at 9 at night. The next day they picked up their sleeping bags and made the journey back to the hotel in two days. The snow from Shoshone down was 4 to 5ft. deep. Both Shoshone and Lewis lakes were partially frozen over, and the ice was strong enough to let them walk along on the edge of the lake. They saw only an old bull elk on the whole trip south, but there were a great many bobcat (lynx) tracks. They returned to the springs on snowshoes, having been out twenty days. Such trips soon make expert snowshoers and good scouts.

Not long after the above trip was made Burgess was out again; this time with Private Saxton and Bjork, of the Hospital Corps. They started from the Mammoth Hot Springs on snowshoes for the buffalo country, going by way of Norris and the Grand Cañon. This was the most successful trip ever made after buffalo. From the Cañon Hotel they make a scout through the Hayden Valley and all that section known under the name of Alum Creek Country. In the upper end of the valley, on waters of Alum and Trout Creeks, they found three large bands of buffalo; one of 78, and not far from these another of 50. These were all lying down. The party passed within 50yds. without disturbing them. A little over a mile further on they found a band of 105. At another place in the Upper Valley they saw a band of 15, three of these were calves. Burgess says that he is safe in saying that of all he saw in bands, one in every six was a calf. Besides the bands, they saw quite a number scattered about the valley, one, two and four in a place, mostly old bulls. One old bull was mouse colored. Most of them were very dark.

At one time when the party rounded a hill on Trout Creek they suddenly came upon a large bull feeding in the deep snow. He was knocking the snow sideways with his head, clearing a place to root for grass under the snow. They called out to him, "Hallo, old fellow, what are you doing here?" He raised his head and looked at them for a moment without moving. They could see the snow matted in the hair around his nose and face, ice was in the long hair over his eyes and he looked like a frost king. He turned and walked away, running when he came to deep snow and going through it like a snowplow, sometimes almost out of sight. Burgess says all the buffalo he saw moving would run when they came to deep snow and walk when on ground blown bare. They saw and counted 280 buffalo.

There were very few elk in the section of the valley where the buffalo were, but at the lower end there were 2 000 in three bands. These were south of the Sulpuer Mountain.

On their way home they saw a fresh trail crossing the road at the old hot spring beds on the Norris road. Burgess followed it, and saw a large buffalo bull going toward Hayden Valley—he had come from Mt. Washburn. Later I hope to give the FOREST AND STREAM more news about these buffalo.

The elk, antelope and mountain sheep are quite numerous on Mt. Everts and in the Gardiner Cañon. The valley of Lamar River is full of elk, and the stage driver says the Blacktail country is covered with them.

Swan Lake Basin and the ridges leading up to Electric Peak are alive with game. If some of the tourists who want to see large game, and miss it in summer, would come here in winter, they would be satisfied. H.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

CHICAGO, Ill., Jan. 30.—Another FOREST AND STREAM project will materialize next Wednesday evening in the meeting of the Chicago Fly-Casting Club, at which time a constitution and by-laws will be adopted, and the scheme of action fully outlined. The rough draft of the constitution left in my hands by Mr. Antoine specifies objects and purposes, makes the officers president, vice-president, secretary and an executive committee of three, sets the initiation fee at $5, with yearly dues of $2, and outlines duties of officers, placing the main cares as to practicing grounds, etc., upon the executive committee. The membership is not yet determined. It may be left unlimited, but this is an unwise step in any club, and means, of course, no club at all. I should think fifty an ample membership, and half that would mean a more active and practical body and better and more systematic work.

The following is received at headquarters of the Kankakee Association in the matter of the State league organization:

> BELVIDERE, Ill.—*Kankakee River Fish and Game Association:* I see by the papers your plans for forming a State association, and wish to say that while our organization is small we are anxious to help anything along that will further the interest, and wish to combine with all the rest. Last year was our first, but we accomplished more than enough to satisfy the most greedy. Yours very truly, BOON COUNTY FISH AND GAME PROTECTIVE ASSOCIATION, L. M. Eldredge, Pres.

The above speaks very well in the right way. If this State league is to be a success, it must be made so by support outside of Chicago. The country below Chicago must wake up, stay awake. The meeting at the Sherman House on Jan. 13 did not establish the success of the league by any means. It only established its beginning. I think I can tell just what Chicago will do in this matter. She will hold back and see what the lower country will do. Chicago will give just $200, $100 each for the Fox and Kankakee Associations. She will not give that until, say, $800 has been raised by the other clubs and associations outside of town. That would make $1,000. To his Dr. Bartlett will add $500. The total of $1,500 will be plenty small enough for a year's work, certainly, since out of that must come at least $600 for a secretary. Gentlemen proposing to further this beneficial work should first push it among the lower clubs, and push it definitely with a definite object. In view of this, Mr. Eldredge's letter is very opportune.

We are again betwixt and between on shooting out here, and little activity in such matters is shown at present, as the old season is gone and the new one not yet on. The middle of February has seen good duck shooting in this region before now, and eyes are now set forward rather than backward. The weather now is milder, much the better for the quail crop, though the snow has by no means disappeared in this region.

Much sickness continues among our shooters. The grip is still with us.

From the dispatches I take the following: "Columbus, Ind., Jan. 27.—At his home six miles east of Nashville, in Brown county, early this morning, Henry Hover, a well-to-do farmer, and his son George while attempting to remove a ball from a rifle were accidentally shot, the father fatally. The ball passed through the son's hand, striking the father in the stomach, from the effects of which he died a few hours later."

It is not usually considered very good technique to take

weekly paper news from daily paper columns, though sometimes that is the quickest way of getting at a piece of news. When the quotation is made, it seems to me better, more honest and more workmanlike to say so plainly. For instance, last week I thus quoted the telegraphic report of the Tuscola, Ill, wolf hunt, not trying to make any steal on the stuff at all. I observe that another sporting paper of concurrent publication has the same item precisely and unchanged. It has, however, gone to the trouble of putting it under a head as a game "note," giving it the appearance of a special communication from Tuscola, and signing it with the ingenious and perhaps not too awfully transparent alleged *nom de plume* of "Lupus." This is a very pretty instance of what is known in newspaper work as the great North American grapevine telegraph, which is still in use in some quarters. It sometimes puzzles the grapevine operators to get good pen names for all the dummy stuff. Alas! there is sawdust in several idols nowadays.

He was 16 years old, 6ft. tall and 1ft. wide, and he wore a hat like that of a clown in the circus, from beneath which straggled hay-colored wisps of hair.

"Reckon you all sells guns?" he said to the salesman.

"Yes," said the salesman.

"Shotguns?"

"Yes."

"How much?"

"About $12 50," said the salesman, sizing him up.

"Purty good gun?"

"M ghty good gun."

"Reckon she goes off every time, shore pop?"

"She ain't no snapper."

"Glad o' that. Might make trouble."

"Why?"

"Old man's mighty quick on the trigger."

"What old man?"

"My old man."

"What about him?"

"Oh, I go to lay fer him. Ef my gun hangs fire, he's liable to git me."

"Trouble in the family?"

"Well, you see, it's this way. Pap he's got a coon dog purp 'bout 12 years ole. Useter be a good 'nuf one, but he's too blame no-'count now to waste corn meal on. Bline in all two of his eyes, an' mange an' fleas twell he kaint run no sorter trail fer scratchin'. Pap he 'lows Buck's good's ever he was, an' the best haoun' dawg in the settlement. Mam, she's fur gittin' a new dawg, an' 'lows the neighbors says we-all is too pore to git another dawg. That riles Mam some, but it don't rile Pap, an Mam 'lows it orter rile Pap, an' it riles Mam becos it don't rile Pap."

"Yes."

"Pap says Buck's good 'nuf dawg fer any dad-binged womern on earth, er any dad-binged settlement."

"Yes."

"Mam she 'lows ef Pap don't trade er kill Buck befo' two days she's shore goin' to put hot water on Buck."

"Yes."

"Pap 'lows ef she teches Buck he'll baste her with a stick o' cord-wood."

"Well."

"Well, she does."

"Well."

"Well, he does."

"Well."

"Well, Pap he's hidin' out now, but he has to come in to town wunst in a while after terbacker."

"Oh, I see."

"An' Mam, she 'lows I gotto git Pap, er she'll put rat pizen in my vittles."

"Exactly."

"So I gotto git him."

"Looks that way."

"You say this yer gun is all right?"

"She's all right."

"All right. Ef I has any trouble with her, an' Pap don't git me, I'll come in an' git you."

"All right."

"Reckon I better git erbout six bulls [shells], hadn't I? Pap may have some friends along."

"Anyhow six."

"All right. Load 'em with buckshot, an' put in a plenty. Pap he's pow'ful tough."

"Anything else this mawnin'?"

"Nope."

"Good coon weather."

"Yep. Ef I git Pap I 'low to git ernuther dawg an' go out after some."

"Well, good mawnin'."

"Well, good mawnin'."

E. HOUGH.

THE HARTWOOD SPORTSMEN'S ASSOCIATION has been incorporated, with office at Hartwood, Sullivan county, N. Y. Thos. Clapham, President; Thos. J. Bonnell, Vice-President; F. L. Shattuck, Secretary; C. F. Van Inwegen, Treasurer. The Association have leased the Hartwood property, in the town of Forrestburgh, of 3,600 acres, with a privilege of buying at a reasonable price. The game cover is said to contain deer, bears, foxes, occasional wild boars, and other game and birds. Within the tract are ponds and trout streams, and the Neversink and Mongaup rivers are of easy access, the former bounding the tract on the east.

WILDFOWL AT CURRITUCK.—Norfolk, Va.—F. Simonds, Esq., of Reading, England, with his friend J. B. White, of Norfolk, Va., bagged in two days' shooting at Currituck last week seventy wild ducks, twenty swan and ten geese. This is one of the best bags made at Currituck recently, but the shooting has been better recently than early in the winter.—CURRITUCK.

British Appreciation.

Editor Forest and Stream:

Did you see the comment our *Sporting Goods Review* made on your report of the last Fulford and Brewer match? We quite agree with them. It was one of the best reports we ever saw in any paper of any match, and does your paper much credit, and in fact it was a work of art. W. W. GREENER.

ST. MARY'S SQUARE, Birmingham, Eng., Jan. 23.

Glad you have given us four pages more. I never can get too much of FOREST AND STREAM. SAM'L WEBBER.

CHARLESTOWN, N. H.

ST. LOUIS NOTES.—Jan. 29.—St. Louis sportsmen were much amused over the articles in last week's FOREST AND STREAM about Bud Weaver and his experience with guides. As Mr. Weaver is one of the best deer hunters in St. Louis and thoroughly familiar with Arkansas hunting, the reason for the laugh becomes apparent. On the question at issue he is perfectly able to take care of himself. The Western Gun Club gives its regular annual ball Feb. 21. The Harin Fishing Club has been organized and will build a club house near Harin, Mo. The Germania Hunting and Fishing Club has purchased 400 acres of ground on the Big River, and will erect a club house in the spring. The Western Gun Club has elected the following officers: President, E. Alexander; Vice-President, Fred Werner; Secretary, G. H. Rhodes; Treasurer, H. Tallon. The Missouri Hunting and Fishing Club, of St. Louis, has bought hunting and fishing grounds on the Illinois River, near Manitou. On Spring Lake club houses will be built. The Ozark Gun Club has elected the following officers: President, Jos. Hood; Vice-President, W. Sheldon; Secretary, Frank Crawford. The Carondelet Hunting and Fishing Club has elected the following officers: President, H. R Graff; Secretary, W. C. Crumden; Treasurer, Joseph Udell. The St. Louis Fox Hunting Club has been organized with thirty-one members, and the following officers: President, Wm. F. Anderson; Vice-President, J. C. Chubbey; Secretary, H. N. Comeaux; Treasurer, L. Abadie.—ABERDEEN.

Monroe County Game Law.

WHEREAS, By section 37 of chapter 534 of laws of 1879, entitled, "An act for the preservation of moose, wild deer, birds, fish and other game," and the several acts amendatory thereto, it is lawful for the Board of Supervisors of any county, at their annual meeting, to make any regulation for the further protection of such game as in said act mentioned; therefore

Resolved, That the Board of Supervisors of Monroe county do enact as follows:

1. No person shall catch or kill or attempt to catch or kill in any manner or by any device whatever, or have in his or her possession for any purpose except as provided for by the laws of the State of New York, for the period of three years from the first day of January, 1892, any partridge, grouse, pheasant, woodcock or quail (except alive and for the purpose of propagation) in this county.

2. No person shall catch or kill or attempt to catch or kill in any manner or by any device whatever, or have in his or her possession after January 1, 1895, any partridge, grouse, pheasant or quail, except from the 15th day of November to the first day of December in each year (except alive and for the purpose of propagation) in this county.

3. Any person violating any of the provisions of the foregoing sections shall, on conviction thereof, be subject to a fine of $25 for each off-nse, and in default of payment shall be committed to the Monroe County Penitentiary for twenty-five days.

One-half of said fine shall be paid to the person causing the prosecution in the manner now provided by law, and the other half of said fine shall be paid to the Treasurer of Monroe county.

4. Any person who shall violate any of the provisions of the foregoing shall in addition to said fine be liable for a penalty of $25 for each bird caught, killed or had in his possession, except as provided in sections 1 and 2 of this act, to be sued for and recovered in a civil action brought in the name of the people of the State of New York, in all respects as now provided by chapter 534 of the laws of 1879, and the several acts amendatory thereof and supplementary thereto.

One-half of said penalty shall be paid to the person giving the information on which the action is brought, and the other half shall be paid to the Treasurer of Monroe county, and in all respects as now provided by law.

5. All acts or parts of acts inconsistent with the above are hereby repealed.

6. This act shall take effect immediately. [Adopted Jan. 8.]

TROUTING IN THE CASCADES.—VIII.

THE MOLALLA COUNTRY.

EARLY in the morning of the 5th I was awakened by rain pattering on the tent. I lay there a long time listening to nature's tender reveille and the sighing of the treetops as they responded to the call. The gentle rain's refrain, mingled with the winds moaning accompaniment, was a soothing lullaby to me after my trip with Frank to Canyon Creek, and I rested there on that bed of cedar and hemlock browse as only the angler with an investigating turn of mind can rest after a red-letter day.

I felt that this expedition was only the introduction to a great volume of knowledge in store for me about the wonderful fishing waters of the Cascade Mountains. Although I had fished much in these mountains, I had followed beaten paths, as a rule, and had heretofore controlled, to a degree, my desire to seek out new and untrodden fields. I resolved that henceforth I would be the pathfinder myself and make my brother anglers of Portland depend a little on me for information, as I had depended much on them in the past. However, it must not be understood that I had been fishing for the last ten or twelve years in my back yard, for many and many a time I have cast the fly in both the Cascade and Coast ranges where none had been cast before; but now I seemed to have lost all interest in known waters and felt impelled to seek only after the unknown. So I rested, and so I reflected until I heard Billy growling around outside about wet wood and "the durned dog." It seemed that, during the night, Hall's dog had taken upon himself the task of preserving what remained of the "mountain beef," and Billy lamented, for he dearly loves venison.

Nevertheless I continued to rest, for truly I was tired. I wanted to get up but my legs didn't and they seemed to hold the controlling interest when it came to a vote. But the smell of coffee and broiled trout, added to suggestive remarks about bacon and eggs, honey, hot bread, canned huckleberries, etc., dropped by Billy and my wife as they prepared their bill of fare, induced my stomach to desert my legs and go with me, which decided the contest, and I crawled out, taking my protesting legs along with me. I managed to dress in spite of my sore muscles and stiff bones, but I felt much as an old broken-down stage horse looks.

Yes, there was a marked change in the weather. The mountains were buried in clouds, and old Mount Hood's cold breath was perceptible. After breakfast we loitered around camp, and tried to feel at home and perfectly contented, but we could do neither. It was too wet to fish, and my wife and Billy decided that it was about time that we should return the Halls' visit. You see, propriety and Billy's comfort again asserted themselves and required his immediate presence at the side of Hall's generous fire-place. Besides, my wife had not yet lost all taste for shingled roofs and dry floors, even if the shingles were only "shakes" and the floors only hewn logs.

Away went the procession of tenderfeet over to Hall's, and I sat down by the camp fire to ruminate.

Frank came down early to see me. He did not seem to feel the effects of our trip to Canyon Creek, and I envied him his powers of endurance. "That's nothin', I'm used to it," said he, and added, "Ye stood it pretty well yerself, considerin'." Yes, considering the fact that I was not made out of iron and India rubber. He again inspected the fly-book, and then turned his attention to our assortment of rods. The split-bamboos did not come in for their proper share of admiration, but the lancewoods filled the requirements to a dot, and he declared his determination to have one some day. Well, I thought he had already earned one, so I fitted out a good one with reel and line and gave it to him. He was happy as a clam at high tide, and as proud as a boy with his first pants, and it made me happy to see him so happy. Then we also went over to Hall's, to play audience for Hall and Billy while they told yarns.

Both Frank and Hall gave it as their opinion that the indications pointed to quite a spell of wet weather; but after dinner the sun came out, the birds began to sing, and although the wind hung in the same quarter I concluded that the weather clerk had decided not to fulfill the prophecy of bad weather. So I took my rod and struck out for the deep pools of Milk Creek. I had fair luck, for although the water was a little muddy the fish were feeding upon the flies and bugs washed into the stream by the rain, and my flies were greedily taken. But the ferns and sal-lal brush were incessantly giving me free and copious shower baths at the slightest touch, and, too, the clouds soon thickened and re-enforced them so that I was driven to camp pretty well soaked. Frank had taken advantage of the weather and staid at Hall's all the afternoon. During my absence he had unfortunately mentioned the cougar incident, which made it an easy matter for Mrs. Hall to persuade my wife to take supper with them and sleep in the house. Billy had all the blankets, including his own, over at the house by the time I returned, and it was painfully evident that we were all safely housed for the balance of our stay on Milk Creek. I went over to camp. It looked like a bush-whacker's camp after a surprise; and I felt as if I was in a country churchyard. Unlike the Arabs they had folded all but their tents and silently stolen away. Well, such are the vicissitudes of an angler's life; everything goes lovely while the weather is fine, but when the weather gets bad even your wife will desert you. I slept in the house along with the rest, but the tents stood their ground, silent monuments to the memory of the weakness of human flesh.

Once during the night I got up and looked out. The moon was shining through a rift in the clouds, but the wind was whistling merrily in the canyons and the weather had a decidedly unsettled appearance.

The tents seemed to look at me reproachfully from the lonely, deserted camp by the creek, but I crawled back into bed and went to sleep.

Next morning, Moody put in an appearance bright and early. As he drove up he greeted us with: "If you uns expects to git across the Molalla afore the next moon you'd better be crawlin' out o' here."

I laughed at the idea, for, when we came up a week before, the Molalla was as mild as a sucking dove, and I could wade almost any of its rapids. But when Hall allowed that he guessed Ira was about right, and Frank had added that I didn't know the treacherous river as well as they did, I concluded that discretion might be the better part of valor and surrendered. So we drove over and got the camp luggage and were soon on our way to Moody's. The Molalla did seem to have its business suit on. There was an ominous sullenness about its murky waters that was suggestive, and I observed that the horses had much difficulty in keeping their feet, on the round, smooth stones.

All day we remained indoors while the rain came down in torrents, and the mountain looked wet and forbidding. Fay told me all he knew about Pine and Trout creeks, two tributaries of the South Fork of the Molalla. The trout in these streams, he said, were large and numberless, but there was no way to get to them except by walking. We might take a pack mule, but he would have to be sure footed.

His description of these two creeks convinced me that the life of an angler was not worth living unless he could cast into their waters. My wife thought we had better go home and wait for better weather. Ira expressed the opinion that I would get no more fishing for at least a month, but thought we might as well stay right there at his house and wait, as to make two long trips of it.

The 7th day of June was like unto the 6th day of June, and the 8th was like unto the 7th. Rain! pure and unadulterated Oregon rain!

The morning of the 9th Fay and I went over to the upper crossing to see if, by any possibility, we could get across the Molalla from the east about six miles above Moody's. Pine Creek, the larger of the two tributaries, was ten or twelve miles further back in the mountains. The Molalla, as I had known it, was not there. In its stead was a roaring, seething, howling torrent. As we approached we could hear the angry mutterings of the turbulent stream and the confused grindings and thumpings of great boulders as they were torn from their sockets and driven against each other by the irresistible current. While we stood there, awed by the mad ravings of the mountain-born torrent, Mr. Sam Ingalls and Mr. Voorhes rode up. They had a few cattle on the other side of the Molalla, and were taking a run over to look after them. Every moment seemed to add fury to the frenzy of the frantic waters, and although the trail led across at a point where the stream was apparently shallow, danger seemed written on every liquid line.

"Gentlemen," said I, "you are both much older and, no doubt, much more familiar with this stream than I am; but if I had cattle on the other side I would leave them

to the tender care of the cougars before I would undertake to ford that stream in its present condition."

Voorhes laughed, and without replying touched his horse with his spurs and they started across. Voorhes was slightly in advance of Ingalls and before he reached the middle of the stream his horse was straining his every muscle to counterbalance the momentous force of the rushing flood. Suddenly the horse lost his footing and in a moment horse and rider were struggling helplessly in the merciless current. Ingalls hurried back but we were all powerless to aid Voorhes in the least. Like two straws horse and man were hurled down into the seething caldron below the rapid. Once Voorhes reached out desperately but vainly for the end of a log that protruded out over the stream from the further bank. Before we had fully realized that the man was down and at the mercy of the torrent, Voorhes, despite his heroic struggles, was in the swirl of the deep pool and sank to be seen no more alive.

"Not even a rock from out the liquid grave
Lifted its point to save,
Or showed the place where strong despair had died."

Aimlessly we ran along the bank for half a mile or more looking for some vestige of him, but the cruel Molalla had claimed him for its own. After an hour's vain searching we sorrowfully retraced our steps to Moody's, and soon the sad intelligence of Voorhes's fate had spread among the settlers.

Next day Moody took us to Oregon City, and thus ended the first chapter of my fishing experience in the Molalla country. S. H. GREENE.

PORTLAND, Oregon.

SOME CHINESE FISHES.

WE are indebted to Mr. E. G. Blackford for the following interesting notes on some fishes of China:

CONSULATE OF THE UNITED STATES OF AMERICA, AT AMOY, CHINA, Sept. 23, 1892. *Hon. Eugene G. Blackford, President New York Fish Commission, U. S. Fish Commission, etc.:* DEAR SIR—At the suggestion of our mutual friend, Vice-Consul W. E. S. Fales, I have the pleasure of submitting to you various notes I have made upon subjects of ichthyologic interest here in the far East. Hoping that they may prove of some use to you and the learned societies you so ably represent, I have the honor to be, Your obedient servant, EDWARD BEDLOE, U. S. Consul.

I. THE SAM-LI.

The best fish on the China coast from a gastronomic standpoint is the sam-li (Fig. 1). It is a member of the Alosa genus and bears a striking resemblance to its American cousin, the shad. It seems to have a wider range than the latter, being caught all the way from the Gulf of Tonquin to the Yellow Sea.

This, so far as mere distance is concerned, is about equal to a line from Nova Scotia to Trinidad on the Atlantic coast of the United States and West Indies. Still greater is the difference in temperature of the waters in which it is found. The Gulf of Tonquin is as warm as the Gulf of Mexico, while the Yellow Sea is about on a par with the Gulf of St. Lawrence. On the Pacific a corresponding marine habitat would reach from Nicaragua to Alaska. There seems no reason why this fish can not be transplanted and raised successfully on both the Atlantic and Pacific coasts. It would be a notable addition to our food supply. The sam-li is thicker and heavier than the shad; its flesh slightly tends to a yellowish tinge owing to its fatness; it is equally delicious, and its bones, larger than those of the shad, are more easily detached and removed. It is a great favorite in the East, bringing 20 cents a pound, where commoner sea food is sold for 1 and 2 cents per pound.

II. BAMBOO OYSTERS.

At various points on the China coast, and more especially at Foochow, Amoy and Taiwanfoo in Formosa, the natives raise an oyster which is called the bamboo oyster on account of the manner in which it is grown and which is famous for its delicacy and flavor. It obtains its best results in tidewater streams, where the bivalve attains its finest development. Bamboo stakes about 5ft. long are driven into the sandy or mud bottom so as to project a foot at low tide. To each stake are fastened two or more old oyster shells. The stakes themselves are arranged six or eight inches apart in parallel rows a foot apart. The young fry attach themselves first to the old shells and afterward to the stalk of bamboo. They are removed when they have grown to be not less than a half inch in diameter. The smallest size in the market (of the oyster, not the shell) is that of a cherry pit. From this the sizes run up until they are equal to the Bluepoint. The best or rather the most popular are those of the size of a peach stone. From the alternation each day of salt and fresh water they become very fat and tender, and grow much more rapidly than those found in natural beds. The bamboo stakes are very durable and last oftentimes twenty years. The gradual growth of the bivalves causes the top of the stake to become imbedded in a ball of shells and debris, which in the course of a decade is frequently as big as a man's head. The effect at low tide is striking and rather comical. In every direction are thousands of rough black balls, supported on thin pegs that look for all the world like one of those murderous festivals of the King of Dahomey, in which a thousand Senegambians were decapitated and their wooly heads set upon poles.

III. CHINESE CARP.

Swatow, in the province of Quantung, is noted for the skill of its fishculturists. They fatten fish for the wealthy mandarins, and more particularly the bright-colored members of the goldfish family. They raise Chinese carp and enjoy a lucrative industry in selling the young fry to different parts of the Empire. The more skilful of the cultivators practice artificial fecundation in the same general way as is done at Cold Spring, N. Y. They have been doing it for 2,000 years. The hatching is effected with but little trouble on account of the excellence of the climate. When the fry are a half inch long they are ready for the market, and are sold by the hundred, thousand, ten thousand of fifty thousand. How they count them I could never find out. The average price is about ten for a cent, or one *cash* apiece. The purchaser transports the fry to pools, ponds or fountains, and there grows them until they weigh from a half pound upward. It is found more economical to sell them at this stage than at any other, because the growth, though very rapid up to this point, becomes suddenly very much slower. In transporting the fry long distances by sea a very ingenious system prevails. The young fish are put into large tubs on the upper deck that resemble brewery vats, and are filled with fresh water. From a working-bar across the top of the tub four strings connect the bar with as many wooden plungers, that float on the water in the tub. A half turn of the bar causes two plungers to rise and the other two to fall and strike the water with enough force to stir it up, and at the same time to force into it fresh air. The return of the bar brings down the first two plungers and raises the second couple. The bar is worked by coolies day and night, and enables the purchaser to keep the fish alive five or six days without any change of water. By changing the water it is said that they can be preserved three weeks, and in that way be safely transported to any part of the Chinese coast.

EDWARD BEDLOE.

We have been informed by Mr. Ho, of the Chinese Legation, Washington, D. C., that *sam-li* is the Cantonese name of the shad. In the central provinces of China, including the Yang-tse-kiang River region, the fish is known as *che-yu*, which means "time" fish or "periodical" fish, referring to its anadromous habit. Mr. Ho says the shad

THE SAM-LI.

arrives in the Yang-tse-kiang about the end of March or early in April, and runs about two months. The shad of this river are reputed to be the finest in the empire, and grow very large, sometimes weighing 7lbs. About forty years ago a wealthy Cantonese official, named Woo, the Tas-tai, or Superintendent of Customs, in Canton, started the custom of paying a high price for the first shad brought to him by a fisherman—the reward was 50 tales, equal to about 80 American dollars. The favorite mode of cooking the shad in China, according to Mr. Ho, is steaming without removing the scales. The flavor is said to be better preserved than by any other style of preparation.

According to Dabry de Thiersant, from whose work the figure of the *che-yu* or *sam-li* was copied, the fish arrives as late as June in some Chinese rivers; the scales are used in making artificial pearls, and some doctors regard the oil as a sovereign remedy for certain ulcers.

INTRODUCTION OF BLACK BASS INTO MASSACHUSETTS.

SINCE writing the letter which appeared in FOREST AND STREAM, Dec. 24 last, under the caption "A Back Cast," I have been indulging in an exploration into dark closets, upper shelves, and out-of-the-way corners for old books, reports, papers and forgotten memoranda. It resulted chiefly in raising dust and a mild remonstrance; caused soiled linen and frequent ablutions, and yet there was some meat among the husks.

I have previously contended that the interior waters of New York State were not the original habitat of the black bass, but that they were introduced from Lake Erie through the Erie Canal, built in 1825. I did not, however, know (or if I did I have forgotten it) that through the building, or rather digging, of this canal black bass were introduced into Massachusetts; but such is the case. Four years before the birth of this journal, four years to a day, namely Aug. 14, 1869, Mr. S. T. Tisdale of East Wareham, Mass., told in the *Albion* how he introduced the black bass into the waters of the Commonwealth in which he resided; and in this account additional evidence is given of how intimately Saratoga Lake, in the State of New York, is associated with the general distribution of black bass, and what an important part she has played in making this game fish known to anglers in New England.

I have related in these columns, and elsewhere, how Saratoga Lake was stocked with black bass from the lower Hudson, and how in turn that lake stocked a large area of northern New York with the same fish.

While I have a very indistinct recollection of previously seeing Mr. Tisdale's name in connection with a transfer of black bass, I never had seen his statement before I came across it a few days ago. He noticed that because of the expansion of the manufacturing interests, the increased facilities offered by the railroads for transportation, and the growing desire of the people to engage in angling as a recreation, that the trout streams of Barnstable and Plymouth counties had become depleted until they no longer repaid the effort to resort to them. "This depletion of the trout streams led me to consider the subject of stocking the lakes and ponds of this vicinity with some game fish as a substitute. With the aid of a veteran angler and friend I decided upon an effort to introduce the celebrated black bass of the Northern lakes. I allude to Preston Hodges, then verging upon seventy years. He proposed to undertake and accomplish the effort at my expense. This was the result of a conference at my house one evening in May, 1850, after an unsuccessful raid for trout near Agawam. Saratoga Lake was selected as the best location to obtain bass. In June he was upon the spot, where he remained some two weeks, and, aided by a henchman, captured some forty fish, thirty of which were kept alive. With these, seeking the most expeditious means of transit by rail, he started for Agawam, via Boston. They were placed in a large cask of water, properly cooled with ice, and reached Springfield only to die! This was in June. Undaunted he retraced his steps, and was soon at the lake, and, with his trusted henchman, again catching a fresh supply of fish. The mortuary result of the Springfield route led him to discard its second attempt.

"By the first of July he was once more ready to start for Agawam with twenty-eight live fish. These were divided and placed in two boxes, 4ft. long and some 15in. square. He came to Troy, and started for New York by steamboat down the Hudson River, making a night passage, and reaching New York in the morning at 8 o'clock. During the night himself and the henchman were constantly watching, watering and icing the fish—they began to droop and their loss seemed inevitable. They were carried to the Fall River steamboat, apparently gasping their last. A change of water, from a Croton tank, well iced, restored them, only one dying. This change and cooling was kept up during the day and through Long Island Sound until they reached Fall River, and from there, via railroad, to Agawam, two large casks of Croton water having been brought the entire distance for this purpose. For two days they were watched, watered and cooled, without a moment's intermission, and on the arrival of the cars at Agawam, at 11 o'clock A. M., the 4th day of July, Anno Domini, 1850, twenty-seven live black bass from Saratoga Lake were placed in Flax Pond, adjoining my residence, thus stocking it forever. This, I believe, is the pond first stocked in this State, if not in New England, Vermont probably excepted. Nor could I rest here. The foundation had been laid at Saratoga Lake for a further supply at a later season of the year. Of this I availed myself in November, and through a person employed there I had one hundred more live fish brought over the same route to Agawam and distributed in several ponds of larger size within Plymouth woods, among these White Island Pond, which is seven miles in circumference; Great Sandy Pond, a mile long; Great Herring Pond, Pickled Pond, Agawam Mill Pond, and Sturtevant's Pond. This was repeated in 1851 and 1852, and from these and their progeny more than thirty ponds in this region have been stocked by other gentlemen of Plymouth devoted to angling. The waters of Massachusetts are destined to teem with this superior fish, the first planting of which was in beautiful Flax Pond."

This is Mr. Tisdale's story of his introduction of the black bass into Massachusetts waters, and he acted from an honest desire to benefit his fellow anglers; but the black bass business may be overdone, and because he was successful it does not follow that the indiscriminate planting of black bass is to be practiced or encouraged. It is not always wise to put them into waters of good size and never into small waters in which other fish are expected to thrive. Mr. Tisdale discovered evidently that all waters are not fit for black bass, for he says that "in waters adapted to their growth they will increase as rapidly as yellow perch." I venture to say that no fish has been so generally introduced into waters wholly unfitted for them as the black bass. As if to emphasize this statement, since I began to write I have had a request to procure some trout to be planted in a little spring pond on the top of a mountain most difficult of access, and the trout are desired "because the bass are not doing very well." It was a trout pond originally, but some stupid fellow with the black bass mania managed to climb up there with a few black bass and yellow perch and leave them in the pond; and as they have not "done well" it is considered time to plant trout. This man exhibited less intelligence than a visitor that I had about a week ago. He, too, wished me to get some fish for him to stock an artificial pond. He thought about 100,000 trout fry would do because he had heard that that was the number of young salmon I had planted for the Government last spring in streams near the village in which I live. His pond was about 20×30ft. and from 18in. to 3ft. deep, and he had built it for the purpose of raising trout for market. I told him that neither the State nor the United States furnished trout fry for such a purpose, and then devoted two solid hours to explaining patiently and as clearly as possible some things that he did not know about planting and rearing trout. He finally said that he never had seen a trout in his life, but he had a friend at court, or in other words "a pull," by which he could get the fish in spite of the "regulations." Food, depth, area and temperature of water, hiding places and other conditions suitable for trout were as nothing compared to his pull, which of course existed only in his mind.

Mr. Tisdale's statement does not end with the introduction of black bass into Flax and other ponds, and I return to it for other interesting information. The bass that he procured from Saratoga Lake were the small-mouth species, because the large-mouth was not introduced into the lake until a number of years subsequently to the organization of the New York Fish Commission. He continues: "After stocking a pond no fishing should be permitted for five or six years. This gives ample time for a large increase. In six years after being spawned they will reach three pounds, and gradually increase to the maximum size, which may be set at five to six pounds at the rate of about half a pound per year. Very many fish from two to three and one-half pounds have been taken from the ponds stocked in 1850 to 1852, and but few comparatively of five or six pounds. One of seven and one-half pounds was taken late in May, 1864, which I had placed in a new pond two years previous, then weighing three and one-half pounds; but it was a female fish, from which I took a sack of spawn weighing two pounds."

There are no hard and fast rules by which the yearly growth of black bass may be determined, as the conditions may differ in different waters, but here is the record of a seven and one-half pounds small-mouth black bass caught in 1864, and yet when one was caught in other waters thirteen years later, weighing but a few ounces more, the weight and species were seriously doubted by many anglers, simply because they never had heard of such a fish; and several more years passed and a still greater bass was produced in the flesh for examination before the last doubter was satisfied that the small-mouth did grow to seven pounds and over.

Mr. Tisdale's observations upon the spawning habits of the black bass are also of interest, although his deductions therefrom are not in all instances correct, as viewed from later and more extended observations. He says that they spawn in May and occupy their spawning beds for nearly two months. Their nests are accurately described and also the watchful care of the parent fish. "In embryo life they seem to come in a moment. From close observation in a small pond where I placed some fish in April and May, and where I could daily watch their movements, beds were made by several pairs, over which the females hovered continually. Here they remained until the 24th of June. Every hour I watched them without any evidence of young fry. In the afternoon of this day, after an hour's absence, I returned and discovered several hundreds of minute young bass hovering at the surface of the water, while the parent fish was moving about her bed as usual.

These fish were darting about with activity, about ¾in. long, looking like black motes in the water. For three or four days they kept in this position and then scattered about the edge of the pond among the grass, a few being

thus seen for some two or three weeks, when all sight of them was lost till September, at which time a few only were discovered of about 2in. in length. The above refers to the first show of life from one bed. On June 28 two other beds in the same manner developed their young. The precise time these fish spawn, or the duration of their spawning season I have not yet fully discovered. I incline to the opinion that a period of two to four weeks passes before all their spawn are deposited. One fish is generally on guard at the bed, seemingly quite docile, and if alarmed, moves from it a few feet, but soon returns. The young fish begin to be visible in June and July close in shore among the gravel, pebbles or grass, darting with some activity, and near the surface, for the double purpose of food and protection. They are about an inch long when they first disport themselves, and reach about 3in. in five months."

Twenty years of observation since this labor of love was recorded has added but little to our knowledge of the habits of the black bass. The facts are facts to-day, and the conjectures are not particularly wide of the mark. To me the striking part of the last extract is that which relates to the development of the black bass ova. The first sign of life in the fry was on June 24, and four days later two other beds developed their young. This was in the southeastern part of Massachusetts, in Plymouth county, presumably as early as any part of the State for the development of spring-spawning fishes. The Massachusetts State law makes the open season for black bass from July 1 to Dec. 1, in recognition of the fact that this fish spawns in June. In the State of New York, where there is every reason for the black bass season to open fully as late as in Massachusetts, the law permits fishing May 30, and the destruction of spawning fish goes on year after year.

Eight years ago I urged in the columns of this journal that the New York law for black bass should be made to open not earlier than July 1, and I have been urging it ever since. Commenting upon my letter at the time FOREST AND STREAM said editorially that I had rather understated the case and asked the question: "Is it better to wait and let the fish get through with their domestic arrangement, and have some fishing years hence, or is it best to kill the old fish and trust to luck for a future crop?"

The codification of the fish and game law has again been introduced in the New York Legislature, and the bass season is made to open, as now, May 30. Unless the season is changed to cover the breeding season, the anglers of New York will yet see the time when they will have to trust to luck for a crop of black bass.

OBSERVATIONS ON THE TENCH.

AS PROPAGATED AT THE NEOSHO STATION OF THE U. S. COMMISSION OF FISH AND FISHERIES.

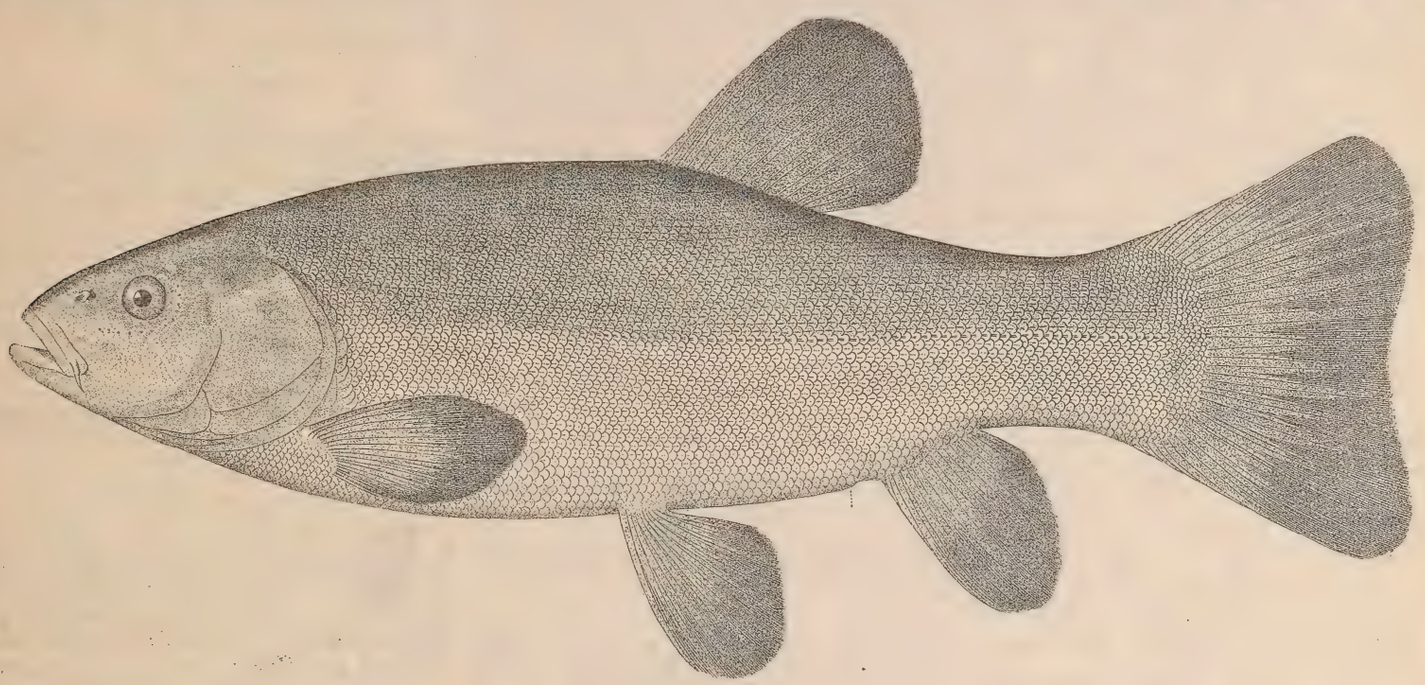
ON Dec. 22, 1889, we received twenty-three tench (*Tinca vulgaris*) which might fairly be called fingerlings. They were placed in one of the station ponds known as Pond No. 9, which has a water surface approximating 9,000sq. ft. Its greatest depth is 3½ft. and the floor of the pond gradually slopes upward to a "feather edge" of minimum shallow. A small proportion of Pond No. 9 (hardly one-sixth) is covered with less than one foot of water. This is less than gives the best results with carp.

The tench were placed in this pond about Christmas, of 1889, and though the water was clear nearly all the time they were not seen until the middle of April, 1890. The tench, unlike the carp, is never seen near the surface: they are a bottom fish, and seem to delight in hiding among the water-mosses. Many of the visitors at the hatchery doubted the existence of a fish in Pond No. 9 at a time when it contained over 25,000 tench. Fewer carp in a larger pond were seen in vigorous action when a tench could not be seen.

On May 23, 1889, spawning was observed among the tench, and that for the only time during that season; but it is unquestionable that they spawned more than once during that season. In the fall of 1890 the pond was drawn and found to contain 9,907 young tench measuring nearly as large as their parents did one year before. The parents had increased in size and weight nearly 100 per cent. Though a close watch was kept on the pond during the summer we never saw a tench, young or old, from May 23 until the pond was drawn on Nov. 14, 1890. The drawing of the pond taught us that the *Cottus bairdi* was as inimical to the propagation of the tench as to any other fish; over 100 of these pests were found in the tench pond, and dissection disclosed that they contained from one to three undigested tench. The natural question is, how many tench had this 100 "mullygrubs" consumed during four months? Parenthetically it might be mentioned that in this latitude the *Cottus bairdi* is hatched out by Jan. 15 and at that time is small enough to pass though a wire screen sixteen meshes to an inch. It is certain that those in pond No. 9 had traveled an underground pipe 730 feet long, an open flume 532 feet long, and passed through four screens, sixteen meshes to an inch.

Season of 1891.—In November of 1890, after the pond was thoroughly cleaned of pests and surplus moss, the twenty-three original breeders were returned to the pond. During this season they were seen quite frequently in May and early June, but only at spawning times.

The tench, like some warmer-blooded animals, delights to meet its mate "in the gloaming." At Neosho it was not known to spawn except in the dusk of very early morning or late evening. As is well known among pond-culturists, the carp prefers to spawn along the margin of the pond and in quite shallow water. Our tench invariably spawned near the center of the pond, over a large bed of myriophyllum. The time of the incubation of their eggs is of course dependent upon temperature. As near as we have yet been able to determine, it varies from four to seven days. The egg, in color and size, might easily be mistaken for a carp egg. They are slightly glutinous, but rarely lumpy.



When the pond is drawn to induce the young to run into the kettle, the greatest care and patience must be exercised. The water should be drawn off very slowly, and it will be found best to do this work on a rainy day. The young tench are easily frightened. At the least disturbance they hide among the mosses (which should be abundant in their pond). The tench and the myriophyllum are nearly the same color. Each piece of moss must be carefully picked by hand or else very many young tench will be lost. When the mud, pond water and cold autumn rains are considered, it will be conceded that drawing a tench pond is not pleasant work. Under these conditions Pond No. 9 was drawn on Oct. 12, 1891, and found to contain 27,270 young and the full number (23) of original breeders.

In transporting the young tench all that is needed is the fish, a small pail and a limited quantity of water. In November, 1891, 6,300 tench, averaging over 2in. long, where shipped from Neosho, Missouri, to Washington, D. C., packed at the rate of 150 tench to a 5-quart pail. These pails at no time contained over 4 quarts of water. The water was not changed, nor was any fresh water added, for 54 hours. Not a fish was found dead when the pails were opened in Washington. Comment is unnecessary.

The tench pond is at nearly all times (excepting midwinter) slightly milky, but never muddy. Unlike the German carp, they no not wallow over the bottom and burrow into the sides of the pond. In a pond of earth enbankment, unprotected by piling or rip-rapping, we have had carp to burrow out long trenches large enough to contain a man's body. Any approach to such destructiveness we have yet to see among the tench. A further comparison of the carp and tench shows that the latter is much stronger and muscular, size for size, quite as rapid in growth, much more rapid in reproduction, and cleanlier in its habits (especially as to breeding). Therefore, there can be no doubt that the tench will prove an agreeable substitute to many for the unjustly much-despised carp.

Gauckler has the following to say about the tench: "The body of the tench is arched on the back and compressed laterally; its scales are very small. The mouth is small and is furnished with two barbels. Its coat is dark brown, bright with metallic reflections of bronze; the scales are fastened to the skin by more than half of their surface. The body is coated with a kind of mucus which is secreted by a great number of pores, scattered over the head and body. This fish is found throughout Europe. It lives in running waters, but also thrives in lakes and ponds with muddy bottoms and covered with vegetation. It lives upon vegetable substances, insects and small mollusks. It is of rapid growth. At one year old it weighs about ¼lb., at three years it weighs from 2½ to 3¼lbs. At six or seven years of age it reaches from 6½ to about 9lbs. in weight. Like the carp, the tench is very hardy. It lives in places where all other fish die. It can remain out of water for several days if care is taken to moisten the gills every three or four hours. The tench is prized as a food fish, but before preparing it for eating it is necessary, or best, to allow it to remain several days in running water, in order to remove a disagreeable taste of mud, which it contracts in ponds.

"The tench is very prolific. It spawns from the last of May until the middle of July, and deposits its numerous eggs on the aquatic plants which grow on the bank of the water-course. They are raised in the carp ponds to serve as food for the pike, which chase it eagerly. In ponds which are too muddy for the carp to prosper the tench thrives well, especially if they are not allowed to become too much crowded, which may be prevented by introducing a few eels. The tench, however, is less productive than the carp, and it is said that more space is required to nourish 100 tench than to fatten 500 carp."

THE TENCH (*Tinca vulgaris*).

The writer begs to express a decided difference from the statements contained in the last sentence of the above paragraph. WM. F. PAGE, Supt. Neosho Station.

"THAT'S DIFFERENT."

IN the star-chamber room of the Ohio Yacht Club, the other evening, several well-known local anglers were relating their last summer fishing experiences, and among the interesting incidents the following was told, the sequel of which may be of value to many anglers who complain of always losing the largest fish. Two gentlemen were fishing for bass in the waters of Ten-Mile Creek, a tributary to Lake Erie, when the stouter of the two, weighing about 225, was startled to see his sea-grass line move rapidly toward the deep water, the general movement indicating a large fish. At the proper time to jerk he rose to his feet and hooked the fish. When he jerked it seems the fish was near or under the boat, and instantly made a terrible leap out of the water. His companion at once cried out, "It's a dogfish, take these scissors and cut the line—let him go." The fish had taken advantage of this parley and nearly emptied the reel. "Oh, no," replied the angler, "I will show you how to land a large fish scientifically."

No fisherman who ever landed black bass among the many islands of Lake Erie could have handled this fish with so much coolness and according to the rules laid down in books, as did this gentleman. The line was kept taut, the fish was permitted to move up stream, then down, and a happier angler never cast a line than this fisherman. There was not that look of anxiety that creeps over a man's features when he is playing an unknown fish, but a broad smile extending from ear to ear, while his companion was carelessly feeling the nibble of an ounce perch. There was no trouble for him to land the fish at any moment, but he wanted to "practice playing him." Suddenly, as if by magic, the fish came around near the boat and made another leap out of the water in full view of the angler.

"My! Walcott, it's a black bass," cried Sanfleet, taking a firmer hold of his rod. "That's different."

Walcott dropped his rod, upset the lunch basket and lost the string of fish to which he was adding a recently caught perch. "It will weigh six pounds," he said, "try him in this landing net."

"There is quite a difference between a black bass and an old dogfish. See him run! Look at him trying to get in the grass! Not much, my fine fellow," said Sanfleet, jumping about the boat. His usually rosy cheeks had an autumn color, and from the excitement wound the reel the wrong way. This bass seemed to know the difference, for he certainly had more strength and performed more deceiving and difficult movements than any fish the gentlemen had ever seen. The lancewood tip was instantly broken; ten minutes later the second joint was

snapped, and it was all Walcott could do to keep in the boat. There was never a black bass hooked which had so much sport with two gentlemen as this one. It took five minutes to conquer him under the name of dogfish and over half an hour to bring him within reach of the landing net as a black bass. Not a joint in the rod was whole, and as a last resort the fish had to be pulled in "hand over hand." In the bottom of the boat lay a large-mouthed black bass which weighed a few ounces over five pounds; the largest ever caught in the creek. But he worried the two anglers until they fell exhausted in the boat. Sanfleet says, "It's an easy matter to land a six-pound dogfish, but a broad-shouldered, intelligent black bass—that's different." J. E. GUNCKEL.

TOLEDO, Ohio.

CANADIAN SALMON RIVERS.

FOLLOWING is a copy of the petition now circulating and receiving signatures of anglers directly concerned. Blank copies may be obtained upon application to the FOREST AND STREAM:

To the Honorable Sir Charles H. Tupper, Minister of Marine and Fisheries:

The undersigned, owners and lessees of fishing privileges in Canada, respectfully represent that of late salmon have become more and more scarce each year in the Canadian rivers, and that unless the Dominion Government shall promptly adopt some decided and effective measures to enable a larger number of salmon to safely reach their spawning grounds, great danger of extermination of the species will be incurred.

We believe the present requirement, that the nets shall be raised from Saturday evening until Monday morning, affords inadequate opportunity for a fair proportion of the fish to safely reach their spawning grounds. Considering the great extent of shore line along which the perfected net appliances now in use are set, the proportion of fish which can escape them must be small. This is sufficiently proved by the fact, observed by all anglers, that a large percentage of the salmon which reach fresh water are disfigured and scarred from contact with the nets from which they have escaped.

We therefore respectfully petition that all salmon nets and traps be hereafter raised during three successive days and nights of each week, which shall be the same stated three days and three nights for all nets.

We believe that the ultimate interests of the net fishermen (by whom alone objection would be offered) would not in reality be prejudiced—should our petition be granted. Eventually they must be actually benefited by allowing a larger number of fish to cast their spawn and thus increase the now diminishing supply.

We beg your attention to the fact that anglers pay liberally for their fishing privileges, and are compelled to guard and protect the salmon while in fresh water; and in consequence of the very small proportion of salmon taken by anglers as compared with the large numbers taken by net fishermen we believe we are entitled to a more favorable consideration.

In presenting this petition, we submit, therefore, that we ask nothing but what coincides with the interests of the government, as seeking the greatest good to the community it represents, and nothing more than a fairer division of the time between netters and anglers.

And we respectfully pray that our petition be granted for the common benefit of all concerned.
